enjoyed by foreigners over and above the privileges distinctly enumerated in the Treaties. The avowed object of a policy apparently so retrogressive and illiberal was to render the situation intolerable to the foreign residents, and thus force them into advocacy of Treaty Revision. In that form the project received considerable support, being taken up in the House of Representatives not only by the Progressionists (*Kaishin-to*), but also by the other sections of the Opposition. It was then that Count OKUMA, in his supposed capacity of leader of the *Kaishin-to*, became associated in the public mind with the strict-enforcement policy, though he never openly endorsed it, and though his attitude towards Treaty Revision in 1889, when he held the portfolio of Foreign Affairs, had been conspicuously liberal. The phrase "strong foreign policy" came into use in 1893, and was employed to designate the platform of the "strict-enforcement" advocates. But the *Kobe Chronicle* is singularly mistaken when it alleges that the views of the "strong-foreign-policy" party with regard to Treaty Revision were "common at one time to almost all the Japanese political parties." On the contrary, those views were openly denounced by the most powerful and influential of all the parties, the Liberals (*Jiyū-to*), and the fact constituted a noteworthy landmark in Japan's modern history.

Passing now to the assertion that "what differentiated the strong-foreign policy party from others was the advocacy of Japanese control over Korea," we have only to say that we have never known such a doctrine to be advocated by any party in Japan. The elimination of Chinese suzerainty and the establishment of Korean independence were openly preached, but when we recall the fact that their most prominent advocate in the Lower House was Mr. INOUE KAKU-GORO, who certainly had no connexion whatever with the strong-foreign-policy party, our Kobe contemporary's misapprehension becomes apparent. We do not by any means desire to suggest that Count OKUMA has not always been regarded as an exponent of the strong foreign policy. There we entirely agree with the *Kobe Chronicle*. What we deny is that the strong foreign policy of Count OKUMA has ever been connected with territorial expansion, and that it ever included the idea of Japanese control over Korea. Still more erroneous is the allegation that "the proximate cause of Count OKUMA's accession to power was the hostility aroused against Marquis ITO and Count MUTSU by the retrocession of Liaotung." The *Kobe Chronicle* is apparently ignorant of a fact perfectly familiar to all close observers of current events, namely, that Count MATSUKATA, the present Premier, was opposed to the acquisition of Liaotung, and

strongly argued against the insertion of any such provision in the demands formulated by Japan at Shimonoseki. How then can the MATSUKATA Cabinet be supposed to have displaced the ITO Cabinet because the latter had retroceded Liaotung? In point of fact, the Liaotung question had long passed out of the field of practical politics when the last change of Cabinet took place. The proximate cause of the MATSUKATA Cabinet's accession to power was Count ITAGAKI's refusal to hold office with Counts MATSUKATA and OKUMA. Marquis ITO's plan was to give the portfolio of Finance to Count MATSUKATA and the portfolio of Foreign Affairs to Count OKUMA, leaving the other holders of portfolios undisturbed. But Count ITAGAKI preferred resignation to that plan and Marquis ITO decided that, if he could not retain the Liberal leader's coöperation, complete reconstruction of the Cabinet would be the wiser course. These things ought to be very fresh in the memory of our readers, who will probably be as much surprised as we are to learn that the retrocession of Liaotung, which took place in April, 1895, was "the proximate cause" of a change of Cabinet which occurred in September, 1896. Indeed, at every point the *Kobe Chronicle's* history astonishes us. It ascribes even "the expansion of Japan's armaments" to the "strong-foreign-policy" party whose principal leader it recognises in Count OKUMA. But it was by the ITO Cabinet that the expansion programme was mapped out, and the only murmurs ever raised against the programme have come from the political supporters of the present Cabinet. Probably something of our contemporary's perplexity is due to the difficulty of distinguishing between the vapourings of irresponsible "patriots," who ventilate their views in newspapers or magazines, and the views really held by political parties. But, after all, we have no business to travel beyond the four corners of a manifesto in search of its subscribers' principles. We affirm that in no document professing to be an authoritative exposition of the policy advocated by either the *Kaishin-to* or *Shimpō-to* can there be found any declaration in favour of territorial aggrandisement, and when Count OKUMA, in the pages of the *Far East*, pronounces against territorial aggrandisement, he does not make any new departure from the lines hitherto pursued by himself and his party. The essay did not strike us, when we first perused it, as containing anything at all novel or unexpected. In fact, our impression was that its uses would be small. But we now see that it may help to dispel some serious misapprehensions.

A NEW POLITICAL ASSOCIATION.

THE organization and dissolution of political parties in Japan have ceased to greatly interest foreign observers. It is now recognised that these events do not possess the significance attaching to them in the West. When men are linked together by a chain of principles the strength of their union can generally be estimated by the nature of the principles in question. But when their coalition depends upon personal considerations, incalculable influences may, at any moment, dissolve the cohesion. There are no principles available at present for the construction of political platforms in Japan. If we recall the course of events during the past twenty years, we perceive that representative institutions originally constituted the main line of cleavage between the "ins" and the "outs." The *Shisoku*—not the *Heimin*; not the bulk of the nation—that found themselves outside the pale of officialdom, agitated in favour of a national assembly, and the *Shisoku* that held the reins of power, though pledged to the principle of a parliament, sought to defer the event, partly because they doubted the nation's readiness, partly because they found their own account in preserving the *status quo*. The time, however, gradually ripened for the desired consummation, and it came. That great question having been disposed of, the agitators—we do not use the term disparagingly—had to seek some new ground of intelligible opposition to the Government. They found it in the problem of Party Cabinets. The Diet had become an accomplished fact. The "outs" had at length acquired the right of scrutinizing the acts of the Administration and controlling its legislative functions. They had also obtained a rostrum from which they might criticise, attack and condemn the conduct of officialdom. But so long as the Cabinet remained independent of the Diet, just so long did the sweets of office lie beyond the reach of the majority in the Lower House. Party Cabinets, therefore, became the second shibboleth of the Opposition.

Now here are two broad and perfectly plain issues: first parliamentary institutions; secondly, party cabinets. Are any other main lines of cleavage discernible in the political world of Japan? We can not discern any. There have been minor questions, it is true. There has been the question of Korea—a question that broke up the Cabinet in 1873; that nearly broke it up five years later; that involved collateral complications, such as the organization of the Kyodo Unyu Kaisha and its ultimate amalgamation with the Nippon Yusen Kaisha; that plunged the country into war with China; that led to the Liaotung embarrassment, and that finally necessitated the programme of military and naval expansion which the

nation is now devoting its energies to carry out. It was always conceivable that the general problem of Korea, or some one of its numerous corollaries, might have furnished a platform for a political party. But it did not. The attitude of an ITO Cabinet towards Korea may appear to differ from the attitude of a MATSUKATA Cabinet, but there is no real difference. The nation has only one mind in the matter, and every coterie of statesmen or combination of politicians reflects that mind. Then, again, there has been the question of the Land Tax; there has been the question of freedom of speech; and there has been the question of official salaries. These, however, are dead issues, nor can it be said that they ever sufficed to differentiate parties. They were chiefly means to an end; sticks for beating the Government into acceptance of the Party-Cabinet System. Thus we revert to the conclusion that only two great issues have been before the country for the past twenty years—Constitutional Government and Party Cabinets. Moreover, the two issues are really one: Party Cabinets are the inevitable sequel of parliamentary institutions. Under such circumstances there appears to be now a *raison d'être* for only two political parties in the country: a party advocating immediate recourse to responsible cabinets, and a party advocating the postponement of that consummation. So, too, before the proclamation of the Constitution, there should have been room for only two parties: a party advocating the speedy inauguration of a parliament and a party advocating delay. But the state of affairs indicated by reason has never been attained. When all the "outs" were ostensibly fighting for the same end, constitutional government, they divided their forces into *Kaishin-to* and *Yiyu-to*, and fought even more bitterly against each other than against their common foe. When nearly all the members of the Lower House were nominally struggling to overthrow the clan combination and introduce party cabinets, they struggled in half a dozen sections against each other more violently than against the *Sat-cho* statesmen. There is now a *Yiyu-to*; there is a *Shimpo-to*; there is a *Kokumin Kyo-kai*; there are "caves" of seceders; there is a Business Men's Party, and there are Independents, but no man has ever yet been found capable of defining the theoretical differences that hold them all asunder. Nothing emerges clearly except the personal element. We have no choice but to conclude that persons, not principles, are the bases of political associations in Japan. On the whole, perhaps, no other result could reasonably be expected. Differences of principle can not be established where uniformity of principles prevails. The whole country may be said to be liberal and progressive, and its advance along liberal and progressive lines has been so

rapid—not to say precipitate—that no body of politicians with any sense of responsibility could venture to advocate a higher rate of speed. Conservatives calling for greater deliberation would seem to be a natural outcome of the situation, but they have not yet raised their heads in any appreciable numbers.

In such a state of affairs a new political association has been born. It calls itself the *Kodō-Kai*, or "public unionist party." Probably our readers remember that when the Diet met last December, the members of the Lower House were supposed to be divided into nine sections, thus:—

GOVERNMENT SUPPORTERS.

Progressionists (<i>Shimpo-to</i>)	99
Parliamentary Club (<i>Gin-kai</i>)	25
Business Men	13
Independents	10

147

GOVERNMENT OPPONENTS.

Liberals (<i>Yiyu-to</i>)	100
National Unionists (<i>Kokumin Kyo-kai</i>) ..	30
Kishu Section	8
Independents	5

143

Unclassed Independents 7

The Government had not a working majority; indeed, there were doubts whether it commanded a majority at all. But the first important division showed unexpected results. Several of the Liberals had seceded from their Party and formed an independent cave; several of the National Unionists had adopted the same course, and formed a National Club, and both groups voted with the Government though they refrained from enrolling themselves in the ranks of the latter's acknowledged supporters, the *Shimpo-to*. These seceders, together with the Parliamentary Club, making a total of about 50, have now coalesced to form the *Kodō-Kai*, under the leadership of Viscount TAKASHIMA, Minister of State for War. It is rumoured that they will be strengthened by another draft from the Liberal Party, bringing their number up to 70, but even though they receive no further access of strength, they will be in the position of holding the balance of power. As for their principles, we look in vain for anything to differentiate them from existing parties. They aim at securing the advantages of responsible cabinets; they intend to improve the country's foreign policy; they propose to adjust the finances and to develop the resources of the nation so that the prestige which ought to accrue to the State after its victorious war may be realized, and they declare themselves independent, free to support the right and condemn the wrong whatever its source. It is the usual string of vague platitudes. Every party might adopt the same platform. Interpreted by the light of the past, this movement seems to mean that Japanese politics have entered what may be called the fifth stage of their history. First, the affairs of the country were absolutely directed

by the band of statesmen who planned and achieved the Restoration. Secondly, some of those statesmen falling away from the majority of their colleagues, gathered about them a number of disaffected politicians, who, though working in separate parties under rival leaders, were guided by a common purpose, namely the establishment of representative institutions. Thirdly, that purpose attained, the parties still found it necessary to continue their joint campaign, with the object of compelling their official opponents to bow to the mandates of the Diet. Fourthly, the nation's leading statesman, Marquis ITO, identified himself with the most powerful party (the *Fiyu-to*), thus tacitly acknowledging the principle for which it fought, and destroying the platform upon which the various sections of the Opposition had hitherto stood together; and now, fifthly, the parties having no longer any common purpose to compass, or any general principles to assert, are lending themselves to be moulded by individual statesmen for purely political ends. After all, parliamentary institutions seem destined everywhere to develop some such mechanism.

FINANCIAL PERPLEXITIES.

THE introduction of the gold monometallic system has given rise to sundry doubts and perplexities. A somewhat quaint example is described by the *Jiji Shimpō*. The old one-yen gold piece has been declared to be equal to two gold yen for the purposes of the new currency. Observing that change, an economist of Niigata addressed to the Bank of Japan an inquiry as to the value of notes issued simultaneously with the old gold piece. Would they, too, pass for twice the number of yen indicated by their denomination? An essay on finance from that gentleman's pen would be entertaining, we imagine. His difficulty reminds us, however, of one point which, strange to say, does not appear to have attracted public attention. We refer to the conduct of the foreign banks in the settlements. For many years, ever since their establishment in Japan, indeed, these banks kept their accounts in dollars. The sums standing to the credit of their depositors or to the debit of their borrowers were invariably quoted in dollars. Sometimes the words "local currency" were added; sometimes they were omitted. But their presence or absence did not affect the meaning. Mexican dollars and Mexican dollars only were in question. From the 1st of the present month, however, the banks have changed their unit to the gold yen. They have followed the example of Japan and substituted gold monometallism for silver monometallism. This sudden change affects different people differently. Depositors may be glad to find that each unit of their deposit is worth 24½ pence

instead of 22½ pence only; in other words, that the sterling amount standing to their credit is from 7 to 8 per cent. larger than it would have been had the unit continued to be a Mexican dollar. On the other hand, there may be some depositors to whom the change is not at all welcome. There may be men who, retaining their faith in the future of silver hope to see the dollar rise to two and sixpence or even three shillings, and who, consequently are not at all pleased to be arbitrarily excluded from the eventualities connected with the remonetization of the white metal. As for the debtor class, little doubt can be entertained about their sentiments. Their sterling liabilities have been made seven or eight per cent. heavier than they would have been had the old system remained in force. They borrowed dollars, which are now worth only 22½ pence, and they are written down as owing yen, which are worth 24½ pence. It may indeed be urged that when the debt was contracted, the dollars were worth more than 24½ pence. That may or may not have been the case, but, at any rate, it does not effect the question involved, namely, whether any bank, having lent certain silver coins of fluctuating gold value, and having invariably stated its debtors' liabilities in terms of those coins, is entitled, by an independent resolution of its own, to re-write the debt in terms of different coins having a fixed gold value. Possibly it may occur to some of our readers that the banks have no option: that since the country in which their business is conducted has adopted gold monometallism and fixed the sterling value of the coin hitherto circulating at par with the Mexican, they must bow to the change. From a practical point of view that is doubtless true. It might be extremely difficult and it certainly would be wholly irrational for the banks to conduct their local operations in terms of a coin which has ceased to be current, and which is linked to the coins of the country by a constantly changing ratio. But we must here observe that the foreign banks have hitherto asserted their complete independence of Japanese financial measures. They have exercised note-issuing power without the permission of the Japanese Government. They never recognised the *riyo*, which was the unit of Japanese currency in the early days. They never recognised the yen during any of the vicissitudes of its career. They have from first to last kept their accounts in a coin legislatively unknown to Japan. If, then, they now suddenly adapt themselves to the Japanese financial system, and convert their debts and credits into gold yen, they do so of their own free choice. They might just as legitimately decide to adopt some unit of their own and assign to it an invariable and arbitrarily chosen sterling value. We are sensible that the problem bristles with difficulties and offers a wide field for discussion, but the considerations set down here seem to constitute its general outlines.

THE ADMINISTRATION AND THE JUDICIARY.

The vernacular press reports another collision between the Administration and the Judiciary. Recently Judge Takano, the chief judicial official in Formosa, was summoned to Tokyo, to report upon some proceedings the nature of which does not appear to be understood by the public. Evidently the Administration was not satisfied with the Judge's account, for the *Official Gazette* soon contained an announcement that he had been placed upon the Retired List. Now the Constitution provides that "no judge shall be deprived of his position unless by way of criminal sentence or disciplinary punishment." The object of the provision is to secure the independence of the Judiciary, and its effect should be to guarantee the judge against removal from office except by the decision of a court of law, whether criminal or disciplinary. If, then, it be assumed that the Constitution extends to Formosa, the action of the Administration in placing Judge Takano on the Retired List without recourse to a law court is distinctly unconstitutional. So Judge Takano also thinks, and he has adopted a very practical method of protesting. He has gone back to Formosa with the avowed intention of resuming the discharge of his functions and resisting to the death any attempt to remove him. The affair is inexplicable at the present stage. It appears that Judge Mizuno, also a Formosan official, was placed on the Retired List some time ago, but public attention was not attracted by the incident, the Judge making no attempt to resist. We are informed by vernacular newspapers that both Judges incurred the displeasure of the Administration in the same way, namely, by adopting too severe measures against the official corruption prevalent in Formosa. It is even stated that they thus brought upon their heads the displeasure of the Governor-General, Viscount Nogai, and the former Colonization Minister, Viscount Takashima. Such tales are obviously quite incredible. Unfortunately party considerations seem to weigh much more strongly with some Japanese journals than the duty of telling the truth. In this case there is special difficulty in ascertaining the facts, for the Minister of Justice being unpopular even with the newspapers that habitually support the Cabinet, they do not hesitate to give publicity to the above extravagant explanation. For our own part, we fail to see how the removal of two judges by an Administrative order can be reconciled with the provisions of the Constitution, unless, indeed, the fact that a special system of Government exists in Formosa be regarded as placing it beyond the range of the Constitution's operation.

FORMOSA.

The *Seikai no Nippon* confidently repeats the rumour recently current that, so soon as the amended administrative organization for Formosa is promulgated, Viscount Takashima will become Governor-General, in succession to Viscount Nogai. The portfolio of War will then be given to Viscount Katsura, whose present office—Inspector-General of the Defences of Tokyo Bay—will be filled by Viscount Nogai. There is a possibility, says the same authority, that Viscount Kawakami may compete for the portfolio of War, but Viscount Katsura is supposed to be strongly supported by Marquis Yamagata.

MONTHLY SUMMARY OF THE RELIGIOUS PRESS.

In the pages of Christian journals a warm discussion is going on respecting the Dōshisha and its new President, Mr. Yokoi Tokiwo, whose recent address, summarised by us last month, seems to have caused great dissatisfaction. The conflict may be described as one between the orthodox and the heterodox as to how the Dōshisha should be conducted. Its founder, Mr. Nijima, being dead, there is a dispute over the nature of his intentions in calling the Dōshisha into existence. As our readers will remember, the notion that the Dōshisha was no longer fulfilling the object for which it was founded led the American Board of Foreign Missions to withdraw its support last year. Left to his own resources, the Japanese Christian manager tried to make the institution a success by running it on somewhat new lines, under the presidency of Mr. Kosaki, who may be said to represent the orthodox party. But the school ceased to prosper. Some months ago, Mr. Kosaki resigned, and the leading man of the heterodox party was appointed President. The *Kirisutokyo Shimbun*, the *Fukuin Shimpō* and other journals have articles on Mr. Yokoi's views, and criticise the statements made by him in the address alluded to above as wanting in Christian ring. Here is what a former professor in the School, Mr. Kashiwagi Giyen, has to say on the subject. Mr. Yokoi's public declaration of the principles by which he is guided can not be regarded in other than a serious light. The absence of any allusion to those doctrines, the belief of which led to the establishment of the institution, is very marked. There is no allusion to Christ or the love of God. The principles to which Mr. Yokoi refers have nothing distinctively Christian about them. Is this the kind of Christianity that permeated the Dōshisha in its prosperous days? There can be no doubt that under Messrs. Nijima and Kosaki, Christian piety was exalted above everything else. The development of the "Individualism, universal brotherhood and Ethical Nationality" to which Mr. Yokoi alludes was a result of Christian faith and feeling. Mr. Yokoi refers to the effect, but not to the cause. Will those who have undertaken the management of the institution be satisfied with this meagre statement of the principles to which it owes its existence? Does this accord with the intentions of the Committee which informed the Commissioners of the American Board that the school would remain Christian?

A writer signing himself "Kyokugai" replies in the following terms to the above remarks:—Mr. Yokoi's address to the students as President of the institution was never intended to be an enunciation of faith. The principles on which the institution is founded were taken for granted, and attention was called to the needs of the time—more individualism, more universal brotherhood and more ethical nationality. Mr. Yokoi did not address the students as a Christian preacher, but as the President of a School. Mr. Kashiwagi praises the orthodoxy of Mr. Kosaki, but was it not when he was president that the American Board Commissioners arrived in this country and, after conferring with the school authorities under Mr. Kosaki, came to the conclusion that the institution was not sufficiently Christian to warrant the continuance of the Mission's support. The charge brought against Mr. Yokoi has no foundation in fact.

Another writer expresses extreme regret that so many differences should arise among the Christians who are managing the Dōshisha. If they realised more that they have a number of common enemies to overcome, they would disagree less among themselves. Mr. Yokoi's remarks on the reduced condition of the school were by no means complimentary to its former Director. When so much is at stake it is a pity that Christians cannot treat each other with more deference. The above comments appear in the *Kirisutokyo Shimbun*.

The *Fukuin Shimpō* says that, for the last few years, the Dōshisha has given cause for great anxiety among those interested in its suc-

cess. Is the remodelled Dōshisha Christian or not? On this point many have their doubts. As a scholar Mr. Yokoi has the confidence of the Christian public, but the same cannot be said of his religious belief. There are those connected with the school who incline to Unitarianism rather than orthodox Christianity. It is reported that owing to the colourlessness of the Christianity professed by the present Dōshisha, Mr. Miyagawa and others contemplate disconnecting themselves from it. Notwithstanding the fact that the confidence of the public is being lost, expenditure is increasing at an alarming pace. In President Kosaki's time, it was estimated that, in addition to the funds available for supporting the institution, 3,000 yen per annum were required, but under Mr. Yokoi the figure has risen to 6,000 yen. Some of the students are dissatisfied, the Kumiai Churches have little sympathy with the way the school is being conducted, and as for foreign missionaries, as was shown at the Kōbe meeting a short time ago, they have no wish to identify themselves with the institution any longer.

In another note on the same topic the *Fukuin Shimpō* contends that the present trouble is to be traced to the action of Mr. Nijima and others in the early days of the institution. Mr. Nijima played at running will the hare and hunting with the hounds in turn. To Christians he insisted that the institution should be made thoroughly Christian and obtained their support on this understanding. But before non-Christians he placed the educational advantages which the institution offered, and led them to think that considerable freedom of belief would be allowed, and on this understanding obtained their pecuniary support. By adopting this course he combined two elements that never could blend, he called into existence two antagonistic influences whose power has been felt ever since. Mr. Kosaki for some time followed the same course. This is the real reason of the institution's turning out so unsatisfactory from a Christian standpoint. We may note, in passing, that this weak spot in the original Dōshisha was pointed out in the columns of the *Mail* many years ago, and it was predicted that sooner or later it would lead to trouble. The *Fukuin Shimpō* goes on to show that the severance of the connection of the American Board with the institution and the recent appointment of an extremely heterodox President, who will gradually fill the professorial chairs with men as broad in belief or still broader than himself, is all the result of trying to effect a union that was quite impossible. It is not to be expected that in future the Dōshisha will be more Christian than the *Rikugō sasshi*, for which Mr. Yokoi has written so much. Henceforth it may be described as having Christian elements in it, but the title to be called a Christian School it has lost. Whether even the Christian elements it now has will be retained long is open to question.

A meeting convened for the purpose of discussing the future of the Dōshisha was held in the Seinen Kan, Kanda, Tōkyō on August 20th, when Messrs. Yokoi, Tokutomi, Yebina, Miyoshi, Onishi and others delivered addresses. It was decided that steps should be taken to make the institution a high class college of the type of some of the best of the American Colleges, and that with this in view departments for the study of Politics, Law, Physics, Chemistry and Literature should be created.

Japanese Christians, says the *Fukuin Shimpō*, are of three classes. (1) There are those who are fully persuaded that the Churches must give up using foreign money. The poverty of many members should not be allowed to prevent the attainment of independence. By uniting in their efforts, sinking all minor differences, appealing to the patriotic instincts of their friends and supporters, and by relying on industry and commerce, and even on politics for pecuniary help, a great deal may be accomplished, say the leaders of this party. (2) Then there is a large class of Christians who are in favour of clinging to the foreign missionary. Sooner or later this combination will give rise to trouble. Al-

ready in various parts of the country there is friction between native and foreign Christians. In many instances relations are very strained and agitation may be expected at any time. (3) There is another class, which, in the matter of activity, bear no comparison with the converts mentioned above, but who are steadfast to the last degree. Though without sufficient spirit to attack the enemy, they would rather die than surrender the fortress in which they have taken refuge. Weakly and patiently they take up their cross and follow Christ. Unobserved by the world, they drink the waters of life and are refreshed thereby. The future of the church does not concern them. To the pro-foreign and anti-foreign spirit they are alike indifferent. The organ we have just quoted, in commenting on the distinctive characteristics of various bodies of Christians, says that the Japanese Methodist Christians resemble a regiment of soldiers in the matter of uniformity. In speech and action they are alike. Dependence on foreigners is an established principle among them. There is no doubt something very imposing in the march of men who have acquired the habit of acting together in obedience to orders. The tone which these men adopt is one of humility. They are the great opponents of what is called *yasigaman*, endurance beyond one's strength. Opposed to all this are the utterances of the Kumiai Churches and the Nihon Kirisuto Kyō Kai, whose watchwords are independence and freedom from foreign interference,—in Christianity as in other things Japan for the Japanese. How far the two elements will blend in the future remains to be seen.

According to the opinion of Mr. Yebina Danjō as expressed in the *Fukuin Shimpō*, the future success of Japanese Christianity depends entirely on the creation of a deeper spirit of union. For some years past, says Mr. Yebina, the joining of forces between sects has been regarded with suspicion and displeasure by a number of Christians. And yet it is only by combination that the full force of our religion can be shown to the world. What we need to do is to impress our fellow countrymen with the conviction that the Christianity which we believe and teach was received direct from God. In the present age there is a great rage for translating foreign Christian works and thus attempting to perpetuate here the foreign dress which Christianity has assumed. This is undesirable. What is required is for us to imbibe the essentials of Christianity, to make them a part of our inmost life and then to allow the manifestations of our devotion to be such as accord with native taste and proclivity.

Mr. Buckle, the well-known missionary, has been delivering addresses in various places in Japan giving an account of his labours in Formosa during the past 23 years. His audiences have been immensely interested in his vivid accounts of the dangers encountered and the difficulties overcome in the course of his long career. In commencing work among strangers Mr. Buckle practiced medicine, thus removing much of the native antipathy to foreigners. Teaching is carried on in the Chinese tongue. There are a large number of native pastors working with Mr. Buckle and another veteran missionary, Dr. MacKay. The combined missions show a membership of 1,300, divided into 40 churches, and employ 30 evangelists. Educational work has also been pushed ahead amid great drawbacks; and various benevolent organizations exist for helping and teaching the blind, the deaf and other afflicted members of the community. Speaking of the state of Formosa since it has fallen into Japanese hands, Mr. Buckle observed that great lawlessness has existed and still exists in many parts, so that it is by no means safe for a missionary to travel. The order forbidding the natives to carry arms was, in Mr. Buckle's opinion, a mistaken order, since honest natives are now left unprotected from the ravages of the hordes of robbers infesting the island. Formosan Christians do not smoke opium, but Mr. Buckle thinks that in

the case of natives that have been in the habit of taking it, they should leave it off by degrees, and that if the drug were heavily taxed, a gradual discontinuance of its use without involving injury to health would be the result.

A writer in the *Seikyō Shimpō* (Greek Church) in an article entitled *Kuni Jiman* (National Pride) says that among Eastern countries in the matter of self-exaltation China leads the way, and Japan follows at no great distance. Even at the present day, there is a class of men who are never tired of speaking of Japan as *Shin-koku*, a country specially favoured by the gods, as *Kumshi koku*, *Oinaru Nippon*, *Sekai no Bi-koku*, *Seigi-koku*, *Sekai no heitwa no ijisha*, "preserver of the peace of the world." This is the result of ignorance. Though of late years we have made rapid progress, it is not very long ago since we were an unenlightened people. As regards the war with China, how far we can congratulate ourselves is a question difficult to answer, since we went to war to establish the independence of Korea and that end has not been attained. On certain Japanese minds the war has had the effect of increasing their self-consciousness (自覺), and a spurious kind of patriotism, results which are by no means desirable.

The organ we are quoting expresses the opinion that Christianity has passed through three stages in this country. At first it was largely welcomed, then bitterly opposed and now it is treated with indifference, men's thoughts being absorbed by other things. The Christian ship appears to this writer to be at present stuck fast on a rock, unable to move forward or back.

The *Kyōrin* (Shintō) continues to urge the importance of Shintoists' preparing for the changes incidental to the operation of the new treaties. The importance of deepening national feeling is acknowledged even by Christians, says this organ, who are making strenuous efforts to remove foreign elements from their creed. With a view to be ready for the altered situation, the Ecclesiastical Bureau (社寺局 *Shōjikyoku*) attached to the Home Office, has commenced to compile a set of laws. The Buddhists are busy in the same direction. We Shintoists must not be behind. In competing with other religions, a defect in our organisation reveals itself. Shintoists consist of two separate bodies: *Shinkwan*, priests, whose special duty it is to keep up the worship of the nation's gods, and the *kyōkai*, the society of believers whose duty it is to teach Shintoism and make its power felt in the world. Our *Shinkwan* are not expected to preach. Their office is superior to that of the ordinary propagandist. But under the new rules to be promulgated by the *Shōjikyoku* no such distinctions will be observed. The 200,000 priests in charge of temples or shrines and the 100,000 preachers and teachers of Shintō will come under the same rules. So that the superiority of rank which the sacredness of their calling has hitherto given to the conductors of public worship will no longer be retained. This and other changes, the *Kyōrin* says, demand careful consideration at the hands of all interested in the future of Shintō.

In the opinion of a writer in the *Teikokubungaku*, the Protestants of Japan have of late, specially in the matter of education, shown a tendency to secularise their schools for the sake of increasing the number of their pupils. No such trimming is to be seen among the Roman Catholics or the Greek Christians, says the authority we quote. That a creed which in other countries has made history, has taken the lead in great movements, moulding men and institutions to its own shape, should in Japan be squaring its sails in order to catch every passing breeze, is a subject for deep regret. Pushed by the nationalists among their converts, troubled by the sight of an ever decreasing roll, the foreign managers of many schools have of late altered their courses and adopted the curriculum prescribed by the Mombushō for *Chūgakkō* (Middle Schools).

Religion has been consigned to a subordinate place in order to obtain a better attendance at the school. The men who have made these changes can no longer say with St. Paul, "I am not ashamed of the gospel of Christ." It would have been far better, says the *Teikokubungaku*, had they stuck to their colours, and been content with a small number of superior lads with piety and strength of character.

In the pages of the *Rikugō Zasshi* Mr. Yokoi Tokiwo contributes a philosophical article on what has been called "Europeanism and Nipponism," of which we give the gist. The pro-foreign and anti-foreign cries are alike hysterical and yet there is no denying that the agitation for and against foreign influence of all kinds extends over a great part of Japan. It is not a little significant that two very well-known men should have recently presented themselves in the world's arena as champions of the two conflicting theories. In the columns of the *Yiji*, Mr. Fukuzawa advocates unqualified Europeanism. In the columns of the *Asahi Shimbun*, Mr. Sugiura Jūgō figures as a special pleader for Nipponism. There is nothing particularly new in what either writer has to say, but their articles are worthy of attention as indicative of the prominence in men's thoughts which the future policy of the nation is assuming.* Notwithstanding the fact that we were successful in the late war, that we have obtained treaty revision, and that we are regarded as possessed of great power among Eastern States, it must be evident to every discerning person that we cannot afford to put on an air of superiority. There is more pretended opposition than real in the two principles. There is no such thing as Europeanism that takes no account of nationality, and no such thing, except among very ignorant people, as Nipponism that refuses to acknowledge the need of foreign aid. Anti-foreign sentiment in not a few cases is caused by the fear that we may be no match for foreigners when brought into competition with them. The stage through which Japan is passing now resembles that through which Germany passed a hundred years ago. We are now in the midst of what the Germans call *Die Sturm und Drang epoche*. This will result in the evolution of a nationality of a new and lasting type. Mr. Fukuzawa has been a real benefactor of the nation, but he belongs to the past rather than to the future, and his teaching has a strong leaning towards materialism. As for Mr. Sugiura, though the master of a polished style, and as such attracting considerable attention, he is lacking in power to perceive the spirit of the times, and his writing lends itself to the defence of conservatism. The study of the past should have as its object progress in the present and the future, as the saying has it, *furuki wo tasunete ararashiki wo shiru* (to learn something new by studying what is old). My advice to my fellow-countrymen is "Forget Nipponism and forget Europeanism and study truth as exhibited in nature and the actions of mankind." That is the surest way of increasing our energy as a nation.

A writer in the *Sekai no Nihon* furnishes an analysis of the views and principles of certain Protestant sects. Some of its comparisons are far fetched and evidently not founded on minute knowledge, but others are in the main correct. Three of the leading Protestant sects may be compared, observes the authority we quote, to three great political parties. The Nihon Kirisutō (formerly called Itchi Kyōkai, Presbyterian), which corresponds to the *Shimpō*; the Kumiai-ha (Congregational) to the *Jijū*, and the Methodist to the *Kokumin Kyōkai*. In government

* Mr. Fukuzawa's articles are summarised in the "Spirit of the Vernacular Press," (*Weekly Mail*, Aug. 1st). They are a reply to Mr. Sugiura's articles *Yōheki sharyū wo heikai su*, (Reproof of the Prevailing pro-foreign Bias). Mr. Sugiura simply reiterates the familiar arguments respecting the alleged superiority of Japanese to foreigners in filial piety, patriotism and the like, and expresses the conviction that the Japanese are in danger of losing these virtues by a slavish adoption of foreign ways.

the Methodist is monarchical and the other two are representative. The remarks which follow we understand to refer to other Christian sects as well as those mentioned above. There are sects whose leading principle is union, others whose one object is to preserve intact traditional doctrines and beliefs. There are again those whose watchword is liberty, and a fourth class consists of professed eclectics. Classified according to their prevailing tendencies, Japanese Christians have been divided into 3 classes by the *Fukui Shimō* (1) There are those who are in favour of prompt rejection of foreign aid and the immediate assumption of power by the Japanese Churches (2) There is a set of moderate quiet-going Christians who are quite content with things as they are, who see no objection to receiving whatever foreign aid may be extended to them. (3) There is a party in favour of gradual movement in the direction of independence. Among the leaders of the 1st class are Messrs. Oshikawa Masayoshi, Yebina Danjō, Iwamoto Zenuji, Yokoi Tokiwo and Miyoshi Taizō; among the second Messrs. Honda Yōichi and Hiraiwa Kempo; and among the third, Messrs. Kosaki Hiromichi, Uyemura Masahisa and Ibuka Kajinosuke. Each party complains of want of funds. The *Sekai no Nihon* gives the following figures showing the number of Protestant Christians at the close of last year. The Nihon Kirisutō-ha, 14,584; the Kumiai Church, 12,699; the Methodists 7,350 and Episcopalians 6,896.

No. 44 of Dr. Katō Hiroyuki's Hundred Short Essays, in discussing the significance of the term rational (合理的 *goriteki*), touches on religion incidentally. He says that the word "rational" has borne different meanings in different ages and that at one time the will of God alone was supposed to be the standard of right. Hence to act in accordance with it was considered equivalent to acting in a rational manner. But the world no longer takes that narrow view of things. In China and Japan the character *ri* 理 is applied to the principles and laws that govern nature. It is unscientific to imagine that ethical and religious doctrines can be logically deduced from these laws. To apply the terms as *IE Sei* (just) and *Kō* (impartial) to such laws is quite out of place. These epithets only express our own opinions about the laws and are not to be considered as describing the inherent characteristics or qualities of the laws themselves. Nature pure and simple is indifferent alike to what we call virtue and vice, right and wrong.

Successive numbers of the *Taiyō*, we observe, contain articles on "Nipponism," as explained by the *Nippon Shugi* party, of which Mr. Takayama, the present editor, has become an ardent member.

The idea that Christianity is incompatible with patriotism seems to have obtained a deep hold on the Japanese mind, judging by the number of articles devoted to the discussion of this subject in the pages of Christian magazines. In the last number of the *Shinri*, the Rev. A. Wendt goes thoroughly into the subject, quoting Germany as an instance of a country that has retained its Christianity and its patriotism.

In the same magazine the Rev. R. Minami publishes an article entitled "Ideal School of Divinity," in which he says that many of the existing theological seminaries impart no breadth of view to their students. They are made acquainted with the teaching of one special sect, but are left in ignorance of the general history of Christian thought and speculation. It is not to be expected that men with such narrow views should make successful evangelists. It is well known that Christianity gained immense power by coming into contact with Greek philosophy, that she embodied much of its teaching, and that for hundreds of years she was immensely influenced by the progress of European science and learning. Japanese Christianity cannot afford to ignore its surroundings. It will do well to allow itself to be moulded by them. The influence of Buddhism, Confucianism, and Shintō in this country is very

great. In many respects this influence can be utilised by Christianity. Science and philosophy, too, are progressing here as elsewhere and the intelligent Christian will do well to allow his views to be modified and corrected by these agencies. To shut oneself off from modern life and thought and rely on inspiration, miracles and dogma is not the way to win converts to Christianity. Even Protestant Christianity in Japan is assuming the Roman Catholic type in the matter of abstraction from the busy world in which it finds itself. Only men unacquainted with the history of thought in the outside world will be content with the reiteration of worn-out dogmas such as are drummed into the ears of the theological students from month to month. I am in favour, continues Mr. Minami, of not requiring theological students to accept any special set of doctrines, but of allowing them to explore the whole area of theology and adopt such teaching as may commend itself to their minds. It is not desirable that separate institutions for teaching theology should exist. The plan adopted in Europe and America of imparting instruction in theology at the Universities is much preferable. Theological students in Japan would be immensely benefited by breathing the free air of a University. But if this cannot be effected here, then it is advisable that instead of the sectarian seminaries that now exist there should be established one great school of divinity where instruction in all branches of theology should be given, not by the advocates of any special set of doctrines, but by learned and enlightened men of all Protestant sects. There should be no distinction made between orthodox and heterodox teaching. The aim should be to place the students in possession of what has been thought and written on all sides, and they should be allowed to form their own conclusions and eventually to adopt what form of belief they please. There are those who will object to such an institution on the ground that it would too much resemble a theological exhibition, where a variety of articles are displayed in order to attract the fancy of visitors. But the same objection applies to other branches of education. What are the majority of existing schools and colleges but exhibitions of the thoughts of learned men. The idea of having a school whose design it is to perpetrate one narrow set of doctrines to the exclusion of wider teaching can never be defended. The Dōshisha is endeavouring to combine the teaching of divinity with secular teaching. If the scope of the institution could be widened, so as no longer to be controlled by the Kumiai churches exclusively, but be thoroughly representative in character, it would answer the purpose I have in view.

THE "POLYHEMUS."

At last some information is to hand regarding the accident to the Blue-funnel steamer *Polyhemus*. Messrs. Holt's Agents in Singapore write thus to the local Press:—"Referring to the reports which have recently appeared in your paper respecting the alleged loss of the *Polyhemus*, we are indebted to the agent of the Messageries Maritimes here for the following particulars:—"It appears that the outward mail steamer *Caledonien* passed the *Polyhemus* anchored 27 miles W.N.W. of Djebel Tir, executing repairs to her shaft, and in no danger whatever. As the *Caledonien* was calling at Djibouti, where she was not likely to fall in with any other steamers, she signalled to the *Gulf of Venice*, which was bound for Perim, indicating the situation of the *Polyhemus*. The *Gulf of Venice* seems to have entirely misunderstood the signals made by the *Caledonien*, apparently having read "27 men" instead of "27 miles" etc., hence the London telegram of 11th September which appeared in the *Times of Ceylon*. The report of the loss of the *Polyhemus* is therefore quite unfounded, and she passed through the Canal between the 15th and 17th September.

PUBLIC UNDERTAKINGS LOAN.

The *Shogyo* has been publishing of late several notes on the state of the public finances, and among the various items discussed is one relating to the Public Undertakings Loan, of which so much was heard last autumn. Our contemporary re-states the reasons for this loan, and says that it was to take the form of public bonds, receipts from the sale of which were to be supplied towards paying the expenses incurred in the improvement of Government railways already established; in the construction of railways in Hokkaido; in establishing iron works; extending the telephone system; inaugurating the tobacco monopoly; carrying out coast defence, &c., in accordance with Law No. 59 of the 29th year of *Meiji*. The amount was limited to 135 millions of yen, and this was to be raised during seven years from 1896 to 1902, the bonds not to bear more than 5 per cent interest. With the exception of 3,000,000 yen placed on the market in March, the loan has not been raised in the proportions mentioned in the bill. Nor does there seem to be any possibility of the money being subscribed in Japan, capitalists preferring to put their money into speculations that give a larger return on the outlay, while smaller people hesitate to support a scheme that lacks assistance from financial circles. Yet if the money is not raised, the projects mentioned above can not be carried out. It is therefore necessary for the Government to offer the bonds for sale abroad. By so doing they could raise all the money they want at 3 to 4 per cent., for now that Japan has a gold standard of currency, her stocks are on a parity with those of gold-using countries. The day is coming when Japan must accept the aid of foreign capital and the sooner it arrives, says the *Shogyo*, the better. By getting the money from abroad, the rates of interest will be appreciably lowered, the economic and industrial activity of the country will be stimulated, and Japan will enter upon an era of substantial prosperity.

ALLEGED LOSS OF THE "GOLDEN FLEECE."

With reference to the telegram from our correspondent in Hakodate published in another column, announcing the total wreck of the sealing schooner *Golden Fleece*, we learn that other telegrams have been received, from which it would appear that the reported loss of the vessel is incorrect. Mr. J. Kernan, the owner of the *Golden Fleece*, on Wednesday evening received a wire dated Hakodate, Oct. 6th, 5.25 p.m., which ran as follows:—"Funke and eight men lost from schooner; will be here in five days." On receipt of this Mr. Kernan wired to his agent at Hakodate, who had sent the message, enquiring where the schooner was, to which he received the following reply, dated 7 a.m. on the 7th instant:—"Schooner don't know, nine men now on board *Daphne* lost, will be here in a few days." We understand that Mrs. Funke, Captain Funke's wife, also received a telegram from her husband on Wednesday night stating "all well," and that he would be in Hakodate by the 15th and asking for a passport to be sent to him. From these telegrams the owner of the *Golden Fleece* concludes that Captain Funke and the eight men referred to as being on board the *Daphne*, had been out in a boat and lost the schooner—a very easy matter in the foggy waters of the north—but not that any casualty has occurred to the latter. The *Golden Fleece*, when she left Yokohama in March last, had a crew of 28 all told, principally Kanakas, and she afterwards shipped several more men at Hakodate.

RETURN OF THE PRINCE IMPERIAL.

The Prince Imperial left Hayama at 12.20 p.m. on the 4th instant, and starting for Zushi by the 1 o'clock train, reached Shimbashi at 3.04 p.m. His Imperial Highness is said to be greatly restored in health, though he can scarcely be called robust as yet.

THE RICE HARVEST.

The Department of Agriculture and Commerce publishes statistics relating to the prospects of the rice harvest this year. They are as follow:—

Osaka—Not inferior to average.
Ibaraki Prefecture—Not inferior to average.
Nara Prefecture—Not inferior to average.
Miye Prefecture—Good.
Yamanashi Prefecture—About 1½ per cent, below average.
Shiga Prefecture—More or less below average.
Miyagi Prefecture—Not inferior to last year's crop.
Iwate Prefecture—Fully 20 per cent. below average.
Toyama Prefecture—More or less below average.
Shimane Prefecture—Twenty per cent. below average.
Okayama Prefecture—Not below average.
Tokushima Prefecture—Fully 20 per cent. above average.
Kagawa Prefecture—Twenty per cent. below average.
Fukuoka Prefecture—From 10 to 20 per cent. below average.
Kumamoto Prefecture—Fully 20 per cent. above average.
Miyagi Prefecture—From 30 to 40 per cent. above average.
Kagoshima Prefecture—Ten per cent. above average.

Summing up the table, the result is that out of 16 prefectures and one city district, the prospects are equal to or above the average in the case of ten, and below the average in the case of seven.

NAVAL RANKS.

A correspondent asks us to give authoritative renderings for the Japanese names of Army and Navy ranks from *Shōshō* downwards. If the matter of distinguishing badges has to be taken into account, no exact equivalents can be found for the Japanese terms. But inasmuch as Japan has adopted the rational method of employing the same terminology in both services, so that the difficulties of relative rank are avoided, there seems to be no reason why the following table should not be accepted as the closest possible approximation:—

	NAVY.	ARMY.
<i>Shōshō</i> ...	Real-Admiral	Major-General.
<i>Taiza</i> {	Commodore, or Post-Captain with service entitling him to rank with full Colonel.....	Colonel.
<i>Chusa</i> ...	Post-Captain	Lieut.-Colonel.
<i>Shōsa</i> ...	Commander.....	Major.
<i>Taii</i> ...	Lieutenant, with service entitling him to rank with military Captain.....	Captain.
<i>Chui</i> ...	Second-Lieutenant.....	Lieutenant.
<i>Shōi</i> ...	Third-Lieutenant	Second-Lieut. or Ensign.

JUNK SUNK IN COLLISION.

A telegram was received at the office of this paper on Tuesday afternoon to the effect that it was rumoured in Kobe that two foreign steamers had been in collision and sunk off Oshima. Upon making enquiries we were unable to discover any ground for the report, but we now learn from the *Yomiuri* that the N.Y.K. steamer *Shiganoura Maru*, Captain Y. Mura, which left Kobe on the 1st and arrived in Yokohama on the 4th instant, when nearing Cape Urakashi, Wakayama Prefecture, at about 3 o'clock on the morning of the 2nd, ran into a Japanese junk, which was not seen until she was right under the steamer's bows. The mast of the junk was carried away, and after the collision the two vessels separated. The Captain of the *Shiganoura Maru* turned his ship round and searched for the junk, but could see nothing of her, and consequently steamed on to Yokohama. Other information received from Kobe states that the junk went down and that several of the crew were drowned and others injured. It seems probable that this collision formed the ground of the rumour circulated in Kobe on Tuesday.

JAPANESE FACTS AND COMMENTS.

The total eclipse of the sun, which takes place next January, will not be visible in Japan, but can be observed to advantage from Bombay. The Japanese Government has decided to send a party of astronomers to observe the phenomenon. A grant of about ten thousand *yen* has been made for the purpose, and it is said that Mr. Terao and Professor Hirayama will be in charge of the expedition. The *Mainichi Shimbun* observes that this will be the first occasion of a regularly organized expedition's being sent by Japan to observe a total eclipse. Mr. Terao went to America in 1884 in connexion with the annular eclipse of that year, but that was a comparatively unimportant affair.

The Imperial Princess whose birth was announced a few days ago, has been named Taki-ko Sada-no-Miya.

There has undoubtedly been a great increase in the number of crimes of violence committed in Japan during recent years, and the present year is said to have been specially remarkable. From January to August, there were 15 completed crimes, and 9 uncompleted, of murder and manslaughter, and the number of persons committed for trial on the charge of murder was 33, namely, 26 men and 7 women; the number committed for manslaughter being 5, namely, 4 men and 1 woman.

On the 29th ultimo, the Tokyo Local Court reversed the judgment of the District Court in the Virgin Cigarette case, and condemned the Murai Brothers to pay a fine of 1 *yen*. The verdict was appealed against.

At no time has the municipal administration of Tokyo been so badly conducted as at present, alleges the *Tokyo Shimbun*. The condition of the roads and bridges alone is a disgrace to the capital. Vehement remonstrances have been constantly made by the press and by the public at large in regard to them, and the Municipal Council seems to have consequently felt a certain degree of apprehension. Steps are now being taken to enlist Viscount Yoshikawa among its members, so as to effect a speedy change in the administration. To that end the Viscount was consulted on the 12th and 26th September when the general meeting of the Council was held in Hoshigakoa, and as a result of the conference it was decided that a new office should be established by which affairs relating to municipal reform will be exclusively conducted.

An Imperial Ordinance (No. 333) has been issued revising the scale of travelling expenses for Government officials as follows:—

Class of expenses.	Official grades.	For railways per mile.	For ships per nautical mile.	For carriages per horse per day.
1st	Shinnin	6	7	35
2nd	Chokunin	5	6	30
3rd	Sonin	4	5	20
4th	Hannin	3	4	15
Lodging expenses.	Official grade.	Per night.	Daily allowance.	Boarding per day.
1st	Shinnin	3	2.50	1.70
2nd	Chokunin	2	1.50	1.50
3rd	Sonin	1.50	1	1.20
4th	Hannin	1	.50	.90

Travelling expenses in foreign countries are:—

Official grades.	Lodging.	Boarding.	Daily allowance.	Expenses for outfit.
Shinnin	12	1.70	6	700
Chokunin	10.50	1.50	4.50	450
Sonin	9	1.20	3.50	350
Hannin	7.50	.90	2	200
Employé	6	.60	1	100

The expenses for travelling to China and Korea are fixed at 7 *yen* per diem for *Shinnin*, 6 *yen* for *Chokunin*, 5 *yen* for *Sonin*, 4 *yen* for *Hannin*, and 3 *yen* for employés.

The approach of mixed residence, remarks the *Nippon*, has led to almost a mania for the study of foreign languages. The foreign language school established within the Higher Commercial College having been opened from the 1st September, students are constantly

pouring in from all directions. Among the applicants it seems that those for tuition in the English, German, French, and Russian languages are greatest in number, while the fewest are noticeable in Chinese and Korean. The *Kokumin Eigogakko* is reported to have already secured more than 1,000 students for principal and preparatory courses in the day and night schools.

According to investigations of the Finance Department published in the *Mainichi*, coinage in circulation at the end of August was 84,729,065 *yen*, being 699,535 *yen* increase as compared with the previous month. The following are the details:—

Coin.	End of August.	Increase or decrease compared with the previous month.
Gold	5,427,922	+ 50,045
Yen pieces	37,177,002	+ 386,186
Silver	Below 50 <i>sen</i> denomination	26,146,184 + 263,993
Total	63,323,786	+ 650,090
Nickel	6,626,303	—
Copper	9,351,052	— 600
Grand total	84,729,063	699,534

The government and bank paper in circulation on the 1st September amounted to 14,761,159 *yen*, showing a decrease of 16,113 *yen* in Government paper and of 440,412 *yen* in bank notes as compared with the previous month.

Mokpho, remarks the *Tokyo Asahi*, is to be opened to foreign commerce in a few days. It may therefore be of interest to know the classes and prices of merchandise generally in demand there. They are as follow:—

	COST P'CE.	SALE P'CE.	PROFIT.
	Yen.	Yen.	Sen.
Shirtings	4.70	4.80	10.0
" (other kind)	4.36	4.80	44.0
Turkey reds (superior)	2.50	2.90	40.0
" (inferior)	2.35	2.35	18.3
Gauze	1.17	1.19	2.2
White silk gauze	3.20	3.22	2.8
" (other kinds)	3.40	3.41	1.4
Cotton stuff, white	1.32	1.32	—
Hattan	0.39	0.56	17.0
Taffeta, red	0.34	0.44	10.3

There is a considerable demand for cotton fabrics, but as large quantities were formerly brought into the market by dealers in rice, their price is extremely low at present. Turkey reds find a good sale, first class goods in particular being most popular.

From the *Yiji* we learn that the Governor of Osaka recently summoned some influential merchants of the city to Sakai with the view of ascertaining their opinions in regard to the raising of a public loan for harbour construction. It seems that they advocate the policy of securing subscriptions from foreigners, as it is unlikely that the money can be raised by Japanese. To this end the various banks of the country are requested to act as agencies, while loan certificates of 100 *yen* face value are to be sold for 95 *yen*, so as to secure speedy subscription. The matter was submitted to the Municipal Council for discussion, and it was decided that the Public Loan Regulations should be revised so as to adapt them to the scheme now under consideration.

A special committee appointed by the Corporation of *saké* brewers throughout the empire lately held a meeting in Tokyo to discuss problems concerning the proposed increase of taxation on *saké*, the additional collection of the *saké* brewing tax, articles for security, illicit import of spirits and the business tax. The committee, according to the *Kokumin*, has petitioned the Finance Department that the term fixed for furnishing security, as well as the form of application adopted for granting a license, may be rescinded, as these restrictions have not only proved seriously disadvantageous to dealers themselves, but have also become a source of considerable trouble to Government. October is the season for brewers to purchase rice for *saké*. Nevertheless, owing to the extravagant rise in the price of grain this year, many not provided with large capital are

reported to have resolved upon suspending business until the fall of next year when they trust to be able to buy cheaper rice.

The tea trade for this year, remarks the *Nichi Nichi*, has been fairly successful. The stock in Yokohama now does not exceed 608,000 catties, while the quantity which still remains in various parts of the empire is supposed to be below 1,500,000 catties. These figures together aggregate 2,100,000 catties only. The daily sales at present amount to from 20,000 to 50,000 catties, and it may consequently be inferred that the remaining stock will be taken delivery of long before the opening of the new season next spring. Although the foreign firms in Yokohama appear to be buying at present such quantities only as will supply their immediate requirements, the stock of teas throughout the country may be cleared by the end of the year. In ordinary years, however, the market finds itself glutted with at least a million catties at the end of the season.

The abundance of timber in Hokkaido lately attracted the notice of both natives and foreigners. Lumber for railways, matches, and buildings is despatched every year to various localities in considerable quantities. The amount transported from Otaru and Mororan for the first half of this year was as follows:—

	VALUE YEN.
Otaru—For railways	355,000 logs. 124,250
" For building	37,000 koku 55,500
Mororan—For railway & building	9,979 koku 13,745

The Formosans are a hard-working people, remarks the *Yomiuri*, yet they spend all that they earn. Their most pernicious luxury is opium-smoking. Below is a table showing the quantity of opium consumed by each smoker per day:—

SOCIAL ORDER.	MAXIMUM.	MEDIUM.	MINIMUM.
	momme.	momme.	momme.
Highest	30	10	3
Intermediate	10	5	2
Lowest	5	2	1

First class opium paste costs 12 *yen* per pound; 2nd-class 9 *yen*; and 3rd-class 7 *yen*. In respect of value therefore the account stands thus:—

SOCIAL ORDER.	MAXIMUM.	MEDIUM.	MINIMUM.
	Yen.	Yen.	Sen.
Highest	300	100	30
Intermediate	75	37.5	15
Lowest	29.5	11.8	9.5

The *Mainichi* states that about 1,000 artisans employed in the kind of dyeing known as the *Fusenome* process, in Osaka, went on strike on the 27th ultimo, and are now holding secret meetings. It seems that in May these men had their wages increased by 10.17 per cent. on the plea of the rise in the price of commodities. Nevertheless, the prices of daily necessities having continued to appreciate, the men pressed their employers to raise their pay by another 25 per cent. but were totally refused. This was the immediate cause of the strike. The appreciation of commodities remarks our contemporary, has led to an unusual increase in strikes throughout the empire. A prominent company in Honjo, as well as the Nippon Railway Company, were perhaps the first to suffer the consequences of workmen's combinations now so much in vogue all over the country. Strikes are the last resource of workmen seeking redress. But they have great disadvantages, as the Occident long since learnt. Japanese workmen and their employers are learning the lesson also.

The *Yorodou* urges that that means of communication should be developed so as to facilitate the progress of the country. But no reason exists that such a step should be forwarded by means of raising the rates of postage. The Communications Department, should, before doing such a thing direct attention to the following points:—(1) The present postal machinery is full of abuses, and no expense is needed to remove them so as to set the machinery in better working order. (2) High postage rates

create serious inconveniences, and are a serious drawback. Our contemporary further alleges that the safest way of increasing the postal revenue would be to decrease the rates of postage so as to lead to an increase in the amount of correspondence.

The sale of silk has been brisk this year remarks the *Shogyo*, to a degree without parallel in the past history of the business. According to investigations recently made, arrivals and sales of silk in Yokohama this year as compared with the figures for the past five years were as follow:—

Year	ARRIVALS.		Totals.
	September.	August.	
1897	15,666	16,840	32,506
1896	11,846	12,230	24,076
1895	22,941	24,817	47,758
1894	16,987	16,485	33,472
1893	14,780	15,627	30,407
1892	17,952	15,691	33,643

Year	EXPORT.		Totals.
	September.	August.	
1897—Europe	2,505	3,372	5,877
America	2,216	4,732	6,948
1896—Europe	895	450	1,345
America	1,080	1,109	2,189
1895—Europe	4,328	4,060	8,388

STOCK.	
September 27th.	September 27th.
1897..... 10,645 bales	1896..... 23,408 bales
1895..... 16,499 "	1894..... 24,286 "
1893..... 21,142 "	1892..... 9,558 "

Thus the market has been prosperous in spite of stocks being smaller. The amount now remaining in the market is believed to be the smallest known since 1892. The brisk sale of silk this year is ascribed to the following causes:—(1) The failure of crops in Italy and France. (2) Agricultural success in America and the revival of trade. (3) Scarcity of stock in the hands of American merchants, who contracted for time small quantities only in view of the apparent standstill of the silk trade at the of the Presidential election. Fluctuations in the rates of exchange appear to have also contributed to the spurt to a certain extent.

On the 30th ult., says the *Shogyo*, Chinese rice to the amount of 6,599 bags was imported to Yokohama from Hongkong. Owing to the scarcity of stock at present, the grain was immediately sold at the rate of 3.80 yen for Tonking rice and 3.85 yen for Shanghai rice. Sales for the interior are unusually brisk, 15,000 bags having been taken to Hokkaido a few days ago by the steamers *Nagoya Maru* and *Sagami Maru* alone. The steamer *Moji Maru* is also reported to have carried a considerable quantity. The stock having thus suddenly decreased, fresh arrivals are anxiously awaited from China.

It has hitherto been supposed, alleges the *Chuo*, that the area of Hokkaido is nearly equal to that of Kiushiu and Shikoku combined, or double the area of the former. The latest investigation, however, shows that the northern territory really contains an area of 6,094 square *ri*, while the area of Kiushiu and Shikoku together does not exceed 3,797 square *ri*. This latter figure, together with 2,359 square *ri* in the newly acquired territory, Formosa, is still smaller by 78 *ri* than Hokkaido. It is therefore much nearer the truth to say that the dimensions of Hokkaido are equal to the total area of Kiushiu, Shikoku, and Formosa.

According to the *Yiji*, the Governor of Nagasaki lately issued the following notification with regard to the improvement of the harbour:—Art. I.—When the work of surveying is under taken preparatory to the improvement of the harbour, no vessel shall be allowed to lie at anchor within the limits under survey. When the dredging of the channel is commenced, ships are forbidden to sail or anchor within the

limits so specified. Art. II.—The limits and period of survey or dredging shall be notified on each occasion that the work is undertaken, while the boundaries of the portion being dredged shall be indicated by buoys.

Time and again the Opposition in the Lower House have passed a bill repealing the special municipal system now applied in the cities of Tokyo, Kyoto, and Osaka, but the Upper House has always rejected the measure. It now appears that Count Kabayama has approved a scheme having the same object in view, which will be presented in the next session of the Diet. This bill will allow each municipality to elect its own Mayor.

The tale of storm damages for the month of September increases in amplitude as news filters in from outlying districts. The ravages of floods are very serious in Hiogo Prefecture and many lives have been lost through landslips as well as by broken river embankments. Along the banks of the river Kiso, in Aichi Prefecture, the water rose to such a height that houses were immersed to their eaves: about 12,000 houses suffered this calamity.

The following comparative table is published in the *Kokumin* showing the amount of tea sold from the beginning of the season up to the 30th Sept. in the last two years:—

Firms.	1897. Piculs.	1896. Piculs.
Messrs. Mouriyan, Heimann & Co.	22,558	25,318
Messrs. Cornes & Co.	22,034	16,115
Messrs. Jardine, Matheson & Co.	17,095	22,864
Messrs. Middleton & Smith	14,326	9,533
Messrs. Averill & Co.	8,451	11,302
Messrs. Mollison & Co.	424	674
Messrs. Bernard & Co.	4,958	—
Messrs. Brandenstein & Co.	9,701	7,270
Messrs. Smith, Baker & Co.	26,503	30,278
Messrs. Reimers & Co.	81	—
Messrs. Fraser, Farley and Varnum	6,621	7,270
Messrs. Hunt & Co.	22,472	23,942
Eastern Japan Trading Co.	12,542	11,186
Messrs. Hellyer & Co.	16,076	15,855
Tea Manufacturing Company	8,162	8,620
Japan and Oriental Company	8,737	5,979
Other firms	448	2,067
Total	201,189	198,096

Mr. Miura, says the *Tokyo Asahi*, lately published a second volume of his "National Defence," in which he asserts in most emphatic terms his opinions regarding the incompetence of the President of the Bank of Japan, as well as the propriety of investing exclusively in the Government the right of issuing convertible notes. According to Mr. Miura, the report published by the Bank last year was as follows:—

	Yen.
Reserve security.....	85,000,000
Loans to Government	22,000,000
Notes issuable by withdrawal of bank-paper	19,616,274
Foreign exchange bills discounted	10,000,000
Balance applicable to issue of ordinary loans and discounts	33,383,726
Average amount unused in the vaults	16,137,260
Balance	22,770,000
Interest at 6 per cent. per annum	1,366,200
Profit on discounted bills of Specie Bank (7 million yen being taken as average)	140,000
Total of last two items	1,506,200
From this is to be deducted—Loss resulting from dealing with Treasury accounts	200,000
Expenses in dealing with convertible notes	200,000
Loss in connection with public loan bonds	1,077,880
Balance (net profit)	29,112

Thus, though the profits of the Bank of Japan do not exceed thirty thousand yen, it has to bear the responsibility of adjusting the accounts of the Treasury, and Public Loan Bonds, and matters connected with the conversion of paper, with the withdrawal of bank notes, and with the deposits

of the Finance Department. It is easy to perceive that transactions of such a nature and of so great a variety can in no way be conducted at a profit. The Bank of Japan itself recognises the difficulty: Turning his attention to another point, the writer finds that, of 26 millions of yen in its possession and of one million yen held as a reserve for making discounts on foreign bills, 3 millions, together with 16 million yen which ought to be preserved in the vaults, are actually being appropriated for purposes other than those legally prescribed, and that a profit in the form of interest is, on this account, realized to the amount of at least 1,200,000 or 1,300,000 yen. For these reasons the Government ought, by granting a subsidy of 30,000 yen to the Nippon Ginko, to take from it the right of issuing convertible notes, and to establish instead a special office for the issue of notes under the same responsibility as that which was imposed on the Bank, so that loans to various banks may be directly negotiated and the circulation of money facilitated.

The Department of Agriculture and Commerce, according to the *Tokyo Asahi*, sanctioned the applications received from Saitama and other prefectures by which the shooting season is prolonged from October 1st to April 30th. This adds twenty-nine days to the season.

The *Tokyo Shimbun* publishes the following paragraph under the heading "Intrigue of Count Okuma's Party:—Count Kabayama seems to have been entirely duped or ensnared by Mr. Tokutomi. The Count is now a different person from what he formerly was, having completely lost his rustic simplicity. He is but a buffoon in the political world, and is considered as no match for Count Okuma, by whom Viscount Takashima alone is regarded as a "wen above the eye." The leading members of the Progressionist Party recently held a meeting and resolved upon presenting, at the outset of the 11th session of the Diet, a question regarding Formosa, by which they may be enabled to bring disgrace upon the Viscount. Should the scheme be successful, no one in the Government can offer any effectual resistance to Count Okuma, who may thus be enabled to occupy the post of Premier, to the exclusion of all the elements of Satsuma. Viscounts Tani and Soga will of course join a Cabinet so composed. Such an intrigue, alleges the *Tokyo Shimbun*, is now being carried on. We (*Japan Mail*) need scarcely remind our readers that the *Tokyo Shimbun* is an Opposition journal,

New gold coins to the amount of 940,000 yen having been paid out from the Treasuries throughout the empire, on the 1st instant, and 68,000 yen from the Bank of Japan on the 2nd, the whole amount exchanged for silver and notes may be estimated to have reached 1,500,000 yen during the two days. In Yokohama and Kobe, however, several millions of yen in lump sums have been presented by foreigners for exchange, and it may confidently be supposed, remarks the *Mainichi*, that the aggregate amount of coins exchanged up to the 4th instant was not less than 15 million yen, of which a large proportion, paid to foreigners, was undoubtedly shipped abroad, while the amount in the hands of natives is not likely to be brought into the market for some time. From these facts it may be inferred that the volume of currency has been diminished by at least ten millions of yen. Whether the prices of commodities will fall or rise hereafter is a question which requires the fullest consideration of economists. We (*Japan Mail*) give these figures for what they may be worth.

It is universally supposed that the enforcement of gold monometallism will have the effect of injuring the spinning industry. Such a supposition, however, is incompatible with our own views, asserts the *Kokumin*. Spinning, far from being crippled by the alteration of the monetary standard, is likely to grow more prosperous. The reasons are obvious. In the first place, it may be remarked that this industry having not yet reached perfect development in

Japan in regard to the use of machinery and materials, steps towards improvement may secure an additional profit of five or eight per cent. on the total manufacture. Secondly, ample experience has been acquired in the purchase of cotton, and it may be applied for practical purposes in future with greater facility. Thirdly, the manufacture of fine yarns may be undertaken for export to China, which is now chiefly supplied by England. The import of fine yarns from England into Japan amounted in 1895 to 13,247,216 catties, valued at 6,688,066 yen, and in 1896 to 19,157,711 catties, valued at 11,093,486 yen. Such being the case, ample prospects of success exist for this industry if efforts be made for its improvement.

KOREAN AFFAIRS.

It would seem that there has been a complete re-shuffling of the political cards in Sōul, but what influences have directed the deal must remain for the moment a mystery. Some critics interpret the situation to mean an anti-Russian movement. We can not see that there are sufficient grounds for such a supposition. The Koreans are not likely to remain constant to Russia longer than they have remained constant to any of their friends in the past. Constancy, indeed, does not suit them at all. They find their account in change and commotion. That there have recently been symptoms of a growing repugnance to the supremacy of Russia's influence appears beyond question, and it is not impossible to conceive that such symptoms should have culminated in one of the familiar epidemics of intrigue and even disturbance. But had there been any momentous change in the political situation, official telegrams would doubtless have reached Tokyo. The fact that they have not been sent, is significant. We may remark, here, that any one inferring the state of affairs in Sōul from the tone of the Japanese press, would picture to himself a greatly perturbed Cabinet, and a long stormy discussion over the question of Russian drill instructors. Such an impression does not accord with our own idea of the situation. Japan would doubtless have preferred that Russian drill instructors should not be employed by the Koreans, but if Japanese statesmen attached very grave importance to such an issue, they must be more romantic than practical. A dozen or two of Russian drill instructors—we do not, of course, speak in any disparaging sense, the question of nationality being merely incidental—count for little as a body of men, and the results likely to be achieved by them in training Korean troops need not disturb Asia in the smallest degree. We do not imagine that the sober section of Japanese politicians have been tearing their hair over this matter, or that notable pressure has been exerted in Korea to prevent the employment of the Russians; neither do we think that the journalistic talk of Tokyo has been at all an accurate echo of political discussions in Sōul. In fact, it is difficult to detect any grains of truth in the assertion that the employment of the Russian drill instructors remained for a long time in abeyance. Their engagement was an accomplished fact before the signature of the Lobanow-Yamagata Convention, and when they arrived in Sōul a few months ago, not the slightest doubt can have existed that their services would be utilized in the manner originally agreed upon. If we speak of the Lobanow-Yamagata Convention in this context it is not because we ascribe to that singular document any validity for the purposes of such a discussion. The Lobanow-Yamagata Convention does not seem to us to be worth much more than the paper on which it is inscribed. Either Japan or Russia could drive a coach and four through it without disturbing its provisions perceptibly. But Japanese journalists have been pleased to attach much value to its spirit at any rate, if not to its letter, and have been content to think that a special conference with the present Russian Representative in Tokyo must precede the employment of Russian drill instructors by Korea. That misconception is now pretty thoroughly dis-

pelled. From the moment that Russian officers and non-commissioned officers arrived in Sōul, there was not the remotest chance of their going home again, *re infecta*. But Japan may regard their doings with equanimity. The Koreans will tire of them as they have tired of everything that makes for public order and the discouragement of intrigue and corruption.

Consul-General Jordan's report of Korean trade shows the following figures for the total trade of each year during the past five:—

Year.	Dollars.
1892	9,669,400
1893	7,986,840
1894	11,057,891
1895	12,884,232
1896	12,842,509

Speaking of Exports, the Consul-General says:—

It is barely ten years since the Korean farmer first realized that his surplus stock of beans, instead of being allowed to decompose, could be shipped with profit to a foreign country, and as there is still no lack of waste land suitable for the cultivation of the plant, the only limit to the supply will be the demand in Japan, where the land formerly devoted to bean cultivation is, it is said, being gradually utilized for more profitable crops. Contrasted with Chinese husbandry, Korean tillage is carried on in a careless and haphazard fashion, and hill sides which in China would be terraced with cultivation, are in Korea allowed to run waste. Beans flourish on poor soil, but the question of transport naturally militates against their extended cultivation in parts remote from waterways. It is, however, as a rice growing country that Korea is taking rank amongst the grain producing nations of the East, and becoming to a large extent the granary of Japan. Last year's export of the article was considerably over 250,000 sterling, and represented more than half of the total export trade of the country. In addition to the abnormal Japanese demand, there are other and more permanent causes which contributed to this expansion. One of the salutary changes recently introduced is that the land tax is to be paid in money and no longer in kind, and, as a result, the grain which was formerly diverted from the ordinary channels of trade by being conveyed to Sōul, is now released for export abroad. Another impetus to the trade is the establishment, under American and Japanese auspices, of steam mills with machinery and appliances for cleaning and hulling the rice.

A professed teacher of Christianity in Chemulpo, named Kang Dosa, was found eloping with another's man's wife a short time ago. He received a flogging at the police court.

Steps are being taken to organize the customs at Mokpo. Mr. W. Armour, who has been for several years in the customs service in China and Korea, will be in charge of the Mokpo office.

A Fusan correspondent of the *Independent* confirms the statement that the Russians have established a coaling station on Deer Island. He says that a Russian gunboat arrived there at the beginning of September, and "took as much land as they wanted," but how it was taken the correspondent does not explain.

In ante-bellum days one of the curious institutions in Korea was a "Peddlers' Guild," consisting of some 30,000 members, whose chief occupations are understood to have been the robbing of farmers and the stirring up of rebellion. One of the first reform measures adopted, when reform derived some vitality from Japanese influence, was the abolition of the Guild. It has now been resuscitated by order of the Home Department. However, there seems to be a difference of opinion in official circles, for on the very same day that the Home Department notified Governors of provinces to re-organise the Guild, the Department of Agriculture and Commerce notified them to prevent anything of the kind.

Concerning the drill operations of the Russian instructors, this is the latest:—"The War Office ordered the five regiments last Tuesday (Sept 25th) to select two hundred men from each regiment, making in all one thousand men, and send them to the drill ground before the

Kyengbok Palace every day to be drilled. The men will be selected in a few days and it is reported that this new regiment will ultimately be made the 2nd regiment of the Royal Body Guards."

CHINESE NOTES.

It is reported that a German mining engineer has found a rich mineral deposit—the name of the mineral is not mentioned—at Paimio in Tientsin prefecture; that a considerable sum of capital has been subscribed to develop the mine, and that the finder has proceeded to Germany to buy machinery.

Hunan, generally spoken of as the most conservative part of China, is now distinguished by having an electric light company in its capital, Changsha. The Governor's *yamen* has incandescent lamps, and there is a 2,000 candle "moon" at the gate. The charges are high, however. They vary from 750 to 25,000 cash per month for all night lamps.

Heavy rains at the beginning of September injured a large portion of the foundations of the Shihmên bridge on the Tientsin-Shanhaikuan Railway, but Mr. Kinder, with a big force of navies repaired the damage in 24 hours.

For purposes of future reference it may be well to note that the Tientsin-Peking Railway is called the Tsin-lu line, in China; the Tientsin-Shanhaikuan Railway, the Tsin-Yü; and the Railway to be made beyond the Great Wall into Manchuria, the Kuan-Wai.

Mr. Wellesly Parker, the gentleman who recently visited this settlement with his scheme of an "Artistic Yokohama," is now in Shanghai, where he has had the fine assurance to announce that he received in Japan "the special assistance of the Japanese Government and the gentlemen representing Great Britain, the United States, France and Germany." It is a dangerous thing to give an inch to a gentleman of Mr. Wellesly Parker's methods. The Shanghai residents may be interested to learn that Mr. Wellesly Parker did not receive the special assistance of the Japanese Government or of any of the Representatives referred to.

We take the following from the *N.-C. Dai'y News* of Sept. 20th:—

On Saturday (Sept. 18th) Mr. Frosell, the agent of the Jameson-Hooley syndicate, absolutely settled with H.K. Sheng the loan for £16,000,000 on the conditions previously arranged in Peking, except that the discount is to be £94 instead of £95. The contract as drawn up by Mr. Platt, of Messrs. Johnson, Stokes and Master, is business-like and satisfactory for both sides, and the security given is considered ample. The sum of £9,000,000 is all ready in London to be handed over to the representative of the Chinese Government, and the balance will be paid before the 20th of December next. Mr. Frosell has secured the construction and financing of the railway that is to run from Shanghai through Soochow to Nanking, and the ultimate extension to Honan, besides the line from Soochow to Hangchow, and there are prospects that this will include, conjointly with the Chinese Government, the exploitation and development of coal deposits which are known to exist in Honan. It is expected that Major J. Eustace Jameson, M.P., will arrive in China early next year accompanied by a staff of English engineers to survey the country, and arrange all the details for properly carrying out the whole scheme in which the syndicate is interested. Mr. Frosell and his Secretary, Mr. T. Arnold, with Mr. Platt, leave for Peking tonight in the steamer *Amping*, which has been placed at their disposal by H.E. Sheng. They will be accompanied by Mr. Chu Pao-fay, the Chief Secretary of Railways, who has been closely connected with the negotiations throughout, and who proceeds to Peking at the special request of Li Hung-chang and Weng Tung-ho, for the final ratification and the Imperial edict approving of the loan. When at Peking Mr. Frosell will at once deposit the sum of £100,000 with the Government as a guarantee for the observance of the various payments as agreed at the due dates. Mr. Frosell, and all concerned with him in negotiating this loan, may be sincerely congratulated on com-

pleting a most important business transaction with the Chinese High Authorities with a celerity that is perfectly marvellous considering the usual methods of this country.

"According to a letter received from a correspondent at Kirin," says the *N.-C. Daily News*, "a telegram had been received by the Governor-General from Vladivostok under date of the 1st instant, advising that the construction of the Chinese Eastern Railway, section 761, was officially commenced on the 28th of August in Chinese territory near Poltava, to the westward of Vladivostok, in the presence of the Russian Governor-General Soubtasch and Chinese Mandarin Tai, and other Russian and Chinese officials. According to the latest plans the railway will not touch Kirin, as apparently it is not the object of the Russians to open up Manchuria, but to find a convenient terminus for their line. The name given to the line—the Chinese Eastern Railway—means nothing at all, and to all intents and purposes it is the Russian Manchuria Railway, and will probably be generally known by that denomination."

The magistrates of Hengchon in Hunan, at the instance of a Chinese evangelist, Mr. Peng, have issued another proclamation calling upon the people to welcome foreigners. The document dwells strongly on the fact that any display of rudeness or violence towards foreigners is in reality a display of disloyalty towards the Emperor, who has ordered that they shall be treated hospitably and kindly. There is one clause in the proclamation that would be very useful in Japan also:—"Young boys and children also should be taught and kept within bounds by their parents and elder brothers, for the former have often been the cause of many riots. Boys and children are in future to be prohibited from collecting in crowds and following at the tail of the foreigners, making great noise and displaying unruly antics as they have hitherto done."

The Empress of China has again refused the Emperor's proposal for a grand celebration of her 63rd birthday, but has consented to a partial decoration of Eho Park next November. Her Majesty's ground for refusing is that the State is not sufficiently prosperous to allow such expenditures.

In spite of official denials recently made, it appears certain that a lad of eleven years of age is held prisoner in Soochow for accidentally killing his mother, and that he will probably be beheaded.

"A sad accident," writes the Nanking correspondent of the *N.-C. Daily News*, "occurred in the fort on the Mofushan hill, east of the steamer-landing on the 21st of September. Gunner Schneitz, who has been the Instructor in this fort for more than two years, was attempting to use the large forty-pound cannon in rainy weather as a drill for his men. The electric fuse for some reason held fire and Mr. Schneitz opened the breach to examine the cause. He attempted to rub the end of the shell to brighten it so as to allow the electric current to pass freely, when suddenly the cannon exploded. It is thought that in some way he must have formed a complete circuit for the electric current through his body and thus have set the cannon off. The poor man's body was fearfully mangled, one side being completely torn away and the neck broken by the shock. Dr. Beebe was called by the official in charge, Captain Fung Kuo-ze, and prepared the body for burial. Mr. Schneitz had lived alone on the hill, which is quite a distance from the city, so that he was rarely seen by the residents here. It is not known that he has any living relatives, but a friend of his from Chinkiang has been telegraphed for to attend his burial. Mr. Schneitz was a German by birth but had served his time in the American Navy, so that it is not yet known in which country he claimed his nationality."

NEWS OF THE WEEK.

We have received a cheque for *yen* 10 from Mrs. J. Gooderham, which she wishes us to transmit to the Rev. James Petee to be applied to the rescue of the woman of whom he wrote to us last month.

Mr. Sloan, son of Dr. Sloan, of Shanghai, is reported by the Canadian Press to have made a haul of \$50,000 gold dollars at Klondyke. Mr. Craig, brother of Mr. H. J. Craig, of the Sun Life Insurance Company of Canada, at Shanghai, has sold one-half of his land in Klondyke, for \$80,000.

The steamer *Tokai Maru* of the Nippon Yusen Kaisha presented a report to the Yokohama Water-Police on the 4th inst. to the effect that while she was on the way from Yokkaichi to Yokohama on the 30th ult. about 3 p.m. she sighted the wreck of a schooner drifting about off Oshima near Izu Peninsula.

Training is proceeding in a most business-like way at the race-course, and considering the bad weather experienced throughout last month, the ponies are looking fit. Some good racing may be anticipated. Two ladies were among the company that rode up to the course this morning to view the proceedings.

A coolie at Kandal, India, whose wife gave birth to triplets the other day, went to the Municipal Office in tears to give information of the fact, stating that he was at a loss to know how to feed them on Rs. 5 a month. A day or two later, he announced, with a smile, the glad tidings that all the three children had died.

The Solicitor General of Ceylon sent in a very short annual report, pleading Jubilee duties for its brevity. The Government has given him another month to complete it, seconding him for that purpose. A Ceylon contemporary says "the seconding of an officer for the purpose of writing his own report—that is of doing his duty—is a new procedure. But what about the salary?"

The natural operation of the law of supply and demand has wrecked one market in India. The Government placed a price on snakes, and the untutored Indian forthwith set himself to meet the demand by breeding snakes in earthen pots and producing them when they reached marketable size. The Government has now withdrawn the reward, and a promising Indian industry is ruined.

On the 9th Sept. an American gentleman named Mr. Carroll, who had arrived from Japan and Hongkong by the *Kaiser-I-Hind* on the previous day, fell over a balcony in the Grand Oriental Hotel at Colombo, and fractured his right leg in several places. The limb was amputated at the knee. Mr. Carroll, who is only 25 years of age, was on a pleasure trip round the world. It is believed he was walking in his sleep when the accident occurred.

Between 11 and 12 o'clock last night fire broke out on board a lighter owned by Messrs. Helm Bros., which was lying outside the English hatoba, loaded with cases of alcohol. A gang of *sendoes* and coolies very soon got the burning craft into an isolated position just inside the entrance of the hatoba, where a plentiful supply of water soon extinguished the flames. The lighter itself, a craft of 30 or 40 tons, received little damage, but most of the cargo was destroyed or damaged.

We are informed by the local Agent of the Chartered Bank of India, Australia and China that he has received telegraphic advice from the Head Office of the Bank in London to the effect that at the approaching meeting of shareholders of this Bank, the Directors will recommend a dividend for the past half-year at the rate of 8 per cent. per annum free of income tax.

The N.P. steamer *Columbia* left Kobe last Wednesday for Nagasaki, says the *Higo News*, and encountered the storm that reached Kobe the

same night. In the midst of the heavy gale the interesting event of a birth occurred on board—the new arrival being a girl. Dr. Field paid mother and daughter assiduous attention, and both are doing remarkably well. In honour of the unusual occurrence and in memory of the kindness shown to her the lady has promised to bestow the name of Columbia upon the baby.

The German colony at St. Petersburg has decided to erect a home for aged people as a memorial of the recent visit of the Kaiser in that city. The Home is to provide comfortable rooms for forty persons.

The German commercial Commission lately touring through China have reported at home that there are now 99 German firms engaged in commerce in the Middle Kingdom, who have 870 men from the Fatherland in their service. German merchants are steadily pushing their interests in the big empire.

News comes from Lombok, says the *Strait Times*, that Mr. Van der Hout, the Dutch Controller at the village of Sisela, has been murdered by insurgents. Another Controller was wounded. The Resident called troops out, and summoned the insurgents to surrender. On their refusal, the village was stormed and burned. Twenty-five of the insurgents fell. The Dutch loss came to one killed and three wounded. The cause of the rising is not known.

In the United States Consular Court, on Tuesday, John MacDonald was charged by the Japanese police, before J. F. Gowey Esq., Consul-General and Judge, with being drunk and disorderly in the public streets on the 1st inst. Accused, who, it was reported was a deserter from the U.S.S. *Boston*, was convicted and sentenced to 30 days' imprisonment and a fine of \$5 and costs, and an order was made by the Court that the U.S. Naval Authorities be informed of the fact of the prisoner's desertion.

The body of a *sendo* named Matsumoto Rinzo was picked out of the water near the English hatoba early on Monday morning. Upon enquiries being instituted by the police it was discovered that the deceased had been employed on the lighter belonging to Messrs. Helm Bros. on which the fire occurred on Friday night. It appeared that the man had been drinking freely from one of the tins of alcohol on board the lighter and had in some way set fire to the cargo, whereupon he had taken to the water and been drowned.

The efforts of the Rev. T. H. Le Bœuf, rector of Croyland, near Peterborough, in connection with the preservation of Croyland Abbey, familiar to readers of Charles Kingsley, are meeting with deserved success. The new east end of the Abbey Church is well-nigh completed, and Holy Communion has been administered therein. In an appeal which the rector makes on behalf of the ancient Abbey Church, the fact is recalled that it was on St. Bartholomew's Day, 699 A.D., that St. Guthlac landed on Croyland Isle, nearly 1,200 years ago.

The *China Mail* is sorry to hear that a considerable amount of sickness has occurred amongst the crew of H.M.S. *Undaunted* during the past month or more, and that at present the number of fever cases is abnormal. It was unfortunate that a new crew should have been brought out to endure a Hongkong summer during the re-fitting for the new commission, and it would be astonishing if the men escaped fever after going between the *Tamar* and the *Undaunted* in an open boat without an awning every day at tiffin time. The *Undaunted* will not be sorry when their ship is ready for sea.

The Kobe Eleven that is to meet Yokohama next week in the Annual Interport Match will probably consist of Messrs. W. D. S. Edwards, J. Scrymgeour, F. E. Barto, M. B. Godrij, S. E. Lucas, W. Braess, G. Braess, Matt. Smith, R. E. Gill, G. C. Pakenham, and A. L. Robinson (or Buckley). The names of at least three well-known players, the *Kobe Herald* says, will be missed from this list, but their absence is unavoidable owing to business engagements,

etc. Most of the team will probably go up by the *Peru* on Friday, and the remainder by train on Sunday morning.

It is stated in German papers just to hand that Prince Bismarck, when asked by visitors for his autograph, presents them with a chip of wood fashioned like a visiting card upon which is written, "Zur Erinnerung an den 5th August, 1897, von Bismarck." The wood comes from the Prince's forest, the Sachsenwald.

Mr. Samuel Bryant Rowe, architect and surveyor of Kobe, having been declared bankrupt by the official receiver, Mr. Hobart Hampden, appeared in the British Consular Court at Kobe on the 4th inst., to undergo his public examination before Mr. J. C. Hall, sitting as Registrar. The official receiver stated that practically Mr. Rowe appeared to be a cypher in his family, Mrs. Rowe accepting liability for his debts. In the course of his examination the debtor stated that he had no creditors before the award in the recent arbitration case was made. He said he had neither sold nor given away any of his property in order to defraud creditors; he had handed everything over to the Official Receiver. His assets he set down as \$107.87. He attributed his insolvency solely to the arbitration award, which charged him with certain debts of which he had had no previous knowledge. The items having reference to the award in the list of debts were arrears of salary due to Miss A. E. Sowter and Miss E. Sowter; sundry items expended in Melbourne and the voyage to Japan; \$800 charged for his board and lodging at the Kobe High School; \$1,140 for the board and lodging of his children for twenty months; and the costs of Mr. Skinner and Mr. Crosse. The debtor stated his liabilities to be \$2,700. He had no property in Japan and had only acquired \$125 since his arrival in March 1895, as payment for drawings for the German Club premises. He did not own any of the furniture in the Kobe High School, and was not a partner in the school. The rent and outgoings of his own office were paid by Mrs. Rowe. He was now living in a house which was taken in his daughter's name. She was a few months under age, but though he was her natural guardian, he would not think of enforcing any control over her. She was running the school on a small capital which she brought from England with her. The examination was eventually adjourned until the public examination of Mrs. Rowe.

A BOMB ON THE TOKYO TRAMWAY.

At 7 o'clock on the evening of the 3rd inst., as a tram-car was proceeding towards Ueno from Hirokoji, the wheels passed over a small object in Nakacho, and a violent explosion immediately occurred. The car was filled with smoke, and for a moment much alarm was felt, but it was found that happily no one had been injured. Investigation showed that three little tin cylinders had been placed on the line, and on being submitted to an expert, they were pronounced to be signal detonators, for use on a railway to warn the driver of a train that danger was ahead. No such detonators have ever been employed in Japan, but it seems a reasonable supposition that they must have been in the possession of some one connected with railways. As yet no clue to the perpetrator of such a mischievous practical joke has been discovered.

MR. AKIYAMA.

Mr. Akiyama, Counsellor of the Foreign Office, who recently attempted to take his life, is now declared to be out of danger. The cause of the rash act remains a mystery. It is known that Mr. Akiyama wrote a short statement of his reasons, and that the document is now in the possession of his family, but its contents are kept secret. The general impression is that some comparatively trifling incident presented itself in an exaggerated aspect to Mr. Akiyama's mind.

CORRESPONDENCE.

"CIVIL GOVERNMENT AND ROMAN CATHOLICISM."

TO THE EDITOR OF THE "JAPAN MAIL."

DEAR SIR,—It is through no discourtesy to Mr. Pettier that my reply to his letter of the 13th has been so long delayed. I did not see the paper in which it appears till this moment. He is inclined to think that I am "of a kind of upside-down turn of mind." Very well. I am now with the down side up. I have said in my tract that the ingenious interpretations Romans give (in pressing circumstances) to the dogmatical tenets of their church often blind the mind to the true inwardness of their meaning. Mr. Pettier's letter is an illustration in point; but I shall show that when his perambulations are ended and their gauze of sophistry is removed, he appears at the very point where he don't like just now to appear.

I should remark right here that not a single quotation I have made, not a single argument or reasoning I have presented in my tract, has been set forth by him and denied. Then what has he been writing for? I have called on him, as well as on the invincible *A. Wac*, to state if he believed the quotation I made from Pope Pius. But instead of meeting the issue briefly and fairly, as he should have done, he has chosen to write two columns of Brevier. But he says he does assent to it, "in the sense meant by the Catholic Church."

The question of the Pope's supremacy over the civil law in case of conflict ("mixed questions"), is based on the doctrines of the Pope's infallibility. This is the clear import of Mr. Pettier's contention. It is the clear teaching of Cardinal Manning. Upon the discussion of this utterly unscriptural dogma I will not now enter,—except to refer to Mr. Pettier's statement which involves a point in regard to it. In referring to the other gentleman's question, "Is the Pope supreme?" under another form, and his reference to the "Syllabus of Errors," Mr. Pettier says he assents to it "in the sense meant by the Catholic Church." Now what is that sense? The Pope, the only infallible teacher on earth (!), has never said what it means. For example:—

"In the case of conflicting laws between the two powers (State and Hierarchy), the civil law ought to prevail."

Now this, according to Pius IX, is an error. Papists must not believe such a thing. I say that the statement would cover the civil decree for the demolishing of a Roman Cathedral for the purpose of erecting a Government school. It might not be the wish of the congregation to move out of the building. The Pope's voice must be heard in the matter, just as it was heard a few years ago in France on a similar matter. Suppose Mr. Pettier denies that my case is covered by the "Syllabus." He is fallible: so am I. But the "Syllabus" is an infallible utterance. Mr. Pettier says he accepts in the sense the Pope intended; and further says that my case is not relevant to the "Syllabus." But as the infallible Pope has not revealed the sense or scope of the error, and Mr. Pettier is just as fallible as I am, who on earth can decide between us? And suppose we leave the matter to the infallible Pope. We are no better off; for his second infallible dogma may be just as incapable of comprehension as the first.

Surely Mr. Pettier must see that in any case the final action of the individual is made to rest on how *he himself* understands the Pope's utterances. And as every communication to the human mind must filter in through the weakness and corruption of mental faculties, the infallible Pope's utterances are rendered exceedingly fallible by the time they reach the citadel of human responsibility. I close this reference with a quotation from my pamphlet:—

"This is one dogma which is declared in unequivocal language. The Pope, when speaking *ex cathedra*, on faith and morals [75 per cent. of our actions, according to the Matthew Arnold, belongs to morals] is incapable of error; and his teachings are irreformable; and should any presume to deny this dogma, he is cursed."

"What does this *ex cathedra* mean? No accepted definition has ever been given; and until it is decided by the Pope what it is, no one can ever know exactly; for there are several theories knocked about among Romish theologians. But the Pope's definition of it can only be infallible and accepted when he speaks *ex cathedra*. So he is left to his fallible and reformable private decision in defining when he shall speak infallibly. But it has been decided that no document the Pope issues shall be valid without his seal; hence, herein, in the Pope's person, must rest the secret of *ex cathedra*. The seal remains under his lock and key."

If this absurd doctrine (absurd because *infallible* Pope has contradicted *infallible* Pope) and utterly unscriptural, is not a prostitution of the human mind, what is it? But enough for the present.

Let us look now at Mr. Pettier's interpretation of the scripture, "Render therefore unto Caesar the things that are Caesar's; and unto God the things that are God's." Reasoning upon this, he concludes that the spheres of the civil and religious authority are distinct, and that they have no right to trespass upon each other. "Each of these two powers is, in its own sphere, equally independent, equally supreme. No one can interfere with the other's affairs." Correct if you mean the church we read about in the New Testament; but not according to the highest Papal authority, if you mean by "church" the Roman Hierarchy. This I will now show. Mr. Pettier here makes a clear issue, but quotes only two and rather obscure, Papal authors,—Cardinal Tarquini and Pope S. Gelase. The point which he wishes to establish by these authorities is that the Church (the Hierarchy mark you: there is no other church!) has absolutely nothing to do in merely temporal affairs. He prefaces this point with the above quotation of Scripture, and concludes:—"It is not true, therefore, that the Church is antagonistic to the State and shows a tendency to encroach on the civil power."

Here I join issue with Mr. Pettier, and take him likewise to a passage of Scripture and the Papal interpretation thereof. The proof text on which Papists base the claim to civil authority is not the one quoted by Mr. Pettier, but the following: "And they said, Lord, behold, here are two swords" (Luke XXII. 38). A later infallible (?) Pope, Boniface VIII., 1295, in his famous Bull to Philip of France interprets that text as follows:—

"The apostles said: 'Here are two swords,' and the Lord did not answer: 'There are too many,' but 'It is enough.' He who denies that the civic sword (civil authority: the Pope at that time was head of a civil government in reality) is in the hand of Peter, disregards the word of the Lord: 'Put away thy sword.' Both swords are given to the Church, the spiritual and the civic. One is drawn for the Church, the other by the Church. The one is in the hands of the Priests, the other in the hands of the Kings and warriors; but the latter may use it only according to the will of the priests and only as long as the priests permit it."

March up Mr. Pettier, and tell us if this is infallible. What does it mean? Please attribute to your opponents intelligence enough to understand plain language. Show us wherein the above is not encroachment upon civil power? It appears that in the Hierarchy there are two sets of priests, one to affirm a Papal dogma, the other to deny it when circumstances compel. In fact in this way lying is permitted by the Romish Church. Does not Mr. Pettier know that the Popes have time and again encroached upon the civil power by depositions and absolutions. For example, Robert II, of France, the two Napoleons, Victor Emmanuel, and others. And look, sir, at Papal Ecuador to-day, where a Protestant, simply because of his religion, is not considered a citizen. And now, here in the light of the civilization of this century, if Rome never changes, the Emperor of Japan would be deposed and his subjects absolved from their allegiance, if the Papacy had the ascendancy in this country.

Mr. Pettier's statement that the Papacy is not antagonistic to the civil government is untrue, judged by the highest Papal dogma and by the world's history in which Rome has figured. Further, in what he calls "mixed questions," where the State and Church conflict, he comes squarely out and says that the civil power must yield. These "mixed questions" pertain to "temporal matters." In sustaining this point he quotes Acts. VI. 29, "we must obey God rather than man," and applies it to a conflict between civil authority and one's religious duty. The text does not refer to civil authority at all. His interpretation is a Papal perversion of a plain text. The conflict existed between religious duty of the Christians on one side and the religious traditions of the Jews embodied in the Sanhedrim before whom the disciples were brought. Is Mr. Pettier so ignorant as not to know that the civil government was in the hands of the Roman rulers? The Imperial Government relegated the jurisdiction of religious questions to the Jewish Sanhedrim. In the case of Gallio, Acts XVIII. 15. And when the disciples said, "we must obey God rather than men," they meant that they must obey the divine, infallible word of God rather than the religious traditions and perversions and dogmas of man of sin. (see Thesis). Another author called in to bear up Mr. Pettier's sinking craft is the "great American philosopher

Brownson" (Catholic?). The gist of this "great American philosopher's" argument is, that in case a civil law is thought to be unjust, as the presumption is in favour of the law and as the individual citizen cannot on his own private authority disobey, and as neither he nor the State can decide the matter, it must be decided by an authority higher than either the individual subject or the State. The Scriptures cannot decide if interpreted by the individual. Therefore the Romish Hierarchy must be superior and decide. This is the exact meaning of the "great American philosopher's" profound logic, and the keystone to it is that the individual has no right to think for himself ("Private judgment, which gives everyone the right to think for himself.") A baser, more dangerous principle, was never formulated; but such is Rome. Look at the "great American philosopher" again. "Who is to determine whether the law is just or unjust," says the "philosopher?" Who even at first suspected that it was unjust? It was the individual in the God-given right to exercise his reason and judgment (1 Cor. i: 10, 1 Pet. iii: 15, addressed to the individual disciple. See the whole N.T.) And even when the Pope decides a matter, it is still an individual decision, supplemented by a non-scriptural presumption that he is infallible.

Again, since this is a "mixed question" in which the powers are at variance, part pertains to the State and part to the Church. And since, according to Mr. Pettier's bold and popular declaration, one power cannot trespass upon the other, it would turn out that in a "mixed question" neither the State nor the Church could decide! Then who on earth can decide? When the devious paths of the Papacy are followed out they lead to self-annihilation.

In closing, I wish to state that when Mr. Pettier says that "the Church (has) absolutely nothing to do in the merely temporal affairs," he endorses the following error condemned by Pius IX: "The Church has not the power of availing herself of force, or any direct or indirect temporal power." And this dogma of the right to temporal power is in direct violation of the Saviour's words not to resist evil.

In submitting to the Church of Rome, you submit to a despotism which is condemned by the word of God, which has dyed the pages of history with the blood of our fellowmen, which has ever stood in the way of the advance of civilization, and is a constant menace to the peace and safety of civil society.

Very truly,
E. SNODGRASS.
Kanazawa, Sept. 24, 1897.

P.S.—Those German Protestants who have spoken so grandly in behalf of Romanism—will Mr. Pettier please tell us who they are, and quote a little more of the context? This quoting of Protestants in defence of the most absurd dogmas of Romanism reminds me of a similar feat a few years ago in which a Papal priest quoted Macaulay in defence of the Hierarchy. He thought nobody was acquainted with Macaulay; but when the context was presented by his opponent the priest was never more heard from. Now I do not believe that any German Protestant has ever said what Mr. Pettier represents him as saying. This is not charging Mr. Pettier with wilful falsifying. In some way he is simply mistaken. I emphatically dissent from the teaching of these German Protestants; but reserve what I have to say to another time.—E.S.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Allow me to select of the materials at hand a few pieces—which, being all official documents, may serve to illustrate the principal position of the Roman Catholic Church as against the authority of the State.

Pope Urban II. (1099), states, that to kill a man who is excommunicated by the Church, is not to be considered as murder.—This principle, which I can not call otherwise than horrid, was embodied in the canonical law: Decret. Grat. c. 4. f. C. XXIII. 9, 5.—Innocentius IV. declared in the *Bulla ad extirpanda* (May 15th, 1243), that everybody may take possession of the whole property of a heretic, and that the sons and grandsons of heretics can not serve in a public office. I challenge my opponent to give a clear answer to the following question:—Is it also in such cases, that the secular government has to yield to the decisions of the Church, as given by the infallible popes? And in order that he may not escape by saying that I refer to things 800 or 600 years old, I shall quote a few sayings of Popes of the 19th century, which absolutely forbid every public tolerance of heretics. Pope Pius VII., in a note to his nuncio in Vienna, 1805, repeats the commandments of Innocentius III., that the property of heretics must be sold by public auction, and says: "To-day the

circumstances are so humiliating for the Roman Catholic Church, that she cannot apply those most sacred principles against the rebellious enemies of the true faith." Pope Pius IX. writes in a Breve to the Archbishop of Toledo, March 4th, 1876:—"Once more we protest against the tolerance of non-catholic worship becoming legal. We protest against it as against a violation of the truth and the right of the Roman Catholic Church." In the *Allocutions Aderbissimum*, Sept. 28th, 1852, and *Nemo vestrum*, July 26th, 1855, he solemnly declared "the Roman Catholic Religion is solely entitled to be the religion of State."—I ask what becomes of the religious liberty, as granted in the constitutions of civilized states, if in this question the Roman Pope has absolute authority to decide what is right and what is not?

The *Inquisition*—This tribunal, through the decisions of which thousands and ten thousands of heretics have been burned to death, was instituted in its present form by Pope Sixtus V. (1590). And when Martin Luther in his 34th thesis wrote:—"To burn these heretics is against the will of the Holy Ghost," this proposition, which will appeal to everyone, except a fanatic Roman Catholic, the most natural expression of the spirit of the religion of love, was condemned by Pope Leo X. in his *Bulla Exsurge Domine*, May 16th, 1520, as heretical, i.e. as unchristian. What can this mean, except that an infallible pope has declared:—"To burn heretics alive is a practice fully in harmony with Christian principle!" And it is a bishop of the Roman Catholic Church himself, a better test than the four protestants, quoted by my opponent, who will appear a little strange to most readers—Bishop Neefe of Rottenburg, who after having opposed the promulgation of the dogma of infallibility, afterwards *landabiler se subject*, but nevertheless writes in a letter of 3d Dec. 1870: "It is surely not the will of the hierarchy, which is wanting, if in our 19th century the burning stakes are not raised again" (see v. Schulte, *Der Altkatholicismus*, p. 225).

And what does my opponent say against the claims of the popes to interfere in the whole constitution of the States, claims which are so frequent in history? That Pope Pius IX. declared "null and void" such legitimately made laws as the *Maisgesse* in Prussia, 1875, and the *Staatsgrundgesse* in Austria, 1867, caused a most difficult position for every conscientious Roman Catholic citizen in these countries, for the very question was vexing them:—"Shall we obey our own constitution, law and emperor, or the Roman pope?" And the bold saying, that the world owes all liberty it possesses to the Roman Catholic Church, is it not excellently illustrated by the fact that the *magna charta*, to which Englishmen look as the origin of their freedom, was formally condemned by the Roman Pope? And more significant than everything else is the *Bulla Regnans in excelsis* of February 25th, 1570, in which Pope Pius V. solemnly declared the deposition of the Protestant Queen Elizabeth of England. His words are extremely characteristic. He says:—"Based upon the authority of God we declare, by apostolic power, that the heretic Elizabeth is deprived of the right which she has usurped over the country of England, deprived also of every possession, every dignity, every prerogative. And we also release for ever all her subjects of every duty of homage and obedience and we depose said Elizabeth of her usurped kingdom." Now this was said three hundred years ago; but how true the words of the Syllabus are, that the Roman Pope shall never be reconciled with the modern ideas, is clearly shown by a speech, made by Pius IX. on the 20th July, 1871, when he says: "The right to dethrone Kings and to release their subjects of their duty as subjects, though it does not spring from the infallibility of the Pope, springs from his authority." Hereby he repeated only what his predecessor Pius VII. has declared in a note to the meeting in Vienna, 1805: "The right of dethroning princes belongs to the most sacred rights of the Popes." The judgment on these declarations of the Popes, and the necessary consequence of them, I shall state in the words of the Roman Catholic Bishop Hepele, who says in his History of Synods (VI., 299):—"He who has the right to order things in a country, to destroy and to build, and to take care of its good administration, he is the real lord of that country."

These quotations will suffice to prove that the Popes claim for themselves the supreme authority not only in matters directly religious, but also in secular matters, like liberty of religion and right of a prince to his throne. I await the explanation of my opponent.

I remain, dear Sir, your obedient servant,
DR. MAX CHRISTLIEB.
Tokyo, Sept. 30th, 1897.

ANOTHER WORD ABOUT THE SYLLABUS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—How right I was to translate the syllabus from the negative into the affirmative form, i.e. to give, instead of the heretical doctrines, the orthodox doctrines, which it intends to teach, I must once more conclude from the criticism of "A Roman Catholic." Every reader of his "Word about the Syllabus" will most probably translate the Latin quotation as follows:—"The immunity of the church and of the clergy has its origin in the civil law," and wonder, what can be found of evil ideas in these harmless words. And if my "translation" is placed side by side with this original, it must appear as the work of either an ignorant or a wilful falsifier. But we must not forget that the "Syllabus" is a "Syllabus errorum prohibitorum," i.e. an "enumeration of the chief erroneous doctrines of the present time," as the official declaration of the Pope styles it. Thus the doctrine, that "the immunity of the church and of the clergy has its origin in the civil law," is declared to be erroneous and prohibited by the authority of the infallible Pope. "Immunity" means "exemption from the secular law." Now if this exemption had its origin in the civil law, i.e. if it were granted by the authority of the State only, it might legally be abolished again by another civil law, i.e. by the State, without the consent of the church. This origin from the civil law is denied in the Syllabus. But besides the civil law there is, according to the view of the Roman Catholic Church, no other law than the law of the church, i.e. the divine law. Therefore the meaning of the Pope can only be, that "the exemption of the clergy from the civil law," (which was the actual custom for a long time) "has its origin in the divine law," which is exactly what I gave as the meaning of the section in question. That my explanation is right, follows from section 31, which runs, literally translated, as follows: "The ecclesiastical tribunal for the secular litigation of the clergymen, whether civil or criminal, is to be abolished without asking the apostolic See and even against its protest." In my form of translation, as used in my former contribution, it would run: "All secular litigations of the clergy, whether civil or criminal, are to be dealt with not by the civil courts of law, but by special ecclesiastical ones," the meaning of which is again: "The church and its clergy are exempted from the secular law." I can only hope that my Roman Catholic opponent does not give a different explanation of the words of the Syllabus, for in this case he would be a heretic, and what punishments were prescribed for him he may read in my last contribution. I do not believe that "the interpretation of the Syllabus" is, for an orthodox Roman Catholic, "a matter of opinion." Let my opponent, however, give his explanation of section 30.

I remain, dear Sir, your obedient servant,
DR. M. CHRISTLIEB.
Tokyo, October 2nd, 1897.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—With reference to the recent correspondence on the subject of Roman Catholicism and civil power, I desire to point out that the method of changing the negative expressions of the Syllabus into positive affirmations does not appear to be right. Accuracy of discussion does not sanction any departure from the text of a document quoted in evidence. If a quotation is made as such, it must be an exact quotation. The Syllabus may, of course, be translated, but its language should not be altered. Its interpretation may be a matter of opinion, but its terms may not be re-cast. That, in my opinion, is the only rule of loyal quotation.

If, instead of quoting accurately, you undertake to deduce the doctrines of Roman Catholicism from the doctrines that it denounces, your task is not performed merely by changing negatives into affirmatives or vice versa. Such a method is quite illogical and might lead to great mistakes.

Let me further appeal to scholars in the following instance among others:—The Syllabus says:—"Ecclesia et personarum ecclesiasticarum immunitas a jure civili ortum habuit." A Protestant Minister translates this:—"The Church and its Clergy are, by divine right, exempted from the secular law!"

The Syllabus is a weighty and succinct document, for the explanation of which superficial information does not suffice. The true Catholic doctrine about the civil power may easily be learned from either the authorized catechisms used in every country or from the Encyclic Letter of the Pope (*Immortale Dei*, Dec. 1885) which

treats precisely of this matter. I venture to ask why these clear documents are not quoted. Your readers can answer and judge for themselves.

Your obed. servant,

A ROMAN CATHOLIC.

(We are not acquainted with the Syllabus. But the most rudimentary knowledge of Latin suffices to show that the phrase quoted does not bear any such construction as that said to have been put upon it by a Protestant Minister. —E. J. M.)

JAPANESE NAVAL PROMOTION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—In a note in your issue of the 25th ult. on the period of service entitling to promotion in the Japanese navy the English equivalents of the Japanese titles are given as Rear-Admiral; Captain, Second Captain, Post Captain; Commander, Lieutenant, and Sub-Lieutenant. The Japanese titles are not given but they probably are *Shojo*; *Taika*, *Chusa*, *Shosa*; *Taii*, *Chui*, and *Shoi*.

In a book published in 1890 by a Lieutenant in the English navy the ranks are given in the order Rear-Admiral, Commodore, Captain, Commander, Lieutenant (of 8 years seniority, distinguished by two broad stripes and one narrow stripe on the sleeve) Lieutenant, Sub-Lieutenant.

It seems to me that the rank of Commander must be omitted as having no equivalent in the Japanese navy. In the stripes on the sleeve ordered in the *Official Gazette* to be used when the new ranks of *Chusa* and *Chui* are established, there are none to correspond to the one broad stripe worn by the British Commodore. The new *Chusa* is to wear three broad stripes and one narrow stripe. To this there is no equivalent in the British navy, while the two stripes and a half worn by the British Lieutenant of 8 years seniority have no equivalent in the Japanese navy. The new *Chui* is to wear one stripe and a half, and this mark also has no equivalent in the British navy.

The Japanese *Taika* and *Shosa* have heretofore, in duties and in distinguishing marks, corresponded to the British Captain and Commander, and the new regulations make no changes in these respects. The same is true of *Taii* and *Shoi*, and Lieutenant and Sub-Lieutenant. The new *Chui* is nearer to *Shoi* than to *Taii*, he being the senior officer in the gun room. In a similar way the *Chusa* is rather a senior Commander than a Second Captain.

Requesting you to give some authoritative renderings of the nine ranks in the Japanese navy and also of the corresponding ranks in the army, I am, faithfully yours,
T.
October 2nd, 1897.

MY CITIZENSHIP.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—It was not my purpose to elicit comment nor "court publicity." It seems that "publicity" has rather "courted" me. My affair has been an open secret ever since my card was displayed before the public with a sneer. It has long since travelled all the way to the United States and China and has been talked of generally independent of my assistance. As is usually true in such cases, the story has not always been told correctly. It occurred to me that a brief statement through the *Mail*, leaving each to draw his own conclusion, might not be out of place. Since your editorial comments, however, I hope to be heard some further.

I have been surprised no little at the criticisms passed on my quotation from the scriptures. Some have impressed me as not even recognizing it as scripture at all. The Editor's reasoning on this point also is no little remarkable. He admits I had a perfect right to even oppose the Fourth of July celebration in question without its touching on my citizenship had not I appended the "rider," "our citizenship is in heaven," by which "it seems indisputable that I denied my American citizenship." I used the passage in the exact sense of the scriptures; if thereby I have denied my "American citizenship" it follows that millions of the American people, including Presidents, are not American citizens since they claim "our citizenship is in heaven." If the Editor's reasoning be correct, then every man who prays "Our Father who art in heaven" renounces his earthly father. Every Christian who calls a fellow Christian brother renounces his brothers in the flesh. There are six brothers of us born of a common mother. Suppose I should be asked by them to take part in what I considered would work evil against my Christian brothers. I could very properly offer as an objection that I belonged to a brotherhood of a more extended and spiritual kind, which relationship I could not imperil. But none could justly accuse me of renouncing connection with

my brothers in the flesh. Now there are a number of brother citizens in Japan born of a common mother country who have asked one of their number to engage in that which he conceives to be detrimental to another citizenship he holds of a more extended and spiritual kind. His contention is that he cannot imperil the spiritual relationship he sustains for the sake of gratifying that of the fleshly. But he who accuses him of thereby renouncing his American citizenship does him an injustice.

The only "embarrassing position" in which the Minister could have been placed was to have some possible doubt as to my citizenship. But I hastened in person to give the Minister a full, unsophisticated explanation "that no proper construction of my card can be made to mean that I have practically or otherwise renounced my citizenship." The Minister was convinced to the same affect and has so expressed himself more than once. What the Minister requested was that "you furnish some affirmation or some other evidence of your citizenship." I complied with the request and removed every doubt. Even in the mind of the Minister then, using the Editor's language, I am "as good an American citizen as any body else." The Oath of Allegiance therefore cannot be required of me without a violation of the law of equity. When all other citizens are marched up and are compelled to take the Oath before being granted a passport I shall not complain at being put to the same test, but so long as such is not the case I can but consider it as biased treatment.

Although some may not take my view of this particular case I am persuaded that few acquainted with the scriptures will accept the Editor's statement, that the Bible does not teach we should be "rigidly unbending" when it comes to a matter of conscience.

Most respectfully Yours,

J. M. MCALEB.

YOKOHAMA CHESS CLUB.

The annual general meeting of the members of the Yokohama Chess Club was held on Monday afternoon at Keit's Building. There were present Messrs. J. T. Griffin, in the chair, Fox, Thomas, Mendelson, Friedlander, Tennant, Unite and Ackmann.

The minutes of the last extraordinary meeting, and the report of the Hon. Secretary and Treasurer were taken as read, confirmed, and passed unanimously.

Two new members, Messrs. Ackmann and Richardson, proposed by Mr. Thomas and seconded by Mr. Griffin, were unanimously elected.

Mr. Griffin expressed his desire for a year's rest from the post of President of the Club, but on Mr. Fox expressing the great regret of the members at his resolution and persuading him to reconsider it, Mr. Griffin agreed to withdraw his resignation, and was unanimously re-elected to the Presidency.

On the proposal of Mr. Mendelson, seconded by Mr. Fox, Mr. Friedlander was elected Hon. Secretary and Treasurer, and Messrs. Fox, Unite and Pollock were elected on the Committee.

It was stated that it was proposed to make arrangements with the new Oriental Hotel when finished, for a Club room, but for the present year unless better quarters offered, it was decided to avail themselves of the accommodation provided at Clausen's Hotel, where play would commence on Thursday next, the 7th inst.

The report was as follows:—

SEVENTH YEAR 1896-1897.—REPORT.

The session which ended 30th April, 1897 has not been satisfactory: and the lack of interest shown by the members has been lamentable. As in former years when we had no fighting to do, the Club seems to doff its armour and take its ease. The Committee earnestly hope that the coming session will show an improvement in this respect: that the members will attend regularly at the practice-meetings, so that when occasion arises to do battle for the honour of our Club we may not be found wanting.

The number of Members on the roll was 43, but from that figure must now be deducted some half dozen removals and resignations. We experienced a great loss in February by the departure of our energetic and enthusiastic Secretary (Mr. Davieson) who left Yokohama for Bakan during that month. Messrs. Batavus, Mowat and Wolheim have also removed to other scenes:—their places will be hard to fill.

The Treasurer's account is annexed—showing Balance in hand of \$154.09 with which to start the new season. The Club gear is sufficient for all purposes according to the present outlook.

The incoming Committee will have to consider the subject of a meeting place for the Club. In January we had to remove from the Club Hotel into temporary quarters at Clausen's Hotel, No. 66, Main Street. Some good and definite location should be found for the season 1897/1898.

An Extraordinary General Meeting was called by the President (at the request of 5 members as per Bye-laws) on 25th March: but the summons issued failed to draw a *quorum*. The meeting was therefore adjourned to 1st April when 11 members attended. The business on the summons was:— "To reorganise the Yokohama Chess Club. To elect fresh officers, and draw up new Rules." Some discussion took place, but the proposals found scant support: and finally, it was unanimously agreed to postpone all changes, until the opening of the present season.

The outgoing Officers and Committee accordingly place their resignations in the hands of the Members: with their best wishes for the future welfare of the Club.

JOHN GRIFFIN, (President.)

Secretary ad interim.

Yokohama, 30th September, 1897.

JOHN GRIFFIN, (President.)

Treasurer ad interim.

Yokohama, Sept. 30th, 1897.

WILLIAM TO FELIX, GREETING.

Mon brave, my thoughts embrace you where you
wend,
Transfigured by a fine Imperial halo!
I, too, was lately with our mutual friend
At Krasnoe Selo.

And all the while my heart was full of you!
I felt your martial presence when reviewing;
It penetrated that superb tattoo
They kept tattooing.

The buoyant hunting (with designs, or plain),
The masts, the festive mottoes, breathed of Félix;
So did those paper garlands which in vain
The artless bee licks.

As I was riding down the bandsmen's line
In Russian uniform—a rather gay gear
The trumpets played that little thing of mine,
"The Song of Aegir."

The music seemed to melt me to the core,
So wild its beauty, I could hardly bear it;
"Ach, Gott!" I said, "if my beloved Faure
Were here to share it!"

The people as I passed them in the street
Gave to their rapture such a stangely glad vent;
I feared no voices would be left to greet
Your promised advent.

I bounded under many a banneret,
By columns brave with triple-coloured plaster,
Of you I still was thinking when I met
The Burgomaster.

He served me salt and bread—a happy thought;
And, as the evening papers rightly stated,
Of solid silver was the charger wrought;
Not simply plated.

I understood this excellent *menu*—
Ample, of course, for me, a modest eater—
Had been originally meant for you,
Which made it sweeter!

You speak the Russ? *Ich auch!* I used it there
For toasts, or when I overhauled a battery;
You, see, I initiated you, *mon cher*—
The truest flattery!

And when I told them what a peaceful joy
An armed alliance in these perilous days is,
I honestly endeavoured to employ
Your very phrases!

I would not take the wind from out your sail,
Nor wipe your eye (in vulgar sporting diction);
With you, such scandal never could avail
To work conviction!

No, no, *mein lieber Félix!* you and I
Are twins in worship of a common nation!
Might not a brother taste your pleasure by
Anticipation?

For me, apart from this, the treat was nil;
I know my Europe, long have been a ranger;
You never leave the only land that still
Counts me a stranger.
I search my travelling log, but fail to trace
That I have ever visited your city;
Our Friend the Czar informed me that the place
Is rather pretty.
No doubt your genial Paris much resents
A coolness that I mean to rectify, sir;
Kindly convey to her the compliments
Of William, Kaiser.
I'll shortly look you up, indeed I will;
You'll find I've got a most engaging temper;
Meanwhile, my honoured fellow Russophil,
Sis Felix semper!
—Morning Post.

LATEST TELEGRAPHIC NEWS.

(FROM THE "JAPAN TIMES.")

ANNEXATION.

London, Sept. 29.
A Canadian Government expedition has formally annexed Cumberland Sound in Baffin Land, to forestall its eventual seizure by the United States.

(The message in reference to the annexation of Cumberland Sound for fear of its ultimate seizure by the United States, is not clear. The Sound in question lies between the Cumberland and Hall peninsulas, on the south-east part of Baffin Land, British North America.)—Ed. J.T.

THE MOHMANDS.

The Mohmand campaign is over, the tribes having been thoroughly cowed, and General Elles is withdrawing his troops from the Mohmand country towards Peshawar.

October 2.

General Jeffrey's brigade has had a severe encounter with the Mohmands, who, in great force, stubbornly opposed his advance. General Jeffrey's brigade ultimately retired in good order. The casualties included Colonel O'Brien and Lieutenant Brown-Clayton killed, and Lieutenants Peacock and Isache severely wounded. In the British force three men were killed and fifteen wounded, and in the native seven killed and twenty-three wounded.

ATTEMPT ON THE CZAR'S LIFE.

London, Sept. 30.

It has transpired that the police frustrated a plot upon the Czar's life on his recent visit to Warsaw. It appears that a number of Socialists, of German nationality, had mined the principal street in Warsaw, but, fearing that a collapse of the roadway might follow before they could effect their object, engaged masons to erect supports. The masons informed the police of the circumstances, and 120 arrests speedily followed.

THE SPANISH CABINET.

London, Oct. 1.

The Spanish Cabinet has resigned, and Señor Sagasta has been summoned by the Queen-Regent to form a new Ministry.

NAVAL CASUALTY.

Two British torpedo-destroyers, the *Thrasher* and the *Lynx*, while under steam in a fog in the chops of the Channel, grounded near Falmouth. The steam-pipe of the *Thrasher* exploded after she got on shore, killing four stokers and injuring another. Both vessels were subsequently brought into harbour.

THE GERMAN NAVAL PROGRAMME.

The new German Naval Secretary has submitted the proposed naval programme covering the period to 1905, which for building new ships will involve an expenditure of twenty-one millions sterling, and this sum it is proposed to obtain by fresh taxation.

HOUSEHOLD TROOPS ON FOREIGN SERVICE.

A battalion of the Grenadier Guards has sailed for Gibraltar.

RESIGNATION OF M. RALLI.

October 2.

After a debate in the Chamber at Athens on the Treaty of Peace with Turkey, the Greek Government was defeated and M. Ralli has resigned.

THE UGANDA RAILWAY.

One hundred miles of the Uganda Railway have been completed.

[This railway, which is intended to connect Uganda with Mombas, a distance of about 600 miles, was only commenced in December, 1895. It was expected that the first section of 100 miles would have been ready for opening to traffic in June or July last, but considering the difficulties that have been reported from time to time, the chief engineer and his staff have done exceedingly well with the work so far as it at present goes. The gauge is one metre. A telegraph line is also in course of construction over the route selected for the railway.]

BRITISH REVENUE RETURNS.

The revenue returns for the quarter just closed show an increase of £688,000.

NEW GREEK CABINET.

London, Oct. 4.

A new Cabinet has been formed at Athens by M. Zaimis.

THE SOUDAN.

Kitchener Pasha (Major-General Sir Herbert Horatio Kitchener, K.C.B., K.C.M.G., A.D.C., Sirdar of the Egyptian Army), telegraphs that letters have arrived safely at Berber from Suakim which state that the whole of the Eastern Soudan tribes have renounced Mahdism.

YELLOW FEVER.

Yellow fever is raging at New Orleans DEFEAT OF KING MWANGA.

Advices have been received from Uganda of the defeat, after one hour and a half's fighting, of King Mwanga, with heavy loss on both sides. The rebellion is stated to be distinctly anti-European, and much alarm was felt at Mengo, which was left denuded of its defenders during the operations against Mwanga.

(It was generally supposed that Mwanga would give no further trouble, as so recently as August last when he headed an anti-British rebellion, he was defeated by a force under Major Tennant, the rebels scattered, and Mwanga himself fled into German territory, where it was said he would be detained. After that the British proclaimed Mwanga's son King under a regency.)

AN INDIAN ASSASSIN ARRESTED.

London, Oct. 5.

The murderer of (Mr. Commissioner) Rand and (Lieut.) Ayerst at Poona (on Jubilee Day) has been arrested, and has confessed to the crime.

ITALY IN AFRICA.

It has been semi-officially declared in Rome that, under any circumstances, the Italians will leave Kassala in December next.

TURKEY AND GREECE.

The Greek Government is sending Prince Navrocordato to Constantinople as delegate to negotiate the definitive peace arrangements.

MR. HOSHI'S RETURN.

Mr. Hoshi, our Minister at Washington, has sent the following telegram to the Foreign Office:—

Washington, Sept. 29.

Will leave for home on board the *Empress of India*, sailing from Vancouver on October 11th.

KOREAN TELEGRAMS.

Söul, Oct. 2.

All the Cabinet Ministers having tendered their resignations, the following

appointments are to be announced shortly:—Min Yöng-kyu, to be Minister of the Royal Household; Pak Chöng-yang, to be Minister of Finance; Cho Pyöng-chick, to be Minister of Education; and Min Chhông-mök, to be Minister of Foreign Affairs. The nominations of the other Ministers have not yet been settled. It is rumoured that the present Cabinet changes, being due entirely to the King's own will, are subject to the opposition of the Russian Minister.

Later.

Ye Chong-kön and Chöng Pak-yong have been appointed Ministers of War and of Agriculture and Commerce respectively, while Nan Chöng-Chhöl has been ordered to retain the portfolio of Home Affairs. Shin Sang-hun and Yi Yan-yung have been appointed Councillors of the Cabinet, and Han Chu-sul a Member of the Privy Council.

[The report of contemplated ministerial changes in the above telegram has been confirmed by official intelligence.—Ed. J.T.]

Söul, Oct. 2.

Sin Sun-tak, the Premier, accompanied by his subordinate officials, had an audience with the King yesterday, and presented a memorial with respect to the offering of the title of "Emperor" to the Sovereign. The same proceeding is also to be repeated to-day and to-morrow.

Söul, Oct. 2.

It is stated that M. de Speyer, the Russian Minister, was received in audience by the King yesterday, when some representations were made to His Majesty.

Söul, Oct. 3.

Mr. Li Koshun (?) has been appointed President of the Privy Council.

ENGLAND AND BIMETALLISM.

London, Oct. 5.

The *Times* says that the American Bimetallic Commissioners have again arrived in London, and intend to request the British Government to give a final and immediate reply to their proposals in regard to a Bimetallic Conference. The *Times* questions the wisdom of entering into negotiations at all on this subject, and asks is bimetallicism wise, seeing that it lies at the root of all these entanglements. It has been decided on behalf of Great Britain to answer in the negative, but if an affirmative answer be given in regard to the Indian Mints we shall place ourselves in a contradictory position, as the keys of both the British and Indian Mints are in the custody of Downing Street.

Sir William Barbour in a letter to *The Times*, attributes the maintenance of the present rate of exchange to exceptional circumstances, including the borrowing of large sums from England by the Indian Council and Indian railways. He states that before many years have passed a disastrous collapse is inevitable, and strongly urges that an international bimetallic agreement would be preferable to the continuation of the present situation.

RUMOURED WRECK OF THE "GOLDEN FLEECE."

(FROM OUR OWN CORRESPONDENT.)

Hakodate, Oct. 7, 8.15 a.m.

The Russian gunboat *Koreets* arrived here yesterday from the Commander Islands, and brings news of the total wreck of the schooner *Golden Fleece*. The Captain and seven men are coming up in H.M.S. *Daphne*.

CHESS.

All Communications to be addressed to the Chess Editor.

The Yokohama Chess Club is meeting for the present at Clausen's Hotel, Main Street.

The Tokyo Chess Club now holds its meetings at No. 3, Uchi-Saiwai-cho Ichome (next to the Tokyo Club).

ANSWERS TO CORRESPONDENTS.

R. S. (N.Z.) Thanks, will return after perusal.

W. H. S.—Correctly reprinted, but will examine.

P. E. F. S.—Many thanks for problem. Re solution of No. 340 see above correspondent.

The following is the solution of Problem No. 339:—

WHITE.	BLACK.
1—P to B 4	1—R takes B P
2—Q to Kt 5, ch	2—K to K 5
3—Kt to Kt 5, mate	
1—P to B 4	1—K to K 5
2—Q to B 4, ch	2—K takes P
3—Kt to R 6, mate	
1—P to B 4	1—P takes P
2—Q to Kt 7, ch	2—K to B 5
3—Kt to K 5, mate, &c.	

Correct solutions received from W. H. S., P. E. F. S. and D. D.

PROBLEM NO. 341.

By EUSTACE KING, Christchurch, N. Z.

White to play and mate in two moves.

YOKOHAMA CHESS CLUB.

The annual meeting for the election of officers was held last Monday evening and passed off in the happy manner characteristic of all meetings presided over by Mr. J. T. Griffin. The President wished to be relieved of the cares of office this year, but the members would not hear of it, so to the satisfaction of all, Mr. Griffin remains at the head of affairs. He gave the Club some good advice when he urged members to get to work and have done with the dilatory methods of the last two years. Unless they kept a sharp look-out, he said, they would be caught napping and somebody would be giving them a good licking. He also informed the meeting that he had been trying to get up a contest with the Tokyo Club, on the latter's own terms, but so far without success.

The post of Secretary and Treasurer was given to Mr. Friedlander, while a new committee was elected consisting of Messrs. Fox, Pollak, and Unite.

On Thursday evening, members met for the first time this season to do battle over the chequered board and although not many turned up, owing to the exigencies of the outgoing mail, the few that were present enjoyed the play thoroughly. We were pleased to notice that no skittle games took place, on the contrary some remarkably good Chess was produced. Mr. Ackman, one of the new members, showed up well in two stubbornly fought games with Mr. Thomas, the result being one win each. Another good piece of work was the game between Mr. Pollak and Mr. Hodges, which, being unfinished at half past 7 o'clock, will be continued at the next meeting.

Mr. Griffin has resigned the Championship of the Club, which he has held for two years, in order to arouse a spirit of emulation among members by giving them something substantial to fight for. We understand that a general tourney will be arranged shortly which will afford members ample practice for the subsequent championship tourney. We think that this encounter should not be open to all and sundry as has been the case hitherto. A position in the ranks of the contestants for the Championship Cup should be regarded as a special

honour only to be gained by those qualified to challenge the champion. Would Lasker or Steinitz, or for the matter of that, any master who played in the Hastings Tourney, have entered, had the Match Committee accepted entries from all comers without distinction? We think not. There is no doubt that the reason why so many young players have come to the front of late is the system of competition in minor tourneys gradually leading up to the greatest of all—a Masters' Match. The spirit of emulation is thus aroused and men try their best to achieve good work. We think that this will be the case with the Y.C.C., and therefore look forward to a capital winter's work.

TOKYO CHESS CLUB.

The Metropolitan Club has changed its habitat. For the future meetings will be held at No. 3, Uchi-saiwai-cho, Ichome, next to the Tokyo Club. The following are the office-bearers for the current year:—President, Archdeacon Shaw; Secretary, Mr. W. B. Mason; Committee, Mr. T. J. Harrington and Rev. W. F. Madley.

"JAPAN MAIL" CORRESPONDENCE TOURNEY.

The following are the last moves received:—

Game	Move	White.	Move	Black.
4	19	R-K2	19	QR-Ksq
10	16	R-Bsq	15	B Q2

Since our last issue "Pakeha" has scored a win from "Nemo" in Game No. 3, which we publish below. The score is now as follows:—

PLAYER.	WON.	LOST.
Pakeha	3
Olymp	3½
Shepherd	1
Nemo	2
Fardel	1½

"Pakeha" is leading with 3 wins out of a possible 4, and should win the prize unless "Fardel" comes off victor in both his games versus "Pakeha" and "Nemo" (No. 4 and 10). Another few days should decide the Tourney.

GAME NO. 3.

GIUOCO PIANO.

White—Pakeha.		Black—Nemo.	
WHITE.	BLACK.	WHITE.	BLACK.
1 P K4	P K4	17 Kt B3	Kt QB4
2 Kt KB3	Kt QB3	18 Kt xP	Kt (B4) xP (-)
3 B B4	B B4	19 P xKt	Q B4 ch
4 P QB3	Kt B3	20 Q Q4	Castles
5 P Q3(a)	P Q3	21 Q xQ	P xQ
6 B K3(b)	B Kt3	22 Kt xB	Kt xKt
7 Kt Q2	B Q2	23 Kt Q6	Kt Kt3
8 Kt B q	Q K2	24 B Kt3	R Q q
9 Kt Kt3	P KR3	25 P K5	R xKt
10 Kt Q2	Kt Q q(c)	26 P xR	P B3
11 Castles	Kt K3	27 B B2	Kt Q2
12 Kt B5	Q B q	28 Q R Q q	P Kt K3
13 B xB	B P xB	29 B R4	Kt Kt3
14 P KR3	Kt Kt4	30 B Q7	R Q q
15 P KB4	Kt K3(d)	31 KR Ksq	Resigns
16 P xP	P xP		

NOTES.

- (a) Not considered so strong as P to Q 4.
 (b) P to Q Kt 4 is a better mode of continuing the attack.
 (c) With the object of moving Kt to K 3 tempting White to exchange his K B for it, but overlooking White's attack of Kt to B 4.
 (d) Preferably P takes P, 16—R takes P &c. as subsequent events show.
 (e) Miscalculating that by Q to B 4 ch White replies with Q to Q 4, protecting his Kt; thus Black loses a piece and the game.

LATEST SHIPPING.

ARRIVALS.

LATEST COMMERCIAL.

IMPORTS.

Nothing has yet been done in shirtings, and very little during the week in fancy cottons and woollens, but a very considerable business has been transacted in yarns, at gradually dropping prices. At closing, however, the market is steadier in tone.

COTTON PIECE GOODS.

	PER PIECE.
Grey Shirtings—8 1/2 yds. 39 inches	\$2.50 to 2.80
Grey Shirtings—6 1/2 yds. 45 inches	2.80 to 3.35
Indigo Shirtings—24 yards, 44 inches	1.60 to 1.90
Prints—Assorted, 24 yards, 38 inches	1.95 to 2.90
Cotton—Italians and Sateen Black, 36 inches	2.00 to 3.75
	0.18 to 0.25
Velvets—Black, 35 yards, 41 inches	7.75 to 9.90
Victoria Lawns, 12 yards, 32 inches	0.75 to 1.00
Turkey Reds—2.0 to 2.4 yds. 24 1/2 yards, 30 inches	1.50 to 1.70
Turkey Reds—2.8 to 3 yds. 24 1/2 yards, 30 inches	1.75 to 2.10
Turkey Reds—3.8 to 4 yds. 24 1/2 yards, 32 inches	2.40 to 2.70
Turkey Reds—4.8 to 5 yds. 24 1/2 yards, 32 inches	3.00 to 3.50

American Middling	PER POUND. \$21 to 22
Indian Broach	21 to 22
Chinese	20 to 21

METALS.

A fair business has been done during the past week, news of the upward tendency of the home market having had some effect on buyers. Several large transactions have been effected in bar and galvanized iron.

	PER POUND.
Round and square 1/2 inch. and upward	4.15 to 4.60
Iron Plates, assorted	4.10 to 4.50
Sheet Iron	5.10 to 5.30
Galvanized iron sheets	0.70 to 1.50
Wire Nails, assorted	6.00 to 6.50
Pin Plates, per box	5.50 to 6.00
Pig Iron, No. 3	2.05 to 2.20
Hoop Iron (1 to 1 1/2 inch)	5.00 to 5.25

KEROSENE.

Arrivals of American have been very considerable during the past week or ten days and the market has become firmer. Business for the interior has, however, been affected by the block of goods at the railway stations owing to the interruption of traffic by floods.

American	\$2.00 to 2.15
Russian	2.00 to 2.15
Langkat	—

SUGAR.

Arrivals of Brown since the beginning of the month are 18,071 piculs Manila, and 2,140 piculs China and Formosa. Sales include 18,071 piculs Manila, 2,000 piculs Formosa, and 1,300 piculs China, at former prices. White refined is quiet at unchanged rates.

	PER POUND.
Brown Takao	\$3.50 to 4.10
Brown Manila	4.20 to 4.90
Brown Daitong	3.20 to 3.35
Brown Canton	3.30 to 4.20
White Java and Penang	6.50 to 6.60
White Refined	7.30 to 8.90

EXPORTS.

RAW SILK.

During the week there has been a fair demand both for America and Europe, but there is a rather heavy stock of coarse-sized filatures on the market which buyers have hitherto somewhat neglected. If holders will make some concession these would probably, however, soon be disposed of. Reels have advanced slightly. Total settlements from July 1st to Oct. 6th are 21,685 piculs, and stock in Yokohama amounts to 6,900 piculs, against 16,390 piculs at same date last year.

QUOTATIONS.

THE GREATEST WONDERS OF MODERN TIME HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulceration of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammation.

MR. J. T. COOPER, in his account of his extraordinary travels in China, published in 1891, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors throughout the World.

Printed and Published for the Proprietor, at 51, Main Street, Settlement, by ARTHUR BELLAMY BROWN, of "Nooklands," No. 156, Bluff, Yokohama.—SATURDAY, OCTOBER 9, 1897.

THE steamer *Nemuro Maru* foundered near Etarup on the 13th inst. All the crew were saved.

HIS MAJESTY THE EMPEROR presented yen 2,500 to the family of the late Lieut.-General Yamaji, towards the funeral expenses.

MR. HOSHI, Japanese Minister to the United States, will arrive at Yokohama about the 26th inst. by the *Empress of India*.

LORD SALISBURY has definitely refused to participate in the Sealing Conference if Russia and Japan are represented thereat.

THE Japanese despatch boat *Miyako*, which has been constructed at the Kure Shipbuilding Yard, is to be launched on the 28th inst.

THE Porte has proposed to the Powers the total disarmament of the inhabitants of Crete and the appointment of a Christian governor.

ALTHOUGH the port of Mokpho, Korea, has been opened to foreign trade since the 1st of October, no trade preparations have been made as yet.

VISCOUNT OKABE CHOSHOKU has been appointed Governor of Tokyo. Marquis Kuga, the late Governor, was released from the post at his own request.

ON the 11th inst., the Shimbashi Railway Bureau called for tenders for Portland Cement amounting to 25,000 casks. The home-made article secured the contract.

MR. MIZUNO, Secretary to the Home Minister, has been ordered to Europe to inspect political affairs. He will leave Japan for the United States on the 21st inst.

IT is stated that the Russians are now suggesting to the Korean Authorities the opening of the port of Yuki, located near the boundary of Russia, to foreign trade.

COUNT KABAYAMA, Home Minister, will attend the ceremony of formally commencing the construction of the harbour of Osaka, which will take place on the 17th inst.

THE Treasury has issued Railway Loan Bonds to the amount of yen 5,000,000 and Public Undertaking Loan Bonds to the value of yen 10,000,000, purchasing them itself.

KATO Tetsugoro, aged 55 years, a workman employed at Shimbashi Station, while working on a chimney at the smithy, slipped and fell to the ground, meeting immediate death.

A TELEGRAM received by the Yokohama Specie Bank on the 11th inst. says that the Republic of Peru adopted the gold standard by a majority of only one vote in the Lower House.

THE Spanish Government is about to despatch 20,000 more troops to Cuba and also reinforcements to the Philippines. It also proposes to grant autonomy to Cuba under the suzerainty of Spain.

FROM wreckage found near Oshima it is considered almost certain that the steamer *Sesshu*

Maru, which has been missing since leaving Kobe on the 28th ult., has foundered with all hands—64 crew and passengers.

THE sealing schooner *Pointer*, late *Arctic*, owned by Mr. H. J. Snow, has been totally wrecked at Shikotan, Hokkaido. The crew and some, if not all, of the skins aboard were saved.

IT is reported that at the special Cabinet Council held on Monday it was decided to appoint Marshal Count Nozu Governor-General of Formosa, Governor-General Nogi being transferred to another post.

THE draft of the amended Formosa Administrative Regulations, which the Government has been discussing for many weeks, was submitted by Count Matsukata, Premier, on the 11th inst. to the Emperor.

THE funeral of the late Lieut.-General Yamaji took place on the 14th inst. The cortege left the residence at Koyama-cho, Mita, Shiha, Tokyo, at 1 p.m. for Aoyama cemetery, escorted by two battalions of soldiers.

A SPECIAL Cabinet Council was convened on Monday morning. It was attended by all the Ministers of State and Count Kuroda, President of the Privy Council. The discussion related to the amendment of the Formosan Administration, the resignation of Mr. Komuchi, President of the Legislative Bureau, and other topics.

REAR-ADMIRAL SHIBAYAMA has been promoted to the rank of Vice-Admiral and appointed Commander of the Japanese Standing Squadron. Vice Admiral Baron Aizra, former Commander of the Standing Squadron, has been appointed Commander of the Sasebo Port Admiralty. Rear-Admiral Samejima has also been promoted to the rank of Vice-Admiral.

THE foreign trade of Yokohama and Kobe from January to August last and during the month of September, was as follows:—Exports from January to August yen 100,314,728 and during September yen 11,321,497, a total of 111,363,225. Imports from January to August amounted to yen 139,089,603 and during Sept. to yen 16,867,591, a total of yen 155,957,194.

THE Import market generally still remains very dull, though in certain lines some business is being transacted. Cotton piece goods are entirely disregarded, with the exception of some fancy goods, such as Turkey reds. Woollens are also very lifeless. Yarns must be bought to keep the weavers at work and consequently a fair business has been kept going, at prices fully up to last quotations. The metal trade is looking up a little and a fair amount of transactions have place place in pig, bar and galvanized iron. The kerosene market is improving in tone [as the winter approaches; arrivals have been considerable and sales steady. A fair business has been done in sugar, principally Brown, at former rates. One or two large shipments of Rangoon and Saigon rice have been received and readily placed at remunerative prices, the native product having risen abnormally in value. In the Export market, large transactions have taken place during the week in raw silk, and some business has also been done in waste; but holders of the latter are very firm and the value at present quotations is not good, which stops much business for a time. The silk season in Japan for producers and native dealers promises to be the most profitable on record. Exchange is unchanged though silver is quoted in London $\frac{1}{2}$ higher than at date of our last report.

SPIRIT OF THE VERNACULAR PRESS.

The *Fiji Shimpō* reverts to its old argument against the growth of conservative ideas in Japan. Evidently such ideas must be coming into vogue or the *Fiji* would not devote so much space to their discussion. It asks what the conservatives understand by the "nationality" which they are so desirous of preserving. What is their definition of nationality? The *Fiji's* definition is that a country should be a distinct integer and should enjoy full sovereign rights. Nothing else seems necessary. How is it conceivable that Japan should lose either of those characteristics by adopting the systems and customs of the West? No one can deny that all her modern progress is due to liberal assimilation of Occidental sciences, philosophies, methods of Government and material civilization. Thus far she has not hesitated to draw freely upon these sources of improvement; so freely, indeed, that in many respects she may be said to have undergone metamorphosis. But she has lost nothing of her nationality. To change her policy now and refrain from further drafts upon Western fountains of civilization would be nothing more or less than to adopt towards the nations of Europe and America an attitude of estrangement. In the eyes of the Occident Japan is a small insular Power. Whatever attitude she might assume would be to them a matter of almost complete indifference. But it is certain that if she showed them the cold shoulder, they would behave similarly towards her, and whether she could afford that is a question that the conservatives have to ask themselves seriously. If they look back, too, at the history of Japan they will see the groundlessness of their apprehensions. For during many centuries she borrowed wholesale from China. Her literature, her calligraphy, her system of ranks, her philosophy, her administrative methods, her religion, her art, her folk-lore, her superstitions, her festivals—all these things were taken from her neighbour. When Kyoto was founded its streets were laid out according to Chinese models of the Tang dynasty and it was called by a Chinese name. To say that a thing was Chinese amounted to declaring its superiority. Yet Japan lost nothing of her national spirit. The slightest attempt to encroach upon her sovereignty was always indignantly resented. That record should suffice to re-assure the conservatives, and, at the same time, they ought to remember that when they declare the necessity of safeguarding the patriotism of their countrymen by recourse to artificial restrictions, they insult that patriotism by implication, and offer an indirect proof of want of confidence in themselves and their fellow-nationals.

That the Cabinet should be attacked for its failure to effect Treaty Revision with France and Austria-Hungary was a foregone conclusion. The *Nichi Nichi* takes up the question with considerable vigour. It claims that the task of Revision was practically completed by the Ito Cabinet, only a very small part being left for the Matsukata Cabinet to accomplish. Yet that small part remains unaccomplished. The consequence is that the fruits of the last Cabinet's labours can not be reaped, and that the financial programme of the State is dislocated owing to the impossibility of putting the New Tariff into force. From another point of view, it may be said that the work of Revision was done by the Ito Cabinet, and that there devolved upon the Matsukata Cabinet only the duty of making preparations for the operation of the Revised Treaties. Even that duty, however, does not appear to have been satisfactorily discharged. Doubtless the Committee of Preparation (*Tsishi Yumbi-In Kai*) has not been idle, but no evidences of its useful labour are yet apparent, and assuredly no steps have been taken to make the necessary preparation in Formosa, although the conditions that Japan found there when she obtained possession of the island were eminently in need of modification before mixed residence could be allowed. It may, indeed, be argued that until preparations are completed at home, the Government

has no leisure to turn its attention to an outlying territory. But the reply is that there ought not to be, and that in fact there is not, so much to do at home. These considerations cause considerable uneasiness and, in the *Nichi Nichi's* opinion, constitute grounds for accusing the Cabinet of palpable incompetence.

What is meant by "preparing for the operation of the Revised Treaties," asks the *Nippon*. Foreigners coming to Japan are generally ignorant of the language of the country and unacquainted with its facilities. If a Japanese travelling by rail observes that a foreign fellow-traveller labours under those disadvantages, it is his duty to make room for him; to take care that he does not miss his station; to assist him in finding a hotel or obtaining food; to restrain any vulgar Japanese who may be disposed to employ opprobrious epithets towards him or to take advantage of his inexperience. That is the duty of every true Japanese, and to inculcate it as widely as possible is an important preparation for the day when all restrictions upon the coming of foreigners will have been removed. The Japanese have never been wanting in appreciation of the dictates of humanity. The history of their intercourse with their neighbours establishes that fact. If, thirty-five years ago, they were influenced by a desire to expel foreigners from the country, it was simply because they believed that not otherwise could the integrity of the empire and the premanence of the Throne be secured. It was not because they had made any radical departure from the path of humanity. They have only to be true to their instincts and traditions when mixed residence is permitted. To inculcate that fact, supposing that any such teaching be necessary, might be a useful preliminary to the operation of the Revised Treaties. But there is a wide distinction between humane civility and humiliating servility. If the Japanese passenger by rail, spoken of above, bows and scrapes to his foreign fellow-passenger, and treats him like a superior being whose convenience alone is to be consulted, the chances are that the foreigner, accepting the implied estimate that the Japanese gives of himself, will behave in an arbitrary and masterful manner, and treat the Japanese as a species of slave. So it is with this much talked-of question of "preparations for the operation of the Revised Treaties." Manners and customs differ more or less in different countries. It may happen that what is in accordance with convention and innocent of offensive significance among one nation, would be a gross solecism or an insult in the eyes of another people. Such contingencies should be provided against if intercourse between several races is to be conducted smoothly and comfortably, and there might be much advantage in conveying information on those points to provincial Japanese before the Treaties go into operation. That, however, is not the impression gathered by the public about the preparations contemplated by officialdom. What we hear is that such and such a law must be modified to please the Russians, perhaps; or that such and such a privilege, though quite right and proper in itself, can not be enjoyed by the Japanese, lest Englishmen and Americans should be offended; or—to quote an extreme case—that the treatment extended to criminals in Japanese jails may be all very well for Japanese, but is by no means good enough for foreign offenders against the law. With "preparations" dictated by such a spirit, the *Nippon* has no sort of sympathy. The interest of forty millions of Japanese must not be subserved to those of four or five thousand, or even ten times four or five thousand, foreigners. Japan is for the Japanese. If foreigners can not be conciliated without a display of servility and undue self-effacement on the part of the Japanese, better make no attempt to conciliate them.

The *Mainichi Shimbun* protests vehemently against the Government's rumoured intention of raising postal, telegraphic and railway rates—a measure which it denounces as retrogressive. One of the principal reasons assigned

for the change is that the prices of labour and of commodities have appreciated so greatly during recent years as to render it impossible to conduct these services of communication on the former bases of outlay. Such an argument has no validity. The expense involved in running posts and telegraphs is a mere bagatelle compared with the impulse that can be given to their earnings by cheap rates and improved facilities. Evidence of that fact can be found without going far afield. During the early years of postal and telegraphic communications in Japan, when labour and commodities cost about one-third of their present prices, the income of the services did not balance the outgoings: they were a constant drain on the Treasury. But gradually as material civilization progressed and as the services themselves were improved, people began to avail themselves so largely of post and telegraph alike that their earnings not only sufficed to cover the expenditures but even left a solid and steadily growing surplus. An illustration of the same nature is furnished by newspapers. A journal used to be one of the least profitable of properties. Labour was cheap; yet a proprietor who could make ends meet counted himself exceptionally fortunate. By degrees, however, in the face of an outlay that assumed larger dimensions year by year, the newspapers found readers and advertisers, so that now they are a paying enterprise, although their selling price is actually one half of what it used to be and their expenses are three times as great. So far from raising postal and telegraph rates, the Government should aim at lowering them. There has been no progress in these departments of late. At the outset, great zeal was shown in organizing them, and the public had reason to be satisfied with the rapid development of means of communication. But now-a-days complaints are constantly heard of late delivery, delays *en route*, miscarriages, and so on. With deteriorating services there is talk of augmented rates. The question of railway charges is similarly discussed at tedious length and with an abundance of platitudes, and finally the *Mainichi* cursorily deals with the real reason of the alleged project of increased rates. Our readers are acquainted with the reason—namely, the necessity of finding 15 million *yen* to double the present lines of telegraph and extend them to localities not yet provided with such facilities. The *Mainichi* dismisses that programme very curtly, by declaring that the proper way to obtain funds for such a purpose is to impose additional taxes, which the Diet will doubtless be prepared to sanction and the people to pay. We have here epitomised three long articles, and we may add with reference to them that whatever be the value of their contents, they at least show unbounded confidence in the patience of the newspaper-reading public.

The *Yomiuri Shimbun* strongly advocates the conclusion of a special convention with the United States in order to obtain a reduction of the immense duties imposed by the Dingley Tariff on silk fabrics, cotton carpets, matting, straw-braid, and so forth. These minor products of Japanese industry promised to assume large dimensions when the Dingley duties suddenly checked their development. It is true that the volume of the trade has not been affected by the new tariff, but the only warrantable inference to be drawn from that fact is that a great expansion would have taken place had not these crippling duties been enforced. It becomes, then, a matter of prime importance for Japan to obtain relaxation of the harsh conditions now existing. She rebelled strenuously against these conditions when they were only *in posse*, and endeavoured by diplomatic representation and popular agitation to turn America from her purpose. But her success was practically *nil*. The Dingley Bill contains a clause, however, which offers a last hope—a clause providing that, in return for special concessions made by a foreign country, the United States Government shall be entitled to reduce the Tariff rates in

favour of products or manufactures of that country coming to America. Already the Argentine Republic has taken advantage of the clause to conclude a special convention, and France is understood to be contemplating similar action. Japan could make tariff concessions with respect to American kerosene, flour, machinery, hardware, and so forth, in consideration of corresponding concessions for her own silk fabrics, carpets, matting, straw-braid, and porcelain. Where competition is keen, a slight advantage often suffices to turn the scale. America might find it well worth her while to be able to get her goods into Japan on better terms than those extended to the same class of goods coming from other countries.

THE RIGHTS OF THE SUBJECT.

The patience of the Japanese is a prominent trait. They quietly endure inconveniences that would provoke an outburst of indignant protest among other people. It is undoubtedly a pretty characteristic, but it has one great drawback. Progress is much more likely to be rapid in a community each unit of which feels himself personally aggrieved by official laches or administrative abuses, than in a community where every one resigns himself placidly to things as he finds them. At an important railway station, for example, the Japanese consent unmurmuringly to be ranged in a long queue curving from the ticket-seller's wicket to a point sometimes fifteen or twenty yards distant, and in that order they will placidly stand until the slow process of distributing tickets brings each unit of the queue, in due sequence, to the place of purchase. It never seems to occur to them that the conservative uniformity of the railway authorities' arrangements is a public outrage. They do not observe, or, if they observe, they take no practical note of, the fact that to make precisely the same provision for selling tickets at an out-of-the-way provincial station as at a metropolitan terminus, is to ignore the convenience of the travelling public altogether, and that instead of keeping two or three score of passengers wearily waiting to buy tickets while the selling clerk sits idly twiddling his thumbs, the wicket ought to be opened half an hour earlier, or even supplemented by two or three additional wickets according to the pressure of traffic. Naturally, under such circumstances, the railway authorities are not shaken out of their groove of false economy and discourteous perfectoriness. The same tolerance closes the mouth of protest against the slow, inconvenient methods of water-works' engineers in Tokyo. During long weeks, traffic is impeded by lines of big pipes ranged along the streets, as if the authorities were under no sort of obligation to dispose of these obstacles as quickly as possible; and after the pipes are laid, the street remains almost impassable, as though the achievement of burying the pipes deserved to be commemorated by a monument of mud and ruts. No one formulates any complaint, however. But, in truth, we need not look beyond the general state of the streets of Tokyo to find evidence of the people's long-suffering propensities. Men have silently submitted for years, and do still submit, to be tortured by the most uneconomical and inconvenient system of road-making that was ever conceived. It is true that public opinion seems to have awakened of late to the disgrace of such streets as those of the capital, and at last there is apparently earnest talk of recourse to civilized methods. But in the meanwhile the municipal authorities continue calmly indifferent to their public responsibilities. They grant a charter to a tram-way company without imposing any conditions as to the repair of the roads along which the lines are laid, and the result is that while the centre of a once passably good road is occupied by the tram, the narrow spaces on either side assume the character of ploughed lands. The Japanese do not appear to recognise that every citizen agitating against these abuses is a factor of progress, and that patient endurance is a sign of want of civilized sensibility.

"THE COMING RELIGION OF JAPAN."

We reproduce elsewhere an essay from the pen of Mr. W.E. Griffis on "The coming religion of Japan." It is, in our opinion, a remarkable example of the errors into which a clever man may be betrayed by imperfect investigation. As to Mr. Griffis' idea that belief in a personal God is absolutely essential, and as to his statements about a want of religious feeling among the Japanese, we need not say anything. These are matters of opinion. But against the extraordinary blundering of some of his allegations, we can not choose but protest. For example, he says that "polygamy and private harems with children born in a herd instead of a home"—whatever that may mean—"are the general custom from the court noble to the betto;" that Confucianism "teaches only etiquette and ceremony, extinguishing all faith in personality, divine or human;" and that "Buddhism ignores and ridicules the idea of a creator, teaches flat atheism, * * * and finds the whole basis of its philosophy in a succession of cause and effect, even while ignoring the first cause." Every one of these assertions is as wrong as it well could be. We have not space here to enter on such large questions, but we desire to place on record an emphatic denial of Mr. Griffis' propositions. He says that he has been for thirty years before the public as a writer on Japan, and on the strength of that fact he claims exemption from any accusation of lack of appreciation. It is very true that Mr. Griffis has written much about Japan and written it well, but we are bound to say that his latest conceptions, wherever he obtained them, are egregiously false; so false that his qualifications for challenging the integrity of the Japanese may fairly be doubted. "Their books and newspapers," he says, "are painfully, even disgustingly, full of boasting and national vanity." Well, we will undertake to show Mr. Griffis more "boasting and national vanity" in the columns of his own country's journals during a single twelvemonth than he can collect from the columns of the Japanese press since it came into existence. Mr. Griffis is a man of profound prejudices. We do not quarrel with him for that. Many noble folks have been steeped to the lips in bigotry. But if he allows his prejudices to run away with him, he can not expect that others will follow along the same route.

SPAIN AND CUBA.

When Reuter telegraphed, on the 20th of September, that the United States Government, through its Representative in Madrid, had conveyed an ultimatum to Spain, warning her that unless the war in Cuba was terminated by the end of October, the United States would feel justified in taking measures to secure the independence of the island, most of our readers probably agreed with us in thinking that the intelligence could not be credited. News from America now shows that the United States Representative presented no ultimatum of any kind, but merely conveyed an expression of his Government's deep interest in seeing the contest terminated. We are further informed by a telegram apparently despatched from London on the 8th instant, that Spain has decided to grant autonomy to Cuba, retaining only her suzerainty over the island. In all probability that decision will put an end to the conflict. The Cuban insurgents, though their subjugation does not seem imminent, can not entertain much hope of conclusive success. Spain has shown a degree of tenacity and dogged resolution that have won the plaudits of the world, and the general opinion in Europe a month ago was that order would quickly be restored in the island were not the rebels constantly supplied with arms, ammunition, and money by American speculators. Thus the wise concession now made by Spain can scarcely fail to terminate the trouble.

EXCHANGE OPERATIONS.

The total demand for gold from the 1st to the 6th was:—

	Yen.
One-yen pieces.....	832,797
Notes	2,604,016

Total 3,436,813

The returns of silver yen and notes presented for exchange against gold on the 7th instant are as follow:—

	TOKYO.	YOKOHAMA.
	Yen.	Yen.
One-yen pieces.....	3,720.....	318
Notes	23,430.....	10,262

Totals..... 27,150..... 10,580

During August, and especially September, rumours constantly reached Japan to the effect that large purchases of silver yen had been made in Hongkong, Shanghai and Singapore by speculators who intended to send them here for exchange. Millions were spoken of as having been already accumulated for that purpose. They do not appear, however, to have found their way to Japan yet. Of course it is still early in the day, but evidently the utmost expedition would be used in managing an operation of that kind. It is inconceivable that silver pieces collected solely for the purpose of realizing profit on their exchange should be kept unexchanged an hour longer than necessary. We are inclined, therefore, to conclude that events are justifying the doubts often expressed in these columns about the magnitude of the exchange transactions likely to follow the adoption of gold monometallism.

Exchange operations continue insignificant. The figures for the 8th and 9th were:—

	Silver.	Notes.
	Yen.	Yen.
Tokyo and Yokohama, 9th.	5,392	11,663
Various localities, 8th	10,035	26,020
Totals	15,427	37,683

The total from the 1st to the 9th was 3,603,829 yen, consisting of 887,370 yen in silver coins and 2,716,459 yen in notes. The first exchange of old gold coins for new took place at Bakan (Shimonoseki) on the 8th instant, when 452 yen were exchanged for 904 yen.

On the 11th instant, the amount of silver yen presented for exchange in Tokyo and Yokohama was 5,015 yen and the amount of notes 25,855 yen. From the first to the 8th instant, the total quantity of silver yen presented for exchange throughout the country was 902,212 yen, and the total of notes, 2,741,762 yen, making an aggregate of 3,643,974 yen.

The silver coins and notes presented for exchange in Tokyo and Yokohama on the 13th instant totalled 26,480 yen, and the aggregate exchanges from the 1st to the 13th throughout the empire were 3,801,844 yen; namely, silver yen to the amount of 976,655 yen, and notes to the amount of 2,825,189 yen.

THE VOYAGE OF THE "GLADYS."

Towards the end of last week, some anxiety was felt in Yokohama about the *Gladys*, the trim little steam launch built for the P. & O. Company by the Yokohama Engine and Works, Ltd., which left for Kobe on Monday under command of Captain George Hay. No advice had been received of her since Mr. Trezise left the little vessel at Sagami; the weather was very stormy then, and it got steadily worse as the week wore along. The directors and officers of the Y. E. & I. W. were therefore much relieved when a telegram reached them on Saturday afternoon from Captain Hay, dispatched from Yokkaichi at 1.30 p.m. It ran:—"Arrived here this morning for stores after very bad weather: if fine will sail to-night." It is thought that the message really came from Matoya, the post town being Yokkaichi. The *Gladys* arrived in Kobe on Monday.

THE NEW POLITICAL PARTY.

It is stated that the parliamentary members of the new political association—the *Kōdō-kai*—now in Tokyo number twenty-five, and that the names actually borne on the roll aggregate forty-nine. Possibly some reductions or accessions of strength may take place before the opening of the next session of the Diet, but, at any rate, the association is expected to command from forty to fifty votes in the Lower House. That is the estimate of one authority. Another alleges that the union is likely to receive several recruits, not only from the Liberal seceders of last session, but even from the ranks of the Progressionists (*Shimpo-to*) themselves. The *Shimpo-to* are the Cabinet's supporters, and any defections from their number would be a serious matter, since they do not now aggregate more than a hundred in a House of three hundred. But we speak here upon the assumption that the new association is hostile to the Cabinet; an assumption by no means to be accepted confidently as yet. The *Fiji Shimpo*, indeed, alleges unhesitatingly that the three sections forming the *Kōdō-kai* have come together on a basis of opposition to the Government. It explains their alleged attitude to be that, whereas the Minister President promised the Diet last spring that the *post-bellum* measures should become a practical reality and that Administrative reform should be achieved without fail, on which promises the three sections have hitherto relied, it has now become evident that administrative reform can not possibly be carried out by the opening of the next session of the Diet, and consequently the three sections find themselves unable any longer to support the Cabinet. They will, therefore, attack the Ministry, with whatever politicians the proceeding may bring them into line. But while that is their ostensible position, there are said to be other considerations influencing them. Thus, while they acted during and subsequently to the last session as supporters of the Cabinet pure and simple, they were not treated as such, but were always differentiated from the Government's other allies, the *Shimpo-to*, the latter being taken into the Ministry's confidence and consulted about official measures, whereas the three sections received no such mark of trust. Against that distinction they are said to have chafed in secret. Then again, when it came to a question of selecting "men of talent" for special official appointments, the three sections were completely overlooked, though they naturally thought that in point of moral endowments and proved competence, they possessed some title to share the rewards. Finally, they have always been more or less offended by the treatment extended to them by the *Shimpo-to*. Hence their resolve is to stand up against the Cabinet next session, above all against Count Okuma, and to direct their attacks notably against the Departments of Foreign Affairs and Agriculture and Commerce. In the columns of the *Yorossu Chōko* we find it stated, however, that the members of the *Kōdō-kai* have not yet definitely decided to range themselves on the side of the Opposition. They purpose making preliminary investigations of certain problems—as, the increase of taxation, the new appropriations sought in the next Budget, the conduct of the Hawaiian complication, the policy towards Korea and the affair of

Judge Takano—and they will be guided by the result of their inquiries. We do not credit the version of the *Yorossu*. The three sections must have been thoroughly familiar with their own opinions concerning those various problems before they united to form the *Kōdō-kai*. The only perplexing element in the situation is the alleged position of Viscount Takashima. He is said to be the leader of the *Kōdō-kai*, and yet he is a Cabinet Minister. As for Count Okuma and the old *Kaishin-to*, now the back-bone of the *Shimpo-to*, it is impossible to be blind to the fact that they alone among political parties have held together, through good report and evil report, from 1881 to 1897. Every other association of politicians, not even excluding the *Fiji-to*, has suffered more or less disintegration. It is true that a section of the *Kaishin-to*, under the leadership of Mr. Shimada Saburo, seems to be joined to the body of the Party by very slender links. Could any hard and fast inference be drawn from the *Mainichi Shimbun*, Mr. Shimada's newspaper, his hostility to the present Cabinet, of which Count Okuma is a prominent member, would admit of no question. But hostility to the Cabinet because its programme of administrative reform remains still in the region of hypothesis, need not certainly imply hostility to Count Okuma. So we remain in doubt. With politicians like the *Kōdō-kai*, however, it is hard to sympathise—or, at any rate, with the sections consisting of seceders from the Liberals and National Unionists. They deserted their colours last session in the face of the enemy, and, unless they are unjustly judged, they are about to desert their new flag because their former perfidy has brought no material recompense. The query that presents itself to every foreign reader of Japan's parliamentary records is, when will her politicians learn the absolute necessity of party discipline?

A COALITION CABINET.

Since Marquis Ito's return, since, indeed, the fact that his absence would be unexpectedly shortened became known, there has been much talk of a coalition Cabinet. We have not, for our own part, attached much importance to the rumour. Nothing appears less likely than that Marquis Ito should be willing to resume office on the eve of the Diet's session and at a time when the present Cabinet is grappling with, and has not yet solved, the problem of balancing next year's Budget. However, it is our business to keep our readers informed of what is passing in the political world, and we accordingly call attention to an essay in the *Taiyo* which deals with this question. The idea, of course, is that Marquis Ito, Count Okuma, Count Matsukata and Count Itagaki should combine to form a Ministry so that all the leading statesmen and political parties in the empire might unite their strength to carry out successfully the various measures required in the sequel of the War. An excellent project in the abstract, but impracticable according to the *Taiyo's* view. At a great crisis of the State, the combination of all politicians and the sinking of all minor differences are natural and possible steps, but in ordinary seasons such combinations can not work smoothly unless there is some commanding genius to mould them to a common end. Otherwise friction and confusion are their inevitable outcome.

Japan is not without experience. In 1871, there was a coalition Cabinet seemingly very powerful, headed by Okubo, Saigo, Kido and Itagaki. It lasted only two years. Again, in 1875, after the Osaka Conference, another coalition Cabinet, lead by Okubo, Kido and Itagaki, was organized, but it fell to pieces rapidly. In later days, namely, 1888, the Kuroda Cabinet was a coalition: it included Ito, Inouye, Okuma, and Matsukata. The circumstances of its fall are fresh in every one's memory. The upshot of the matter is that until principles not persons become the motive of coalitions, united action is practically impossible. The unions now proposed are mere temporary expedients. You can not tie men together for administrative purposes if their administrative policies are different. Marquis Ito and Count Itagaki have one policy, Count Okuma and Count Matsukata have another. The two former can pull together in harness and so can the two latter, but yoke the whole four to the coach of State and they will certainly kick over the traces. Such is the *Taiyo's* opinion. It declares that Baron Iwasaki and Mr. Fukuzawa are conspicuous supporters of the coalition idea, and that they are hardly worth laughing at for their pains. That is all very sapient, no doubt, and sounds very plausible, but so far as foreigners are concerned, they have a difficulty in appreciating the *Taiyo's* argument, seeing that the main link in the chain of reasoning is omitted, namely, an exposition of the alleged differences of policy that divide Marquis Ito and Count Okuma, Count Itagaki and Count Matsukata. We ourselves have never been able to discover what those differences are, and we have devoted some attention to the subject. Indeed, our conclusion is diametrically opposed to that of the *Taiyo*; for it appears to us that personal considerations, not distinctions of political principles, hold the Meiji statesmen asunder, and that there is nothing whatever in their administrative ideas to prevent them from working together with perfect smoothness and unanimity.

MR. FUKUZAWA AND THE GOVERNMENT.

It has been remarked by readers of the vernacular press, and, indeed, has been shown by our weekly summaries of the Tokyo newspapers, that of late the *Fiji Shimpo* shows a disposition to depart from the neutral attitude hitherto maintained by it in politics and to criticise the doings of the present Cabinet in very severe terms. Recently it contained a long article, of which we gave an epitome, charging the Government with many and serious sins of omission, and thereby delighting the Opposition, who naturally welcome the assistance of such a distinguished addition. The *Fiji's* change of tone is turned to curious account by the *Chuo Shimbun*, the organ of the National Unionists. In order to emphasise the thoroughness of the new departure, that journal publishes a note headed "The venerable Mr. Fukuzawa's Talk." It says that for many years Mr. Fukuzawa has been revolving a plan for the re-organization of the Mita College, and that a friend recently suggested to him the advisability of asking the Household Department to purchase the land attached to the present school buildings at Mita, which is now so

valuable that the money thus obtained would suffice not only to procure another site in the suburbs and erect suitable buildings there, but also to support the institution for ten years, during which time a scheme for its permanent endowment could be elaborated. Mr. Fukuzawa's reply—wherein, of course, lies the whole gist of the story—is said to have been this:—"Your idea is good, but I can not adopt it. With administrative affairs conducted in such a disorderly manner as they are by the present Government, there is no knowing what phenomenon we may not see. Have not strikes of operatives become common and does not victory always rest with folks that take the law into their own hands? Republican principles may grow out of it all for aught we can see to the contrary. It is impossible for me, under such circumstances, to stand aloof from politics, as I have done hitherto. I am resolved to spare no effort that may promote the spread of enlightened and loyal principles. To ask the Household Department to buy land from me at such a time would interfere with the prosecution of my purpose. I am sorry to say that I can not entertain the idea." The story may be made out of whole cloth, or it may be an adroit exaggeration. But it has interest as indicating, however remotely, the growth of a conservative element in Japanese politics. We have often wondered how long the nation would continue its course of almost radical progress without developing some conservative tendencies.

THE GOVERNOR-GENERAL OF FORMOSA.

We read in the *Yomiuri Shimbun* that the Government has decided to appoint Vice-Admiral Count Kawamura to be Governor-General of Formosa in place of Lieut.-General Viscount Nogi, in which case Lieut.-General Kurogi, now commanding the Guards, will be gazetted commander-in-chief of the Western District, in succession to the late Lieut.-General Viscount Yamaji; Lieut.-General Oku, now commanding the First Division, will become Commander of the Guards; and Lieut.-General Viscount Nogi will succeed to the command of the First Division.

The re-appearance of Count Kawamura on the stage of active administration would be a most interesting event. The Count must be now over sixty years of age, a time of life when statesmen begin to be really useful in the West, though in Japan a strange notion exists that a sexagenarian in harness is more or less unseemly. In 1867, when Colonel Kawamura marched from Kyoto in the Emperor's suite, he had not yet attained very high distinction, but the campaign against Aizu which followed immediately afterwards, gave him an opportunity of displaying the remarkable daring in action and strategical insight which he showed even more conspicuously, ten years later, during the Satsuma rebellion. In 1870 he was Vice-Minister of the *Hyobusho*, a Department which, at that time, combined the functions of the present War Office and Admiralty. A year later, the affairs of the Navy were placed under the control of a separate Department, and Mr. Kawamura became the first Naval Minister, which office he held, if we remember rightly, until 1882. It was under him that the British Naval Mission served

from 1873 to 1879, its first head being Commander Douglas, its second Commander Jones, and its third, Lieut. Bailey. Few Japanese officials have ever succeeded in winning such a large measure of respect and liking from the foreigners that served under them as did Count Kawamura, and we can not doubt that he would be a universal favorite in Formosa. Nevertheless, we question the truth of this rumour about his appointment, for we have always understood that he entertained no desire to resume active duties. He is now a Privy Councillor.

It is stated that the new Administrative system for Formosa has been definitely fixed, and now awaits only the Emperor's sanction. According to brief notices given in the vernacular press, there is to be no change in the Governor-General's office, and the Governor-General himself is to be an officer of the rank of either full General or Lieut.-General. The Bureau of Civil Government is to be divided into two, namely, the Civil Government Bureau and the Administrative Bureau, and these will have under their control Sections of Home Affairs, of Foreign Affairs, of Law, of Education, of Communications, and of Agriculture and Commerce. The present Military Bureau is to be divided into Military and Naval Staff Offices. So far as organization is concerned, no other changes are mentioned. It is further stated that Major-General Tachimi, of Manchurian reputation, is to be chief of the Military Staff, and Rear-Admiral Tsunoda, Chief of the Naval. Mr. Sone will be Chief of the Civil Government Bureau, assuming, at the same time, temporary control of the Administrative Bureau. These changes, thus stated, convey little meaning. Doubtless they represent an improved organization, but what Formosa wants is not good administrative machinery so much as good men to run it. If a complete recasting of the *personnel* of Formosan officialdom were announced, we should have more confidence in the prospect. However, if rumour be right as to the appointment of Count Kawamura, the needful changes will probably be made.

THE ADMINISTRATION AND THE JUDICIARY.

The vernacular press reports another collision between the Administration and the Judiciary. Recently Judge Takano, the chief judicial official in Formosa, was summoned to Tokyo, to report upon some proceedings the nature of which does not appear to be understood by the public. Evidently the Administration was not satisfied with the Judge's account, for the *Official Gazette* soon contained an announcement that he had been placed upon the Retired List. Now the Constitution provides that "no judge shall be deprived of his position unless by way of criminal sentence or disciplinary punishment." The object of the provision is to secure the independence of the Judiciary, and its effect should be to guarantee the judge against removal from office except by the decision of a court of law, whether criminal or disciplinary. If, then, it be assumed that the Constitution extends to Formosa, the action of the Administration in placing Judge Takano on the Retired List without recourse to a law court is distinctly unconstitutional. So Judge Takano also

thinks, and he has adopted a very practical method of protesting. He has gone back to Formosa with the avowed intention of resuming the discharge of his functions and resisting to the death any attempt to remove him. The affair is inexplicable at the present stage. It appears that Judge Mizuno, also a Formosan official, was placed on the Retired List some time ago, but public attention was not attracted by the incident, the Judge making no attempt to resist. We are informed by vernacular newspapers that both Judges incurred the displeasure of the Administration in the same way, namely, by adopting too severe measures against the official corruption prevalent in Formosa. It is even stated that they thus brought upon their heads the displeasure of the Governor-General, Viscount Nogi, and the former Colonization Minister, Viscount Takashima. Such tales are obviously quite incredible. Unfortunately party considerations seem to weigh much more strongly with some Japanese journals than the duty of telling the truth. In this case there is special difficulty in ascertaining the facts, for the Minister of Justice being unpopular even with the newspapers that habitually support the Cabinet, they do not hesitate to give publicity to the above extravagant explanation. For our own part, we fail to see how the removal of two judges by an Administrative order can be reconciled with the provisions of the Constitution, unless, indeed, the fact that a special system of Government exists in Formosa be regarded as placing it beyond the range of the Constitution's operation.

The course adopted by the Chief Judge in Formosa, Mr. Takano, in returning the notice of retirement sent to him by the Department of Justice on the ground of its unconstitutionality, attracts much attention. The Opposition press gladly seizes upon the incident as an opportunity to attack the Government, not scrupling to assert, first, that Judge Takano's removal is necessary in the interests of officials who have been practising corruption; and secondly that the complication now caused is likely to show even Cabinet Ministers in an ugly light. Meanwhile, the *Fiji Shimpō* has sought information direct from the Minister of State for Justice, and publishes an explanation said to come direct from him. Stripped of technicalities, the explanation amounts to this:—That although the Constitution guarantees judges against removal from office except by the verdict of a Disciplinary Court—we omit the question of criminal court as irrelevant in this particular instance—the guarantee can not have practical validity in the absence of such a court; that, as a matter of fact, the Law of Organization of the Law Courts is not operative in Formosa, and that, consequently, a Disciplinary Court can not be convened there; that the authority belonging to a Disciplinary Court in Japan proper is, under the special circumstances of the new dominion, vested in the Governor-General's Office; that the High Court over which Judge Takano presides was called into existence by the Governor-General in virtue of the exceptional powers entrusted to him; that, in short, Formosa has not yet been brought fully within the pale of the laws operative in Japan proper; that the Minister of State for Justice is not competent to enforce the Constitution in the absence of the necessary machinery; and that, finally, Judge Takano

is entirely wrong when he appeals to the protection of a law which is not in force. It cannot be denied, we think, that the Minister's explanation is sufficient, so far as the actual circumstances are concerned. But the question arises, why do such circumstances exist. More than two years have passed since Formosa became a Japanese possession. Surely that time should have sufficed for the organization of proper law courts, at any rate. Due provision for the administration of justice ought to have been one of the first cares of the Government. Formosa is a fair possession, but it threatens to cost Japan very dear.

Viscount Tani, in an interview with a representative of the *Yushin Nippo*, has ventured to denounce the "absurdity" of saying that the Constitution is not in force in Formosa, his contention being that the island is Japanese territory, and that the Constitution necessarily extends to every part of the empire. That is an example of the difficulties with which a Japanese Ministry has to contend. Viscount Tani is a prominent figure among Japanese politicians. He leads the Opposition in the House of Peers and he himself held a portfolio ten years ago. Yet he labours under the extraordinary hallucination that the Constitution of a country becomes necessarily and immediately operative in any territory accruing to the country by conquest. It must always be embarrassing to carry on the business of government when the Ministry's prominent critics have so little knowledge of the subjects they undertake to criticise. If Viscount Tani paused a moment and looked abroad before committing himself to hard and fast statements, he would see that the constitution of a Western State never extends, *ipso facto*, to newly acquired territory, and if he reflected on what has taken place in Formosa itself, he would at once perceive that the island has hitherto been governed by methods which could not have been applied to any part of Japan proper without the previous consent of the Diet. Laws have been enacted and promulgated and districts have been placed under martial law by the sole authority of the Governor-General, facts which conclusively prove, if any proof were necessary, that the island still lies outside the pale of the Constitution. It appears to us that Judge Takano's case lies in a nutshell. The Government's competence to remove him without recourse to the verdict of a disciplinary court cannot be doubted. But the public want to know the cause of his removal. Serving in Formosa as a "judicial official," not as a "judge" in the terminology of the Constitution, he was unquestionably a unit of the general body of officials whose appointment and removal belong to the Imperial Prerogative. Hence the question turns entirely on the justice of the treatment he has received, and for some reason which we fail to understand, materials for forming a judgment on that point are not furnished. The Government naturally resents the idea of being required to account for acts which lie entirely within its competence, but as a matter of tact and prudence a little more frankness would appear to be advisable in this instance.

It is impossible to deny some measure of applause to Judge Takano. We believe him to be wrong. Unfortunately he can not claim the protection of the Con-

stitution, and he would recognise the fact if he devoted some study to constitutional history. But the sturdiness of the man is admirable. We read in the vernacular press that he has returned, for the second time, the order placing him on the Retired List, and has addressed the following letter, apparently to the Minister President of State:—

I have the honour to state that since I was officially summoned to Tokyo more than a month ago only one question has been addressed to me by the Minister President, and without further communication, I suddenly received, on the 1st inst., a Departmental instruction placing me on the Retired List. But inasmuch as the matter is distinctly provided for in the Constitution, I could not possibly accept the instruction. I therefore returned it as an invalid order, accompanying it with a statement of objections. A second time it was sent to me, and a second time I declined to receive it. I have not been favoured with any intimation of your business with me, and as it is my intention to proceed to Formosa on the 15th instant, I have the honour to request that if you have any need of my continued presence in Tokyo, you will let me know by noon on the 14th instant.

The *Yomiuri Shimbun* says that Mr. Takano will set out on the 16th instant, and that nothing short of force will prevent him from taking his seat as presiding judge of the chief court there. If he is expelled from the Court by gendarmes, police or soldiers, he will appeal to the Diet. Meanwhile, the strange point is that not one of the vernacular newspapers offers any explicit statement as to the reasons of Mr. Takano's removal from office. The *Fiji Shimpō*, indeed, hints that he showed a want of discretion in dealing with the Japanese in the island, and that he failed to recognise the inevitable character of some of the irregularities existing there. That is a poor kind of explanation. The *Fiji*, too, does not pretend to think it sufficient, but in temperate though forcible language criticises the Government's action as harsh and ill-judged. Of course the *Fiji* is much too level-headed to endorse the monstrous charge that the Government, in removing Mr. Takano, desired to shield corrupt officials. It rightly says that no level-headed person could entertain such a notion. Still it evidently thinks that a blunder has been made. Outsiders must reserve their opinion until they know something definite as to the cause of the removal.

THE KODŌ-KAI.

The *Chuo Shimbun* describes the programme of the new political association (the *Kodō-kai*) in terms evidently designed to discredit that body as much as possible. It says that the object of the association is to bring about the formation of a purely Satsuma Cabinet, by removing all the Choshu elements from the Ministry—namely, the Ministers of Communications, Justice and Education—and replacing them by Satsuma men. If that be done, and if reforms be undertaken in the Department of Communications and the Hokkaido Administration, the association undertakes to support the Cabinet in increasing the Land Tax 3½ per cent., in the Audit Bureau affair, in the Takano trouble, and in the Budgetary expenditures. But there is another condition. Like a lady's postscript it is the most important part of all. It is that ten members of the association shall receive good official appointments. We don't believe the story.

JAPANESE SIEGE ARTILLERY.

Our readers probably remember that after the capture of the Talien forts, a considerable delay took place before the Japanese troops moved to the attack of Port Arthur, and it was subsequently learned that the Commander-in-Chief of the expeditionary force had resolved not to deliver the assault until a battery of siege guns was available. Up to that time, the Japanese had used field guns only; and had found them sufficient for the purposes of a campaign which did not involve the capture of any permanent fortifications. But Port Arthur was a fortress of the first order, and had the Chinese brought any resolution to its defence, heavy artillery would have been indispensable to the assailants. We believe that we are right in saying that no regularly organized corps of siege artillery then existed in the Japanese service. At all events, some difficulty was experienced in complying with General Yamaji's requisition, and when the siege guns were finally landed at Talien, a coolie corps had to be formed for their transport to the front. They never went into action, so far as we know, but the Japanese did not fail to take the experience to heart, and they are now engaged in a series of experiments having for their object the settlement of preliminaries to the organization of a brigade of heavy artillery. A force of gunners has been taken from the Uraga Forts, and four twelve-inch guns have been sent from Yokosuka to Gotemba by train, whence they have been drawn by horses to the Suso-no plains, the journey furnishing data for guidance in organizing a transport service. Firing practice is now going on, for purposes of both attack and defence. It is not necessary, of course, to go all the way to Suso-no in order to practise garrison gunnery, but the special kind of defensive fire carried on in the plains beyond Gotemba is "masked fire;" that is to say, firing at an invisible enemy.

THE FORMOSA RAILWAY.

The projectors of the Formosa Railway are bestirring themselves. They held a meeting in the Imperial Hotel on the afternoon of the 7th instant, and were encouraged by the presence of Count Okuma, Viscount Takashima, Marquis Hachisuka, Prince Konoye and Baron Yasuba. Among the projectors are many prominent men of business—as Messrs. Shibusawa, Yasuda, Yonekura, Tanaka, &c.,—whose names alone constitute a guarantee that the project is receiving practical and serious consideration. Mr. Shibusawa, who was one of the speakers, told his audience very plainly that their reputation as practical merchants was concerned in carrying that programme to completion. He also employed an argument which used to have much potency in this country, though we suspect that it has now lost some of its old force, namely, that foreigners were watching Japan's proceedings in Formosa, and that any failure to push an enterprise so essential to material progress as railways are, would certainly be construed greatly to her discredit. It seems probable that this meeting will prove the prelude of active steps to build the long talked of line, but we can not forget that a great part of the responsibility for the delay rests with the Government's failure to establish order

in the island. Folks can scarcely be expected to devote their funds to railway construction in a country where insurgents may at any moment set themselves to destroy life and property on a wholesale scale.

RESIGNATIONS.

Note has already been taken of the fact that Mr. Takahashi, Chief Secretary of the Cabinet, resigned his post on the 4th instant. Mr. Takahashi has long been in delicate health, and had his resignation stood alone, the reason assigned—recent aggravation of his malady, that too common trouble in Japan, lung disease—would probably have been accepted without question. But the event was followed by the resignation, on the 5th instant, of Mr. Komura, chief of the Legislative Bureau in the Cabinet, and it is now alleged that the action of these two officials is connected with the revision of the administrative system in Formosa. No explanation is given as to the nature of their objection, but since the statement that ill-health is not the real cause of their retirement comes from the *Yomiuri Shimbun*, which has special sources of information at present, we must assume it to be correct. There is much that perplexes foreign observers of Japanese affairs. If officials in the position of Messrs. Takahashi and Komura think it necessary to resign because they can not endorse a project of law contemplated by the Cabinet, their independence of opinion is certainly commendable, but does not seem conducive to the discipline, without which public business is apt to get into difficulties.

ARREST OF A LOCAL OFFICIAL.

Mr. Kamoike, Headman of the Hongo District in Tokyo, was arrested on the 12th instant at the suit of his sister-in-law, who charged him with fraud. The case, as stated in the vernacular press, is this:—The sister of Mr. Kamoike's wife married a Mr. Hanai, who died last May, leaving property valued at about twenty thousand *yen*. Mr. Kamoike became a species of self-constituted guardian of the widow, and, without her consent, pledged house and land property of hers to a bank, raising on it eight thousand *yen*, which he spent on his own account. It was a vulgar kind of crime, not at all interesting, but the social position of the delinquent gives the incident some prominence.

THE NEW ISSUE OF BONDS.

With regard to the recently announced issue of five million *yen* worth of Railway Bonds and ten million *yen* worth of Public Undertakings Bonds, the *Fiji Shimpō* says that it understands the whole amount to have been taken up by the Bank of Japan with funds accruing from the sale of War Bonds. Our contemporary describes these funds as a Government deposit, from which we infer that reference is made to the money obtained by selling War Bonds to a British syndicate last summer, but we confess that the true bearings of the operation escape us. The proceeds of that transaction meet us at so many turns, now as a gold reserve, now as a fund for building railways or carrying out public

works, that we find ourselves bewildered. Doubtless the facts will soon be plain. Meanwhile, it is interesting to note that the Railway Loan and the Public Undertakings Loan stand thus, at present:—

RAILWAY LOAN.		
	Amount issued.	Issue price.
	<i>yen</i> .	<i>yen</i> .
First Issue.....	100,000	100 00
Second „	1,000,000	100.00
Third „	2,000,000	96.36
Fourth „	1,000,000	99.25
Fifth „	1,000,000	100.20
Sixth „	4,000,000	99.20
Seventh „	5,000,000	95.53

Total 15,000,000

Remaining to be issued..... 3,897,333 *yen*.

PUBLIC UNDERTAKINGS LOAN.

	Amount issued.	Issue price.
	<i>yen</i> .	<i>yen</i> .
First Issue.....	3,000,000	99 22
Second „	10,000,000	95 53

Total 13,000,000

Remaining to be issued this fiscal year..... 55,704,100 *yen*.

HONGKONG AND GOLD.

The Hongkong Chamber of Commerce recently decided that, in consideration of the Colony's close commercial relations with China, it would not be advisable to place the currency on a gold basis. We observe, nevertheless, that the *Hongkong Daily Press* continues to advocate the adoption of the gold standard. The *Daily Press* has always been a staunch supporter of bimetalism, and its present attitude is one of despair, not of changed conviction. It thinks that if no hope of the international rehabilitation of silver can be entertained, and if country after country is resolved to turn its back on the white metal, things will fare badly with a community that refuses to follow the general lead. We can appreciate such an apprehension. If the demonetization of silver proceeds much farther, its fitness to discharge the duties of a medium of exchange will become very doubtful. Another strong point made by our Colonial contemporary is that China, since she has pledged her customs revenue as security for a large gold loan, will soon find herself under the imperative necessity of fixing the sterling value of that revenue. She counts upon it to pay off the interest and principal of her foreign debt, which it certainly will not do if she collects it in coins that threaten to become mere tokens. The French in Indo-China have just recognised that they are confronted by a similar source of embarrassment, and have converted their customs dues into sterling by assessing them in francs. It would not be by any means so easy for China to adopt a similar course with her customs revenue. She is perfectly competent to demonetize silver and resort to a gold currency, as Japan has done, but to make such a change in the domain of her foreign trade only, would be a discrimination against which the Treaty Powers might justly protest. Besides, it is easy to speak of collecting the duties in gold, but when we come to consider the details of such a measure, grave difficulties present themselves at once. The unit would have to be a Chinese gold coin. By no possibility could all the subjects and citizens of the various Treaty Powers be required to adopt the currency of any one of their number for duty-paying purposes in China, neither is it conceivable that China should consent to collect her revenue in half a dozen different kinds of coin. Her only course, failing a gold currency of her own, would be to fix the sterling value of the Mexican dollar once and for all, and we do not believe that she could ever induce Western countries to agree to anything of the kind. Even assuming that she could, the fact would not add materially to the embarrassments attending the circulation of silver dollars in Hongkong. None the less it appears to us very improbable that any community of merchants should be able to work successfully with a silver currency if the demonetization of the white metal by so many nations is to remain permanent. But will it remain permanent?

We can not think so. England is the chief—may we not say the sole?—obstacle to an international agreement for the rehabilitation of silver. Now if England had to consider her interests as the world's creditor only, she would assuredly hold firmly to her gold conservatism. But she has to consider something else. She has to consider the interests of a section of her subjects numbering no less than 300 millions. What is to be done about India? The rupee now has a fictitious sterling value which has destroyed its use as a measure of the country's hoarded wealth, and, moreover, the Government stands in the extraordinary position of offering to buy the people's gold at a price for which it declines to sell its own gold. We doubt whether the history of the world offers any precedent for the singularly anomalous financial system now existing in India, and it is impossible to conceive that a nation possessed of so much economical wisdom as the English have proved themselves to possess, should suffer such a system to remain long in force.

THE EMPEROR OF KOREA.

On the 2nd instant, the Korean *Official Gazette* published a memorial by the whole body of Korean Officials to their sovereign, urging him to assume the title of "Emperor." The *Forosū Choho* gives a Japanese translation of the document. It sets out by asserting the truisms that every independent sovereign has a right to choose his own title and require his own subjects to recognise it; that recognition having been obtained at home, recognition abroad follows in natural sequence, and that the assent or dissent of foreign Powers need not be awaited in such a matter. "Now," the document proceeds, "the virtues of Your Majesty are as those of Heaven and Your Majesty's subjects must necessarily look up to You as their Emperor. We therefore pray that Your Majesty will assume the title of Emperor without regard to the acquiescence of foreign States." The Tokyo journal says that the ceremony of crowning the "Emperor" was expected to take place on the 14th instant, and the appropriate worship of heaven and earth at the palace on the 17th.

It is doubtless fresh in the recollection of our readers that this idea of changing the King's title was mooted when Japanese influence was supposed to be paramount at the Korean Court, and the critics had not the slightest hesitation in attributing the initiative to Japan. They probably see their mistake now, though they obstinately refused to admit the truth of our denial at the time. There is an element of comicality, it must be admitted, in the assumption of such a title, especially at a time when the shadow of a foreign Power is supposed to be cast over the whole of the peninsula. But we sympathise with the Koreans. Their action in this matter can only be construed as an assertion of national independence. It is not a very substantial kind of assertion. Whether Korea be called an empire or a kingdom will matter little if its absorption by a foreign aggressor becomes essential to the latter. Still, the great trouble about the Koreans hitherto has been their apparent indifference about their country's status. They never seemed to have the heart to strike a blow on their own account, and until they began to help themselves, heaven was not likely to help them. This imperial aspiration may mean the advent of a more wholesome mood.

A FIFTIETH ANNIVERSARY.

On Wednesday, Mr. H. Kessler, the representative in Japan of Messrs. Siemens and Halske of Berlin, gave an entertainment at the Imperial Hotel, Tokyo, to a large number of patrons and friends of the Firm, in honour of the fiftieth anniversary of the Company's office in Berlin. We believe that this is the first celebration of the kind ever held by a foreign firm in Japan.

THE FORMOSAN JUDICIAL CASE.

WE did not suppose it possible that the case of the Formosan judicial official who has been placed on the Retired List by an Administrative Order, would lend itself to interpretations such as have been formulated by one of our local contemporaries. Mr. TAKANO is said by that journal to be "a second martyr for the Constitution," and it is declared to be "a happy omen for Japan that she should produce such men." In one sense it certainly is a happy omen. Men that make a stout fight for what they believe to be the right are always a fine element in any nation. But in another sense it is by no means a happy omen. For when an official reaches a position of such eminence as that lately occupied by Mr. TAKANO, he may reasonably be expected to have some knowledge of constitutional law or, at least, in the absence of such knowledge, to be endowed with prudence which shall guarantee him against becoming the central figure in a discreditable scandal. The public, in appraising the qualities essential to a judge, would certainly place discrimination and circumspection high in the list, but Mr. TAKANO does not appear either to discriminate or to be circumspect. He has taken his stand on a certain provision of the Constitution which guarantees judges against removal from office except by sentence of a disciplinary or criminal court, and on the strength of that provision he has assumed an openly defiant attitude towards the Government, refusing to obey its orders and declaring his intention of setting its authority at naught. But it does not appear to have occurred to him that before appealing to the Constitution he ought to have ascertained whether the Constitution applies to his case. Of all men a judge should be the last to have recourse to a law without considering whether its scope extends to the matter in question. Formosa has not yet been brought within the range of the Japanese Constitution. Nothing is more certain than that. The *Japan Gazette*, indeed, from which we have quoted above, dismisses as "a very trivial argument," the contention that the Constitution does not apply to Formosa, and says:—"Is Formosa a part of Japan or is it not? Certainly no regulation has been effected prohibiting any such application, and in the absence of any expressed provisions the Constitution must be held to prevail?" We presume that the singular ignorance displayed in that statement will be at once apparent. Few readers of English history—not to travel beyond the annals of our own country—have studied the subject so superficially as to be unaware that the Constitution has no operative force outside the confines of England, unless special measures have been taken to render it operative. In the case of territory acquired by conquest the right

of the Crown to institute a system of local government, wholly apart from parliamentary interference, has been universally recognised and everywhere illustrated in practice. It has been well said by one of the greatest of modern authorities on this subject that "the constitutional history of British dependencies may be compendiously described as that of a gradual transfer of the functions of Government from the Crown, in the exercise of a well recognised prerogative, to Parliament"; and inasmuch as the paramount authority of the Crown still continues unassailed in the case of many British dependencies—as Gibraltar, Malta, Hongkong, &c.—, it is almost incredible that an English journalist should fall into a blunder so egregious as to imagine that constitutional privileges extend, *ipso facto*, to conquered territory in the absence of restrictive legislation. One of the fundamental principles of the Japanese Constitution is that all laws require the consent of the Diet, but the Governor-General of Formosa is invested with power to make laws for the inhabitants of that dominion without any reference to the Diet. That one vital fact should have sufficed to indicate to Mr. TAKANO that Formosa still lies beyond the purview of the Constitution, even supposing him unacquainted with constitutional law as applied by Occidental countries. Besides, he had an object lesson lying still closer to his eyes. Before his appointment to Formosa he sat on the bench in Niigata. His title then was *hanis* (judge). When he was nominated to Formosa he became a *hanguan* (judicial official). In other words, he received a title no longer used in Japan proper; a title abolished on the reorganization of the Judiciary. Moreover, the name of the tribunal over which he presided, the term applied to himself as president, and the constitution of the law courts generally, plainly differentiated the whole judicial system of the island from that of Japan proper. Those facts should have suggested the possibility which in his ignorance of constitutional history, he seems to have altogether overlooked, namely, that the authority of the Crown, not that of the Constitution, was paramount in Formosa. We do not know the reason of Mr. TAKANO'S removal from active duty. Journals opposed to the Government hint that he displayed too much severity in dealing with corrupt officials. Such an explanation is obviously incredible. It is nevertheless accepted without query by the *Japan Gazette*; nay more, it is re-stated by that journal on its own authority in the most explicit terms. Local criticisms of Japanese administrative acts would carry more weight were they not disfigured by constant displays of injustice and recklessness. The cause of Mr. TAKANO'S misfortune can not be discussed, since it is

not known, but we are bound to say that sober folks will find difficulty in reconciling his present conduct with any theory of fitness to discharge judicial functions. Whether the Government is blameworthy for not having yet brought the Formosan Judiciary within the purview of the Constitution, is a question inviting discussion, but so long as the island remains outside the operation of the Constitution, there can be no manner of doubt of the Crown's power to remove or suspend the members of the Judiciary.

SECTION XXII.

It is fortunate for Japan that the United States Government has decided not to enforce the additional duties provided for in Section 22 of the Dingley Tariff. The Section attracted attention originally because it seemed likely to interfere seriously with the business of the Canadian Pacific steamers. These vessels carry considerable quantities of goods destined for the United States *via* Canada, and the 22nd Section of the Tariff provided that goods coming to the United States from Canada should pay a tax of 10 per cent. *ad valorem* in addition to the duties leviable upon them under the general provisions of the law. It appeared, therefore, that the Canadian route would be effectually closed. But there are good reasons to doubt whether the Section could have been construed in that sense. It speaks, not of goods coming *through* Canada, but of goods coming *from* Canada, and the natural interpretation of such language is that the *provenance* of the goods referred to Canada—in other words, that they are Canadian products or manufactures. Apart from that question, however, the Section would have discriminated fatally against the Japanese maritime carrying trade, for it provided that an additional duty should be levied upon goods coming to the States in vessels not owned by American citizens or not specially protected by treaty, and since Japanese vessels are not thus protected, the Nippon Yusen Kaisha's Seattle line would have been penalized.

Section 22 of the Dingley Tariff Law runs as follows:—

That a discriminating duty of ten per centum *ad valorem*, in addition to the duties imposed by law, shall be levied, collected, and paid on all goods, wares, or merchandise which shall be imported in vessels not of the United States, or which, being the production or manufacture of any foreign country not contiguous to the United States, shall come into the United States from such contiguous country; but this discriminating duty shall not apply to goods, wares, or merchandise which shall be imported in vessels not of the United States, entitled at the time of such importation by treaty or convention to be entered in the ports of the United States on payment of the same duties as shall then be payable on goods, wares, and merchandise imported in vessels of the United States, nor to such foreign products or manufactures as shall be imported from such contiguous countries in the usual course of strictly retail trade.

A JAPANESE CRUISER BUILDING IN GERMANY.

The *Yomiuri Shimbun* says that an order has been given to the Vulcan Yard at Stettin for the construction of a protected cruiser of ten thousand tons displacement; that she will take three years to build, and that two Japanese experts, Messrs. Takayama and Uyeno, have proceeded to Stettin to superintend the work. We presume that our contemporary refers to one of the 9,600 ton first-class cruisers included in the Naval Expansion Programme. If so there seems to have been a good deal of delay in placing the order.

GREAT BRITAIN AND THE BEHRING SEA CONFERENCE.

There is no longer any doubt that Great Britain has refused to take part in the proposed Conference with regard to pelagic sealing in the Behring Sea, if Russia and Japan are to be parties to the discussion. Details of the reasons assigned by Her Majesty's Government have not been received, but the general outlines of the objection are understood to be that as the subject to be considered is pelagic sealing with reference solely to its effects on the life of the Pribyloff rookeries, in which the United States alone are interested, neither Japan nor Russia has any *locus standi* in the discussion. That is evidently a question on which it would be extremely rash to pronounce an opinion. Moreover, we are disposed to think that it does not cover the whole ground of Great Britain's contention. For it must have been known in London months ago that Russia had already been invited by the United States to join the Conference, and that Japan was about to be invited. Mr. Foster, the American delegate, visited St. Petersburg in the first instance, and having obtained a promise of coöperation from Russia, proceeded to London to seek a similar promise from England. No secret whatever was made of the fact that Russia had agreed to send a representative to the Conference, yet England consented to take part in it. We must assume, too, that the scope of the Conference's deliberations was known from the outset. On those hypotheses, the reason now assigned for Great Britain's abstention does not seem sufficient, and will probably be supplemented when fuller intelligence arrives. Meanwhile, we confess to a sentiment of satisfaction that things have taken this new course. It has always been our expressed conviction that States should exhibit a neighbourly interest in the conservation of their mutual interests, but the extremely rude treatment that England has received at American hands in this instance awakens feelings of a less philosophical character than those of universal brotherhood, and we should be glad to see Mr. Sherman's undignified and insolent methods of diplomacy visited by the retribution they deserve. As for the Conference itself, we have already exhibited reasons indicating that whatever agreement the four Powers might come to, a very simple device on the part of the pelagic sealers would enable them to evade all restrictions. Thus, since no really practical result could be obtained, England's abstention becomes desirable from that point of view also.

GOLD MINING IN CHINA.

The N.-C. Daily News says:—"A few months ago attention was called in these columns to the discovery of gold in Kueihien, in Kuangsi province, and the fact that a syndicate of returned Californians and Australians (Chinese) had obtained permission of the Governor of the province to erect machinery, etc., on the spot. News has now reached us that the syndicate recently received one out of eight crushing mills that had been ordered from the United States, which was at once erected, and that crushing was commenced on a quantity of ore with results that were quite beyond the most sanguine expectations. Machinery for coal mining has also been ordered for coal deposits in the neighbourhood of the gold mining district, so that a supply of fuel can be relied upon for the crushing mills, etc. The other seven mills are already on their way overland to Kueihien from Canton and are expected to be ready for work by the end of October next. There are also said to be rich galena deposits not far from Kueihien, which the members of the syndicate intend to petition Governor Shih of the province to permit them also to work, in conjunction with another native company composed of the local gentry and men of wealth and influence."

EDUCATIONAL MATTERS.

Some changes have been effected in the field of Japanese education. Additional importance has been given to technical education by establishing in the Educational Department a special bureau for dealing with the affairs of technical schools, including those for training merchants, mechanics, agriculturists, and apprentices. The much vexed problem of text books has also received attention. A bureau has been organized for their selection or compilation. To the same office—called the bureau of archives—is entrusted the duty of providing for the preservation of books of reference and the inspection of libraries. School hygiene also will hereafter be more carefully supervised, a school sanitary committee having been appointed. This last point is one of great importance, and the Authorities are to be congratulated upon having taken it up. We note, further, that the number of normal schools is to be increased, doubtless in consideration of the fact that a serious deficiency exists in the ranks of available teachers.

FRENCH DUELS.

One result of the duel between Prince Henry and the Count of Turin has been to cause the publication of information which completely upsets the ideas commonly entertained of duelling in France. It has been generally supposed in England and America that French duels were veritable farces, mere theatrical displays, in which no one is hurt, and no intention of hurting anybody is entertained. *The Times*, however, prints the following communication on the subject:—

"Most Englishmen regard French duels in the light of Mark Twain's amusing story in 'A Tramp Abroad,' because they never get an insight unless they have a long tenure of some really important official position in France, or are married to a French woman. Duels are occasionally fought for advertisement by such people as journalists and politicians, but the average Frenchman is very reticent with regard to encounters."

"The real French duel often proves fatal, if not immediately, at least after a few days or weeks. It is not uncommon to hear it said of a dead person:—'*Il est mort à la suite d'un duel.*' The combatants practically never escape with no injuries at all. In spite of all this the real French duel seldom, if ever, gets into the papers. . . . The true French duel, which is generally fought with rapiers and not with pistols, is sedulously kept secret, and it is a mark of very bad breeding to question a Frenchman about any of his encounters. A challenge is not lightly sent, but when it has once been accepted the seconds do not attempt to prevent a meeting. Any second who gossiped about a forthcoming duel would be thought to have behaved most dishonourably. It is a curious fact that the seconds are often absolutely ignorant of the cause of quarrel, especially when it concerns the honour of a family. There is extreme unwillingness to bring a lady's name into a quarrel, and many duels are fought on some pretext in order to prevent this. . . . In one case within my own acquaintance death ensued the same day, and the knowledge that a duel had been fought was absolutely confined to the two families concerned. A man I know well, who has fought altogether four duels, so seriously wounded one of his opponents that the latter never got up from his bed and died within three months. In conclusion, I would ask any one who doubts the reality of the French duel why Frenchmen are so careful never to get out of practise in fencing."

THE "TAIYO" AND THE "NIPPON SHUGI" MOVEMENT.

In the Monthly Summary of the Religious Press published in the *Weekly Mail* of July 31st, we gave a very full epitome of the comments of leading magazines on the *Nihon Shugi* party and the views of its chief promoters. At the end of the epitome these words occur:—"The *Taiyō* writes in a cautious tone. The early professions of the sect lack discrimination and are altogether too one-sided, but whether the views of its leaders will gain in breadth as time goes on and embody the results of religious thought and inquiry carried on in other sects, remains to be seen." Now No. 17 of the *Taiyō* contains a note headed, "The *Japan Mail's* gross fabrication," in which this journal is accused of misrepresenting the *Taiyō's*

views in the most flagrant manner when commenting on the *Nihon Shugi* movement, and is charged with displaying, throughout the Knapp controversy, narrow-minded pro-Christian bias, and what not. In regard to what was published in the Religious Summary, we shall place our readers in a position to judge for themselves how far we have misrepresented the opinions of Mr. Takayama Rinjiō, the editor of the *Taiyō*, who, according to his own statement, is alone responsible for what the *Taiyō* has published on the *Nippon Shugi* Controversy. It must be premised that the alleged misrepresentations appeared immediately after the publication of Nos. 9 and 13 of the *Taiyō*, and that it was on the contents of these two numbers, and these two only, that our observations were based. We could not possibly foresee that, after playing the rôle of a lukewarm, if not indifferent, critic, Mr. Takayama would become an ardent partisan of the new movement. He is at liberty to change his opinions as often as he pleases, but it is unreasonable of him to expect that readers of the *Taiyō* should know six weeks ahead the course he is going to follow.

After acknowledging that the summary given in the *Mail* is impartial as regards other journals (*kōkei ni tsumamande shiruseri*), he goes on to say that, as respects the *Taiyō*, it is an entire misrepresentation of facts. "We alone have written on the *Nihon Shugi* in the *Taiyō*," says Mr. Takayama, "and there has been no manner of obscurity or indistinctness about the attitude we have assumed. We are ardent advocates of the new movement. Our views on this subject have been expressed in the clearest manner." Exactly. But when? Has Mr. Takayama forgotten what he wrote in Nos. 9 and 13 of the magazine which he edits? If so, we take leave to refresh his memory. In No. 9, in a note entitled *Nihon Shugi no dotoku to jibutsu no haiseki*, the following remarks occur:—"While coming into direct conflict with the weaknesses and deficiencies of Buddhism and Confucianism, the *Nihon Shugi* movement does not escape the charge of ignoring history in that it fails to appreciate what these systems have done for our people." The *Taiyō* goes on to ask whether it is possible to get rid of Buddhism and Shintoism, and accuses the *Nihon Shugi* party of failure to appreciate the value of the two creeds under discussion. It is all very well to denounce the idleness and proud satisfaction of the Buddhist recluse who has turned his back on the world, or the heteronomy of the Confucianist, continues the *Taiyō*, "but what we particularly wish to know is what the *Nihon Shugi* party has of sufficient merit to take the place of Buddhism and Confucianism. *Ika naru iishitsu* (實績) *wo motte kore ni kayen to suru ka kore warera no mottomo min to hossuru tokoro nari*." Do these remarks sound like the utterances of an ardent admirer of the *Nihon Shugi* principles?

Turning to No. 13 of the magazine, we find still more adverse criticism of the movement. The following observations occur in an article entitled *Nihon Shugi*. "The advocates of the *Nihon Shugi* movement are closely connected with *shintō*. They are for getting rid of both Buddhism and Christianity. They are great sticklers for antiquity and hence associate themselves with *shintō*. This connection may, of course, be merely superficial and deep down there may be a searching for new truths. If, beneath the ancient dress which it has assumed, there beats a heart that is intent on finding out something new, we should like its existence to be made quite plain. If the spirit that actuates the movement be new, what course will it take, what fruits will it produce—these are questions that we earnestly desire to have answered." After observing that there are not only strong conservatives—extreme Shintoists—connected with the movement, but also among its leaders some of Japan's most enlightened scholars, the *Taiyō* concludes with the following expressions:—"Nihon Shugi ippa no shōsen sei wa hatsurete warera no nosomi ni kanau ya ina ya me wo nugute sono shinshu (通取) no seishinteki undō wo min. "When

ther the various scholars belonging to the *Nihon Shugi* party, in the matter of showing that the movement is progressive in spirit, will fulfil our expectations or not, is something that we wait anxiously to see."

If that is not writing in "a cautious tone" words have no meaning. The *Taiyō* accuses us of giving special prominence to anti-*Nihon Shugi* criticism in our quotations from magazines. Will the *Taiyō* kindly furnish us with a list of the magazines that have published articles favourable to the movement? We quoted opinions from no less than ten separate magazines besides the *Taiyō*, all of which had devoted considerable attention to the subject, and many of which are entirely free from the pro-Christian bias which, in Mr. Takayama's opinion, so disfigures the utterances of the *Japan Mail*. These periodicals we take to represent the opinions of a very large section of the Japanese religious public. If the line they have adopted towards the *Nihon Shugi* movement displeases Mr. Takayama, that is no business of ours. What we set out to prove has, we think, been proved conclusively, namely that the July summary published in these columns represented correctly the views of the *Taiyō* as expressed in the numbers of the magazine on which our observations were based.

We take this occasion to remind Mr. Takayama that we are doing our best to keep pace with his changes of opinion. Even in the summary from which he quotes, there is proof of this. Just as the summary was going to press, and after the first notice of the *Taiyō's* views had been penned, a later number of that periodical appeared, and we at once observed that Mr. Takayama was veering towards the new party. We therefore wrote:—"We are very much surprised to find that even Mr. Takayama Rinjiro has expressed sympathy with the new Shintō movement," etc. We did not then know that Mr. Takayama had become the editor of the *Taiyō* and that he was responsible for the statements in previous numbers of the magazine. In our August summary, there is another reference to his attitude towards the new movement. We fail to see what other course is open to us but to represent Mr. Takayama's views from month to month as expressed in his latest articles. As quoted in the August summary, the *Sekai no Nihon* observes of Mr. Takayama:—"The rapidity with which his convictions change is a cause for wonder." That remark, though intended to be disparaging, need not be so, as the same thing has been said of some of our greatest men. But it furnishes an explanation of the apparent tardiness of which we are said to be guilty in recording Mr. Takayama's very latest opinions. As for Mr. Takayama's dictum that the editor of the *Japan Mail* is narrow-minded and not worthy of a position among persons qualified to discuss Japanese ethical subject, that is a matter of opinion which we are not concerned to discuss.

THE QUICK AND THE DEAD.

A very sad case was brought to light by the Bluff police on Wednesday. A policeman noticing the peculiarly dejected aspect of a beggar woman, accosted her, asking her name and abode. She replied that she was called Muraoka Hana, and, as far as she knew, was 25 years old, but had no recollection of her parents, her native place, or connections. She had been homeless so long that her name was not even on the census roll. On the woman's back was strapped a one-year old boy-baby. Looking at it narrowly the constable noticed that the child was dead. It then transpired that the infant had succumbed to hooping cough some days before, but the mother had carried it around ever since, not knowing what to do with it. The beggar woman, herself, was wretchedly ill. The case was at once referred to the Town Office, where the officials took charge of the woman and her dead baby. Truly it is well for our peace of mind that we know little of the awful sufferings of those around us.

HONGKONG AND THE INDIAN CONSTABLES.

It is a serious matter for the Hongkong Government to find that the integrity of the Sikh police has not survived the efforts of the gambling house-keepers to undermine it. The original object of substituting Sikh constables for Chinese lukongs was precisely to overcome the difficulty of preserving order in the face of the corrupting influence of the gambling dens. The change was made thirty-one years ago. At that time, piracy was rife in the seas adjoining Hongkong, and the pirates made the Colony a basis of operations, helping, at the same time, to swell the list of local crimes. The Chinese police proved useless for the apprehension of these rascals, for no constable would cross the threshold of a gambling house. He found it much more profitable to give the place a wide berth, and the gambling houses thus became asylums for all kinds of bad characters. The then Governor of the Colony had recourse to two drastic measures: he licensed the gambling houses and imported a force of Sikh policemen. Apparently the latter have now shown themselves little better than their Chinese predecessors.

"THE ASYLUM RECORD."

The first number of the second volume of the *Asylum Record* is devoted entirely to the affairs of the Asylum—that is to say, the Okayama Orphan Asylum, of which our readers have heard from time to time. The Asylum having completed the tenth year of its existence, the editor of the *Record* is certainly justified in writing at some length about an institution which, from very small beginnings, has grown to noble proportions, and which, by the high courage and unflagging energy of Mr. and Mrs. Ishii and Mr. and Mrs. Pettie, has survived embarrassments that must speedily have overcome less resolute philanthropists. Mr. Pettie's brief record of what the Asylum has achieved in its life of ten years runs thus:—

We would sum up the results accomplished as follows. Over 500 needy people—mostly children—befriended and let into a larger and better life, a spirit of self-help and large-hearted benevolence planted in many young hearts, an inspiring example set to scores of similar institutions, Christian, Buddhist and secular, a world-wide interest aroused in this one work and the principles on which it was founded. These principles may be defined as faith voicing itself in intense prayer; Biblical teaching as the only true basis of a correct and useful life; an earnest spirit of self-help developed in the face of stern trial, and a love for others that is the highest socialism.

The Asylum has done all this and is still true to the faith of its earlier years, still believes in prayer and realized answers to prayer, the simple gospel of a crucified Redeemer, a high spiritual life and tireless activity in labours of love.

For all that it has done through suffering and success it gives to God the glory, and in a spirit of joyous praise, of humble devotion and of renewed courage it starts out for the next great goal a half score years ahead.

AN ILLUSTRATIVE QUOTATION.

A Japanese writer suggests that the best way to administer Formosa might be to adopt the English method of placing it in the hands of a commercial corporation. The suggestion evokes comment from a local English Editor. "There is a sign of healthiness," he says, "coming over the country. The blatant and self-assertive spirit of the pre-war times is getting to be a thing of the past. The Japanese think of imitating England." Then he pushes his comment a little farther. The Japanese diffidently prefaces his suggestion by the remark, "You may laugh at my plan as impracticable." "Laugh! We should just think so," cries the English Editor. "When we consider the vast differences between those merchant-warriors that England sends out by thousands every year and the *akindo* of Japan." Well, we too have a comment to make in the form of a question. We would ask on which side is "the blatant and self-assertive spirit."

DEATH OF MR. R. N. ST. JOHN.

A well-known and widely respected resident of Yokohama passed away in England on Saturday in the person of Mr. Robert Newell St. John, senior partner in the firm of St. John and Daniel, bill and bullion brokers. A banker by profession, Mr. St. John came out to Japan in the service of the Hongkong and Shanghai Bank, which he left to take up the profession of a broker. This he followed with great success, his geniality of temperament and thorough grasp of the details of his business combining in attracting and retaining clients. An affection of the throat that had troubled him for about a year and a half, induced Mr. St. John to visit the old country in the spring of this year to obtain the advice of eminent specialists, but unfortunately the malignant disease had gained too great a headway, and no hope of relief, much less cure, was held out. The end was therefore expected and Mr. St. John awaited it calmly. At the time of his death he was Master of the Yokohama Lodge, No. 1092, E.C., a position he had held three times before. He had served in the high office of Senior Grand Warden of the District Grand Lodge of Japan, and was in office as Scribe N. of the Yokohama Chapter of Royal Arch Masons, and Senior Warden of the Orient Mark Lodge of Japan. His removal leaves a big gap in the ranks of the local fraternity, but his brethren will long cherish the memory of a brilliant worker and excellent exponent of all that was good and great in a noble craft. In the inner circle of family life he was a loving father and affectionate husband: the outside world will remember him as a loyal friend and an honourable gentleman ever ready to attend to the cry for help, comfort, or sympathy. The cutting off of such a life at the early age of 47 is very sad.

GIRL ELECTROCUTED IN TOKYO.

A sad electric light accident is reported from Tokyo. On Thursday night a young servant girl, 15 years of age, named Ikoma Hana, employed at the Echikatsu butcher's shop in Nishikicho, Kanda, grasped the cord, or wire, with which an electric light was suspended and received the full force of the electric current, her fingers being terribly burned, and the shock received so violent that in spite of immediate medical aid the poor girl expired within a few minutes. The Electric Light Company is charged with gross neglect in the matter of the un-insulated cord, but it would appear that the insulating cover had been burned or worn away at the place where the girl grasped it. The lamp, when lighted, used to hang in the inner court of the house, and during the day it was hooked to a pillar within the shop so as to leave the court free. The servant girl, following her ordinary routine, unhooked the burner, turned on the current, and was about to descend into the court with the lamp in her hand when death overtook her. The accident is suggestive. Hundreds of houses are furnished with precisely similar lamps, which are removed from place to place in a room, raised or lowered, by grasping the wire. Evidently there is a serious danger in this custom, and it would be well that householders should have their lamps carefully examined from time to time.

FRANCE AND JAPAN.

The *Official Gazette* of the 12th instant contains an announcement of the Foreign Office to effect that the French Republic and the Empire of Japan have entered into an agreement providing that the subjects or citizens of either shall enjoy, within the territories of the other, national treatment in the matter of the protection of rights of property in industries, and that, in consequence of that agreement, Japanese subjects shall, from the date of the announcement, receive in the French Republic protection for rights of property in the same manner as French citizens.

HOW TO LIVE LONG AND KEEP YOUNG.

[SPECIALLY WRITTEN FOR THE "JAPAN MAIL."]

In a paper contributed to these columns some time ago it was shown that civilization tends to the lengthening of human life. The subject of longevity, which in the time of Cicero had an importance in the eyes of many, is coming more and more to the fore as a theme of absorbing interest. Our instinctive love of life prompts us to look forward to old age as very desirable, even in the face of continuous and severe suffering. But it is a question with some whether Solomon, who is called the wisest of men, did not best prove his wisdom by not asking for long life, when the Almighty promised him whatever he should desire. There is in Holy Scripture a commandment coupled with a promise of long life, as if it were a thing desirable; but the infirmities, weaknesses, and disabilities of old age are so great that there are not a few who regard its gift as of very doubtful value, and many in times of intense suffering, utter the plaint of the man of Uz, "I would not live away." Sir Thomas Browne, whose life was one of singular freedom from trial, and who was in spirit unruffled and calm as a summer lake, once expressed himself as thinking it unbecoming to desire to surpass the days of our Saviour on earth, or wish to outlive that age wherein He thought fittest to die; but probably he did not greatly grieve that he was permitted to live to the ripe age of 77. Benjamin Franklin, attacked simultaneously by gout, stone, and old age, comforted himself with the reflection that "only three incurable diseases had fallen to his share, and that these had not deprived him at the age of 81 of his natural cheerfulness, his delight in books, and enjoyment of civil conversation," and wished that the final advance had been made in medical science that we might be able to avoid diseases and live as long as the Patriarchs. Certainly the value of later years is greater than that of earlier years. Many die at the time when they are best qualified to enjoy life and to be of use to others and the world at large. It is when one has come to the mellow years of old age with temper refined and wisdom clarified that one can most beautifully and happily influence others. Yet it must be confessed that one sometimes sees a man of 50 who has done better, and more wholesome, work for humanity than many an octogenarian. The legend of Tithonus portrays vividly the evils of a physical immortality, and we know that many very old people are very infirm both in mind and body. Yet Gorgias of Leontium, who lived 107 years, and continued his pursuits to the very last, as Cicero tells us, when he was asked why he was content to live so long, replied:—"I have no charge to bring against old age." But how will an old man of vigour and wisdom feel if his contemporaries, the busy men of the third and fourth generations after him, discount his wisdom, and refuse to follow his advice?

There are conditions of longevity. To have the prospect of taking rank among the *makrobiotes*, it is very desirable, if not necessary, to be well-started hereditarily. All qualities and tendencies are more or less hereditary, and longevity is well known to be so in a marked degree. The great grandson of old Parr died in Cork about 1860 at the age of 103, and the son of old Jenkins in his father's life-time reached a hundred. The Costello family in Co. Kilkenny showed that old age was hereditary. Mary Costello, who died in 1824, lived to be 103, and her brother upwards of 100; their mother attained the age of 112, their grandmother a similar age, and their great grandmother's life was lengthened to 125 years. Says the *Lancet*:—"Sir Moses Montefiore had one parent die at the age of 79 years, and the other at 83; his grandfather at 87, his grandmother at 93, a brother at 73, another at 69, a sister at 84, another at 79, another at 82."

The next thing is a full development of physical power. The Egyptians supposed life could be lengthened by the free use of sudorifics and

emetics. The alchemists sought some *elixir vite*, which should preserve youth and energy for ever. Men have learned that the human being is tripartite. The lowest stratum is the body, which demands the first attention. Proper care of the infant and child lays the foundation of a vigorous manhood and long life. The bodily machine is constructed to run, let us say, a hundred years. Just so much life-power is given, which one may husband with care to a green old age, or waste by excessive drafts, and find oneself a bankrupt in middle years. It is true that cases occur of great longevity even in violation of the physical laws which govern the human body. But the exception proves the rule. The drunkard, the glutton, and the epicure are slowly killing themselves. The story of Luigi Cornaro, who died at Padua in 1566, more than 100 years old, is most instructive as showing how life may be prolonged and health preserved by strict observance of nature's laws. He began life with a bad constitution, and a long course of excesses had by the time he reached the age of 35 years, reduced him to a state of extreme misery. His physicians gave him to understand that unless he reformed his life, miseries would increase, and death must ensue. Some time elapsed before he could bring himself to follow their advice. But only a year of strict observance sufficed for his cure. He then concluded that the regimen which had overcome the effects of dissipation and repaired the natural weakness of his constitution would keep him permanently in good health; and from that time upwards for 60 years, with rare exceptions and then always to his injury, he unwaveringly adhered to it. He regarded debauchery as "a cruel monster of human life," which destroyed the health of the body. His method was very simple: that each man should find out for himself what is the suitable quantity of food and drink for himself and live accordingly. His regimen consisted of eggs, soup, bread, pancakes and similar things. He never ate or drank to the extent of his appetite. Dr. Mark Trafton affirms, and is supported by learned physicians, that more people kill themselves by over-eating than by intoxicants. While the growth of the body goes on, the material must be furnished in quality and quantity to meet the demands of growth and the natural waste of the body. One who is engaged in severe manual labour throws off more of the material of his body and requires a larger amount of nutritive material; while one engaged in brain-work will require less to maintain the normal condition. All food taken beyond just enough to supply the waste of one's system is a violation of natural laws, and the penalty will be sure to come. Many, perhaps most, eat too much. Dr. Trafton says it is surprising how small a quantity of food will keep one in health and spirits. He tells of a coloured student who passed a year in school on six cents a day, and came out healthy and strong, and says that he himself does not consume food above the cost of 10 or 12 cents a day, and on his 78th birthday pulled his canoe 4 miles on the lake. Not only is too much eaten; it is eaten too hastily. The digestive organs are in no condition to receive this mass of unmassticated matter. And yet the one indispensable condition of old age is a good digestion. The perfect action of the stomach is of the first importance. "A proportion," says Sir Henry Thompson in the *Nineteenth Century*, "amounting at least to more than one-half of the disease which embitters the middle and latter part of life among the middle and upper classes of the population is due to avoidable errors in diet." While sympathizing to a large extent with the practice of what is called "vegetarianism" in diet, he objects strongly to a dogmatic assertion that such limitation of their food is desirable for any class or body of persons whatever. No broad rule or principle of diet can be laid down which shall be applicable to different classes of people. No prescription for any man is possible without knowledge of his constitution and habits. But everyone may with considerable ease find out the food which will be best adapted for himself, and less costly by half than the conventional meals which custom prescribes to all classes of man in varied conditions of life. For people of sedentary habits, cereal foods including fruits

should form a great part of the diet consumed, with a fair addition of eggs and milk, if no meat is taken and little of other animal food than fish. Dr. Trafton, now in the enjoyment of perfect health, physical and mental, having suffered greatly in earlier years from the horrors of dyspepsia, tells us how he attained this vigorous health. "I take for my morning meal—it is my principal meal—a small saucer of thoroughly-cooked oat-meal porridge with a little milk and sugar. When I can procure them I eat one or two fresh eggs, which have stood in hot water just ten minutes; they are then soft yet cooked through. A baked potato, a slice of wheat-meal bread, and one cup of coffee are added. At night a small bowl of boiled milk. My milk is from one cow, and is corked closely in a bottle until used. Fruit of all kinds having seeds in themselves I use freely. This is my uniform diet. Now in addition to this simple dietary, I have always taken special care of my body, keeping the skin clean by sponge baths and friction, especially taking pains to expand the lungs by the use of a small tube, carried about in my pocket. So simple is this mode of life that I do not find it necessary to make changes with the passing of the seasons. The only change is in my clothing. Summer and winter I am careful to guard the most important parts of the human system against cold, the chest, the back between the shoulders, and the feet." He is a vegetarian, and believes that a vegetable diet is the key to health and a long and enjoyable life. He thinks that to adopt his style of living may cost some self-denial at first, but that it will be a safe and paying investment.

There is another consideration which must not be overlooked: the man who is built so that he is equally strong in all his parts, if his life is not cut short by accident or contagious disease, is likely to live out his allotted period of life. But as Doctor H. C. Wood of Philadelphia says, "Excessive strength in one part is an inevitable source of danger. The athlete perishes because his over-developed muscular system perpetually strains and finally wears out a heart or a lung that was originally constructed for a muscular apparatus of half the power of that he has artificially built up." Care must be taken, therefore, to have the several parts of the body grow harmoniously. The multitude die early because of an inherent feebleness in some organ or other. It is not a desirable thing to have some organ overtopping in strength all other organs. And of course it is not wise to develop some part of the physical system till it is stronger than any other part. Hence, he who is built upon the principle of the "One-Horse Shay," has by far the best chance for old age. As long as we are in the ascending development—from birth to maturity—there is a perpetual increase of material, of activity and of strength. But there comes a time in the lives of men, who live long enough, when they begin to have a consciousness that they are failing, when their feet grow heavier, and their senses are not so keen. The meridian has been reached, the summer solstice is past; the sun has begun to descend; and the shadows are lengthening. The tissues are less flexible, and less easily nourished. The organs are more or less impaired. The safety is in recognizing the fact and acting accordingly. Experts tell us that "the system often bears up under the partial disability of one organ, if there is adaptation to its weakness and some compensation therefor. In a state of inability each organ tends to give to some other a helping hand. The enlarged heart freed from excitements and fatigues lasts a score of years. The weak stomach accepts the substituted digestion of the rest of the alimentary canal, or the outside digestion which chemistry offers." As the heart becomes weaker and the arteries lose their elasticity, and the powers of digestion are diminished, the appetite must be regulated so as "to feed and not choke the slowing fires." It is certainly safe to say that if our desire be to attain a green old age, care must be taken to preserve a balance among the various organs of the human frame not only during early and middle years, but also during the declining period of life.

Another condition of longevity is *exercise*. Sir Morell Mackenzie said that the secret of perpetual youth lies mostly in regular exercise whether in felling trees, or in the humbler form of the daily "constitutional." Perhaps the question is not yet settled whether on the whole the bicycle is favourable to health. Of course with advancing years speed must be slackened, and pressure reduced. It will not do for the belated passenger to attempt to catch moving cars, which may be at the expense of the stoppage of the heart. It was Matthew Arnold (was it not?) who came to his death from indiscreetly leaping over a stile. Sir Morell thinks if a man has ridden all his life he may continue to do so as long as he can sit on horseback, otherwise it is too violent for the aged. The Autocrat of the Breakfast Table had no intention of giving up because he was burning less carbon than in earlier years; and in his own water-sulky he was wont to glide up and down the river, taking advantage of the tide, nor did he object to pull against it for a quarter of an hour. Professor Schrödt recommends pedestrianism as a cure for all possible diseases, since the German landboten—mail-carriers afoot—generally attain to an extreme old age, and appeals to several Grecian writers who make a similar remark in regard to the Spartan *hemero-dromes*. There is no doubt that for old age the "constitutional" is the sheet-anchor. Every day ought to be so apportioned as to permit of the constitutional, or whatever else is the form of exercise. Cato is made to say in *De Senectute*: "We must pay due regard to our health, avail ourselves of moderate exercise, and take just so much food as will build up and not clog our energies." Dr. Rush, in his "Causes and Indications of Longevity," insists upon exercise, including moderate exercise of the understanding. Cyrus loved to plant trees; Gladstone loves to cut them down.

Longevity depends upon a *due amount of labour* through the years. More die from underwork than from overwork. Because they have not the energy of earlier life many retire from business to private life and soon pass away. This is suicidal. One will be happier for employment. That life is sometimes shortened by overwork is plain enough from the case of miners and factory-hands. But life will not be shortened by ordinary work unless the whole waste of the system is in excess of the powers of repair. The premature dotage of many distinguished men has arisen from their thinking that they were too old to work. John Adams, when 90 years of age, said that he kept his powers of action by constantly using them, the mind of an old man being like an old horse; if you can get any work out of it, you must work it all the time. Of course one must know when to stop, how far the measure of one's capacity extends, and must rest there, for all overwork is a draft on the future, which will have to be paid with heavy interest. They who seek to amass a fortune in a few years by crowding into a day what ought to be spread over a week are preparing for themselves a fearful retribution. "Make haste slowly" is a wise motto. But one can never put too much good thought into one's business. Some think that too much study is suicidal and the case of Kirk White is cited to prove it. On the contrary, the best students do not suffer from dry rot at 60. Wordsworth, Bryant, Longfellow, Tennyson, died octogenarians. The very best work that man has achieved has been accomplished after he has reached 60 years of age. Palmerston and Lyndhurst, led public opinion till they were in the eighties. Plato in the midst of literary work died in his 81st year. Isocrates wrote a great discourse in his 91st year. Scipio, the elder, was full of labour when verging on his 90th year. Fresh in our memories are the old men—Emperor William of Germany, Van Moltke, Thiers, Guizot, Carlyle, marvellous illustrations till the last of men who kept themselves in sympathy with their times, active and fruitful, militant and triumphant. It is good to keep in touch with old friends, and the places that have known us long. Only we should never forget to graduate our labour to our strength, and be careful not to go

beyond it. "Just as every mile of speed added to the locomotive after it has attained a high rate adds ten-fold to the wear and tear, so in the human race it is the stress and strain beyond a certain mark that puts the whole frame-work into a state of tension."

The question of sleep must not be overlooked. Rest should be taken with great regularity. It is good to retire, if possible, at one hour, say 10 o'clock, and get all the rest that action requires to build up exhausted nerves and muscles. The faculty of good sleeping is one that should be cultivated in order to secure opportunity for nutrition to do its restorative work. Complete rest one day in seven and an annual holiday are of great value in promoting health and long life.

To have old age, and to be fresh and young in old age, one must have the spirit of cheerfulness and contentment. Says Dr. Hufeland:—"There is one disease unknown in scientific classifications of physicians, which in the present day kills more patients than any other. That disease is worry. There is no case on record of a man with a violent temper, or afflicted with the disease of worry, who attained extreme age." The wise speculator will consider his case carefully, if he launches upon one that may take months before it is known whether it will be prosperous or not, he will in the meanwhile dismiss it from his mind. The unwise speculator will in the meantime become anxious till dyspepsia and wakefulness show the mischief that is being wrought by the withdrawal of nervous force from the processes of nutrition. Good luck tends to prolong life. Discontent and despair are a fatal disease. To have enough of creature-comforts to be saved from worry helps one to live long and keep young. The Director of the Bureau of Statistics at Budapest divided the people of his city into 4 classes according to their worldly possessions, from the very poor to the very rich. He ascertained that the rich class averages 52 years of age; the middle class 46; and the very poor 41½ years of life. Elsewhere it has been found that the mortality of the very poor is 50 per cent. more than that of the very rich. But if one cannot have good luck and an abundance of worldly goods, it is a grand thing to have the temper of Mark Tapley who thought it was not creditable to be jolly when everything went well, but much to one's credit to be exultant in trying circumstances, like the eagle which soars highest in the most tempestuous skies. It was the saying of a sage old lady that sociability keeps people well and makes them live long. It is certainly a great antidote to worry. If one keeps on loving what one loved when an innocent and joyous youth, one can never grow old? Is not one likely thus to be as Macaulay said of the Greek Spirit, "Fresh in immortal youth, exempt from mutability and decay?" "As I am pleased," says Cato in *De Senectute*, "with a young man in whom there is something of age, so I am delighted with an old man in whom I find something of youth; and he who follows this course—he has been speaking of keeping the mind buoyant by exercise—will possibly be in body an old man, but in spirit he will never be old." Then he proceeds to tell what he has on hand—no small tasks: the 7th Book of the "Origines," touching up his orations, working up the early annals of his country, studying Greek Literature, and exercising his memory by diligently going each evening over all that has transpired during the day. How pleasant to meet with an old man who at 80 is the youngest man in the company, bright, genial, cheerful, enjoying the present, making no complaint of the past, looking hopefully toward the future, whose smiles awaken responsive smiles all around him; or a well-preserved old lady in whom sweetness and grace meet and mingle, who forgets herself in her solicitude for others, thinks ill of no one, and whose bright looks and kind words fall on all around her like sunshine! The numbers of these genial old people will increase as the laws of health are more widely known and observed, culture becomes more widespread, and religion moves onward to its proper ascendancy over our race.

Many look upon old age as a descent into deepest shade, but Wordsworth, who died at the age of 84, spoke of it as the crown and summit of human existence:

"Yet have I thought that we might also speak
And not presumptuously, I trust, of age
As of a final Eminence, though bare
In aspect and forbidding, yet a Point
On which 'tis not impossible to sit
In awful sovereignty—a place of power."

A WHIST QUESTION.

The following singular statement has been addressed to a Hongkong journal:—

"A B and Y Z are playing whist, the score being A B two, Y Z love. In the next game A makes a revoke. At the end of the game A B have eight tricks, Y Z five. Y Z now claim that A B mark up their two tricks, making four in all, and from these four deduct three, leaving A B scoring one point only. This I maintain Y Z have no right to do, rule 5 in Cavendish distinctly saying:—'The penalty for a revoke takes precedence of all other scores. Tricks score next.' Whereas Y Z by their action forced A B to score their tricks first, Y and Z argue that one of the penalties they have a right to exact from A B is to take three points from their score, the word 'Score' meaning all they possess, both what they made on the hand in which the revoke was made, and what they had scored previously." Answering this query, another correspondent says:—"A and B are no doubt right in their contention, and as the penalty for the revoke takes precedence of all other scores they might further claim that Y and Z, in making them score their tricks first, have lost their right to claim any penalty for the revoke."

As a matter of fact, what Y Z did is done perpetually at whist. In the given position it was optional with Y Z to adopt one of three courses. They might have taken three of the adversaries' tricks and added them to their own, when the score would have stood at two all; or they might have marked themselves three, and allowed A B to mark four; or they might have taken three from A B's total score, when the result would have been A B one, Y Z love. The only restriction in penalizing a revoke is that the penalty must not be divided. Either three of the adversaries' tricks must be appropriated; or three must be scored against them, or three must be deducted from their score. What may not be done is to deduct, say, one from the revoking side's score and add two to the opposite score. We have always understood that the precedence given to a revoke over all other scores refers solely to the question of points. For example, A B, their score standing at love, make four by tricks and are found to have revoked. Y Z, whose score stands at two, decide to declare game. How many points does the game count? It would be only a single if A B were allowed to mark their four tricks. But it is in reality a treble, because the penal points take precedence of the tricks, and consequently Y Z are game before A B can begin to count. The objecting players in Hongkong appear to us to have quite misunderstood the motive of the law. One simple consideration suffices to demonstrate their error. Suppose that A B's score stands at love, and that, revoking, they make four by tricks. Can there be any question of Y Z's competence to say, "we take three off your score, and leave you to mark one"? That is exactly the same under the circumstances, as removing three of A B's tricks. Assuredly X Y's latitude in exacting the penalty is not impaired by the fact that A B's marker had been raised before the revoke hand was played.

LOSS OF THE "POINTER."

A telegram was received in Yokohama from Hakodate on Tuesday afternoon, announcing the total wreck on the 27th September of the sealing schooner *Pointer*, so long sailed by Mr. H. J. Snow. She went ashore at Shikotan, south of Saghalien. The crew, including the skipper, Mr. Bardeley, are safe.

JAPANESE FACTS AND COMMENTS.

At the end of September there were 1,545 banks in Japan, their aggregate capital being 303,041,514 yen. Banks increased by 24 during the month, while the increase of capital amounted to 4,474,000 yen. The new banks were:—Seven savings banks with a capital of 350,000 yen; 1 joint stock corporation with a capital of 3,615,000 yen; 1 joint-partnership with 100,000 yen; 2 joint-capital companies with 270,000 yen; a total of 29 banks. But as some were called into existence by amalgamation or suspension of business the new organisations really do not exceed 24.

The *Sekai-no-Nippon* reports that sixty persons were drowned in the flood that devastated the districts of Kaito and Nakajima on the 29th ult. Fifteen persons were drowned at Tokushima, and fourteen others are returned by the police as missing.

Messrs. Suzuki, Okumiyu, and Miyamoto, three political prisoners who were released by the special amnesty, have devised a prison gate help brigade that reminds one of the Labour Colony started by the Salvation Army in England. Their idea is to found a settlement at Totsuka, where discharged prisoners can go immediately after their release from gaol, and have work given them to do that will at once enable them to start upon an honest path of life. When they have shown proficiency in any of the trades conducted in the village, or settlement, they will be sent out to earn their living, a percentage of their wages being taken by the Association to pay the expenses of the Settlement.

Along with the progress of society, asserts the *Yiji*, there arises a tendency to an increase in the number of criminal offences. Statistical investigations have already clearly proved this fact. A report for the 15th year of *Meiji* (1882) compared with that for the 29th year shows the following difference:—

Year.	Population.	Prisoners.	Average of Population to one prisoner.
1882.....	36,700,118.....	33,357.....	1,101
1894.....	41,810,202.....	67,261.....	625

Thus the number of prisoners, which did not exceed 33,400 in 1882, increased in 1894 to over 67,000, or more than double the figure recorded for the 15th year. The population, however, had grown largely, and it is not surprising that the number of culprits should have proportionately increased. But it is a serious matter that the ratio of evil-doers has suddenly advanced this year, the number of offences having already reached 70,000. This extravagant rate of increase seems likely to continue.

The proper training and education of children's nurses has long been a matter of more than ordinary interest, says the *Tokyo Asahi*, but no one came forward with any practical scheme. Quite recently, however, the Director of the primary school at Usunomiya took up the subject, and in conjunction with his staff of teachers and intimate friends propounded a scheme whereby instruction in nursing can be given at the school free of charge. Thirty applications were soon sent in and without more ado the nursing class was started. Our contemporary recommends that the plan be adopted at all schools throughout the empire, for upon the proper nursing of children much more depends than is usually dreamt of.

A strange paragraph is published in the *Hochi* with regard to a theft that recently occurred in Korea. It runs:—A Korean in the employ of a Japanese merchant in Wonsan stole a large amount of money from his master and decamped. The matter was immediately reported to the police and the thief was arrested and thrown into jail. The culprit died in prison, and the Korean's friends set down his death as the deed of his Japanese employer. They accordingly managed to secure the corpse and then exposed it on the bank of a creek in the Settlement. Here they kept watch by day and night, lighting a fire near the body. Meanwhile a band of turbulent

men were collected with the idea of attacking the foreign settlement. But this plot having become known to the Japanese, defensive measures were taken and the attack did not come off. Frustrated in this attempt, the friends of the dead man induced the Korean authorities and the local merchants to refrain from trading with the Japanese. In consequence not a single Korean appeared in the Settlement from the 14th to the 17th September. Then the Japanese made a counter move by quietly intercepting the supply of provisions to the town and very quickly the natives were obliged to come into the settlement to obtain food. Finally the Japanese Consul was informed and he made strong representations to the police upon the subject. The Consul succeeded in having the corpse removed, but feeling still runs high against the Japanese.

Investigations made by the Bank of Japan, published in the *Shogyo*, show that the most important articles of domestic trade had risen 63 per cent. in cost by September as compared with the figures for January last, and fifteen per cent. as compared with the corresponding period of last year.

The *Chuo* states that while the recent case of ill-treatment, ending in death, of a prisoner at the Sahara Police Station, Chiba Prefecture, is still undecided, a somewhat similar occurrence is reported from Saitama. A villager named Tamezuka, of Maniata Osato district, after getting intoxicated on *sake* on his way home from a Buddhist temple at Tsumanuma, entered the police station at Sahara. There the head Inspector, Mr. Suzuki, and a police sergeant named Yanagawa, are reported to have kicked him till he fell to the ground, and then they poured water on his head for the purpose of sobering him, a very common and not at all cruel expedient. A number of Tamezuka's fellow-villagers went to the police station and asked for the man to be given into their charge, but the request was refused. A little later the man was found to be dead. A doctor was then sent for, but too late. The villagers, under the belief that the man's death was caused by the ill-treatment of the police, laid an information before the Court, and a post mortem examination of the deceased was ordered.

The *Mainichi Shimbun*, in referring to the Factory Regulations now under consideration, expresses an opinion that the working hours of artisans should be limited to 10 hours a day, and those of boys and girls up to fourteen years of age, to six, or eight hours a day. In support of this limitation our contemporary states that, though in Western countries the average working period for artisans extends from their 21st year of age, by which time they have learned their craft, to their fortieth year, the average period of the full working power of mechanics in Japan, according to statistics compiled by Surgeon General Ishiguro, ceases at the age of 27, this sudden falling off in working power being ascribed to the long hours of work customary in Japan.

The following purchases of coal were made by the Railway Engineering Bureau on the 5th instant by public tender:—

Amount of coal.	Place of delivery.	Tenderer.	Price accepted.
5,000,000 (Austrian)	Yokohama and Kobe	Mitsui	65.80
7,000,000	Ejiri	Minegishi	58.50
5,000,000	Ejiri	Minegishi	57.50
13,000,000	Yokohama	Mitsui	56.50
8,000,000	Yokohama	Maruni	54.00

Australian coal, remarks the *Shogyo*, was brought at 2.50 yen below the market price of Japanese coal and the Engineering Bureau must have realized a considerable profit by the purchase.

According to the *Shogyo*, considerable discontent prevails among the rabble that compose the Korean army. It seems that many of the men who were selected for drill under the Russian instructors, had previously undergone training in accordance with the Japanese system, and they now decline to have their lessons

rethought, or rather remodelled, on the Russian plan. A wrangle is consequently going on between them and the Government which rather resembles the disputes that sometimes arise between discontented schoolboys and unpopular junior monitors.

The *Chuo*, discussing the question of Mr. Takano's refusal to vacate the post of Chief Justice in Formosa at the order of the Governor-General, says a nice point has developed that may lead to some unpleasant legal proceedings. Supposing Mr. Takano's contention is right, then he will sue the Governor-General for his salary: now the Governor-General has already filled the vacancy by appointing Mr. Mizano to the position, and the latter is drawing the Chief Justice's salary. The Governor-General will therefore refuse Mr. Takano's demand and the matter will have to be fought out in the Formosa Law-Courts. According to our contemporary's information, all the minor Judges support Mr. Takano's contention, so a very much sharper collision may shortly be expected between the Executive and the Judiciary.

The *Shogyo* draws attention to the steady decrease in the catches of salmon and trout in Japan and warns the country against allowing the present suicidal policy of the fishermen to continue. The establishment of large fish-hatcheries is most necessary, but more essential is the issue of orders prohibiting under heavy penalties the catching and destruction of immature fish.

Permission having been granted, says the *Asahi*, to the Osaka Mercantile Marine Company to open steamship communication with Chinkiang, China, the Minister of Communications has issued lengthy instructions in the form of regulating articles, the gist of which we translate as follows:—(1) The company is required to begin the service in January, 1898, and continue till December, 1907; and it is to transport mails, passengers, and goods. (2) On the Shanghai-Hankow route two steamers of 600 tons and of an average speed of 10 knots per hour, shall be provided, to ply 6 times per month between March and October, and 4 times a month between November and February of the ensuing year. (3) An annual subsidy of 94,264 yen will be granted to the above service.

The export of tea from Yokohama during September this year was, according to the *Nichi Nichi*, as follows:—San Francisco, 881,852 cattie; New York, 423,745 cattie; Canada, 821,837 cattie; Chicago, 307,829 cattie; Pacific Coast, 19,251 cattie. Following is a comparative table showing the arrivals and sales of tea for the past two years as tabulated by the Yokohama branch of the Central Tea Dealers' Guild:—

	30th year (1897). Catties.	30th year. Catties.	Increase. Catties.
Arrivals	20,608,400	20,077,100	531,300
Sales	20,091,500	19,817,000	274,500
Value	5,735,980 Yen.	4,364,489 Yen.	1,371,490 Yen.
Average per picul	28.54	22.02	6.52

A report published by the Finance Department concerning the foreign trade of Yokohama and Kobe for the month of September and for the past nine months of this year, as published in the *Mainichi*, runs as follows:—

	September. Yen.	Jan.-Sept. Yen.
Exports	11,321,497	111,636,225
Imports	16,867,591	155,957,194
Total	28,189,088	267,593,419
Excess of imports	5,546,094	44,320,969
Export of bullion	188,201	5,195,908
Import of bullion	3,935,149	74,582,845
Excess of imports	3,746,948	69,386,937

At a meeting of the General Education Council held in Kobe for three days ending the 4th instant, the following decisions were arrived at:—(1) The question of an obligatory school term of five years, (cancelled); (2) Employers of children of school age to be under the obligation of giving them instruction for five hours a week (approved and passed); (3) Propriety of

prohibiting by law drinking and smoking by youths under twenty years of age, (passed); (4) Establishment of a local educational council, (approved); (5) Question of uniting lessons in reading and moral instruction in one branch of study, (rejected).

The superintendents of the Forestry Offices of Japan are now meeting in Tokyo to discuss improvements in the forestry system of the country. Mr. Shiga, Director in the Forestry Bureau in the Agricultural and Commercial Department, in addressing the assembly, said that the Department was desirous of a thorough examination of all the forestry questions affecting the country, before the council rose. He advocated a conciliatory attitude on the part of officials in their dealings with the people, and the settlement of disputes and questions in the speediest manner possible. There were at present sixteen main offices, with three hundred branches, and a thousand protective sections, giving employment to over two thousand officials. If these men were to act in harmony with the wishes of the Central Office, the whole forestry system of this land might be carried on with marked success. To secure that uniformity was Count Okuma's ambition, for upon it depended the arboral progress of Japan.

The Electric Light Company organised in Formosa under the auspices of Messrs. Kume, Yamashita, Kawamura, and Kinoshita, is reported by the *Mainichi* to be the first joint-stock corporation ever instituted in the island. The Company seems to have secured many natives on their list of shareholders. The number of lights to start with will be between 2,400 and 2,500. The limits of illumination are the castle, the settlement, places of mixed residence, etc., the whole district extending over one *ri* and a half.

The amount of coins struck at the Osaka Mint up to September this year, according to the *Official Gazette*, was as follows:—

GOLD COINS.	PIECES.	VALUE. Yen.
20 yen.....	47,370	945,400
10 ".....	1,871,013	18,700,130
5 ".....	9,441,622	47,208,110
2 ".....	882,749	1,767,498
1 ".....	2,037,055	2,037,055
SILVER COINS.		
1 yen.....	162,150,000	162,150,000
Trade dollar ...	3,057,252	3,057,252

The *Sekai-no-Nippon* states that the old submarine cable of Japan extended over a distance of 511 nautical miles, but the new lines cover 646 miles. More cables are to be laid within the present fiscal year: one between Taramizu in Harima and Sunomoto in Awaji; another between Fukiage in Awaji and Okasuki in Awa; a third between Kunino in Owari and Tatebe in Ise; a fourth between Shibukawa in Bizen and Nobu in Sanuki; and a fifth in the Straits of Akamagasaki. The cables are expected to arrive from abroad by January next.

Mr. Yoshida, a member of the Lower House, and a few other gentlemen, according to the *Sekai-no-Nippon*, will present in the 11th session of the Diet proposals for the establishment of a "Japan-China Bank."

An increase of misdemeanors after a war is an inevitable result, as was shown in the case of Germany. In Japan, however, the increase now observed must be chiefly, if not entirely, ascribed to the imperfect organisation of prisons and lack of suitable means for the reform of prisoners. Convicts of different character are placed in the same cells, while youths are not separated from

the rest so as to prevent them from being tainted with the vices and evil habits prevailing among the adult prisoners. In short, the Japanese jail of the present time is a seminary of vice and crime.

The *Kokumin* publishes a table giving the number of shooting licenses issued, and the amounts of the fees received, in three cities and forty-three prefectures during last year:—

Class B.	Licenses.	Fees. Yen.
1st.....	2,102.....	6,640
2nd.....	7,729.....	12,921
3rd.....	127,981.....	120,218
Foreigners.....	267.....	1,480

Professional hunting licenses that belong to Class A issued in the same period totalled 14,476, but licenses for shooting in parties did not exceed 30 in number.

Kerosene oil imported by various foreign firms in Yokohama and transported to other places during the month of September, according to the *Fiji*, was as follows:—

	Imported. Cases.	Transported. Cases.	In stock. Cases.
Standard Oil Co.....	104,411	32,634	71,777
Jardine Matheson & Co.....	178,249	124,019	54,203
Samuel Samuel & Co.....	105,676	24,181	81,888

The arrival of two sailing ships with cargoes of oil will lead to about 120,000 or 130,000 cases being placed on the market within a few days, but owing to the many accidents and breakdowns on the railways of late, means of transportation to the interior are very inadequate, so prices will rise instead of remaining at their present moderate figure.

Large quantities of Chinese rice are now being imported into Japan owing to the continuous rise in the price of home-grown grain. It is said that the Niigata Prefectural Office has decided to buy 50,000 *koku* of Chinese rice with money obtained from the Famine Relief Fund, in order to relieve the present excessive distress prevailing among the poor of that locality. The rice was to be obtained through the Osaka rice exchange.

Count Okuma is reported to have said at the recent meeting of the promoters of the Formosa railway, that he was of opinion that the undertaking had every prospect of turning out a good investment. To begin with, the Government guaranteed a subsidy for twelve years equal to a 6 per cent. dividend on the capital, this subsidy being payable from the date when business commenced. He was astonished at the apathy of the public regarding this important undertaking, and could only ascribe it to the lack of adequate knowledge of the state of affairs in the island. In times of ordinary prosperity the shares of the Company should appreciate considerably, a 50 *yen* share rising, perhaps, to 70 or even 100 *yen*. The railway should be speedily built, in the interests of the country at large, and he would like to see the period of construction, now fixed at five years, reduced to three. The names of the most influential merchants of the country appeared on the list of promoters, so that any cause of anxiety on that score was removed. Yet the raising of the capital seemed a very difficult task. It was well-known that the Iwasaki and Mitsui houses were willing to undertake the whole affair, but in the Count's opinion the enterprise should be more generally supported: the greater the number of shareholders the better, for in that direction true success in such an enterprise lies.

The *Osaka Asahi* reports, says the *Kobe Chronicle*, that the *Taisho Maru*, a steamer owned by the Taikwa Company of Formosa, which got under weigh from Tamsui for Dokatsukutsu at 8 a.m. on the 1st inst., struck a shoal at the mouth of the river and foundered before she had proceeded more than 250 yards from the anchorage. All the passengers and crew were saved, but the cargo was partially lost.

KOREAN AFFAIRS.

A telegram sent from S ul on the 14th instant informed us that all the Cabinet Ministers had tendered their resignations, and that the nucleus of a new Cabinet had been formed. There is no reason to doubt the accuracy of the information. The event had, indeed, been foreshadowed, and interpreted as a complete reversion to the state of affairs existing in administrative circles before the war between Japan and China. The *S ul Independent* of the 2nd instant is now before us, and we look with interest to find some explanation of the Ministerial crisis. But there is no mention even of the fact. Not the slightest reference is made to such an event either *in posse* or *in esse*. Our contemporary's silence is most singular. We can not offer any explanation.

The Minister of the Home Department in S ul has dismissed the Chief of the Construction Bureau in that Department for proceeding to Chemulpo to examine the state of the roads without making written application for leave. Verbal application had been made and approved. The Minister's harsh action is strongly condemned, as the dismissed official, Mr. Namkung Uk, is said to have been a most competent, industrious and honest official.

There are 80 students at the Royal Russian School in the Korean capital. They are drilled every day by their teacher, Mr. Birukoff.

No romancist ever conceived stories so incredible as the facts of contemporary history in Korea. For example. Last year the governor of a certain province was appointed general superintendent of gold mines, and given an official seal to be used in collecting revenue from the mines. By-and-by, he was arrested on a charge of black-mailing, tried by the supreme Court and sentenced to be banished for ten years to a certain island. He started for his place of exile under escort by two policemen, and a few weeks later, the magistrate in whose district the island lay, reported that the culprit had arrived there and begun to serve his sentence. But to the astonishment of the Authorities in S ul, he still managed to collect the revenues from the gold mines, on the strength of having retained possession of the seal, which he refused to give up. An order was finally sent from S ul to the governor of the province in which the island is included. Then the governor discovered and reported that the supposed exile "had not proceeded" to his island, and it was ultimately found that he had never left S ul, but was living there in concealment, and collecting revenues as merrily as possible. He had bribed the magistrate to make a false report. No one can deny that the individual Korean possesses magnificent audacity.

The editor of the *Independent* declares that Korea has never had a chance to prove her capacity for standing alone, inasmuch as she has never been even able to get on her feet. "There has never been a day," says our contemporary, "during the past fifteen years when the Government was not subject to the dictum of some contiguous Power; not a day." We believe that to be quite true, but we should not have expected to hear it from the *Independent*. We did not believe that our contemporary was disposed to admit the overshadowing influence of Russia in Korea at present. As for the value of the argument, however, the editor of the *S ul* journal must surely see that inability to assert her independence is a valid proof of Korea's inability to be independent.

The Korean War Office has issued orders to the colonel of a regiment to collect customs duties from Chinese traders at Ochaipo, in Jang-yun, which is not an open port. Such an order coming from such a source under such circumstances is another illustration of Korean ways.

NEWS OF THE WEEK.

Two missionaries of the Presbyterian Church have been sent to the Klondike gold-fields. They are Rev. S. Hall Young, of Wooster, Ohio, and Rev. George A. McEwen, M.D., of Farmington, Mo.

A Javanese gardener and a Chinese coolie are at present under sentence of death at Singapore. *Pour encourager les autres*, a Chinaman writes to one of the Singapore journals suggesting a public execution.

An examination of the necrological table in the last minutes of the Presbyterian General Assembly reveals the fact that the average life of the one hundred and twenty-eight ministers of the Presbyterian denomination who died last year was sixty-six years.

About 800 men from the 1st and 2nd Army Divisions, forming a mixed battalion, arrived in Yokohama from Tokyo on Monday morning, and embarked at 10 o'clock on board the N. Y. K. steamer *Sakura Maru*, which was brought alongside the pier for the purpose. They left in the afternoon for Formosa.

An attempt at suicide was made on Saturday last by a woman named Masada Kiku, aged 55, of No. 35, Bandaicho Nichome. The unfortunate woman, who appears to have been insane, threw herself into the Creek near Ogibashi Bridge, but was rescued by some persons who witnessed the deed.

In Singapore, in the month of July, 489 dogs were destroyed by the Rabies Suppression Department, making a total of 19,521 for the year. The importation of dogs into Singapore is prohibited. The Deputy President of the Municipal Commissioners, says the *China Mail*, suggests "quarantine" in place of "prohibition."

The difference between ancient and modern slang was amusingly illustrated in a recent incident at a Chautauqua assembly, when the teacher in English literature asked, "What is the meaning of the Shakespearean phrase 'Go to?'" and a member of the class replied, "Oh, that is only the sixteenth century's expression of the modern 'Come off.'"

The old Dutch Church of Tarrytown, N.Y., immortalized in Washington Irving's tales of Sleepy Hollow, celebrated its 200th anniversary on October 10th and 11th. This is said to be the oldest church in the United States, having been built in 1697. In the cupola hung a bell cast in 1685 that bore the motto in Latin:—"If God be for us, who can be against us?"

An Australian Debreitt is announced, says the *Sydney Mail*. It gives the standing of many colonial families. Curious the number of people that passed "La Manche" with William—you'd imagine all mediæval Europe went across. The redeeming feature about the Victorian hook (it comes from Melbourne) is that for 20s. or 21s. you can become *chic*. The subject of fathers and grandfathers is a large one in all countries, in Australia especially.

The owner of Popocatepetl, General Gaspar Sanchez Ochoa, expects within three or four months' time to complete a cable line to the crater. The line will be used for the transportation of sulphur to be prepared for the market. It will be made strong enough, however, to carry a limited number of passengers. As soon as completed it will be possible to leave the City of Mexico at 6 o'clock in the morning and be back at 6 o'clock in the evening, and yet spend a couple of hours at the summit of the great volcano.

Among the presents taken by President Faure of France on his recent visit to Russia were toys and dolls, gifts from Madame Faure to the infant grand-duchess. The principal present, however, was an olive branch in gold for the tomb of Alexander III. It was one of sixteen specimens of French orfèvrerie taken to St. Petersburg by the President. On the ribbon attached to the olive branch is the motto, "Pax

concepta feramat tempus." Among the other gifts were two busts in Sevres biscuit of the Emperor and Empress by Ratkowsky, and a marble bust of Her Majesty by Antokolsky.

A pet dog belonging to a foreign resident of Yokohama recently became rather strange in its behavior and the owner sent it on the 10th inst. to Mr. Matsuda Atsushi, veterinary surgeon, for treatment. Mr. Matsuda, upon examination, found the dog suffering from rabies, whereupon it was sent to the Bluff Police Station and killed. A post-mortem examination was afterwards made on the body to discover if possible the origin of the disease.

It appears that a newspaper in Madrid is seeking popularity by printing its columns on linen, and with an ink which easily washes out, so that the reader, after perusing the journal, may apply soap and water and convert it into a handkerchief. This suggests to the *Photographic News* an inversion of the process, by means of which the enterprising advertiser could make known his wares. He could print invisible pictures—i.e., "mercurially bleached silver images"—on pocket handkerchiefs, and give them away, but the first time they were washed the advertisement would reveal itself.

The total establishment of the Native Army in India, including European officers, is 145,000. Of this number 4,531 are Artillery, 23,130 Cavalry, 3,826 sappers and miners, and 113,813 Infantry. The total of native officers and privates is 144,071. Of the latter 83,671 are in the Bengal command, 31,929 in the Madras, and 28,471 in the Bombay. In addition to the European and Native Army there are 17,000 Imperial service troops, with two batteries of mountain artillery. This gives a grand total of nearly 237,000 men, exclusive of the Volunteer force, which includes 11 corps of cavalry, six of artillery, two of engineers, eight of mounted rifles, and 53 of infantry.

A writer in the *Globe* remarks:—Several attempts have been made recently to present the Bible in a form approximating more nearly to that of ordinary books, with the ultimate end of inducing the reader to come to its poetry and literary beauty with a mind as open as that which he would bring to Shakespeare. The type, paper, and general arrangement, combined with the influences of early training and tradition, make this a little difficult—in the case of the devotional Bible. Messrs. Macmillan now propose to put the Bible into their Eversley series, where it will occupy eight volumes. The text will be arranged in paragraphs. To what extent a Bible in eight volumes is needed remains to be seen.

At the recent medical congress, at Moscow, a paper was read by an official delegate from the Japanese Navy who was on board the *Yoshino*, a man-of-war, during the late war with China. Statistics show that, excluding one case in which a score of men were blown to atoms by an accidental explosion of ammunition, by far the greater number of men were killed in action by severe scalds, often over the whole body. These were caused by shells rupturing the numerous steam pipes about the vessel. Injuries to the head from fragments of shell come next in order. The fatalities of scalds account for over 20 per cent. and the head wounds for nearly nine. In the latter class, the men were killed on the spot; in the former, they often lingered for days.

A very large dry-dock is being completed at Glasgow and is the third built on the land owned by the Glasgow Dock Company. The first was built twenty-one years ago. It is 555 feet in length on floor and 72 feet wide at top at entrance. The second, of later build, is 575 feet on the floor and 67 feet wide at top at entrance, while that now under construction is 880 feet on the floor, 83 feet wide at top and bottom at entrance and has 26 feet 6 inches of water over the sill. It is built partly of brick and concrete, and is arranged with a gate in the middle to permit two steamers of 420 and 460 feet length to be docked simultaneously, if

occasion arises. All these docks have been made use of by the Government in docking such ships as the *Terrible* and several of the largest battleships, and the docks have been thoroughly tested. The third dock will be opened next month.

On the 30th of Sept. fifteen Indian constables were dismissed from the police force by the Governor of Hongkong. The men were picked out when on parade by a gambling-den *employé*, who swore that they had been in the pay of his establishment. Their names were further found on the lists seized by the police during a raid on a gambling-den. The *China Mail* hears that in the case of some of the European Inspectors dismissed from the force, appeals will be made to the Secretary of State for the Colonies against the decisions of His Excellency Sir William Robinson, and that several of the dismissed Chinese constables now resident in Canton, have been interviewed and their affidavits sworn before the British Consul in support of the forthcoming appeals.

Some rare manuscripts were recently discovered in the so-called Synagogue of Ezra the Scribe, at Cairo, Egypt, by Mr. Solomon Schechter, reader in Rabbinic at Cambridge University, England. These ancient writings have a bearing, directly or indirectly, on the Old Testament, and the *Sunday-School Times* says Mr. Schechter's disclosures will shortly be made known to the world. The papers were taken from what is called the Genizah, a receptacle for manuscripts of various character which have for any reason been discarded, but yet from the sacred nature of their contents must not be destroyed. Mr. Schechter made his journey with the approval of the authorities of the University, and was warmly welcomed by the chief rabbin of Cairo.

We learn from Kobe papers that some of the wreckage, consisting of pieces of a bridge and deckhouse, cabin fittings, etc., picked up by the steamer *Sekkai Maru* on the 10th inst. near Shinju, about 25 miles east of Oshima, have been identified by a boatswain of the missing steamer *Sesshu Maru*, who was prevented from going on the last trip of that vessel, as having belonged to her. It is therefore almost proved that the steamer has gone down, but whether owing to collision or other cause has not yet been shown.

The *Kobe Chronicle* reports that the N.Y.K. steamer *Otaru Maru* (Captain Poole) got ashore about 5 o'clock on Tuesday night on what is known as the "Sand Spit," east of the K.R. & A.C. Boathouse. Failing to get off by her own efforts an attempt was made by the *Fushiki Maru* (Captain Giese), to tow her off between nine and ten o'clock. The attempt, however, was not successful, and on Wednesday morning between six and seven o'clock, the *Totomi Maru* came to assist the *Fushiki* and after a few minutes' pulling together they got the stranded vessel off. She then proceeded to Yokohama.

The British steamer *Algoa*, Capt. Fraser, which arrived on Wednesday from Hamburg, consigned to Messrs. Samuel Samuel & Co., with a general cargo, is the biggest cargo carrier that has ever entered the port of Yokohama. Although her registered tonnage is only put down at 4,897, her gross tonnage is 7,575 nominal and her actual carrying capacity over 10,000 tons. The *Algoa* was built at Sunderland in 1896 for the Indian trade and is owned by the Algoa Steamship Co. She has come out from Hamburg in 51 days, calling only at Singapore after leaving the Suez Canal, so that she proves a fairly speedy vessel for a cargo boat pure and simple. Capt. Fraser, her master, was out here seven years ago in the *Metapedia*, owned by the same firm.

The budget of Indo-China for next year is to be made up in francs, instead of dollars, and all payments to the Government on revenue account will have to be made at the exchange rate of the day. The expediency of adopting the gold standard for the colony is under con-

sideration, but no decision has yet been arrived at. Meantime the public finances are in a bad way. The *Courrier d'Haiphong* says:—Before returning to Tonkin to spend some time with his family, the Governor-General (who is at present at Saigon on a tour in the neighbourhood) is to go to Hongkong. According to good information which has reached us, the principal object of this visit is to enable M. Doumer to make to the English banks propositions, which we must suppose are judicious, with reference to a financial combination which, if it is brought about, will deliver us from the deadlock to which the whole of Indo-China has been brought in consequence of the enormous depreciation of the dollar. We hope we may be false prophets, but we greatly fear that this movement of the Governor-General will resolve itself simply into a pleasure trip. We hope that M. Doumer may find nothing disagreeable in it.

A singular accident occurred to a steward belonging to the steamer *Changsha*, when in Hongkong harbour on Sept. 3th. As is the usual custom when in port, says the *China Mail*, the steward, along with a number of the officers and shipmates, went over the side for a swim. He had been swimming about for some time, and had just about reached the ship's buoy when he felt a prickly sensation and was almost immediately enveloped in a clinging substance, which emitted a dark brown liquid for a distance of about four feet. He was so stunned by the shock that it was with great difficulty he regained the ship. Being in severe pain he at once consulted the doctor, who ordered him to immediately take a fresh water bath. While in the bath he almost fainted, and had to be removed to his cabin. He suffered excruciating pain, developing paralysis of the lower part of the spine and lower limbs, and his condition throughout the night was very precarious. Lotions were applied to the skin, the galvanic battery was brought into requisition, and he was ultimately brought round, but he is still confined to his cabin in a weak state. His arms and body are very much inflamed. The injured man is of opinion that he must have come in contact with an animal of a more venomous nature than a jelly fish, and certainly the nature of the wounds and the effects of the shock point to that conclusion.

The development of the Celtic type in the last quarter of the nineteenth century is, of course, peculiarly interesting to the United States, writes John Paul Becock in the *Boston Herald*. The process may be studied by philosophers all over the world. In all countries and under all flags we find the Celt battling for that cause in which sentiment, or circumstance, conviction or tradition have enlisted his energies. Everywhere he has prospered, save in his own land. Take England, for example, a country in which an Irishman is not yet at home. Of the greatest general in her armies, Lord Wolseley, the commander-in-chief, is a native of Kildare, and Lord Roberts of Candahar, whom Kiplingsings of as "Bobs," the idol of the Indian armies, comes from county Waterford. In the Navy as well as in the Army the names of those fighting brothers, Lord Charles and Lord William Beresford, occur at once to the mind. They are Irishmen born, as is Lord Russell of Killowen, the Lord Chief Justice, the only Catholic of the five; the Marquis of Dufferin, the greatest diplomatist of his time, is now at home in County Down, seven miles from Belfast. He is the grandson of Richard Brinsley Sheridan, the son of Helen Sheridan, the beautiful and gifted author of "I'm sitting on the stile, Mary." Another Irishman famous in contemporary British diplomacy is Sir Nicholas O'Connor, Minister to Russia. In Australia, Sir Charles Gavan Duffy has made a name for himself; in Canada, Blake, Costigan, and Thomas Darcy Magee. In British journalism the Celt is everywhere to be found, beginning with my venerable friend Justin McCarthy, who has for years written the Imperial editorials in the *Daily News*, the great Liberal organ. Gladstone and Balfour are Celts,

ST. ANDREW'S SOCIETY.

The annual meeting of the above Society was held on Thursday afternoon, Mr. W. Ross in the chair. The report of the Hon. Secretary was presented and adopted, and the following officers elected:—Mr. W. Ross, President, Mr. W. F. Mitchell, Vice-President, Mr. H. W. Fraser, Hon. Secretary; Mr. MacArthur, Treasurer, and Messrs. Cruickshank, Borthwick, Sterling, Philip and Ure, Committee. The question as to whether the Society should celebrate their Patron Saint's day with a ball led to considerable discussion, and it was eventually decided that for this year at least no ball should be given, for various reasons, one being the lack of room in the Public Hall for the yearly growing number of guests. Messrs. J. S. Watson, H. R. Mair, H. Keswick, J. R. Black, R. C. Ross, Forest, Steven, and Annal were elected members. The report passed was as follows:—

REPORT.

The Committee beg to submit their Report for the year 1896-7, attached to which is the Treasurer's statement of account.

A final Dividend, amounting to yen 16.50, has been received on the Society's claim against the New O. B. C., reducing the loss on this to yen 118.23. Assistance has been granted to two applicants. To one of these a temporary loan of yen 200 was given, against which ample security is held. The Balance at the credit of the Society is now yen 322.98.

The Committee deeply regret to record the deaths of three Members since the last report was issued, viz.—M. T. B. Macpherson, C. G. Buchanan-Dunlop, J. I. Boag.

The number of Members now on the list is 96, 48 of whom are absent. Five new Members joined during the year.

Under the auspices of the Society a Ball was given on 30th Nov. to celebrate St. Andrew's Day, which was well attended.

H. W. FRASER, Hon. Secretary.

CORRESPONDENCE.

THE PASSPORT QUESTION.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Your recent editorial upon "The Passport and Independence Day" lays the American community in Japan under a heavy debt of gratitude by its assurance that Mr. McCaleb's now historic reply to the Independence Day committee has nothing to do with the subsequent action of the American Legation in regard to his passport. Quite contrary rumours were in circulation among American missionaries in Japan,—unpleasant rumours which it is a relief to learn upon such excellent authority were entirely incorrect.

It is now to be hoped that Mr. McCaleb will understand the matter clearly and cheerfully comply with the regulations of the United States Government which all other American citizens observe.

E. C. FRY.

Sendai, Oct. 6th, 1897.

THE OTHER SIDE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Much complaint is being made, and often with good reason, about the treatment accorded to Foreigners by Japanese. Without any attempt to enter into a discussion of the merits of other instances, let a lover of justice present a case for consideration.

I landed in Yokohama on Tuesday morning Oct. 5th, acting as pilot for a company of friends who with myself had been detained for days on account of the break in the railway. I had purchased tickets for the company to go by steamer down the coast, and so strike across country to our destination. Partly on account of the heavy storm, and partly through a misunderstanding, we missed the steamer we were to take. The gentlemanly passenger agent, Mr. Hidaka, of the Nippon Yusen Kaisha, kept the steamer waiting half an hour in order that if possible we might reach it. As we failed to appear, the steamer sailed without us, but it was in no sense the fault of the Company that we missed the steamer, and they could not properly be held responsible in any way. Yet both Mr. Hidaka and his assistant, Mr. Akiaka, showed us every kindness, taking charge of our baggage, no small amount, till the following day, and offering us the use of their steam launch for our safe conveyance to the steamer, also handling the baggage for us. All this was a matter of great accommodation to us, and yet a service which they were in no sense under obligation to render. And this is only one

of many instances in which the writer has been under obligations to Japanese, both officials and civilians. The Japanese have their faults; there are other races than Japanese who cannot be called faultless; but will it not be as well to have a little of both sides of this mixed residence problem?

DAVID S. SPENCER.

Nagoya, Oct. 8th, 1897.

ROMAN CATHOLICISM AND ITS AS-SAILANTS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—May I be allowed to say a few words, by way of protest, against this insensate and disgraceful attack on the Roman Church led by Mr. Snodgrass and Doctor Christlieb? The relations and attitude of the Roman hierarchy towards Civil Power is such a vast subject that I have neither desire nor ability to deal with it here, or anywhere. Many leading Roman Catholic writers of the past Reformation era have vehemently repulsed the charge of disloyalty whenever made against their Church by their Protestant opponents. Your readers will, I think, remember readily, the host of protests which Mr. Gladstone's famous pamphlet *Vaticanism*, evoked from the Roman Church,—clergy as well as laity. Catholic Christendom has certain well-defined rights which, from the sheer instinct of self-preservation, she is bound to guard jealously. It should be remembered, it was she, as the representative of a United Christendom, that stepped in when the pagan world was tottering, and out of the Roman chaos built what till very recently every cultured man was proud to call Christian civilization. Hence every National Church possesses, *per se*, certain rights which civil authorities are bound to respect; and if modern Protestantism is either unconscious of them or has waived her claim, so much the worse for its incohesive organism. Is it criminal and reprehensible for an ecclesiastical body which has done so much for our civilization to struggle that no temporal power should encroach upon her well-earned rights? Is the Roman Church blameable because she is solicitous that civil laws and civil powers should be based upon the fundamental principles of Christianity, and that these principles should be the guiding factors in moulding every form of our civilization? The voice of the seventh great angel was:—"The Kingdoms of this world are become the Kingdoms of our Lord and of his Christ; and he shall reign for ever and ever." (Rev. II. 15). How, then, can this theodicy be ever realized if Christian people, in their organized capacity, will not strive for its final consummation?

Now let us leave this abstract reasoning and come to the concrete lesson of history, which is our sole guide in all similar matters. Let either Mr. Snodgrass or the erudite German Doctor show us a single instance where the Roman Catholics, laity as clergy, were disloyal to the permanently established authority and conspired to overthrow it. Indeed the Roman Church has been repeatedly stigmatized for attaching herself to the pre-organized government, and not countenancing, or even encouraging, any resistance to it. It is quite true that Roman hierarchy has been very cautious, and even slow, in recognizing the new forms of government during the very critical era of transition from monarchical absolutism to constitutionalism; but whenever a majority of the people have accepted the new forms—consider, for example, the Latin Republics of South America, and lastly France—Rome has acquiesced. It is true that for a long time she was reluctant to recognize the new Republic of France; but the main reason for her action was because its leaders, men like Gambetta and Clemenceau and many others, were professedly anti-Christian, and did everything in their power to destroy her; but as soon as the persecution of the Church ceased, and the new leaders assumed a more conciliatory policy the noble Pope advised the faithful to submit to it, although he incurred the bitter wrath of the different monarchical parties in France who had been for years his great supporters.

The Roman Church has always identified herself very closely with her faithful followers whether in their weal or woe. She has never been guilty of entering into any unholy alliance with "the classes against the masses." Her sacred edifices once erected have stood there forever with open doors to comfort the poor and needy; while Protestantism is continually deserting every locality plagued with poverty. Will any of these zealous gentlemen show us an instance when the Roman hierarchy fomented a rebellion and overthrew the Government and usurped the vacant throne as Cromwell and his Protestant Puritans did? Are not Roman Catholics of the United States just as good citizens—perhaps better, because they are

well-regulated voters—as their Protestant opponents? Have they ever been detected conspiring against the American or any other Christian country? Why then this un-Christian attack upon them?

What was the primal motive of Mr. Snodgrass in agitating this matter, I don't know, nor care to know. I never have had the misfortune to read his pamphlet. One thing, however, is very clear, namely, such charges however baseless will greatly prejudice the people of this country to look with suspicion upon the Roman Propaganda in Japan, and might work immense injury and harm to the godly work of a Mission which contains many men and women who for self-sacrifice and devotion to better the condition of their fellow-men reflect great honour on our fallen humanity; and indeed might be made a good example for every Protestant missionary—Mr. Snodgrass and Dr. Christlieb not excepted—to imitate and follow. I am not a Roman Catholic, and never expect to become one, but thank God the eyes of my conscience are clear to see good even in an opponent.

No! Japan has no danger whatsoever from Roman Catholicism; indeed there might be more danger to her from the Anarchical Protestant individualism than from a well-ordered and well-ordained Roman episcopacy.

One word more for Dr. C. and I am done. Let me assure the learned Doctor that the utterances of the old Popes, or even of the new ones, will never be able to curtail the liberty of our progressive civilization. But the great danger is gradually showing itself, and coming from the utterances of some other kind of Popes. For more than three years hundreds of thousands of innocent Christians of Armenia have been mercilessly butchered by the barbarous Turk, and not a single pulpit in the whole length of Germany has raised its voice to denounce these infernal atrocities. What papal syllabus has destroyed either the conscience or the courage—perhaps both—of the Protestant Germany? There is the real danger to the liberty of the German nation.

Very truly yours, ISAAC DOOMAN.
Tokyo, Oct. 8th, 1897.

YOKOHAMA LITERARY SOCIETY.

The annual meeting of the above Society was held at Van Schaick Hall on Friday evening, Mr. J. T. Griffin in the chair.

The Secretary's report and accounts for the year were adopted as follows:—

REPORT—SEASON 1896-1897.

The Society continues to flourish, both as regards the number of members and its finances. As will be seen from the Treasurer's Report there is a balance in hand of Yen 481.84, and the roll of members includes 94 ladies, gentlemen, and 6 families. Some of these have since gone away or resigned, but the present number of members may be taken as about 210.

Treasurer's Account, Season 1896-1897.—Twelfth Session.

Receipts.	
By Balance in hand 1st Oct., 1896	¥878.73
Less repaid former Treasurer	5.30
By Members subscription, 6 family at \$10	¥77.53
By " " 94 Ladies at \$2	
By " " 100 Gentlemen at \$3	¥48.00
By Interest from Chartered Bank at 2 per cent.	6.73
	¥831.66
Expenditure.	
To Refreshments	¥124.10
To Coolie hire and postages, delivering tickets	12.25
To Printing and Stationery	64.70
To Commissions on collecting Subscriptions 1895/6 & 1896/7	25.00
To Hire of Public Hall, 16 October	5.00
To Putting up Platform on 16 Oct.	1.20
To Hire of Chairs for meeting, 5 March	6.67
To Rent for Session, Ferris Seminary, 14 meetings	122.00
To Balance carried forward	481.84
	¥831.66

E. & O. E.

Yokohama, 30th September, 1897.

A. J. WILKIN, Hon. Treasurer.

Examined with vouchers and found correct.

F. CUMMINS.

Mr. Griffin announced his decision to resign the post of President of the Society, and his resignation being accepted with regret, the following officers were elected:—

President—Mr. A. J. Wilkin. Vice-President—Mrs. O. A. Poole. Secretary—Rev. J. L. Dearring. Treasurer—Mr. E. B. S. Edwards. Committee—Mrs. Cleveland and Rev. E. S. Booth. Music Committee—Mrs. J. G. Doering, Mr. C. I. Fraser, Miss Webb and Mr. F. Whitefield. Refreshment Committee—Mrs. Ballagh, Mr. Drummond, Mr. Neville and Mr. E. H. Irvine. A committee consisting of the President, Mr. Cahusac and Mr. Cleveland was appointed to revise the rules and present a copy of them for the

approval of the Society at the regular meeting to be held on the 5th Nov., the same when approved to be printed and distributed to the members. The first regular meeting is fixed for the 22nd Oct., when a varied and interesting programme may be expected.

YOKOHAMA CHORAL SOCIETY.

The annual meeting of members of the Yokohama Choral Society, adjourned on the 2nd inst. for want of a quorum, was held on Monday afternoon in Van Schaick Hall. There was again an attendance of only about half a dozen members, but after waiting till 6 o'clock—half an hour after the time notified for the meeting, the Chairman, Mr. J. J. Griffin, ruled that the meeting could proceed with the business before it, as although it was necessary according to the Rules that 20 members should be present to form a quorum at a general meeting, there was no minimum fixed as necessary at an adjourned meeting.

On the proposal of Mr. Sharp, seconded by Rev. E. S. Booth, the report of the Hon. Secretary, which was as follows, was unanimously adopted:—

SECRETARY'S REPORT.

The past season can scarcely be called a successful one, as, owing to sickness, bad weather and other unavoidable causes, only one concert was given. The principal work performed at this concert was Lowen's "Sleeping Beauty," which occupied the first part of the programme. The work is very quaint and pretty, and being well rendered, was much appreciated by the audience, though the latter was not so large as it might have been. Part II. was made up of a selection of very attractive items, which included several numbers by the Philharmonic Society, who, as before, joined their forces with ours.

It is to be regretted that the practices during the season were so sparsely attended, there being on one or two occasions only five members of the chorus present. It is to be hoped that during the coming season greater enthusiasm will be shown. If this desirable energy is manifested, the usual three concerts can certainly be given. To Mrs. Doering, whose admirable accompaniment so greatly conduced to the success of the "Sleeping Beauty," the best thanks of the Society are due.

The Treasurer's account shows a balance in hand of \$179.53, with a liability for rent of \$75 for last season. With their best wishes for the future of the Society, your Committee now place their resignations in your hands.

F. WHITEFIELD, Hon. Sec.

September 30th, 1897.

The CHAIRMAN said that the next business was the election of officers for the ensuing season. He himself had decided to retire from active work for this winter, but if the members desired it he would be willing to remain President of the Society on condition that some one else was appointed musical conductor. Mr. Fraser had intimated his willingness to take this post, and with the exception of Miss Thomas he understood that all the present officers and members of Committee were willing to serve again if desired.

Mr. BOOTH then moved that the present officers and Committee of the Society be re-elected, with the exception of Miss Thomas, resigned, and that Mr. Fraser be elected to the Committee in her place.

Mrs. POOLE seconded the motion and it was carried unanimously.

The CHAIRMAN said, with regard to the programme for this season, Mendelssohn's "Athalie" had been put in practice last season and he thought that with a month's farther practice they could give a concert with that as the principal item. It had been proposed by a number of members that in future the work of the Society should include opera, both serious and comic, and there was no reason why those members who elected to do so should not take part in performances of this nature, which had been one of the principal sources of success of the old Choral Society.

Two new members, Mrs. Borthwick and Mr. H. E. Hayward, were then proposed, seconded and duly elected members of the Society, and this concluded the business of the meeting.

Practice commences on Monday next at 5.30 p.m., at Van Schaick Hall.

A LETTER FROM AMERICA.

Life at two points on the Atlantic Coast, as observed by your correspondent, has greatly interested him during the summer just passed. Within times that your correspondent remembers—though only as a child—there were, roughly speaking, no summer or watering places in the United States that were largely, that is, popularly patronized. At Mount Desert, Nahant, Newport, Long Branch, and Cape May there were, of course, cottages and pleasant society and hotels for transient guests, but there was nothing like a large summer population. I can remember when Commodore Benjamin F. Stockton, famous in the history of the United States Steam Navy and in

the Mexican war, went to Sea Girt, on the New Jersey coast. There he spent most of the heated term, and for so doing was thought to be peculiar, if not eccentric. Now, the whole eastern coast of the United States from Eastport down to the Florida Reefs is a summer play ground and a means of enjoyment and recreation to millions.

From Eastport to Narragansett pier we have rocks and rock scenery, with innumerable bays and harbours and arms of the sea for sailing, fishing and all sorts of aquatic enjoyments. For lovers, and those in the state of mutual delight and admiration which may and often does lead to mating and marriage, one of the summer delights is in "rocking," that is, in sitting, chatting and watching the sky and sea and the wonderful forms of marine life in the pools from what, in the Union College song, would be called "That grand old Seat of Stone." This remarkable feature of our American Atlantic coast arises from the fact that we have here a section of that great Appalachian range of elevated land that stretches from Labrador into Alabama, becoming the Alleghenies, the Blue Ridge, the Cumberland, Clinch and Great Smoky Mountains, with the White, Blue, Adirondack and Catskill mountains as outlying spurs. From Narragansett pier in Rhode Island, however, the rock ridges bend inland and thence we have no more rocks on the Atlantic coast till we get to South America. Long Island is only a huge bar of sand. The coasts of New Jersey, Delaware, Maryland, Virginia, the Carolinas, Georgia and Florida are flat and sandy.

Until after the war, there was scarcely more than a beginning of New Jersey watering places. Now, the whole coast from Sandy Hook to Cape May is lined with settlements ranging in importance from permanent municipalities like Atlantic City to those places which, like flowers, bloom only in the summer. Enterprising railways run with very accommodating trains from the pier at Sandy Hook to near Barnegat Inlet and from Cape May Point to Atlantic City. The lagoon and shallow inland waters, lying along the coast from Point Pleasant to Cape May, are in summer dotted with the white sails of thousands of pleasure boats. Even in winter many hotels are open. The tired business man may recuperate, or the invalid find a climate like that of Italy in the dry and aromatic region of the pines at Lakewood; or, in the long glass-encased corridors of Atlantic City hostleries can enjoy winter sunshine and the salt air of the ocean.

While spending some weeks at Spring Laker N.J., which is a select place of summer homes, somewhat different from the crowded popular places of Asbury Park and Ocean Groves six miles north, and which contain scores of thousands, I paid a visit to a place called Chadwick. It lies on the coast just below the 40th parallel. There I found a settlement of delightful summer cottages, built mostly by old college friends. Here in ante-railway days came, for fishing and gunning and sailing, such men as Daniel Webster, Henry Clay, and others famous in history. These wrote their names on the old hotel register here, as well as upon the shining heights of history. The old hostelry, once made of fragments of wrecked vessels, is now renovated and cased in modern sawed and painted timber, so that it looks smart enough. Down along the sea the cottages have been built just inside the great dyke of natural formation which the constant war of wind and wave has deposited. The Government has anchored the soil to itself by planting, after the Dutch manner, New Zealand grass which sends down long filaments and finds nourishment even in this silex, and thrives, making a deep green mass, which in the moonlight and as rippled by the wind, would delight a Japanese artist.

Here, at Chadwick, is the birthplace of that now famous United States life-saving service, which patrols and guards the whole water line of the American frontier on ocean and lakes. In old days, before steam enabled man to laugh at the winds and to smile at the currents, sailing vessels were frequently wrecked on this treacherous New Jersey coast. Often scores and hundreds of human beings found watery graves at lonely places where no living man was present to help. Even in this day of steamships, wrecks cannot be avoided, especially in fog and storm. Only a few years ago, at Elberon (a euphonious name made from the ordinary collocation of the letters E. L. Brown), a merchant of New York who some months before had ordered a cargo of coffee, had it unexpectedly delivered to him on his garden front and amid his flowers, by the wreckage of the steamer before his eyes.

For several years a life-saving station, supported by some New York merchant, had been maintained under the supervision of Captain Chadwick. On one dark night, the British

steamer *Ayrshire* was wrecked near the Captain's house. With cool skill and superb daring, he and his companions rescued two hundred and fifty passengers and ships' folk, only one person on the *Ayrshire* losing his life. This splendid success was made the fulcrum of the lever of interest created in Congress, which resulted in the formation of the U.S. Life-saving Service, the houses and the crews of which are to be seen on all our water frontier.

In the report for 1896, made to Congress, I find that the number of disasters to documented vessels within the field of station operations during the year was 437. On board these vessels were 4,608 persons, of whom only 13 were lost. Of the \$12,726,520 involved, the value of the vessels was \$8,880,140 and of their cargoes \$3,846,380. Of this amount, \$11,880,140 was saved to the owners and \$1,432,750 lost. The number of ship-wrecked persons who received succour at the stations was 613, to whom 1436 days' relief in the aggregate was afforded. Of undocumented vessels, such as sailing boats, row-boats, etc., on which were 597 persons (of whom seven were lost) there were 243 casualties. Of the property involved on these small crafts, \$114,915 was saved and \$4,350 lost. These figures give some idea of the splendid work in the interests of humanity and commerce, which the Life-saving Service does. Ultimately the *Ayrshire*, to which I have referred, was driven far up on the beach. Now, in that addition to the coast of New Jersey which the sea is steadily making (though often eating coast line away at other places) my old college mate's summer home stands, built over about where the machinery and the stern lay, while the bow and forward timbers are still visible embedded in the sand. W.E.G.

AN ELECTRICAL PIONEER.

An event of great, if not superior, interest was the general meeting of the American Institute of Electrical Engineers at Green Acre near Eliot, Maine. There, the 50th anniversary of an Exhibition at Dover, New Hampshire, of an electric engine and railway, invented by the late Professor Moses G. Farmer, was celebrated. This gentleman, who was the brother of the late Charles Carleton Coffin, was an electric pioneer and did vastly more for electric science than even the great Professor S. F. B. Morse, "who did nothing electrically," but who invented a key and alphabet by which Professor Joseph Henry's invention of the magneto-electric telegraph was utilized for practical purposes. The addresses and papers read by experts at Green Acre showed that in Mr. Farmer's note books models and apparatus, made in the day before the terminology of the science was settled, almost every modern and recent invention or idea was anticipated. His original little engine and car, which ran on iron rails and drew a carriage containing two persons, were on exhibition.

The hall in which the interesting models and relics were shown is named the Eirenon. Here every year during the summer, lectures on comparative religion and in the themes that ought to and do occupy the best men of all countries are set forth in choice language by men who are masters of their theme. In the building adjoining, which Mr. Farmer called his workshop, there was apparatus of all sorts, showing his many inventions, for most of these machines were original with Moses Farmer, who was indeed a Moses of the Promised Land in which we dwell. In 1859, twenty-one years before the common electric lamps and circuits, now so familiar, Farmer lighted his parlour in Salem for some months with an electric lamp which has a filament of platinum wire. Until 1879 most electricians believed that this could not be done, although it had been done.

In 1866, Farmer conceived and carried out what is now called the self-exciting dynamo, by which all the electric industries of to-day have been made possible. It is true that other men, such as Siemens and Varley, may have proposed the same thing about the same time, but here are the written proofs, the first written descriptions of such a machine. With it in 1868, Mr. Farmer lighted a private residence in Cambridge, Mass., with forty incandescent lamps arranged in multiple series and with absolute regulation at the dynamo. An unfortunate fire destroyed nearly the whole plant, but the armature to the dynamo is still in existence and was shown at Chicago in 1893. In 1856, he succeeded in electrically depositing aluminum and made a chronograph and an electric clock for the Dudley Astronomical Observatory at Albany. In 1851, Reuclaut of Paris made a gyroscope for demonstrating the rotation of the earth. Farmer in 1856 kept the disc in continuous motion in

electric current. In a certain sense Mr. Farmer's prior inventions are somewhat of a terror to those who claim to be inventors; for, although he did not publish much, his note books show how thoroughly he had entered into the electrical Canaan for the men of to-day.

We must not forget that twenty years counting back from 1897 will cover the commercial development of electricity. Mr. Farmer went from Dan to Bethsheba of the promised land. At twenty-six he built an electric railroad; at twenty-eight he had improved the telegraph; at thirty he had invented and constructed the fire-alarm system, with water power driven by dynamo; at thirty-five he had discovered the means for duplex and telegraphy; at thirty-six he invented the art of depositing aluminum electrically; at thirty-nine he lighted his parlour with incandescent lamps; at forty-four, he had greatly improved thermo-electric generators; at forty-six, he had invented the modern dynamo with self-exciting field; at forty-eight he lighted a house in Cambridge with forty incandescent lamps in multiple circuits and all properly self-regulating. There is even good reason to believe that the introduction of the condenser into telegraph work, which so enormously increased the capacity of the line, was his invention.

How strange seem to be the ways of men to say nothing about the ways of God. While Morse had his breast covered with European decorations and his bronze statue stands to-day in Central Park, the name of Moses G. Farmer is unknown even to the books of references. Yet, his invention of an electric railway car was a new departure in electric propulsion, as distinguished from locomotion, and the logical sequence of this invention was the adoption of electricity for railway work. How wonderful the developments within the last decade! In 1887, there were scarcely a dozen electric railways in existence. Now, there are seven hundred in the United States alone, being over 14,000 miles in length and having 35,000 cars and 52,000 motors, while the era of suburban, and in a large measure interurban, traffic by electricity seems to be already ushered in. W.E.G.

THE AUTUMN REGATTA.

The Autumn Regatta of the Yokohama Rowing Club was held on Saturday afternoon under most favourable circumstances. The weather—that important factor—was all that could have been desired, a light breeze from the E. N. E. made the water a little lumpy outside the breakwater, but not seriously so, and the tide, until more than half the races were over, was with the rowers. There was a large attendance of visitors, including many of the fair sex, assembled at the Boat-house, the large upper room of which had been prettily decorated for the occasion and dancing was carried on during the afternoon to the strains of the Town Band. Several of the races were very close and almost all well contested, so that excellent sport was provided for the spectators. At the conclusion of the races the prizes, consisting of silver cups and pretty and useful articles such as cruet stands, spirit flasks, etc., were presented to the successful competitors by Mrs. Irvine. The arrangements were most satisfactorily carried out by Mr. H. C. Litchfield, President, as Judge, Mr. W. Sutter, starter and umpire, Mr. H. Tennant, time keeper, and Messrs. F. J. Hall, Captain; Schellenberg, Hon. Treasurer, H. E. Hayward, Hon. Sec.; and the Committee, consisting of Messrs. H. M. Arnold, P. S. Bent, J. MacArthur, G. Philip, and Dr. Wheeler. The various events were as follow:—

CLUB FOURS.—(One Mile).

"PELICAN."—(1).		lbs.
Bow.	H. Goddard	130
2.	R. Böhlke	147
3.	E. Levedag	178
Sir.	W. Goddard	126
Cox.	W. Fegen	132
"DARTER."—(2).		
Bow.	H. Rose	145
2.	G. C. Allcock	152
3.	R. Boyes	175
Sir.	H. S. Goddard	135
Cox.	W. M. Carst	100
"SEAMREW."—(3).		
Bow.	E. H. Irvine	135
2.	H. Bethell	135
3.	M. Schellenberg	159
Sir.	H. E. Hayward	138
Cox.	K. Wilson	105

It was past 1.30 when the first race, for the Club Fours, was started by Mr. Sutter; *Seamrew* having

the inside berth, *Pelican* next, with *Darter* outside. The latter got a lead of a length or two at the start, but the other two boats soon drew up on a level footing, though apparently this was not for long. *Seamrew* were pulling only about 32 strokes to the minute to *Darter's* 33 or 34. At the Pacific Mail Wharf *Seamrew* led by a few yards, but almost immediately afterwards *Pelican* passed and took her water, with *Darter*, outside, about level. *Pelican* finished about half a length ahead of *Darter* and *Seamrew* came in at the tail. Time, 9 min. 46 secs.

JUNIOR PAIRS.—(½ Mile).

"MALLARD."—(1)		lbs.
Bow.	E. H. Irvine	135
Sir.	F. Klüss	145
Cox.	W. M. Carst	109
"WIDGEON."—(2)		
Bow.	L. M. Williams	140
Sir.	H. D. Curtius	160
Cox.	A. L. Bouffier	115

Widgeon had inside and *Mallard* outside place. The latter got the best of the start by a trifle and soon after obtained a lead of two or three lengths, Curtius, the stroke of the *Widgeon*, appearing to be unused to pulling in water so choppy as that which prevailed outside the harbour. The crew of the *Mallard*, rowing in better form, kept their lead, and though Curtius spurred gamely when in smoother water inside the Breakwater, won a good race by about three lengths. Time, 8 min. 28½ secs.

SENIOR DOUBLE SCULLS.—(½ Mile).

"PEARL."—(1)		lbs.
Bow.	I. Mottu	145
Sir.	J. B. Rentiers	155
"TERN."—(2)		
Bow.	J. MacArthur	170
Sir.	M. Schellenberg	159

After a very level start *Pearl* got a lead of a length and the chances of the inside boat, the *Tern*, were not improved by a Customs launch which went inside the course and left a nasty wash. Both crews pulled remarkably well, but the weight in *Tern's* bows told against her in the lumpy seas and Mottu and Rentiers increased their lead, passing the P.M. Wharf three or four lengths ahead. When they got into smooth water Schellenberg and MacArthur spouted well, but as this was gamely responded to by Rentiers, the *Tern* was unable to recover her lost ground and *Pearl* won by about two lengths. Time, 7 min. 51½ secs.

MEN-OF-WAR CUTTERS.—(About 2 Miles).

Three ten oared cutters—two from H.M.S. *Rainbow* and one from the *Redpole*—competed in this event, starting opposite the boat house, going round the breakwater and finishing across a line between the boathouse and the breakwater. The *Redpole's* cutter won easily by about half a dozen lengths.

SENIOR PAIRS.—(One Mile.)

"MALLARD."—(1)		lbs.
Bow.	H. E. Hayward	138
Sir.	L. Mottu	145
Cox.	A. H. Lay	105
"WIDGEON."—(2)		
Bow.	H. Goddard	130
Sir.	W. Goddard	126
Cox.	W. M. Carst	100

Mallard had inside place. Both went off to a fairly level start, the Goddards going to the front at once, but Mottu and Hayward almost directly after got on level terms and a little later on took a slight lead, and rowing with a long steady stroke, with plenty of swing in it, gradually increased the distance. Before the P.M. Wharf was reached *Mallard* led by a dozen lengths, and the Goddards gave up and paddled in at their leisure. Time, 11 min., 23 secs.

"RICKETT" FOURS.—(One Mile.)

"PELICAN."—(1)		
Bow.	L. M. Williams	140
2.	H. D. Curtius	160
3.	J. B. Rentiers	155
Sir.	W. Goddard	126
Cox.	K. Wilson	105
"FLAMINGO."—(2)		lbs.
Bow.	R. Böhlke	147
2.	G. C. Allcock	152
3.	E. Levedag	178
Sir.	R. Boyes	175
Cox.	W. M. Carst	100
"SWAN."—(3)		
Bow.	E. H. Irvine	135
2.	F. Klüss	145
3.	J. MacArthur	170
Sir.	L. Mottu	145
Cox.	A. H. Lay	105

"SEAMEW."—(o)	
Bow. H. Goddard.....	130
2. J. B. Gibbs.....	133
3. H. E. Hayward.....	138
Sir. H. S. Goddard.....	135
Cox. J. R. Gibson.....	128

Flamingo had inside place, *Seamew* next, then *Swan* and *Pelican* outside. A number of sampans were scattered about the course at the start, but after repeated whistling from the starter's launch for the most part cleared out of the way, but not until a good deal of time had been lost. *Pelican* got away with a lead of a length and then bored in to *Swan's* water. At the half mile *Pelican* led by three lengths from *Swan* with *Seamew* in third place and *Flamingo* three-quarters of a length behind, last. Goddard and Boyes, in the last two boats, rowed very steadily and well within themselves with a stroke of about 32. By the P.M. Wharf *Pelican* had increased her lead, the other three being within a length of each other. Going past the breakwater Boyes spurred and took second place, finishing in the same position, *Pelican* winning by five or six lengths with *Swan* third and *Seamew* close up. The tide had by this time turned and was against the boats, which accounted for the somewhat poor time made, viz., 11 min. 32½ secs.

JUNIOR DOUBLE SCULLS.—(½ Mile).

"TERN."—(1)	
Bow. R. Böhlke.....	147
Cox. E. Levedag.....	178

Salabelle and Gibbs, in the *Pearl*, in inside place, got away with a slight advantage at the start, but there was little difference between the two boats, which raced almost nose and nose until just before entering the breakwater, when Levedag and Böhlke put on a grand spurt and went away lengths ahead, and in spite of a bad wash from a Japanese steam launch, which in spite of all efforts to stop it, ran right across the leading boat's bows, won a capital race by a couple of lengths in 8 min. 43 secs.

SCRATCH FOURS.

"PELICAN."—(1)	
H. Irwine	Kuhn
Barnby	Goddard
Bird	Gibbs
Rentiers (str.)	Stephens (str.)
"SEAMEN."—(2)	
E. Irwine	Moss
Mason	Bethel
Allcock	Rose
Hayward (str.)	Salabelle (str.)

A capital start was made, *Flamingo* going ahead with a dash, but was overhauled by *Pelican* half way home and the latter won cleverly by a length and half from *Seamew*, second, and the other two close up.

THE CRICKET FESTIVAL.

Kobe versus YOKOHAMA.

The cricket festival commenced in Yokohama on Tuesday. The fine autumn weather experienced on Saturday, Sunday, and Monday had led cricketers and the public generally to believe that the unseasonable and wet weather lately experienced was past and done with, and that we were safe for a spell of fine bright skies for the cricket and baseball carnival at least. But the promise failed to be fulfilled. On Tuesday morning the sky was overcast and somewhat threatening, though for a time the sun broke through and encouraged false hopes. During the forenoon the weather, however, though overcast, was fine, but during the afternoon the rain fell in successive showers of drizzle and sadly interfered with the enjoyment of players and spectators, though it was not sufficient to stop the play. Kobe had sent down a strong, though possibly not the best, eleven it could raise, to do battle with the local Club, and a close game was anticipated. The Pavilion on the Cricket Ground was more prettily decorated than we remember to have seen on any former occasion and during the afternoon the Town Band was in attendance and played a selection of music—not altogether of the most cheering character it must be said—the bandsmen appearing to be suffering from the depressing influence of the weather until near the close of the day, when they endeavoured to brighten things up a bit with some merry dance tunes. As might well be expected under the circumstances the attendance of visitors, particularly of the fair sex, was very limited, but the sport offered was fully up to the average of local interport matches, some excellent cricket being shown. The visitors

elected to go to the wicket first and in this they had bad luck, as the rain in the afternoon, when the Yokohama team batted, told more against the bowlers than the batsmen. The Kobe innings was not brilliant, as no individual "came off" specially strong against the Yokohama bowling, in which Edwards, Jr., Murray and White were in excellent form. Only three of their batsmen succeeded in getting into double figures; they evidently did not have the "luck," that a Kobe contemporary hoped for a few days since when it prophesied that at least eight were good for over 9 runs each. The innings of the Yokohama team, so far as it has gone, was remarkable for the splendid play of Murray and White. The former's 74 was capitally played, only one chance being given, and that a hard one, while the score included no less than 14 fours, showing that the batsman did not fail to "open his shoulders" when occasion offered. A little bit of over zealousness and perhaps want of prudence on his own part, in trying to make an extra run, led to his being run out when he looked set for the century. White's innings for 103, not out, was probably the best he has ever played on the ground, and that is saying a great deal. It was all good, sound cricket and skillfully played, not a chance being given from beginning to end, and like Murray's innings, included 14 fours. With 135 runs to get to equal Yokohama's present score, Kobe's chances do not look rosy for the first match. Some very pretty bits of fielding were done on both sides—and also some bungling—but taken altogether the fielding was very fair, particularly considering the sudden condition of the ball and the ground during the afternoon. Messrs. C. R. Joy and A. N. Hansell officiated throughout the day as umpires. Play, which had been set down to commence at 10.30 sharp, did not begin till after 10.45, and stumps were drawn at 4.45, with nearly two hours interval at tiffin; a good deal of fine weather was therefore lost.

W. D. S. Edwards, for Kobe, won the toss, and elected to bat, sending in Godrej and S. Lucas to face the bowling of F. E. White and E. B. S. Edwards, the former at the Pavilion end, with Duff at the wicket. Off White's last ball Godrej opened by scoring a single. In Edwards' first over Godrej cut him for two, and White then sent down a maiden over. Edwards' last ball in the following over was hit to square leg by Godrej for two. White put in another maiden over, and then Godrej scored a two off Edwards, but was bowled the following ball. One wicket for 7 runs. W. Braess then joined Lucas, and White put in his third maiden over. In Edwards' next over Braess made a single and a leg bye, bringing 10 to the scoring board. Braess made a single off White's first ball in the over, and then Lucas was caught by Edwards at point off White. Two wickets for 11 runs. W. D. S. Edwards took Lucas' place and drove White to the Pavilion to start with, Braess following this up with a 4 and a 2 off Edwards, to long field. Edwards drove White for a single and Braess made a pretty cut off the same bowler for 1, in the next over. In Edwards' next over Braess snicked him in the slips to the boundary for 4. White in his next over was driven by Edwards for a single, which would have been a boundary but for a bit of good fielding by Murray. W. D. S. Edwards made a single off his brother, and the next ball from this bowler was put up by Braess and taken by Kingdon, at cover point, after he had added 11 to the total. Three wickets for 29 runs. Pakenham followed and Murray took White's place at the pavilion end with the leather, and sent in a maiden over. W. D. S. Edwards added a single, and Pakenham another, off Edwards' next over and the latter followed with a 3 to the off from Murray's first ball; Edwards adding a single in the same over, and a bye for three off his brother's next, in which Pakenham also made a drive to the boundary for four. The next ball from Edwards however, took Pakenham's wicket. He had added 8 to the score, which now stood at 42 for four wickets. Scrymgeour followed in and in Murray's next over his partner made a single, and another single off Lias, who now relieved Edwards at the lower end. In Murray's following over Edwards drove him to the boundary for 4. Lias' next over was a maiden, but in Murray's next Edwards' made a single and Scrymgeour a single and a drive for 2. Murray's next ball was driven by Edwards straight over the wicket and was beautifully taken and held by White at long field. Edwards had compiled 18 and the score now stood at 54 for five wickets. G. Braess joined Scrymgeour, who made a single off Murray's next over, after Lias had bowled a maiden. Scrymgeour made a boundary hit off the latter bowler's next over and Braess drove Murray directly after to leg for 2, adding a single in the same over. Lias' second ball in the next over took Braess' wicket, he having added 3 to the score; 62 for six wickets.

Mat Smith joined Scrymgeour and the latter added a 4 and a single to his score off Murray, and 2 two directly after off Lias. Smith made a 2 off Murray and lost his wicket, clean bowled, by the following ball. Eight wickets for 74. R. E. Gill followed in. Scrymgeour added a single and Edwards took Lias' place with the ball at the lower end, and in his third ball clean bowled Scrymgeour, who had played a pretty game for his 18. Eight wickets for 76. Barto joined Gill and opened with a 2 off Edwards. In Murray's next over Gill was clean bowled. Nine for 78. A. L. Robinson joined Barto but was prettily caught and bowled by Edwards after making a single, the eleven being thus out for a total of 79. The scores were as follow:—

Kobe C.C.

Mr. M. B. Godrej, b. E. B. S. Edwards	7
Mr. S. E. Lucas, c. Edwards, b. White	0

BOWLING ANALYSIS.

	B.	R.	M.	W.
Mr. F. P. White	35	9	3	1
Mr. E. B. S. Edwards	31	9	7	5
Mr. C. G. Murray	35	9	1	3
Mr. F. J. Lias	35	9	4	2

After tiffin, play was resumed at 2 p.m. the home team starting their innings with C. M. Duff and D. Tyng, to the bowling of W. D. S. Edwards at the lower end and G. Braess at the pavilion end with W. Braess at the wicket. Duff opened with a single off Edwards and the latter's next ball took Tyng's wicket. One for nought. Murray followed. Duff made a single and Murray a leg-bye off Braess in the latter's first over, and Edwards gave a leg-bye to Duff in his next. Murray made a boundary hit to leg from Braess' first ball in the following over, and followed it up with a single. Edwards' next was a maiden over. Duff then got Braess away to the fence at long field for four, but off the next ball was caught by Godrej at short long-on, having made 6 only. Two for 13. White then joined Murray, who got Edwards away in the next over for a four, a three, and a single. White then drove Braess to long off for 3 and again for a single. After Edwards had sent down a maiden over, Godrej relieved Braess at the pavilion end. Off his first over Murray made a four to long-off, and a pretty cut for three, to which White added a single—rather an expensive over for Kobe. A maiden over from Edwards followed and in Godrej's next Murray scored a single. Murray drove Edwards for four in the following over and White then cut Godrej for 2. Edwards' next only produced a single by Murray. Godrej was severely punished in the next over, Murray getting two boundary drives for 4 each off him. S. Lucas was now put on at the lower end in place of Edwards. White scored a single and Murray a four off his first over. Pakenham went on at the pavilion end in place of Godrej and Murray got him away to the pavilion for 4 and another for the same number to long-off. White made two successive drives for 4 each off Lucas and 70 was posted up. Murray added a single off Pakenham and then got Lucas away to the boundary for two more fours, and 80 went up. White hit Pakenham for a 3 and Murray made a 4 and a single in the following over. Lucas was sent by the same batsman to the fence for 4 and a bye for two; and another 4 to Murray off Lucas followed. Edwards now relieved Pakenham at the pavilion end. White made a single and Murray a 2 off his first over and the century went up. Geo. Braess now relieved Lucas at the lower end and White got him away for 3 in the first over. Off Edwards' next White made a single and then a leg drive for 4 and a single off Braess, adding a pretty drive to the Pavilion for 4 and a cut for 2 off Edwards directly afterwards.

Off Braess' next over Murray scored a single and another off Edwards, who was also cut for 2. Directly after Murray was run out having put together the capital score of 74. Three wickets for 122. E. B. S. Edwards joined White but was bowled first ball by his brother W. D. S. Four for 122. Kingdon was next man in. White made 3 twos and 2 fours off Braess' next over—a total of 14 for the over, and 130 went up on the telegraph board. After Edwards had put in a maiden over Pakenham went on in place of Braess at the lower end and a single to White and 2 to Kingdon were scored off his first over. A maiden over from Edwards followed and then Kingdon got Pakenham away for a 2 and a single. Kingdon cut Edwards for 2 in the next over and White then cut Pakenham to

the fence for 4. Edwards' next produced a single each to Kingdon and White. The latter then cut Pakenham to the fence again for a 4 and Kingdon made a single which was followed by a bye off Edwards. White drove Pakenham to square leg for 4 twice in the next over and 164 was posted up. In Edwards' next over Kingdon was caught in the slips, by Godrej, after adding 9 to the total. Five wickets for 164. J. G. Watson joined Edwards, and M. Smith went on at the lower end in place of Pakenham. White cut him for two in his first over. In Edwards' next Watson snicked him through the slips for 4 but the following ball was caught by W. Braess behind the wicket, off his pad, and given out. Six for 170 runs. Rev. T. S. Tyng joined White who made a single and then a 3 and a 4 off Edwards and 2 off Smith. Edwards then sent down a maiden over, but Smith in his next over was cut for a 2, two fours and a single by White, who also got a four off Edwards. Tyng also securing a single from the same over. Godrej now relieved Smith at the lower end and after Tyng and White had each scored a single off him the former drove the bowler for 3, and the 200 went up on the telegraph board. Tyng got Edwards away to the fence for 4 and was rather badly missed the next ball. Godrej's next over gave a single to White, making up his century, and cheers from the Pavilion greeted the event. White then drove Edwards for a single and Godrej for the same, Tyng and White following with another single each and three byes were added. At this point stumps were drawn, at 4.40 p.m., White not out for 103 and Tyng not out 9, the total for 6 wickets being 214.

Wednesday, the second day of the cricket festival in Yokohama, was favoured with delightful weather, the sky being bright and the air balmy, while the pitch, which had been carefully protected from the rain during the night, and the ground generally was in capital trim, though towards the latter part of the game it got a little rough, resulting in the ball "jumping" up rather dangerously on two or three occasions. During the afternoon there was a considerable attendance of visitors on the ground, the ladies' tent being in particular well patronised; it was therefore rather disappointing to many visitors who did not arrive till about 4 o'clock to find that the match was finished. The base-baller however started in to practice and afforded the promenaders some little entertainment. Yokohama's innings was finished at 11.35, 42 runs being added to the over-night score of 214, bringing the total up to 256, the largest score made by Yokohama in any interport match, we believe, in recent years. White's splendid not-out innings of 135 figures conspicuously in the total, and was a piece of cricketing well worthy of the Yokohama Captain. The Kobe team opened their second innings before tiffin in excellent style, the first wicket costing 41 runs, and it then looked as if they were in for a big score, and that Yokohama would at least have to play a second innings. But after tiffin the scoring fell off, though the two Braesses and Scrymgeour played pluckily and well to save their side from defeat, but the tail of the Kobe eleven went all to pieces and gave a chance to E. B. S. Edwards once more to achieve the hat-trick, by taking three wickets with three successive balls in one over. Five wickets for 6 runs was Edwards' average, while White was not far behind with four wickets for the same number of runs. Messrs. Joye and Hansell again officiated as umpires.

When stumps were drawn on Tuesday afternoon Yokohama's score stood at 214 for six wickets. At 10.55 on Wednesday morning, 25 minutes behind time, play recommenced, the two not-out men, White with 103 to his credit, and Rev. T. S. Tyng, with 9, resuming their innings to the bowling of W. D. S. Edwards at the Pavilion end and Godrej at the other. Tyng took Edwards' first over, which was a maiden. In Edwards' second over White cut him for a single. In Edwards' third over White made a straight boundary drive for four, and Godrej in the following over was pretty cut by Tyng for two. White then scored a single off Edwards, and Lucas relieved Godrej at the lower end. White drove his third ball to square leg for 4 and cut the next ball to the boundary for another 4. Tyng followed

with a 2 and a single off Edwards' next over, and 230 went up on the telegraph board. Lucas in the next over took Tyng's wicket, he having added 14 to the total score, which now stood at 232 for seven wickets. Lias now joined White and opened with a cut for two and a single off Lucas, but was caught and bowled by Edwards in the next over. Eight wickets for 235. Showler took Lias' place at the wicket, but was caught by Barto at mid-wicket, off Edwards' fourth ball of the over. Nine for 235. Philip joined White, who cut Lucas for a 2 and drove him to square leg for 4 and to mid-on for a single in the following over. Edwards sent down a maiden to White, after which Geo. Braess went on in place of Lucas. Philip made a single and White two successive fours and a single off the first over of the new bowler, and 250 went up. Edwards bowled another maiden and off Braess' next Philip scored a single and White a 2. By the first ball of Edwards' following over Philip was clean bowled, White carrying out his bat after a splendid innings for 135. This closed the Yokohama innings, the total runs made being 256.

With 177 to get to tie Yokohama's score the Kobe team started their second innings at 11.50 a.m., Godrej and S. Lucas opening the batting, to the bowling of Watson and E. B. S. Edwards. Both bowlers sent in a maiden over, but in Watson's second over Godrej cut him for 2 and a bye followed, Lucas adding a leg hit for 4. In Edwards' next over Godrej scored a single and Lucas a leg hit for 4. Watson's sent down a maiden over, and Edwards followed suit, while a single to Godrej was all that was made out of Watson's next. The second ball of Edwards' next Godrej tipped on to his balls, the first wicket thus falling for 13 runs. W. Braess followed and opened with a straight drive for 3 and a single off Edwards, Lucas adding another single off Watson. Edwards put in a maiden over and then Braess made a boundary hit for 4 and a single off Watson, following this up with a very neat cut to the boundary, and a leg hit for 4 off Edwards, bringing 30 up on the telegraph board. Philip now went on in Watson's place at the Pavilion end, and was cut by Lucas for a single in his first over. Lias also relieved Edwards at the lower end and rolled down a maiden over. Braess sent Philip's first ball in the next over to the fence for 4 and Lucas slipped a single. Braess then drove Lias to the fence for 4, bringing 40 up on the telegraph board. Kingdon was now put on at the Pavilion end in Philip's place and sent down a maiden over, Lias following suit. The game was adjourned for tiffin, at 12.30, the score being 41 for one wicket.

Upon resuming play at 2 p.m., White took the bowling at the Pavilion end and with his second ball scattered Lucas' wicket after he had made 11 runs. Two wickets for 41 runs. W. D. S. Edwards joined Braess and the latter made a single off White before the over was finished. A leg-bye and a single off Kingdon followed and Braess added two singles, off White and Kingdon respectively. Edwards then made a single and Braess a cut for 2 off the same over from Kingdon. Edwards drove White for a single and Braess obtained a four to long-on and a single, Edwards adding another single from the same over, and 60 was posted. Kingdon's following over only produced a single by Edwards, who in the next over drove White for a 2 to leg. Braess followed with a drive for 2 and a leg-bye for 1 off Kingdon. Off the next ball Edwards was caught behind the wicket by Duff, his score being 7. Three wickets for 66. Pakenham followed on and in White's next over Braess was taken at long-on by E. B. S. Edwards. He had added a very useful 41 to the total score of 56 for four wickets. Scrymgeour joined Pakenham and both batsmen added a single off White. Scrymgeour made a single off Kingdon's next and White sent down a maiden over, Pakenham making a single off Kingdon, White's second ball in the following over took Pakenham's wicket. Five for 70. G. Braess was next man in, and

Kingdon sent in a maiden over. G. Braess managed to cut White for a single and drove Kingdon to leg for the same. Scrymgeour adding another off the same over. Scrymgeour then drove White to long field for 2 and Braess cut Kingdon for the same number and a bye followed, the same batsman adding a single to slip. Braess made a 2 to long field and a single off White's next over, and Scrymgeour added 2 through the slips. Lias now took Kingdon's place at the lower end and sent down a maiden over. Murray went on at the Pavilion end in place of White, and Scrymgeour played him for a single, Braess adding a drive for 2. Scrymgeour cut Murray for two and added a single off the same bowler. A leg-bye and a single by Scrymgeour off Lias followed. In Murray's next over Scrymgeour drove him to leg for four. A leg-bye, a leg hit for 2 by Scrymgeour and three byes were made off Lias' succeeding over. Scrymgeour then drove Murray to the boundary for 4 and followed it up with a 2, the 100 having meanwhile been posted.

Edwards now relieved Lias and Scrymgeour made a single and Braess a boundary for 4 and a 2 off his first over. White again relieved Murray at the Pavilion end and Scrymgeour got him away to the fence for 4 and in the following over Braess made a single off Edwards. Braess added a single off White and was bowled next ball by Edwards, for 20 runs. Six wickets for 123. Matt Smith followed but was caught and bowled by Edwards off his first ball. Seven for 123. R. E. Gill followed and was bowled by Edwards with the next ball. Eight for 123. Barto was next man in. In White's next over Scrymgeour snicked him to the fence behind the wicket for 4 and added a single off the next ball, Barto also making a single off the same over and another in the next off Edwards, who, following ball took Scrymgeour's wicket after he had played a capital innings for 34. Nine wickets for 130. Robinson, last man in, joined Barto, who made two successive twos off White. The latter's next ball, however, took Barto's wicket, and the innings closed for 134, the match being thus won by Yokohama by an innings and 43 runs.

The following were the scores:—

A SCRATCH MATCH.

A scratch match was played on Thursday between eleven captained respectively by Messrs. F. E. White and J. Scrymgeour, resulting in a victory for the latter. Mr. White's team started on a second innings and had compiled 61 for the loss of one wicket when stumps were drawn, W. Braess having contributed 36, not out, of the total. The scores in the first innings were as follows:—

MR. SCRYMGEOUR'S ELEVEN.

THE Y. C. AND A. C. ENTERTAINMENT.

A happy spontaneity, which made up for a lot, characterised the entertainment given on Wednesday evening at the Public Hall by the Yokohama Cricket and Athletic Club in honour of the Kobe visitors. To begin with, the hall was charmingly decorated with big shower-baskets of flowers swung pendant from the roof, thus breaking up the awful monotony of the ceiling. The hall was packed to the doors, extra seating accommodation eventually being provided ere the entertainment began, at a few minutes past nine o'clock. The programme was not so ornate as some we have seen of late in Yokohama, but it made up for its plainness by the local jokes sketched upon the back. These included skits upon most of the players, but the gem of the collection was that labelled "The latest!" The burly figure, redolent of geniality, seated in the diminutive go-cart, pulled and pushed by three desperately labouring men, told its own naïve tale.

The proceedings commenced with a light comedy, translated from the French, entitled "What Tears can do." The scene is laid at Baden and introduces five characters: *Prosper Chomly* (Mr. Wilder) who has married a widow, *Delphine* (Mrs. McWilliams), a former convent friend of *Lady Dorothy* (Miss Poole), the three months' bride of *Lord Charles Clarendale* (Mr. F. Coghill Jackson). The young bride desires some diamonds which her husband refuses to buy for her. *Delphine*, who, by-the-by, keeps her husband on a monthly allowance, advises *Lady Dorothy* to resort to artifice to gain her ends, in fact, to use tears if all else failed. The advice is followed and disaster almost ensues in consequence of *Lord Charles* discovering the trick. But all comes right in the end, matters straightening out happily for all parties, *Delphine* even giving the key of her cash-box into her roulette-loving husband's care. Mrs. McWilliams played her part capably and received splendid support from Mr. Wilder. Miss Poole made a most promising debut as an ingenue, though naturally the part demanded more than a beginner could fairly be expected to achieve. Mr. Coghill Jackson made a very efficient foil, playing well within himself. Mr. Lambert Plummer, as *Alphonse*, an hotel-waiter, was very acceptable. At the close a bouquet was handed to Miss Poole and the rounds of applause that this evoked testified to the audience's appreciation of the players and the play.

The second part was a variety entertainment pure and simple. After a trio—piano, violin, and violoncello—by Messrs. Chalmers, Davies, and Pooler, M. A. C. Read sang "Jack's the Boy," in capital style. He was encored and repeated the last verse. Mr. Showler then got off an old wheeze in "Joshua," and, receiving an encore, replied with a short recitation that tickled the risible faculties of some. Miss Jane Cakebread next tripped on to the boards clad in a fetching costume of black, set off with snow-ball trimming. First the dainty maid sang and danced a Bolero; and then told of the wife-winning ways of the "Gay Tomtit." A flute solo by Lieut.-Commander E. Grafton, R.N., proved a veritable treat, some wonderfully clever effects being accomplished in the course of the selection. The next contribution came from M. Sydney H. Morse, who gave "Let me like a soldier fall" in finished style. Mr. Wilder next gave some "Selected chestnuts"—old favourites would have been an apter title, the applause showered upon the performer being long sustained, but Mr. Wilder, owing to the lateness of the hour, could only reply with one of his most genial smiles. A song "Anson Cab" by Mr. Hore, proved amusing from the variety of intonations and accents employed by the singer. The number was scarcely a success, however, and neither was the concluding item, a song and skirt dance, "Click-click," by Middle. Cogwheel, her words being scarcely audible.

THE INTERPORT FESTIVAL.

FRIDAY'S BASEBALL MATCHES.

The interport baseball matches between Kobe and Yokohama took place on Friday in genial autumn weather. The morning was dull but the afternoon turned out very nice. Putnam's splendid pitching in both matches was the theme of general praise, though other members of the visiting team came in for well-deserved applause. Kobe won the first match, by 13 to 10, and lost the second by 12 runs to 16 scored by Yokohama, so the decider will take place this afternoon. At the close of the first match, the teams adjourned to tiffin in the Pavilion. The President, Mr. J. P. Morrison, presided, having on either hand the respective Captains, Messrs. Barto and Blake. At the close of the repast—capitally served

by Mr. W. N. Wright—he formally welcomed the first baseball team from Kobe to Yokohama and wished them all success. The toast was drunk upstanding. Later in the day, at the close of play, Mr. Barto called for cheers for Yokohama, which were warmly given, and then Mr. Blake called for a similar compliment for the visitors, meeting with a hearty response.

The light was very bad when play began, a nasty glare coming from under the greyish-white clouds. Kobe went to bat first at 10.15 a.m., sending Wheeler to the diamond, to face the pitching of Dyer. He got down to second base on the third ball sent in; Barto was caught by Blake at 3rd base by the next ball. Then Putnam sent a ball down to centre field and Wheeler got home—the first run of the day. W. D. S. Edwards filled the vacancy, only to be caught by Bain, who also put out Putnam on second, by the same ball. Kobe were thus out for one run. K. Smith went out first for Yokohama at 22 minutes past 10. He was disposed of first ball, not reaching first base. Gibbs, the left-handed player, got down to first base on the next ball, and Ellis followed him five balls later, a muffed ball in centre field saving both men. The next ball was passed and bases were taken, Gibbs moving to third, whence he got home by the aid of a nice ball sent to the fence by Blake. One run all. Ellis was the next home, but Briggs was put out on the plate, so Blake got left on third—Kobe, 1; Yokohama, 2. W. Braess now went in for Kobe and took a base on passed balls. Chesai—substitute for Gibbs—filled the diamond, but was put out on strikes. Boeck, an old Yokohama man, was next in, and lost W. Braess before he left the plate, the "cricketing member" being run out at second base; Boeck was then put out on first base and the side went out for nothing.

Azbill started Yokohama's second innings by being put out on strikes. Merriman took his place and reached first base on the third ball sent in by Putnam. He stole his next base, narrowly saving his bacon, performed the same trick on third, and finally ran along the home-stretch, while Dyer got down to first base, only to be put out on second base when attempting a rather desperate run. K. Smith was dismissed by a clever bit of play on the part of Putnam and Chesai, the side thus being all out for one. Score, Kobe 1; Yokohama 3. Scrymgeour, Kobe's succeeding man, never left the diamond, being put out on strikes. G. Braess followed and Wheeler went in, to be put out on first base, Blake sending the ball smartly down to Briggs. Again a maiden innings for the visitors. Owing to an accident to his right hand, Wheeler changed places with Scrymgeour in the field in the succeeding innings. Gibbs, who opened for Yokohama, went out on strikes; then Boeck in left field let Ellis off easily when a catch looked certain. Blake then went down to first base, and a passed ball enabled him and Ellis to move on further. Briggs, the succeeding bat, got down to first base on balls, thus filling all the bases. Bain followed in and secured a free base through the ball striking him, and a base was taken all round, Ellis placing a run to his credit. Azbill went out at first base next ball, and Blake was missed on the plate by Barto, another run thus going up. Briggs by this time had reached third base, but Merriman being put out on strikes, he failed to get home. Score, Kobe, 1; Yokohama, 5.

The fourth innings began with Barto at bat, and he took a base on bad balls. Putnam went in, and before he moved, Barto stole a base—a narrow shave. Putnam received his first base from the pitcher, the ball striking his arm, then W. D. S. Edwards went to bat, and sending the ball into the centre almost brought about disaster. But the leather was muffed and next ball Barto got home, Putnam moved up to third, and Edwards to second. Putnam watching his opportunity next ran home, the ball not being returned to the catcher sufficiently smartly. Chesai, with a prettily played ball, got down to first base, and Bain throwing down wildly to Briggs, Edwards got home. Chesai moved down to second, but Boeck was put out on strikes. Scrymgeour went to bat and Chesai stole his third base, but got no further, Scrymgeour going out on strikes. Score, Kobe, 4; Yokohama 5. Dyer, opening for Yokohama, went out before reaching first base, and Smith went in, to get his first with a passed ball; and the second was stolen. Gibbs played a ball straight into Scrymgeour's hands at short-stop, and things looked desperate. Smith, however, got down to third and then home on a short played ball. Ellis, next ball, was out on first base. Score, Kobe, 4; Yokohama, 6. The fifth innings began at 22 minutes past 11 o'clock. G. Braess starting for Kobe, with a base on foul balls. Wheeler did not

succeed in reaching first base, but Braess moved on to second. Barto scored his first base by luck, Briggs missing the ball, an unusual thing for him. Putnam followed and took a base on bad balls—three men were now on bases. W. D. S. Edwards went to bat and in the result of some wild-over-throwing on the part of Azbill got round to third base. G. Braess was put out on the home plate however, but Barto and Putnam got in. Then W. Braess succumbed at first base, the side going out for two runs. Score, Kobe 6; Yokohama 6. Blake, beginning the 6th innings for the home side, was caught by W. Braess at third. Briggs went in next and took a base on balls. The sun by this time had struggled through the clouds, but the light was still very unpleasant for spectators. Bain going out on strikes, Azbill went out to bat. Briggs sneaked down to second, but he had to thank Wheeler's injured hand for an escape. Azbill being caught at first base, Briggs was left at third, no run being scored. Scores were now even, the telegraph showing innings 6; Kobe, 6; Yokohama, 6. Blake here relieved Dyer at pitching. Chesai, sending up a fly in the centre field, was almost held by Ellis, but the catch was difficult. Boeck, the next man, was caught by the catcher close to the net, and then Scrymgeour went out on strikes. G. Braess was the next visitor who failed to get down to first, and Chesai was left on second. No addition had been made to the score. Merriman began the last of the sixth innings by going out on strikes, but Dyer had a base presented him by the pitcher. K. Smith, who followed, fell in running to first base, and was put out. Gibbs followed and sent a ball nearly to the fence; Dyer came home. Gibbs secured his second and third bases before Ellis had left the diamond. Gibbs, two balls later, catching Barto asleep, ran home, while Ellis got down to first. Blake, last in, was caught by W. Braess, and the side went out. Score, Kobe 6; Yokohama, 8. The seventh innings began at 3 minutes to noon, Wheeler going in for Kobe. He made a pretty one base hit off Blake's sixth ball. Barto was badly missed at third, and then Putnam was forced off, Barto being unable to move. W. D. S. Edwards followed and had a "life" given him through three men running to catch a skied ball. His next hit brought Wheeler home and Barto to third base. Then W. Braess sent a splendid ball down the field and Barto and Edwards got home. Chesai, who followed, was caught by Bain, and then Boeck went in only to be put out by Briggs. The score now stood, Kobe, 9; Yokohama 8. Briggs, opening the next innings, had ill-luck and did not reach first base, but Bain being struck took a base and then sneaked two more. Azbill took a base on balls and Merriman went to bat, only to go out on strikes. Dyer, playing the ball almost into Wheeler's hands, put all the side out—nothing being scored. Kobe were now a run ahead, even innings. The eighth innings started at 12.15 p.m. Scrymgeour began for Kobe, but did not reach first base. G. Braess took a base on balls, and Wheeler followed and had similar luck. Barto, sending a ball near the line, an attempt at double play was made, but did not come off, though Smith backed up the pitcher splendidly. Three bases were now filled. Putnam went to bat and bought in G. Braess and Wheeler, Barto getting round to second. Edwards' next innings was remarkable for the number of balls he struck behind the line. He eventually got out on first base, and Briggs throwing in splendidly to Bain, brought off a smart bit of double-play, putting out the whole side. Score, Kobe, 11; Yokohama, 8. Kay Smith secured a base on balls, and then Gibbs went in to bat. Meanwhile Smith had sneaked two bases, coming in next ball, Gibbs making a splendid hit to the long field. This brought him round to third base. Ellis went to bat and was given out on strikes. Blake filled the vacancy and was missed on the fly by Wheeler, and Gibbs got home. Briggs went out on strikes and Bain took his place. Things were getting exciting when Bain went out at first base. Score, Kobe, 11; Yokohama 10. W. Braess began the last innings with a ball that nearly reached the Pavilion. It was a three-base hit. Chesai followed and secured a base on balls. Boeck brought Braess home, Chesai moving down to second. Thus Scrymgeour was the first to be disposed of, at first base. W. Braess occupied the plate next, but although he reached his base, Chesai was put out on the home run by the catcher. Wheeler brought Boeck home. Then Barto was put out by a smart return and the side went out. Score, Kobe, 13; Yokohama, 10. Azbill being struck, took a base and sneaked the next. Merriman was put out on strikes, and Dyer went to bat; only to be put out by a pretty bit of fielding by the pitcher, who caught Smith next ball, the game thus finishing in favour of Kobe by three runs. Score:—

Kobe..... 2 1 0 0 0 0 0 0 0—10
Kobe—Yokohama, 1st game.
Analysis of the score shows earned runs Kobe 2, Yokohama 1, double play Yokohama 1, left on bases Yokohama 5, Kobe 7, Dyer struck out 5 men, gave 3 bases on called balls and hit one man, Blake struck out 1 man and gave 3 bases on called balls, Putnam struck out 9 men, gave 7 bases on called balls and hit 2 men, Azbill passed 4 balls, Barto passed 5 balls, 2 base hits were made by Blake, Wheeler, Putnam, Edwards, and W. Braess; Gibbs and W. Braess each made a three base hit; time of game 2 hours 6 minutes.

THE SECOND MATCH.

Play began in the second match at 2:30 p.m., Kobe going in to bat. The proceedings in the afternoon were enlivened by the Town Band, while the Ladies Tent—most tastefully set out with flowers and foliage—filled quickly after play began. A much larger body of general spectators were also present. The light was better than before the interval, a breeze having sprung up soon after tiffin. Kobe put in the same team, but Yokohama substituted Morse for Merriman, while Gibbs started in to pitch, with Ellis behind as catcher, Blake going on at third and Azbill centre field. Wheeler began for Kobe, taking a base on bad balls. Barto followed and, sending a ball down to 2nd base, was held. Bain threw in to Briggs and both men were put out. Putnam sent the third ball down to the fence but the leather was smartly returned by Dyer, and he only reached first base. W. D. S. Edwards then went to bat and got out on first base, the side thus coming out for nothing. The fielding of the home side in this innings was very smart. Smith opened for Yokohama with a walk-down to 1st base on balls. Gibbs followed and sent the ball away into the sky. Ellis filled the vacancy at the plate and being hit, everyone took a base. Then Blake went in, only to be caught by Wheeler in centre field. Briggs sent the ball down towards Scrymgeour and the latter returning to catcher, Smith was forced out on the home run. Bain, next man in, was thrown out, and the side retired for nothing. Score, Kobe, 0; Yokohama, 0. W. Braess commenced the second innings for Kobe and had a merry time sending up foul flies. Eventually he got away on bad balls, and Chesai went to bat and sent the ball out into right field. Boeck followed and took his first base at the pitcher's expense. Scrymgeour, next man in, went down to 1st base, and Braess got home—the first run of the match. Chesai, the next man to attempt a run, was put out, Briggs fielding smartly. Boeck and Scrymgeour ran home, two balls later, but G. Braess was put out on 2nd base, on a hit by Wheeler. Barto got down to 1st base and let in Putnam, while Wheeler sneaked a base. Putnam was, next ball, caught by Ellis, and the side was out. Score, Kobe, 3; Yokohama, 0. Azbill, for the home team opened with a base hit, and Morse went to bat, but was given out on strikes. Before Dyer could do anything, Azbill was put out on 2nd base by Wheeler, and Dyer went out on strikes. Another maiden innings for Yokohama. W. D. S. Edwards again had a merry time with foul balls when he went in for the third innings of Kobe, but in the end was put out by Briggs at first. W. Braess, going to bat next, remained in some time before being caught by Ellis close to the Ladies' tent, the catch receiving hearty applause. Chesai soon after secured a base hit, and then Boeck went to bat, only to be given out on strikes. Kobe's second maiden innings. Smith, for Yokohama, took a base on a dead ball, and then catching the field asleep got down to second base, but the point was not allowed and he went back again. Gibbs went out at first base and Ellis filled the vacant place. Meanwhile Smith had moved to third, Ellis next

made a three-base hit, amid ringing cheers, and K. Smith got home—Yokohama's first run. Ellis came home on a passed ball, second run for the home side. Blake then took a base on balls, and Briggs went to bat and got a base from the pitcher. Bain sent a ball down to centre field, and as a result Blake was forced off third; Briggs moved on to second. Azbill went to bat and before he moved Briggs had stolen a base, and Bain another. A base was given to Azbill on balls and Morse followed at bat. He sent a ball down past short-stop, letting in Briggs and Bain—two runs. Two balls later, Azbill came home on a passed ball, and Morse moved up to third base. Dyer was put out next ball, Morse being left on third. Score, Kobe, 3 Yokohama, 5. Scrymgeour was Kobe's next batter, opening the fourth innings at 3:40. He went out at 1st base. W. Braess followed and had similar luck, but Wheeler took a base at the pitcher's expense, while Barto made an easy base owing to the pitcher miffing. Putnam making a three base hit, let Wheeler and Barto in, bringing the score equal. A minute later W. D. S. Edwards caused some consternation among the crowd gathered around the telegraph-board by sending a swift ball there. He made a foul hit towards the Pavilion, but the next carried him down to first base safely, and Putnam came home. W. Braess, taking a base off balls, eventually moved round to third, Chesai then made a capital hit that took Braess in. Boeck went out at first, and the side were out. Score; Kobe, 7; Yokohama, 5. Opening for Yokohama in the next innings, K. Smith took a base on balls; Gibbs followed and made a base hit to the right field. He stole his next base. A beautiful strike to deep field by Ellis, brought Smith in; then Blake brought in Gibbs and Ellis, the striker getting to second. Short-stop, Scrymgeour, nearly held Briggs a moment later, then Bain made a good hit and next Blake was forced off by a short ball sent down by Azbill. All bases were filled, Briggs being at third, Bain on second, and Azbill on first. Morse went to bat but was capitally caught by Putnam near the scorer's table. Two balls later, Briggs was put out on the home run, and the side retired. Score, Kobe, 7; Yokohama, 8.

The fifth innings began at 5 minutes past four o'clock, Wheeler opening with a base hit for the visitors. Barto, sending a ball down into centre field, was well held by Azbill, and Wheeler remained at second base. He stole down to the next, where he had to remain while Putnam took a base on a dead ball. W. D. S. Edwards brought Wheeler and Putnam home. W. Braess went out at first, and Chesai followed at the bat. Edwards in the meantime stole a base, getting down to third. Chesai being put out at first base, Edwards lost his run. Score, Kobe; 9; Yokohama, 8. A blocked ball following on a strike took Smith down to 2nd base; Gibbs, however, did not get down to first base. Ellis followed at the bat, and brought Smith home, equalizing scores. Then Blake made a base hit and stole another. Two balls later Briggs let in Ellis and Blake; then Briggs got down to third and Bain to second. Next Azbill went round to third. To vary matters, Morse was given out on strikes. Dyer took a base on balls, and Smith went to bat, succeeding in letting Bain get home. Next Azbill came in, Boeck missing a fly sent down by Gibbs. But next ball Dyer was forced off the plate in attempting a run home. Score, Kobe, 9; Yokohama, 14.

By this time the shadows were lengthening across the ground. Kobe lost her first bat, Boeck, Bain holding him well, and then Scrymgeour followed, to take a base on balls. The next batter, G. Braess was caught by Smith, short-stop. Wheeler went to bat and after Scrymgeour had taken a base on a past ball, made first base at the expense of the pitcher. Barto was the last man in—no runs being scored.

Yokohama opened their innings by losing Ellis, who was caught by the pitcher. Then Blake hit a ball to the fence and attempted a home run, but was put out just as he reached the plate. Briggs being caught next ball by Putnam, the side went out for nothing. The seventh innings began at 4:35 p.m., Putnam opening proceedings by taking a base, the ball striking his foot. But he was given out before reaching third base. Edwards, next man in, got his first base with a very safe hit, and then W. Braess sent up a fly, and was put out; Edwards meanwhile running to second, spiked his hand severely and Chesai took his place. Gibbs, just arrived by the *Saikyo Maru*, from Kobe, now went to bat and secured his first base after two balls. Boeck went out on strikes and the side retired. Score, Kobe 10; Yokohama, 14. Bain began business with a two-base hit; Azbill followed with a three-base hit, and Bain got home. Four balls later Azbill ran in. Morse came out on strikes, and Dyer followed

suit, but Smith managed to pull off a safe one-base hit. Gibbs was given out on strikes and the innings closed. Score, Kobe, 10, Yokohama 16. Opening the eighth innings, Scrymgeour went out on first base; Braess got to second, but Wheeler was put out on first. Barto took a base on balls, and then Azbill caught Putnam in the centre field. A maiden innings. Ellis went out to start and was put out on first; then Blake went out on strikes, and Briggs on first base. A maiden innings. The last innings began at 5 o'clock, Chesai taking the place of Edwards, retired hurt. He was missed by Smith at short-stop. Wheeler went in and in consequence of some erratic fielding got down to second. Gibbs next distinguished himself by placing a ball straight into Briggs' hands at first base. Boeck was the next man out on first base, but Chesai got home, scoring a run. Scrymgeour brought W. Braess home, and then was put out on second base by Bain and Azbill, the game finishing, Kobe, 12; Yokohama, 16. Cheers for the winners and then for the Visitors were once raised. Score:—

Analysis of the score shows earned runs Kobe 7, Yokohama 4, left on bases Yokohama 11, Kobe 9, Gibbs struck out 2 men, gave 8 bases on called balls and hit 1 man, Putnam struck out 6 men, gave 7 bases on called balls and hit one man. Ellis passed 3 balls, Barto passed 3 balls, Blake made one a base and a safe 3 base hit, but was put out on the latter in trying to make a home run, Putnam also made a 3 base hit; time of game, 3 hours 14 minutes.

THE CRICKET DINNER.

On Friday evening one of the most enjoyable events of the Cricket and Baseball Festival, the dinner in honour of their Kobe visitors, was given by the Y. C. and A. C. at the Club Hotel. The large dining room was placed at their service by the manager, Mr. Seon, where the tables were arranged in horse shoe form, affording ample accommodation to the sixty or more guests and members who sat down, while the small room adjoining, at the front of the building was turned into a bar and ante-room. An excellent dinner was served, the liquid refreshment being as choice and as bounteous as the solids provided; the menu was as follows:—

HORS D'OEUVRE.

Consommé Macedoine à la Royale.
Saumon Bouilli, Sauce Crevettes.
Petits Pâtés à la Montglas.
Salamis de Bécassines aux Truffes.
Filet de Boeuf à la jardinière.
Champignons Frais au Gratin.
Petits Pois à l'Anglaise.
Dindonneau Farci.
Jambon à York.
Salade.
Glace Chocolat et Vanille.
Pudding Diplômé.
Gâteau Fleuri.
Fromage.

Fruits. Café. Dessert.

The President of the Y. C. and A. C., Mr. J. P. Mollison, occupied the Chair, supported on either side by the Kobe and Yokohama Captains of cricket and baseball—Messrs. W. D. S. Edwards and White, Barto and Blake, the Vice-Chairmen being Messrs. Walford and Coghill Jackson. After full justice had been done to the choice repast provided, the Chairman proposed the first toast, the "Rulers of our Respective Communities," which met with a fitting reception. The toast of the evening, "Our Kobe Visitors," coupled with the names of Messrs. Edwards and Barto, was then proposed by the Chairman in felicitous terms and drunk with musical honours. Messrs. Ed-

wards and Barto replied, referring to the recent matches, and proposed the success of the Y.C. & A.C., which was also drunk by our Kobe visitors with musical honours. Mr. White responded in a graceful little speech, in which he referred in complimentary terms to baseball, and the value of good fielding generally in both games. The Chairman then presented the Yokohama Cricket Captain with a very pretty silver bat, a prize which he had offered for the best individual score at the recent interport cricket match, and which was won by Mr. White with his splendid score of 135, not out. Mr. Blake replied on behalf of the baseball team to the toast of the Y. C. and A. C., and Mr. Coghill Jackson proposed the toast of the umpires, scorers, and all who had assisted at the matches, which was responded to by Messrs. Joye and Hansell, the two umpires. Mr. Duff proposed 'The Ladies,' and Mr. Murray responded. The last toast on the programme was 'The Press,' which was proposed by Mr. Walford and replied to by Mr. Tennant. Other toasts were afterwards proposed and enthusiastically drunk to, including the popular President of the Y. C. & A. C., the Hon. Sec., Mr. Coghill Jackson, the Captains past and present, Messrs. Duff and White, Mr. S. Lucas, Hon. Sec. of the Kobe Cricket Club, etc. A number of enjoyable songs were sung in the intervals between the toasts, there being a large array of vocal talent present; Mr. Morse gave a fine rendering of the 'Macgregors' gathering,' and an Italian song as an encore; the Chairman gave his well known cricket dinner song, 'The farmer's boy,' the genial and inimitable Mr. Wilder proved a perfect mine of song and recitation, which was worked without stint; Mr. Walford, Mr. Showler, and Mr. Kenny, who sang the 'Last Rose of Summer,' in Japanese, all contributed to the harmony of the evening, and shortly after midnight a most enjoyable social entertainment was brought to a close with the evergreen chorus of 'Old Lang Syne' sung hand in hand by the assembled company. The verse on the menu aptly describe the feelings of those who participated in the Y. C. and A. C.'s hospitality on the occasion:—

Happy are we met
Happy have we been,
Happy may we part
And, happy meet again.

CONCERT AT THE PUBLIC HALL.

The vocal and instrumental recital, or concert, given on Thursday evening as a farewell to Mr. Sydney H. Morse, under Mr. T. V. Twinning's auspices, proved a success and a failure: a success from an artistic standpoint—for a good programme was admirably carried out—and a failure from the business manager's point of view, as, to put it mildly, there was not half a house. It was the case of a good entertainment going a-begging. The concert opened with a Toy Symphony, by Hadyn, in which, the following local amateurs appeared and rendered full justice to the pretty overture selected:—Mr. Chas. F. Rhine, Pianist; Mr. H. Pollak, Mr. H. A. Poole, Violins; Mr. W. A. Crane, Viola; Mr. W. H. Crane, Cello; Mr. A. B. Walford, Double Bass; Mr. S. E. Unite, Drum; Mr. H. B. Darnell, Mr. H. J. Ginn, Trumpets; Mr. L. Jupp, Nightingale; Mr. F. Whitefield, Rattle and Triangle. Mr. Morse's fine tenor has never been heard to greater advantage since his stay in Japan, than in the solo he sang in the first part 'The Holy City,' by Adams. His voice appears to have gathered strength and volume since his stay among us and the crescendos and cadences in the beautiful song were most effectively rendered. An encore from the small but appreciative audience followed the song, and in response the last verse was repeated by the singer. Lieut. Commander Grafton, R.N., followed with a very artistically executed fantasia on the flute, by Reichert. It was easy to see that the musician loved his instrument and had thoroughly mastered all its technique, and his performance elicited warm applause. Mrs. W. W. Campbell, always a favourite with Yokohama music lovers, was enthusiastically received, and gave a most expressive rendering of Coenen's charming song 'Lovely Spring,' eliciting enthusiastic applause, and a pretty bouquet was presented to her on the recall to the stage. The duet, 'Oh, that we two were maying' (Smith), by Mrs. Irwine and Mr. Morse, was alone well worth a visit to the Hall so exquisitely it was rendered; and the violin solo by Lieut. Cole, R.N., which followed—a Fantasia by Rossini—was also a treat to music lovers. Miss Scherschewsky's recitation of 'The Swine-herd,' (H. C. Anderson) proved an admirable piece of elocution—of the American school—and showed moreover great dramatic talent on the

part of the fair elocutionist. The last number on the programme in the first part, a vocal trio, 'Dreaming,' was struck out and in its place Messrs. Morse and Walford sang Balle's beautiful duet 'Exelsior,' with great success, the two voices blending most effectively.

The second part opened with a trio, a Serenade by Kummer, by Lieut.-Commander Grafton, Lieut. Cole and Mr. Whitefield, for flute, violin and piano, which was admirably played. Mrs. Irwine sang Tosti's 'Could I' in her well-known finished style, and Mrs. W. G. Bayne performed Raff's 'Rigaudon' on the piano so artistically and effectively as to elicit an undeniable recall, to which the player responded by repeating the last movement of the piece. Mr. Morse took the house by storm with his splendid rendering of Molloy's 'Carnival,' in which he showed more power than perhaps ever before on the Yokohama concert stage, and in response to repeated recalls favoured the audience with the 'Echo' song by Lord H. Somerset. Another flute solo by Commander Grafton, 'Homage à la Russie,' was followed by a song 'My love is come' (Marzials), by Mr. A. Duncan, and a very enjoyable concert was brought to a close with the vocal quartette 'Ye spotted Snakes' (Stevens) by Mrs. Irwine, Miss Burdett Leach, Mr. Morse and Mr. Whitefield, which proved one of the gems of the evening, so effectively did the voices harmonise. The accompaniments during the evening were played by Mrs. Mollison, Miss Burdett Leach, Mr. Whitefield and Mr. Twinning, at the piano, and Mr. Whitefield at the organ.

THE "WAKASA MARU."

A SUCCESSFUL TRIAL TRIP.

On Thursday morning, in most perfect autumn weather, the N.Y.K. steamer *Wakasa Maru*, (Capt. McMillan), built by the Hendersons of Glasgow, and just arrived in Japan, made her trial trip, in order to qualify for the Government's substantial subsidy. At the invitation of the Directors of the Company a large company assembled on board shortly before nine o'clock, the guests including Mr. Alf. Woolley, of the P. & O. Co.; Mr. B. C. Howard, of the Pacific Mail and O. & O. Companies; Mr. W. T. Payne, of the C. P. R.; Mr. A. McMillan, of Tokyo; Mr. Matsuyama, N.Y.K., Tokyo; Mr. J. Johnston, Captain W. Townsend, Capt. W. C. Haynes, R.N.R., St. Ninian; Capt. Forbes and Capt. Ewata, Supt.-Captains, N.Y.K.; Capt. F. Brown, Capt. Ekstrand, Mr. Suda, Chief Superintendent Engineer of the N.Y.K.; the officials of the Teishinsho; Government Engineers, Chief Engineer Shibata; Mr. Takeda, Mr. Tsutsumi, Mr. Fukuchi, etc.

The *Wakasa Maru* left the harbour at 9.30 a.m. and proceeded to the trial ground, a measured course to the north-east of Tokyo Bay. The weather was all that could be desired, light variable airs, falling at times into calms, that scarcely rippled the glassy surface of the water, while bright sunshine flooded an almost cloudless sky. The three miles were run over three times, involving three turns at either end, an evolution that gave a vivid object-lesson to spectators of the ease with which a twin-screw vessel can be turned. The *Wakasa Maru* on this trip was drawing 14 ft. 11 in. forward and 16 ft. 1 in. aft., and as result of the trial made an average speed of 14.426 knots per hour; thus more than fulfilling the requirements of the Navigation Encouragement Law. During the trial the good ship developed a horsepower of 4,100, making 83 revolutions, mean, per minute, with a coal consumption of 45 tons per 24 hours.

The indicator cards read as follows:—

Knots per hour.	Mean Knots.	Average.
1 14.268	14.421	14.495 14.585 14.4105 14.3535
2 14.574	14.478	
3 14.382	14.4345	
4 14.4966	14.382	
5 14.268	14.325	
6 14.382		

As we have before stated, the *Wakasa Maru* was built at Glasgow by Messrs. W. and D. Henderson, who also engineered her. She has a carrying capacity of upwards of 7,000 tons, and is a decided advance on her sister ships, especially in the passenger accommodation. Lofty, airy, well-lighted first class passengers; the second class cabins and saloon being aft. In both cases the comfort and convenience of those who have to travel by sea, have been fully studied, the accommodation

being fully up to that of the latest P. & O. intermediate steamer. Indeed, the provision made for the second class is much above the average of mail liners, and the whole of her poop is set apart for their service as a promenade. Their bath-rooms are also very nicely fitted. The needs of steerage passengers have been very well looked after. The officers' quarters are designed on the latest scale, it being recognised by ship-builders at last that marine officers' deserve as much convenience and accommodation in their floating homes as do the saloon passengers. And this brings us to the saloon. In the *Wakasa Maru* light oak has been adopted in the panelling and fittings of this apartment, a charming and cosy effect being obtained. Passengers home-ward bound by the *Wakasa Maru* will, indeed, find ideal quarters; cosy berths, a pleasant lounge at the top of the companion, and a snug little smoking room. If the trip of Thursday can be taken as a criterion, travel on the *Wakasa Maru* should be very pleasant, the engines working so smoothly that hardly any vibration was noticeable. By the result of Thursday's trial she should earn the Company a subsidy of over 100,000 yen per trip, out and home.

The *Kamakura Maru*, Capt. Trennt, made her trial trip on Wednesday when, drawing 14 ft. 11 in. forward, and 16 ft. 6 in. aft. she developed a speed of 15.42 knots per hour. She is a Belfast built ship, twin-screws, but of very different model to the *Wakasa Maru*.

THE COMING RELIGION OF JAPAN.

Japan is the most interesting country in Asia, perhaps in the whole missionary field. The reason is plain. Modesty is not a shining characteristic of the modern Japanese; but, though their books and newspapers are painfully, even disgustingly, full of boasting and national vanity, yet in reality there is a deep-seated self-digust, a realization that something is not only wrong, but radically so. To-day probably more than ever before, there are deep searchings of heart in that country, where it is not yet safe to openly challenge the mythology on which the popular and political religion rests. There is much earnest talking and writing about a "moral crisis." There is yearning after a religion that will satisfy the awakened man in the Sunrise Land. As one who has for thirty years been before the English-speaking public as a writer on Japan, one will not accuse me of lack of appreciation. Yet the truth must be told. Using words in their highest and therefore their true sense, we declare that the average Japanese lacks the fundamental ideas that go to make up a religion. He not only does not know of God, but he ignores the very idea. He has scarcely a conception of the soul as perishing and individual. His idea of duty, nobly as he fulfils it, is a childish one. Using the word with the same value, weight, and colour that we use it when talking of the Hebrew prophets, the Greek sages, the English poets, Dante, Milton, or Shakespeare, or of the nations which have produced these men, I believe that the Japanese, in spite of all their religions, are not a religious, certainly not a spiritual people. I have tried to make myself reasonably familiar with Japanese history, but I find in it no overmastering spiritual ideals such as have moved and do move the great men of the continents; no consciousness of personal individuality such as filled and exalted the soul of teachers, heroes, and martyrs in lands where Christ reigns; no vision and realization of a presence filling heaven and earth. Indeed, what could we expect, with a rudimentary system founded on the idea of the mere evolution of matter and force which, after rising into the personification of the forces of nature, became a political engine for the subjugation of the people, centring everything to the will of the Emperor? After the baldness of Shinto comes the agnosticism of Confucius, teaching only etiquette and ceremony, bidding men to "honor the gods but keep them far from you." After this extinguisher of all faith in personality divine or human, Buddhism enters to ignore and ridicule the idea of a Creator, teaching flat atheism and a new cycle of ideas founded on agnosticism, evolution without any previous divine involution, and finding the whole basis of its philosophy in a succession of cause and effect, even while ignoring the First Cause.

Is it any wonder, then, that to-day the gospel of Herbert Spencer—a Japanized gospel at that—is the favourite creed of the average educated (heaven save the mark!) Japanese? Without, then, the idea of a personal God as a living, self-conscious, free intelligence; without the idea of personality of man, as of a real individual surviv-

ing as a spiritual entity the dissolving of his fleshy framework; without any moral character apart from personal interest and social necessity, or the will of the Emperor; how, in the name of any philosophy, are the Japanese to face the perils which now beset them and solve the problems awaiting them? How can Japan, undoubtedly yearning for the full recognition of all the world, reach that level which the proud nations in Christendom require in one who claims to be an equal? The Japanese boast of their ethics or "spirituality." It is a sham. They may be perfectly certain that a country in which one divorce to every three marriages is the rule, where polygamy and private harems,—with children born in a herd instead of a home, the Emperor himself setting the example, and this being the general custom from the court noble to the *betto*, is reckoned distinctly inferior and will be. The hazy view which mercantile and other folk take of the sacredness of a contract, the low value put on the letter of one's bond and of truth generally, the lack of general understanding of the value of a promise,—these things, which a better religion will vastly improve, are paving the Japanese future pathway with failures both humiliating and continuous.

He who dwells in the country of little Captain Miles Standish, and familiar with the story of David and Goliath, will not willingly twit the Japanese for their smallness, either in personal stature, the area of their country, the diminutiveness of their rice and grain stalks, compared with those of South Carolina and Dakota, the littleness of their rivers, their low percentage of arable area, nor with the grade of their heroes, literature, art, or poetry, all of which seem miniatures, rather than mature or imposing products. But, when we see the Japanese persisting in their love for things petty and clam-like in regions sublime, comical, eternal, demanding "Japanese ethics," a religion of their own making, or "Christianity adapted to the needs of Japan," we behold either a merely splenetic reaction against what they deem foreign, or insanity with which God has afflicted them in order to humble them, and we trust afterward to raise them up. When the whole truth is told about the Japanese armies in China and Formosa, and the behaviour of civilian officers in the newly conquered island, one is not favourably impressed with the fruits of their ethical training. Though the nation is to-day ground down under the awful load of taxes that keeps the mass of the people poor and ignorant, though, no doubt, many are made rich, one in Tokio, Osaka, or Kyoto looks almost in vain for great schemes of benevolence, hospitals, asylums for the insane, for the blind, and for diseased and suffering humanity.

Perhaps it is not possible for a foreigner to divest himself wholly of prejudices, but the writer has not often been accused of prejudices against Japan. This question of religion must be and can be pondered apart from subjective prepossessions, when we apply the test of results and ask for fruit. I fully believe that for the Japanese to continue in these old paths or to rest in their interpretation of the gospel of Herbert Spencer, will result not only in failure to win a place of equality among the nations of Christendom, but means utter collapse of the nation. They have planted the acorn in the bottle, but their honest men know the power of growth and the thinness and rigidity of the glass, and therefore dwell in impotent fear. They need to become a religious nation and to have that sense and apprehension of one living and true God who is "the overflowing fountain of all good." They need to know the reality and therefore the worth of the individual human soul. Will not the Japanese, even those who "swallow Herbert Spencer whole," understand that even the philosopher of the unknowable does not deny the existence and activity of a personal God, that even those destructive critics on the European continent who have deserted the old Calvinism and other traditional forms of Christian faith, believe none the less in a great determining Power, personal and intelligent? The Japanese must learn that the very "evolution" in which they so delight is, with thousands of Christian thinkers, supremely loyal to Jesus, only another way of describing and of seeing plainly God's methods of continuous creation. Certain it is that, without the faith of theism, it will be impossible to grasp that which not only binds the nations of the west in unity, but which gives them their law of progress,—that is, the fatherhood of God and brotherhood of man.—Rev. WM. ELLIOT GRIFFIS, D.D., in the September *Missionary Review*, New York.

The *Mainichi* states that the Government has under contemplation the opening of three more special ports for exports and imports during next year, with a branch customs house at each.

HAKODATE NEWS.

(FROM OUR OWN CORRESPONDENT).

Hakodate, Oct. 13, 12.25 p.m.

The *First Chishima Maru* arrived here yesterday with 256 seals aboard: she also brought in one hunter and 179 skins belonging to the schooner *Pointer*, wrecked at Shikotan, east of Yesso. The *Pointer's* Captain and crew are reported safe and are coming down to Hakodate.

The Russian gunboat *Korsets* has left here for Vladivostok.

Hakodate, Oct. 15, 9.40 a.m.

The *Daphne* has arrived with Capt. Funcke and seven men.

LATEST TELEGRAPHIC NEWS.

(FROM THE "JAPAN TIMES.")

SPAIN AND CUBA.

London, Oct. 8.

The Spanish Government proposes to grant autonomy to Cuba, providing that the island remains under the suzerainty of Spain, but the campaign will be continued against the rebels as long as necessary, and General Weyler will be recalled unless he resigns in the meantime.

London, Oct. 11.

The Spanish Government has determined to crush the rebellion in Cuba, and is about to despatch 20,000 more troops as reinforcements, accompanied by General Blanco, who is the successor of Captain General Weyler. The Government is also reinforcing the Philippines, and is recalling the present Governor.

THE NAVAL PROGRAMME.

It is estimated that the engineering dispute, through the non-delivery of materials to the dockyards where Her Majesty's ships are already in course of construction or have been ordered, has retarded the completion of the current naval programme by a year.

THE SEALING CONFERENCE.

October 9.

Fresh parleying in regard to the Sealing Conference has ended in the final refusal of Lord Salisbury to participate in any conference if Russia or Japan be represented thereat.

The Hon. Mr. Sherman, Secretary of State, in replying to the Marquis of Salisbury's Note declining to participate in the Sealing Conference with Russia and Japan, says that the United States is astonished at Great Britain's determination, and suggests the holding of a conference of experts of Great Britain, the United States, and Canada, constituted in accordance with the Marquis of Salisbury's views, in addition to the conference of the United States, Russia, and Japan. The first sitting of the latter conference will probably be held on the 20th instant.

RUSSIA AND INDIA.

The Vienna correspondent of *The Times* says that it is rumoured there that the late Prince Lobanoff left papers wherein he urged that, when Russia had completed her railways in Asia, she should strike a decisive blow at India, and it successful the disintegration of the British Empire would speedily follow.

THE ENGINEERS' DISPUTE.

London, Oct. 11.

The Secretary of the Amalgamated Society of Engineers states that in the event of a continuance of the struggle, the engineers of the Peninsular and Oriental Steam Navigation Company and other

mail lines will be withdrawn, thus rendering outside intervention inevitable.

THE FRENCH IN AFRICA.

A French expedition has left Porto Novo for Uikki, in the Lagos hinterland, where the situation is serious in consequence of the possibility of collisions between British and French troops. The Lagos Government is taking active measures to prevent encroachments upon British territory, though it has decided to grant autonomy.

RAILWAY EXTENSION.

It has been decided to extend the railway from Abu Hamed to Berber forthwith.

HOUSEHOLD TROOPS FOR FOREIGN SERVICE.

It has been decided to send two battalions of Guards to Gibraltar next troop-ing season, when the battalion at present doing duty at the Rock returns.

RIOTS IN ROME.

Serious anti-taxation riots have occurred in Rome.

TYPHOID IN ENGLAND.

Typhoid fever, in epidemic form, has broken out in Maidstone, the county town of Kent. Already 1,556 cases have been reported, and 68 deaths have occurred. The Lord Mayor of London has opened a subscription for the sufferers.

THE "YASHIMA."

Suez, Oct. 12.

The *Yashima* arrived here to-day.

ASSUMPTION OF A IMPERIAL TITLE.

Söul, October 11.

The King is to hold the ceremonies of assuming the title of Emperor to-morrow. No information has been given to the Foreign Ministers as to the ceremonies. The King, however, has forwarded despatches intimating that they will be received in audience on the afternoon of the 13th inst. It remains uncertain whether the Powers will recognize the new title, but the Foreign Representatives will have recourse to some measure after referring to their respective Governments subsequent to the above mentioned audience.

SIAM AND THE FRENCH PRESS.

London, Oct. 13.

The French Press has changed its tone in regard to Siam, the *Temps* and the *Débats* in recent issues being conspicuously moderate.

THE PORTE AND CRETE.

The Porte has proposed to the Powers the disarmament of the entire population of Crete, both Mahommedan and Christian, and the appointment of a Christian Governor, who shall be an Ottoman subject, and be nominated by the Porte with the assent of the Powers.

BOUNDARY COMMISSION.

London, Oct. 14.

It has been arranged that an Anglo-French Commission, to determine the boundaries of the respective countries in West Africa, shall meet in Paris on the 20th instant.

KOREAN NEWS.

Söul, Oct. 15, a.m.

The Order has been promulgated that this country will henceforward assume a national name, and be known as Taikan (Great Korea), and that there will be a great liberation of prisoners to commemorate the occasion.

CHESS.

All Communications to be addressed to the *Chess Editor*.

The Yokohama Chess Club is meeting now at 184 Creekside.

The Tokyo Chess Club now holds its meetings at No. 3, Uchi-Saiwai-cho Itchome (next to the Tokyo Club).

Solution of Problem 340 will be held over for a while to give our friends time to solve this difficult problem.

PROBLEM No. 342.
By WALTER PULITZER, U.S.A.
BLACK.

WHITE.

White to play and mate in two moves.

We are indebted to our regular Problem solver P.E.F.S. for the above pretty two-mover.

Walter Pulitzer the composer of this problem, is well known as the author of Chess Harmonies and ranks among the great problemists of the world. Born in New York city in 1874 he is a very young man to have won such distinction in the Problem Art.

From the Preface of "Chess Harmonies" we quote his views on Problem making:—

"The Art principles laid down and prescribed by critics like Lowell and Ruskin may (in the main) be said to apply equally and with as much truth and directness to the art of problem construction as to any other art. Although I admit intricacy of theme and beauty of design and general harmony of ideas and conception to be very desirable qualities in the problem, still I do not consider them indispensable quantities. I am inclined to attach so much importance to construction in itself that even if a problem be commonplace and uninteresting, so long as the constructive laws have been followed out, the result in my opinion, is as much a composition as anything, and, indeed, a more legitimate work than a crudely executed "inspiration."

JOTTINGS FROM ABROAD.

The chess congress of the Berliner Schach-Gesellschaft opened at the Architekten, Berlin, on Sept. 12th. Twenty entries are announced. According to late advices, no American players will compete in the tournament. Lasker, Trassack and Maroczy have, so far, not entered the contest either. Blackburne, Burn, Bird, Teichman and Lee, however, will be found among the players in the tournament as representing Great Britain.

In addition to the international tourneys to be arranged next year at Vienna, Leipzig and Cologne, an international congress is projected to be held at The Hague.

A young and strong player has come to the front in England. He bears the name of Evans, and has proved his prowess in the pending tournament at the City of London Chess Club, wherein he leads all his competitors, including Blackburne. Evans will probably play in the next international cable match.

The admirers of Paul Morphy have just established in Berlin a new society, membership of which is open to all chess players in the world. The chief object of this society is the collection and publication of all unpublished games, letters and biographical notes of Paul Morphy. The leader of the society is F. Guttmayer, Berlin. The annual subscription is \$3. All subscribers will receive the organ of publication, the *Berliner Schachzeitung*, gratis.

The directors of the New York State Chess Association have had a special meeting respecting the unsettled contest of the *Staats-Zeitung's* challenge cup. They decided to declare this year's competition a draw, and they will hold the cup themselves until next summer.

The Brooklyn Chess Club has issued a circular letter to the principal chess clubs in the United

States inviting co-operation in the formation of the team for the cable match in 1898, and asking for suggestions as to the best methods to be adopted to make the team representative. This new policy will doubtless reconcile those clubs who denied the right of the Brooklyn Club to challenge Great Britain in behalf of American chess players.

The Metropolitan Chess Club of New York will hold a reception and entertainment on October 16th next, the proceeds of which will be used to create a "Steinitz testimonial fund."

YOKOHAMA CHESS CLUB.

On Monday night the Y.C.C. had another successful meeting at Clausen's Hotel and then removed to the new quarters at Messrs. Far-sari's Photographic studio, where members met for the first time last Thursday night. Great satisfaction was shown with the choice the committee had made, the rooms being well lighted by the electric light and possessing every convenience. We wish the Club success in their new home.

"JAPAN MAIL" CORRESPONDENCE TOURNEY.

We have had to abandon the idea of concluding the two remaining games by telegraph, communications being continually interrupted and messages wrongly interpreted. The games will now be carried on by correspondence. This, while being a very slow process, considering the distance the combatants are from one another, is preferable to a break-down of the Tourney, which so far has been a success.

The score of the two games will be published in this column after the conclusion.

A BRILLIANCY PRIZE.

The following game was awarded the Brilliancy Prize at the late New Jersey Chess Association meeting. The winner is a brother of the well-known problemist, M. Lissner, and the loser a brother of the world-famous composer San Loyd.

GAME No. 341.

RUY LOPEZ.

White—J. Lissner.		Black—S. Loyd.	
WHITE.	BLACK.	WHITE.	BLACK.
1 P K4	P K4	15 B K3	QxKt
2 Kt KB3	Kt QB3	16 KR Q sq	P QKt3
3 B QKt5	P Q3	17 Q Kt5 ch	Kt B3 (d)
4 P Q4	PxP	18 P K5	P KR3
5 Castles (a)	B Q2	19 Q KR4	P KKt4
6 P QB3 (b)	PxP	20 BxKtP	R Kt sq
7 Kt xP	Kt K4	21 BxKt ch	K K sq
8 Kt xKt	PxKt	22 P KKt3	R Kt5
9 Q Q5	P QB3	23 RxB (e)	RxQ
10 QxKP ch	Q K2	24 QR Q sq	B K2
11 Q KK3 (c)	PxP	25 RxB ch	K B sq
12 Rt Q5	Q QB4	26 KR Q7	K Kt sq
13 Kt B7 ch	R Q sq	27 R Q8 ch	Resigns.
14 Kt xR	Q QB4		

Notes by E. Hymes.

(a) A decided novelty, and worthy of consideration.

(b) Kt takes P would here bring about a well-known variation. The text-move produces an anomaly, the Scotch Gambit idea being tacked on to the Spanish attack.

(c) White here scorns the proffered exchange of Queens, and proceeds to tangle up his opponent in truly brilliant style. The sacrifice of the Bishop is the inaugural coup of a series of master-strokes.

(d) If K to K sq; 18—R takes B, K takes R; 19—R to Q sq ch, and wins.

(e) Simply beautiful. From the eleventh move White's play has been of the highest order, and this last bit of ingenuity serves to make the game a gem of the purest water.

LATEST SHIPPING.

ARRIVALS.

Mitke Maru, Japanese steamer, 2,053, P. Going, 9th Oct.—Bombay via ports, General.—Nippon Yusen Kaisha.

Monmouthshire, British steamer, 1,872, W. A. Evans, 9th Oct.—Portland, Oc., General.—Samuel Samuel & Co.

METALS.

Some business has been done in pig, sheet and galvanized iron, at former rates, but the amount of sales has decreased considerably since last week, when there was quite a little rush.

	PER PIECE.
Round and square 1 inch. and upward	4.15 to 4.60
Iron Plates, assorted	4.30 to 4.50
Sheet Iron	5.10 to 5.30
Galvanized Iron sheets	9.20 to 10.50
Wire Nails, assorted	6.00 to 6.50
Tin Plates, per box	5.90 to 6.00
Iron, No. 3	2.05 to 2.30
Hoop Iron (1 to 1 1/2 inch)	5.00 to 5.35

KEROSENE.

A fair business has been transacted at slightly hardening quotations.

	PER GALLON.
American	\$2.00 to 2.15
Russian	2.00 to 2.15
Langkat	—

SUGAR.

Neither arrivals nor sales of Brown during the past week have been large, but a small and steady business has been done at, for the most part, unchanged rates; and the same remarks apply to White refined.

	PER PIECE.
Brown Takao	\$3.50 to 4.10
Brown Manila	4.20 to 4.90
Brown Daitong	3.20 to 3.35
Brown Canton	3.50 to 4.20
White Java and Penang	6.50 to 6.60
White Refined	7.30 to 8.90

EXPORTS.

RAW SILK.

During the week there has been a fair daily demand, while on the 11th quite a rush occurred and no less than 3,355 boxes, or half bales are reported to have been disposed of; the total settlements for the week being placed at 5,192 boxes, or half bales. Stocks on the 15th were said to amount to 525 boxes. Shipments during the week were: 713 bales per *Empress of Japan*, on the 9th, 566 bales on the 12th per *Peru*, for America, and 450 bales per *Ancona* on the 12th, for Europe. Quotations are unchanged.

THE GREATEST WONDERS OF MODERN TIME HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN. HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1891, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and more food were placed in upon us, until at last a teaspoonful of ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors throughout the World.

Printed and Published for the Proprietor, at 51, Main Street, Settlement, by ARTHUR BATTAMY BROWN, of "Nooklands," No. 150, Bluff, Yokohama, SATURDAY, OCTOBER 16, 1897.

YOKOHAMA: SATURDAY, OCT. 23RD, 1897.

BIRTH.

At Shanghai on the 9th of October, 1897, the wife of E. J. LINDSAY, Chartered Bank of India, Australia and China, Hankow, of a daughter.

MARRIAGE.

At the British Consulate at Kobe Wednesday by J. C. Hall Esq., H. B. M. Consul for Hiogo and Osaka, CHARLES THWAITES to LELITA JANE CABELDO, daughter of P. S. Cabeldo Esq., of Kobe. Afterwards at the Union Church, Kobe, by the Rev. H. J. Foss M. A.

DEATH.

At Glasgow, Mrs. MARGARET PENDER MOLLISON, Mother of James Pender Mollison, Yokohama. [By Telegram.]

SUMMARY OF NEWS.

SIR EDWIN ARNOLD has married a Japanese lady.

TYPHOID fever is reported to have broken out in a London Hospital.

THE Japanese battleship *Fuji* arrived at Hong-kong on the 18th inst.

THE Authorities propose building 300 forts at many important points in Formosa, with the

object of providing against the attacks of insurgents.

It is stated that Governor-General Nogi of Formosa will submit his resignation at no distant date.

THE Emperor sanctioned the amended draft of the Formosa Administrative System on the 11th instant.

SIR ERNEST SATOW, British Minister to Japan, is reported to have left London on the 4th inst. for Japan.

HIS EXCELLENCY M. HARMAND, French Minister to Japan, left Japan on leave of absence on the 17th inst.

THE total amount of gold coins struck at the Osaka Mint up to the 10th of October reached yen 52,079,340.

THE crew of the sealing schooner *Pointer* wrecked near Shikotan on the 29th ult., arrived at Nemuro on the 21st instant.

THE P. and O. steamer *Verona*, which arrived at Yokohama on the 16th inst., brought silver yen amounting to yen 1,008,000.

THE Yokohama Merchandise Exchange, which deals with coal, kerosene and drugs, commenced business on the 15th inst.

EARTHQUAKES were reported on the 15th instant from Mito at 9.51 p.m.; Kofu at 10.57 p.m.; Tokyo at 10.57 p.m.; and Kumagaya at 11 p.m.

By the derailment of a locomotive on the line between Morioka and Utsunomiya on the 14th inst. a stoker on the engine lost one of his legs.

ACCORDING to *The Times* the British Government has declined to re-open the Indian Mints, or to enter the proposed monetary conference.

It is rumoured that some friction has occurred between Count Okuma and the Cabinet which may lead to changes in the Government very shortly.

THE Communications Department is revising the Navigation Encouragement Regulations. The draft will be submitted to the forthcoming session of the Diet.

THE autumn manoeuvres of the Imperial Body Guards will take place in the neighbourhood of the Tone and Kinu rivers in Ibaraki Prefecture from the 14th to the 22nd of November.

IN accordance with the advice of Count Okuma, some leading business men are now engaged in raising subscriptions for sending exhibits to the Paris International Exhibition.

AN iron mine was lately discovered in Ongagun, Fukuoka Prefecture, the ore being of excellent quality. The discoverer has applied to the authorities for permission to work the lode.

FIVE, or according to some reports, six, Japanese fishermen, have been shot off the coast of Siberia, or Saghalien, by Manchurians. Reports state that the men killed were stealing sealskins from a Russian schooner.

THE inauguration of the new harbour works at Osaka took place on the 19th instant, with considerable *clat*, in the presence of Prince Komatsu, Count Kabayama, Viscount Nomura, and other high officials.

THEIR MAJESTIES the Emperor and Empress have contributed yen 1,500 towards the alleviation of the distress caused by floods in Hyogo Ken, yen 1,200 to Tokushima Ken, yen 800 to Aichi Ken and yen 700 to Gifu Ken.

THE total output of the Hokkaido Tanko Kaisha (Coal and Mine Railway Company), has

been 600,000 tons per year. In order to meet the increasing demands the Company has decided from next year to produce 1,000,000 tons per annum.

THE Yokohama Electric Railway Company, promoted by Japanese merchants, has applied for a charter from the Government. The proposed lines are to run from Yokohama Railway Station in three sections, to various points.

ON the 18th inst. while thirteen workmen at the Yokosuka dockyard were conveying some dynamite, in a boat to a workshop, the dynamite exploded, killing two of the men and seriously wounding eight more.

ON the 15th inst. a luggage train from Moji, on the Kyushu Railway, was run into at Orio Station by a passenger train coming from behind. Five cars were broken to pieces. It is not yet reported whether any casualty to life or limb happened.

THE autumn manoeuvres of war vessels belonging to the Yokosuka Port Admiralty began from the 23rd inst. and extend to the 4th prox. The Commander-in-chief is Rear-Admiral Togo, Acting Commander of the Yokosuka Admiralty.

THE census of the principal cities of the empire at the end of last year was as follows:—Tokyo 1,368,070; Osaka 505,657; Kyoto 342,724; Kobe 183,065; Yokohama 179,868; Nagoya 235,706; Hiroshima 101,094; Nagasaki 71,906.

IN a succession of skirmishes between three companies of Japanese troops and the rebels, in the districts north of Kelung, Formosa, from the 5th to the 11th instant, 99 insurgents were killed, the Japanese loss being five killed and four wounded.

THE telegraph line between Osaka and Tokyo being frequently interrupted by storms or floods, the Authorities will shortly undertake the laying of cables between Cape Irako, Mikawa Province, and the port of Toba, Shima Province, and between Akashi and Saga via Awaji and Awa, as alternative routes.

THE Import market during the week has been fairly brisk, on the whole, though cotton piece goods and woollens have not yet begun to move. A fair business has been transacted in yarns, though at the close the wants of buyers appears to have been satisfied for the present, and prices have dropped some points. In metals there has been a good demand for iron, pig, bar and sheet; tin plates are weak, as heavy arrivals are anticipated in the near future. There has been some enquiry for American nails but buyers are not disposed to place any considerable orders as they are awaiting the development of a scheme in hand for starting a large nail factory in Japan. It is anticipated that the native-made article will be put on the market at prices considerably under the American and European rates. A steady business has been done in sugar, both brown and white refined, the former at a rise in quotations of from 5 to 10 cents per picul. The kerosene market is unchanged, though the arrival shortly of a cargo of Langkat may affect prices to some extent. In Exports a large business has been done in raw and waste silk, principally for the American market, prices generally showing an upward tendency. The trade in silk handkerchiefs and piece goods has also been brisk. An active demand for the lower grades of tea, principally for the Canadian market, still continues, and stocks being small prices have been forced up about \$1 per picul. Exchange shows a rise of $\frac{1}{4}$ on last week's closing rates.

SPIRIT OF THE VERNACULAR PRESS.

In the *Nichi Nichi Shimbun* there appears an article strongly advocating official assumption of the work of railway construction in Formosa. The Cabinet has shown itself singularly solicitous about the question of Formosan railways. When the last session of the Diet was approaching its close, the Administration exerted all its energies to secure the passage of the bill providing an official guarantee of 6 per cent. on the capital required for building the line. All the pro-Government members of the House of Peers were whipped in, and the Minister President himself descended into the body of the House and offered explanations designed to obtain favorable votes. Nevertheless, when the projectors sought to raise capital, they could not find subscribers for more than a small part of the 12 million yen required. They reduced the amount of the capital, but still the public declined to be tempted. What the cause of this reluctance may be, it is difficult to perceive, but considering that the Company receives a State guarantee of six per cent., and that it also receives a free gift of the railway already built in Formosa with all its rolling stock and appurtenances—a property representing five million yen—the failure to obtain capital after six months' effort must be taken as a final indication that the line is beyond the reach of private enterprise. On the 6th instant, a meeting of promoters was held at the Imperial Hotel, and again the Government evinced its keen interest in the success of the scheme, Count Okuma himself attending, and delivering a speech, in the course of which he confidently described the enterprise as a paying project. Still it has been found necessary that a considerable part of the capital should be supplied from official sources. Thus the Government stands in the position of guaranteeing six per cent., of making to the Company a present of property worth five million yen, and of subscribing a part of the required capital. Does it not seem wiser, under such circumstances, that the State itself should undertake the work, especially if, as Count Okuma alleged, there is good hope of making it a paying concern? Evidently the public can not be persuaded to entertain the sanguine view taken by the Ministry. Instead, then, of making large concessions to tempt private enterprise; instead of inciting private individuals to undertake a work which the State itself might carry out without any sacrifices, let the Government take the line into its own hands. If capital is difficult to procure at home, there is no reason why it should not be obtained abroad. Everything indicates the advisability of the State's stepping in since private initiative has proved so feeble.

According to the provisions of the Bank of Japan's present charter, the power of fixing the Bank's rate of interest from time to time is vested, not in the President of the Bank, but in the Minister of State for Finance. The *Yiji Shimpō* urges the advisability of reversing that arrangement. It bases its argument on two grounds, one general, the other special. The general ground is that the independence essential to the successful and healthy development of commerce is seriously impaired by a system which confers upon a Cabinet Minister competence to exercise arbitrary control over such a question as the rate of interest upon circulating capital. The Bank of Japan is, in effect, the centre of the country's trade organization, and until it is free from official interference there is no hope of seeing a spirit of genuine independence grow up among the mercantile and manufacturing classes. Certainly a great improvement has taken place during the past twenty years in that respect. A quarter of a century ago, men feared to put their hands to any enterprise unless officialdom led the way, but happily they have now learned, in great part, to think and act for themselves. The improvement is not complete, however, and never can be complete so long as the control of the Bank of Japan's rate of interest remains in official possession. That is the *Yiji's* general reason, briefly stated.

Its particular reason is that, under the circumstances, the Minister of Finance is perpetually assailed by merchants, manufacturers and speculators who see their account in getting the Bank's rate raised or lowered, and who bring all sorts of pressure to bear on the Minister with that view. The "quick-eared coterie," as the *Yiji* calls these persons, are an additional obstacle to the sound working of the present system. They are men who contrive to obtain early information of the Minister's intentions, and make use of the knowledge in their own interests. The *Yiji* does not seem to suggest that the Minister now in power is a party to any impropriety, but it evidently thinks that some Ministers might be, and that, at all events, the door should be finally closed to such contingencies. On the other hand, some may be disposed to contend that this special abuse would be likely to flourish to an even greater extent if the power in question were transferred to the President of the Bank. But that is a misconception. The President is always under the supervision and control of the shareholders, whereas the Minister, being absolute, the shareholders make no attempt to interfere with him. They would soon interfere, however, were there any evidence that the President made corrupt use of his power, or failed to place the interests of the Bank above all other considerations, under ordinary circumstances. Yet again it may be contended that if the President were competent to fix the rate of interest, he would be likely to fix it at a point inconveniently high from the public's point of view. That, too, is a misconception. The Bank's prosperity is best secured when the volume of its business is largest; when it discounts a maximum of bills and lends a maximum of capital. If it succeeds in placing out the whole of its normal note issues, namely, 180 million yen, at 8 per cent. interest, it obtains a return of 14½ million yen, whereas if it can only employ a third of that total—namely 60 millions—at 16 per cent., its return is 9½ millions. (The *Yiji Shimpō* gives a table to show this, but it is self-evident). Thus, if the discretion rested with the President, the public might count on getting reasonable terms, a great step towards the complete independence of commercial affairs would be taken, and the road would be barred to abuses which, under the present system, might become very serious.

Under the heading "the trouble is from within, not from without; the *Mainichi Shimbun* attacks the Government in language that sounds effective and is skillfully constructed, but unfortunately lacks any semblance of practical suggestion. It is, indeed, characteristic of nearly all the assaults now directed against the Cabinet that the assailants do not appear to be themselves assured about what they want, but raise an outcry chiefly for the sake of hearing their own voices. However, the *Mainichi* makes one intelligible point: it insists that the present Cabinet is absolutely free from any formidable opponent, and has nothing to fear unless it creates an opposition by its own blunders. The nation, according to our contemporary, had grown heartily tired of the Ito Cabinet, and would have showed it a cold shoulder much sooner had not the war with China necessarily postponed all internal disagreements. After the war, the Ito Cabinet had, perhaps, an opportunity of recovering a place in popular esteem, but its mismanagement of *post bellum* measures and of the finances brought it into greater discredit than ever, and although by securing the alliance of the Liberal Party, it succeeded in weathering the storms of one session of the Diet, its fate was really sealed from the first. Thus the present Cabinet came into office as an inevitable result, and so completely shattered were all the forces otherwise capable of being marshalled against it, that it may be said to have had the arena virtually to itself. Assuming the direction of affairs within a brief interval of the Diet's tenth session, the new ministry had not time to lay any programme of reform before parliament. The Premier explained that difficulty, and, at

the same time, promised definitely that he should meet the next Diet with fulfilled pledges. The Diet was satisfied and so was the country. People rested assured that the adjustment of the finances, the vigorous carrying out of the *post bellum* measures, and the radical reform of the Administration would now, at last, be achieved. But nothing has been done. Two months more will see the Diet meet for its eleventh session, and the Minister President will have to go before it with hands as empty as they were a year ago. There will be no party then to save the Cabinet as the Liberals saved its predecessor, and the Ministry will find that their own failures have created a foe of overwhelming strength. It is here that one expects the *Mainichi* to tell the Ministry what they ought to do. But it confines itself to telling them what they ought not to do; namely, to waste time disputing about the appointment of petty officials or the division of the spoils among party partisans; to devote weeks and months to thinking about remodelling the Formosan Administration or choosing a new Governor-General for the island; to engage in endless discussions about the raising of new taxes, and to entertain retrogressive projects for increasing the postal and telegraphic rates. Large measures of administrative reform and a thoroughly sound financial policy are what the *Mainichi* wants, but what is meant by reform and what constitutes financial soundness it does not attempt to explain.

The *Nippon* reverts to the old question of the Russian *mission militaire* in Korea. It recapitulates the facts that the war with China having been undertaken in the interests of the peace of the East, and Korean independence having been recognised on the basis of peace, Japan's responsibility remains as heavy as ever. After the restoration of the Liaotung Peninsula, a state of affairs was created the result of which was to transfer to Russia the position previously occupied by China in Korea. The independence of the peninsula was not attained. Recognising that serious fact, the Japanese Government deputed Marquis Yamagata to come to some agreement with Russia. He concluded an abortive kind of Convention practically of as little value as was the Tientsin Convention. Nevertheless, defective as the text of the Convention was, there could be no doubt about its spirit: its intention was to place Russia and Japan on an equal footing in the peninsula. It has certainly failed to accomplish anything of the sort. Russia, indeed, justifies her action in furnishing military instructors to Korea by saying that the independence of the peninsula depends ultimately on Japan, and that to interfere with the King's right of employing whatever military instructors he pleases, would be a most marked way of demonstrating that Korea is not independent. That is like stabbing a man with his own spear. It is perfectly patent that Korea is not free to choose as she pleases. Her independence is at least as much impaired by the presence of a Russian *mission militaire* that she is constrained to employ, as it would be were she not allowed to employ it. Besides, there is no intention on Japan's side of forcing Korea's hand. The question lies between Japan and Russia, not between either of them and Korea. The Japanese are not deceived. There may be some who imagine that the recent change of Cabinet in Seoul indicates the withdrawal of Russian influence. It means nothing of the kind. It means that Russia, by nominally leaving the King unfettered in the selection of his Ministers, really gets him more than ever under her control. The new Cabinet is composed of men without any progressive ideas; men steeped to the lips in the old conviction that Korea can not stand alone, but must lean upon one of her neighbours. That is a situation fully appreciated by Russia, and the fact that she has brought it about will be evident by and by from the uses to which she puts it.

The *Kokumin Shimbun* has a cleverly written article containing general advice about the present political situation. An old Chinese proverb (*tekikoku gaiwan*) says that some

measure of foreign trouble is essential to the well-being of a State. If a nation is entirely without sources of uneasiness beyond its borders it is certain to lapse into a careless invertebrate condition fatal to sound health, for it lacks any incentive to development and to the union of its forces. On the other hand, a nation that fails to foster its capacities and allows itself to become a prey to domestic dissensions while a foreign foe is at the gates, must be considered to be in a hopeless condition. The story of the Tokugawa dynasty is a good illustration. Relieved from all external menace, it gradually fell into a feeble and helpless condition, and when the crisis came, it succumbed almost without a struggle. Prior to her recent war with China, Japan also lived beyond the current of international events, but she is now in mid-stream, and however skilfully the ship of State be navigated, there is always danger of a collision with some of the other craft into whose close company she has been brought. She is subjected to external influences that ought to be amply potent for her consolidation, yet she appears indifferent to the fact, and allows her attention to be engrossed and her strength frittered away by petty quarrels at home. Political parties are divided against each other, and the Government is divided against itself. It might at least be expected that men who cannot discover any differences between their political views should unite to form one party, in the interests of their common principles. But such is not the case. Look where one may, whether at the Ministry itself or at the various fractions into which political society is divided, the fact that union is force seems to be forgotten.

* * *

The proposition that a country's financial credit depends quite as much upon the exertions of its commercial and manufacturing classes as upon the policy of its Government, forms the subject of an article in the *Osaka Asahi*. Japan having now adopted gold monometallism, and thus placed her currency on a sound basis, her enterprises ought to attract foreign capital, and their failure to do so must be attributed to the doubts that foreigners entertain of the stability of the new system. Some people are disposed to attribute that failure to the defective methods of the Government, to something left undone by officialdom. But the truth is that foreigners have not learned to trust Japanese merchants, and that until the latter make themselves really worthy of the station which their country has won for itself in a political sense, foreign coöperation for the development of the national resources can not be looked for. The history of States like England and France shows that their credit, speaking financially, is independent of the statesmen in whose hands the direction of affairs may happen to be. The people, by their own exertions, have placed the national credit on a basis virtually independent of political influences. Japanese merchants and manufacturers are separated by only a short interval from the era when a *Samurai* might cut down one of their number with impunity—the *Kiri-sute-gomen* epoch—and it is natural that they should not yet have risen to a full appreciation of their place in the national polity. They have doubtless made remarkable progress towards self-respect, and towards a sense of their importance as factors of the empire's credit, but there is still much to be desired. It is a pity that the *Asahi* does not formulate this good advice in more explicit language.

* * *

The *Fomiori Shinbun* notices the exceptional number of international congresses at which Japan has been represented during the present year. She sent delegates to the International Postal Conference, to the International Conference of Librarians, to the International Geographical Conference, to the International Medical Conference, to the International Colonization Conference, and to the International Red Cross Conference. In some cases she was invited to be represented; in others, she applied for admission; but invariably her delegates received a most hearty welcome. At the geographical

meeting the theses that her representatives were able to submit elicited strong approbation, and at the medical meeting the addresses delivered by her delegates received warm applause. It is a matter for sincere satisfaction that she is thus taking her place in the civilized councils of the world, and the time is ripe for her to consider whether she should not herself become the host at some of these learned *ré unions*. In 1902, her turn will come to entertain the various representatives of the Red Cross Society, and, considering her great distance from Europe and America, it might be advisable to seize that occasion for opening other international conferences.

COUNT OKUMA ON AFFORESTATION.

At a meeting of the Directors of the principal Forestry offices throughout the empire, recently held, Count Okuma, Minister of Agriculture and Commerce, is reported to have delivered the following speech:—Notwithstanding the fact that Japan naturally abounds in hills and mountains, many of them are barren and produce no timber, while most of the existing woods are yearly devastated by the axe, the only natural forests left uninjured being those situated in the remotest parts of the country. The demand for timber has increased year by year, and prices have so considerably risen that the import of foreign lumber became a profitable enterprise. The destruction of forests has not only affected the cost of timber, but also the well-being of the country, as the repeated calamities from floods clearly prove. The area of the Government forests extends over 7 million *cho* (17,500,000 acres), but the annual receipts therefrom do not exceed a million *yen*, while four millions are required annually in riparian works. A resolute reform of the forestry system is absolutely necessary. To carry out such a step the financial prospects of the Government forests must first be investigated. Thus:—(1) In dealing with forests, the fundamental principle should be to preserve them in a state of permanent utility, and every precaution should be taken to secure their fullest development. (2) It is necessary to raise in large quantities every variety of timber suitable to the demands of the country. (3) The gathering of by-products in the forests must not be allowed to injuriously affect the principal productions. (4) Every facility should be afforded to supply the demand arising from agricultural and industrial enterprises, to attain which end the rescission of the existing regulations and the framing of such provisions as may be necessary, is required; the Government forests to be made State property; the boundaries of Government forests to be properly investigated and demarcated; the carrying out of a programme for the planting and cutting of trees; the utilization of the natural forests in retired mountains and secluded valleys; planting of trees on barren hills; the enforcement of strict supervision over all private forests and adopting measures for their development; encouragement of education in forestry affairs; establishment of Forestry Experimental stations; organization of Training Institutes for Forestry officers; and the transference of forests from the supervision of Cities or Prefectures to the control of the Divisional Forestry Office.

Some of the above items have indeed been carried into execution, but owing to want of uniformity in the course pursued, no satisfactory results have been attained.

It is necessary for the present to establish the foundation of the system of forestry in Japan by immediate enforcement of the provisions specified. The policy hitherto adopted in the preservation of forests has been passive, and no science has been employed in their improvement. Preservation is doubtless indispensable, but utter indifference to all schemes of utilization is sure to deprive the country of the legitimate profits of its woods. Nor is it improbable that the existing system of forestry has been diametrically opposed to the sentiment of the people, the result being serious inconvenience to the populace and a loss to the Government. That the people of Japan have enjoyed valuable privi-

leges in connexion with forests has been customary from time immemorial, and instances of the kind abound also in Europe. The existing abuses must therefore be removed. Inspectors of forests who are responsible for the above important functions should faithfully apply their learning and experience to the matters in their charge and endeavour to display accuracy, celerity, and courage in all their dealings.

CONFLAGRATIONS IN TOKYO.

It used to be commonly said that Tokyo was burned to the ground every quarter of a century; a somewhat startling assertion, signifying that twenty-five times the average number of houses destroyed annually by fire equalled the total number in the whole city. It would seem, however, from statistics published by the *Yiji Shimo*, that whatever may have been the fact in former times, things have not been quite so bad during the *Meiji* era. Of course, the immensely improved organization and equipment of the modern fire-brigades must have materially modified the record. We ourselves can recall the incomparably greater frequency of large conflagrations from twenty to thirty years ago, and are distinctly conscious of the virtual immunity now enjoyed. It is not that the number of fires has greatly diminished, but rather that their destructive effects are circumscribed within narrow limits. The *Yiji's* statistics do not cover the first six years of the *Meiji* era: the history of that time does not furnish details. But from 1874 to 1896, inclusive, a period of 24 years, it appears that the number of conflagrations was 8,553; number of houses destroyed, 97,844; their area, 923,653 *tsubo* (769 acres), and their total value, irrespective of furniture and fittings, 19,787,128 *yen*. According to official returns, the number of houses in Tokyo is 294,456, and it thus appears that the life of the city is 72 years, if the *Yiji's* figures be correct. That is bad enough, it must be confessed. Our readers will note that the average estimated value of the burned houses is between 21 and 22 *yen* per *tsubo*, from which it may be inferred that the poorest quarters of the city suffered most, for the houses of the middle and upper classes would average at least 40 *yen* per *tsubo*.

DEPARTURE OF THE FRENCH MINISTER.

The French Minister, Madame and Mademoiselle Harmand left Tokyo on the 16th instant by the 4.10 train from Shinbashi. The station was crowded with people assembled to say farewell, among them being the Minister of Foreign Affairs, and Countess Okuma, the Grand Master of Ceremonies and Baroness Sannomiya, Lieutenant-General Viscount Kawakami, the Vice Minister of Foreign Affairs, nearly all the *Chefs de Mission* and members of the Legation Staffs, and a number of Japanese and foreign friends. Several beautiful bouquets were presented to Madame and Mademoiselle Harmand. A very large company bade farewell to the departing Minister on board the French mail steamer on Sunday morning: hearty cheers being raised as the *Caledonien* left the wharf. We believe that the Minister expects to return to Tokyo in six months.

THE TRAGEDY IN THE NORTH.

The five men whose assassination at some point on the Siberian coast has been telegraphed to Tokyo, appear to have met their death at the hands of Manchurians, not of Russians, as was at first reported. Everything belonging to the unfortunate men is said to have been stolen. Three of them were natives of Niigata—one of the three being the son of a former member of the Diet for that prefecture—one was a native of Nagasaki, and one belonged to Hokkaido. Their bodies arrived at Matsugasaki on the 20th instant, and an inquest was about to be held at the date of latest advices.

POLITICAL PARTIES.

In connexion with the recent organization of the *Kodo-kai* we pointed to a feature now becoming more prominent than ever in Japanese politics, namely, the subservience of principles to persons. It is not to be inferred that there is any sacrifice of principles. The simple fact is that since a virtual consensus exists with regard to principles, there are no materials available for constructing special platforms. Every party is so deeply pledged to progressive ideas, that no one party can differentiate itself effectively from the rest. It is an ideal opportunity for men of commanding ability to become the leaders of groups each fighting for its own hand. The advantages of a free lance were vividly illustrated in the ninth session of the Diet by the National Unionists. An insignificant party in themselves, they acquired signal importance as the holders of the balance of power. That object lesson was not without its effect upon others. It is more than probable that the seceders from the Liberals and National Unionists, who brought such an unlooked-for accession of strength to the Government in the tenth session were not uninfluenced by the prospect of supplanting the National Unionists in the latter's rôle of middle-men. At any rate, we may fairly ascribe that motive to the recently formed coalition, the *Kodo-kai*. A political leader who can command fifty votes in the Lower House, would be in a position to dictate his own terms if the remaining members were virtually divided, as they were a few months ago, into two parties of nearly equal strength. But it is now evident that the organizers of the *Kodo-kai* will not be suffered to enjoy any monopoly of cave-making. Mr. Kono Hironaka, formerly leader of the Liberal Party in the Lower House, has decided to take a hand in the game. He has constructed a coterie of his own, calling it the North-Eastern Union (*To-koku Domei-kai*), and he will figure in the next session of the Diet as the captain of about a dozen free-lances. Excepting Mr. Kono himself and his confidential friends, no one seems to know why he left the Liberal Party. He was never remarkable either as an orator or as a parliamentary tactician, but he certainly wielded large influence at one time, and stood next to Count Itagaki at the head of the *Yiyu-to*. His defection was, therefore, a serious blow to the Party, and considering that it took place precisely at a time when some such disintegration of the Cabinet's opponents was essential to the success of any official legislation, ugly rumours were naturally circulated about Mr. Kono's motives. Had he subsequently accepted a post in the Government, the public could never again have consented to regard him as a trustworthy politician. But he has refrained from any suicidal act of that kind, and now once more resumes his familiar part as an agitator. With regard to his platform, it has only three planks that present any appearance of novelty. The first is that he proposes to increase the salaries of junior officials and of members of the Diet; the second, that he advocates extension of the franchise, and the third, that he desires to have the privilege of parliamentary representation conferred at once on the peoples of Hokkaido and Riukiu. Very slight planks, those, for building an independent platform, especially when we

know that any of the parties from which the North-Eastern Union seeks to differentiate itself would be perfectly willing to build with the same materials. But the point is that Mr. Kono wants to stand on a platform of his own. His conduct, and the conduct of those supporting him, may be regarded as fresh evidence that the personal element is now paramount in Japanese politics, and that the first essential of party organization is wanting, namely, the subordination of selfish ambition to genuine principles. Judging by present appearances, Japan is entering upon an era of cliques and coteries, and the possibility of party Cabinets is more remote than ever.

As the attitude of the newly formed political party (the *Kodo-kai*) becomes clearer, there seems to be little doubt that it will support the Government in the next session of the Diet. The secret of its organization as an independent body appears to be a reluctance, not unnatural, on the part of the members to enrol themselves in the ranks of the Progressionists (*Shimpo-to*). Most of them are seceders from the Liberals and the National Unionists, and while they are willing to support the present Ministry, they have not so completely abandoned their old traditions as to throw in their lot definitively with the party against which they formerly fought. It is thought, however, that the position they have now taken is a kind of half-way house, and that, by and by, they will unite with the *Shimpo-to* to form one great party. If that estimate of the situation be correct, as we are led to believe that it is considering the source from which it comes, then our own recently expressed ideas about the increased prevalence of the personal element in politics were exaggerated, and the same is true, in a still more emphatic sense, of the rumours that a split has occurred in the Cabinet and that the *Kodokai*, under the leadership of Viscount Takashima, represents an *imperium in imperio*. All such rumours must be accepted with extreme reserve. It forms part of the programme of Opposition journals to suggest the actual existence of a state of affairs which they would be glad to see realized. The organs of the *Shimpo-to* had recourse to precisely similar manoeuvres when their leaders were without the pale. Undoubtedly the Government weakened its position materially when it took the long-talked-of departure and began to employ the "talents." Whatever euphemism was used to disguise the step, it could not fail to bear the character of the "spoils" system, and it opened the door to the assertion of claims which had never previously proved embarrassing. Thus we read now, even in the columns of the Ministry's staunchest supporter, the *Yomiuri Shimbun*, that the *Shimpo-to* are putting forward Mr. Minoura Katsundo for the post of Chief of the Legislative Bureau, recently vacated by the resignation of Mr. Komuchi, and that the "Satsuma Section's" candidate is Mr. Okuda Yoshindo. It is the custom of politicians, the world over, to reward their supporters by conferring office on them when opportunity offers, but all Japanese Cabinets antecedent to the present one declined to recognise in that manner the assistance rendered to them by parties in parliament. Indeed, they had generally reason to resent opposition rather than to acknowledge support. Things have changed now, however, and the result is that the

agitators who combatted so vehemently against what they called "government by persons" have been the means of securing governmental recognition for personal claims. One of the advantages attaching to the semi-independent position taken by the new party is that they may look for independent recognition of their services, but we are inclined to believe that rivalry of that nature represents nearly the whole gulf between them and the *Shimpo-to*.

THE EXPLANATION OF THE TAKANO AFFAIR.

It is a somewhat singular fact that the really important feature of the Takano affair has remained wholly unnoticed by the vernacular press. All the Tokyo journalists that have discussed the question devote themselves to its aspect from a judicial point of view, and lead their readers to suppose that Mr. Takano was a judge in the active discharge of judicial functions. But on making inquiry in official quarters, we learn that, in addition to being Chief Judge of the principal Court in Formosa, Mr. Takano was also Councillor to the Administrative Office, and that his duties since he went to the island have been entirely of an administrative character. We are informed, indeed, that he has never once sat as a Judge in Formosa, and that his removal to the Retired List is entirely owing to mistakes committed in his administrative capacity. That, of course, disposes completely of the criticism that the Government's procedure in his case strikes a blow at the independence of the Judiciary. The incident has no connexion whatever with the Judiciary. On the other hand, it affords a very plain object lesson as to the unwisdom of combining administrative and judicial functions in the person of the same official. We can not say that Japan is the only country guilty of that mistake, but the evil possibilities of such a system are now very apparent. Apart from the obstacles that a duality of office presents to the perfectly impartial discharge of judicial duties, there is the embarrassment that no effective distinction of responsibilities can be made, and if incapacity on the administrative side is visited with the usual penalty, the constitutional immunity of the Judge is vicariously violated. We can not see why, in Mr. Takano's case, his removal from the post of Councillor to the Administrative Bureau would not have fully satisfied the requirements of the situation. It may be, however, that the Chief Judge holds the post of Councillor *ex officio*, in which case his removal from one position would necessarily involve forfeiture of the other also. That is a point upon which we are not competent to offer any opinion, being without access to accurate knowledge of the administrative organization now in force in Formosa. The inevitable conclusion seems to be, however, either that the system is bad, or that a want of judgment and foresight has been shown in dealing with Mr. Takano. If he erred in his administrative capacity he should have been thenceforth limited to his judicial functions only, and if the separation of the two was impossible, the sooner it is made possible the better. With regard to the agitation that Mr. Takano is carrying on, it appears to us very unseemly. Indeed, we do not hesitate to say that his conduct, so far as the public are in a position to judge, sug-

gests that he is not qualified to discharge the duties of any high office. If he considers that he has been unconstitutionally treated, there are constitutional means of seeking redress. By defying the authorities and creating a scandal, he himself exhibits contempt for the laws whose majesty he is avowedly so anxious to assert. The subject is so interesting and occupies such a prominent place in Japanese thought at present, that our readers will probably be glad to hear what Mr. Takano has to say for himself. On the 15th instant, a meeting was held at the *Fujimi-Ken* in Tokyo to consider his case. About 120 persons were present, among them being several prominent members of the Diet—Mr. Shimada Saburo, Mr. Miura Yasu, Mr. Funakoshi Mamoru, Mr. Goto Shimpei, Mr. Moriya Konosuke, Mr. Tanaka Shozo, Mr. Ooka Ikuzo, Mr. Kurihara Ryoichi—, together with Mr. Matsuoka Koki, Mr. Fujii Saburo, Marquis Nakonomikado, and a number of judges and barristers. Mr. Takano delivered an address, of which the following is the gist:—

In April of last year, the military system of government in Formosa was abolished and the civil substituted. The first question that arose was by what laws the place should be administered. Some maintained that there were no laws applicable until enactments should have been made by Imperial Ordinance. I opposed that view. My contention was that security of life and property, as well as the preservation of the rights of the subject, being absolutely essential to good government under any circumstances, it was out of the question that the island should be left without laws for, perhaps, a year. Under such circumstances, murderers, thieves and even rebels would remain unrestrained. Granting that the Formosans were a conquered people, they had nevertheless become subjects of the empire, and were therefore entitled to have laws protecting their lives and possessions. Now the punitive regulations enforced in the time of the military government by virtue of delegated legislative authority, were not at all severe in comparison with the laws of China. I therefore decided that these should remain in operation, and for the rest, that the criminal code, the code of criminal procedure, and the code of civil procedure, as applied in Japan proper, should be enforced. Local law courts (*chiho-hoin*), courts of appeal (*fukushin-in*), and an upper court (*Koto hoin*), were organized. But funds being deficient, only twelve judicial officials (*han-gwan*) could be employed, a number obviously insufficient to meet the requirements of three millions of people. Last April, ten more judicial officials were added, but prosecuting officials (*Kensatsu kwan*) being still lacking, the district police had to discharge the functions of prosecutors. Such is the history, in brief, of the judicial system in Formosa. Inasmuch, however, as very serious consequences were involved in the manner of carrying it out, I found myself obliged to point out various imperfections from time to time, as they showed themselves, and to urge upon the Governor-General the importance of remedying them. Not one of my suggestions was adopted. Now although the object of criminal law is to punish crime, that object is not necessarily attained by the conviction of a number of persons. No mistake could be greater than to suppose that the object of the criminal laws was achieved by arresting the folks who gave "a dozen of beer as a bribe." (We do not understand this allusion). "The laws are well administered when they operate in such a manner that their corrective effect is a hundred times greater than their punitive. Justice tempered with mercy is the first principle to be observed in putting laws into operation. The three millions of inhabitants of Formosa are crying out to-day that they can not obtain security for their lives and property. The reason of that unfortunate state of affairs is that the local police are not sufficiently strong, the result being that rebels go about freely by day and by night defying honest folks who have no means of resisting them, and whose appeals to the police for aid meet with no adequate response, the police being unable to protect them. It is the plain duty of the judiciary to see that such a state of affairs is corrected, but if the appeals of the judiciary are neglected, what recourse is there? If I am asked to explain the cause primarily responsible for this failure to provide security of life and property, I can only reply

that my mouth is sealed by the Law of Official Circumspection (*Fukumu kiritsu*). I must say a word, however, about my own retirement which is now the subject of so much comment. I myself, I can assure you, am in a state of the greatest perplexity. I have sought an explanation of the reason from the Cabinet Ministers, but their reply is so vague that I can find nothing to take hold of. They will not tell me whether I have committed any fault in the discharge of my official duties. Am I then to understand that I am incompetent for the post of chief judicial official of the upper court? I may, indeed, be endowed with small ability, but I am not so lacking in brain power as to be incapable of discharging my duties. If, again, it be contended that I exceeded my competence when I put the criminal code, the code of criminal procedure, and the code of civil procedure into operation, I reply that the 5th Article of Law No. 36 authorized me. Some accuse me of want of principle, on the ground that, whereas I approved the compulsory retirement of two other judges, I have rebelled when the same fate overtakes myself. That charge is based on ignorance of the facts. I have always been opposed to the compulsory retirement of judicial officials, and the course that I adopted on that occasion is clearly shown in the records of the Governor-General's office. When a local official who combined judicial functions with administrative was removed from office, I urged that the judicial part of his functions should be made subject to his own resignation, and on the other occasion of a judge's removal, advantage was taken of my absence. If I have been guilty of any fault, I will resign at once. But neither the Cabinet Ministers nor any one else can give me any clear proof, and I am myself unconscious of any. Therefore I can not consent to receive the notice of my retirement. If, on the other hand, I am informed that although I have not been guilty of any fault, my continuance in office does not conduce to the interests of the public service, I shall be ready to resign unhesitatingly, recognising, as I do, that the interests of Takano Moku and the interests of the public service are not to be mentioned together. I have no desire to shield myself behind a provision of the Constitution and to assume an attitude of opposition to the Government. When, however, instead of any of the above courses being adopted towards me, it comes to a question of the arbitrary dismissal of judicial officials, then I claim that in the interests of the independence of the empire's judiciary the Constitution shall be respected, and then I am prepared to stand up against the Government. I do not think that any Japanese subject could do less.

This is certainly not the language of a petty man. It has a fine ring of courage and high purpose. We can not agree with Mr. Takano's methods, but neither can we withhold from him a measure of the applause that is the due of everyone boldly championing a cause which he believes to be sacred. Moreover, if it be true that he can not obtain any explanation of the reasons of his removal from office, and if he be really ignorant of them, we can well understand that he feels indignant. But that is a matter entirely apart from the Constitutional question, and we are surprised that a judge should confound the two. If the Constitution has any application to the case, the nature of Mr. Takano's fault, and the Authorities' failure to explain their order of dismissal, are wholly irrelevant issues. The one vital point is that the Administration is incompetent to remove him from office, since he can not be removed except by sentence of a criminal court or by judgment of a disciplinary court. Of course his case is greatly strengthened in public estimation by the plea that the Government will not even deign to let him know his fault, and, perhaps, we should not quarrel with him for appealing to the sympathy of the masses by advancing that plea.

It is the intention of the Authorities, we are informed by the vernacular press, to adopt a very resolute attitude towards Mr. Takano. He left Tokyo for Formosa on the 17th instant, and on arriving at Kelung, he will of course have to give his

name and occupation. Should he then describe himself as "Head of the High Law Court" (*Kato-hoira-cho*)—which is the title of the office formerly held by him,—he will be proceeded against by his successor, Judge Mizuno, on a charge of falsely using an official title (*Kwanmes Soshō*), and if he persists in so designating himself, he may possibly be arrested, though his imprisonment would, of course, be very unlikely. As for Mr. Takano, the same writers affirm that he will proceed to discharge the duties of his office, and they even pretend that he will carry arms for purposes of self-protection, but it is quite incredible, as, indeed, they remark, that a man holding such a position should attempt to forcibly resist the execution of the law. For our own part we anticipate that the whole trouble will end in smoke. More will doubtless be heard about it when the Diet meets, but we do not see how Mr. Takano himself can effect anything at this juncture. He has, indeed, many powerful supporters. The *Mainichi Shimbun*, for example, denounces the action of the Authorities in uncompromising terms, nor can it be denied that there are materials for a strong indictment. The *Yomiuri Shimbun*, on the other hand, points out the obvious error of supposing that Formosa has been brought under the judicial system operative in the other parts of the empire. The judicial and prosecuting officials are appointed by a process different from that followed in Japan proper; the procedure of the tribunals is different; the organization of the courts is fixed by order of the Governor-General or by Imperial Ordinance; there are no collegiate courts; the duties of prosecution are discharged by police officers of the seventh rank; the judges perform administrative functions, and in minor points also differences may be found. Ignorant of, or indifferent to, all the important facts, people do not hesitate to allege that the provisions of the Constitution have been extended to Formosa.

The 24th Article of the Constitution says:—"No Japanese subject shall be deprived of being tried by the judges determined by law." That article is now quoted by the defenders of Mr. Takano. If, they say, the judges officiating in Formosa are not judges duly determined by law, how can it be contended that Japanese subjects in Formosa are in the enjoyment of the privileges guaranteed to them by the Constitution? Persons advancing such an argument fail, apparently, to perceive that its value depends wholly on the applicability of the Constitution to Formosa. If the Constitution is applicable in Formosa, then all its articles must be applicable, and in that case the immunity provided for the judiciary by the fifty-eighth Article has been disregarded in the Takano matter, just as much as the privilege declared for Japanese subjects in the twenty-fourth is disturbed by the status of the judges. If the Constitution is applicable, there the discussion ends. Mr. Takano is then right and the Government is wrong. If the Constitution is not applicable, then to show that its twenty-fourth Article has not been observed is not more significant than to prove that its fifty-eighth has been disregarded. That seems such a simple exercise of the reasoning faculty that no one should be perplexed by it. Perhaps, since reference to the language of the Constitution is in fashion, we may

call attention to the fifty-seventh Article, which says:—"The Judicature should be exercised by the Courts of Law according to law, in the name of the Emperor. The organization of the Courts of Law shall be determined by law." Has that Article been carried out in Formosa? Is the Judicature exercised there by Courts of Law according to law, in the Constitutional sense? Certainly not. Has the organization of the Courts of Law been determined by law, in the Constitutional sense? Certainly not. The manner of exercising the Judicature and the organization of the Law Courts differ materially from the manner of exercising it, and from the organization of the Law Courts, in Japan proper. "Every law requires the consent of the Imperial Diet" according to the Constitution, and the Diet has never been consulted about the exceptional organization of the Formosa Law Courts, or about the exceptional manner of exercising the Judicature. The fact is that Formosa has been palpably and necessarily excluded from the operations of the Constitution for the past two years and a half, but people have only now discovered the fact. The Constitution of Japan was framed for Japan as she existed at the time when it was framed, not for territory subsequently acquired by conquest, a contingency of which the framers took no note. Territories added to the United States Republic remain outside the pale of the Constitution until it is specially extended to them by law, and the same system is observed the world over. A United States judge, for example, officiating in a new territory is appointed for four years only, whereas in the States themselves he holds office for life. When it is remembered that up to May of this year Formosa was inhabited by three million persons who, although under Japanese jurisdiction, did not possess the status of Japanese subjects, we find difficulty in conceiving how any one can contend that the provisions of the Constitution extended to it. Mr. Takano himself has destroyed his case, for in his speech recently delivered at the *Fujimi-ken* he informed his hearers that, after the substitution of civil government for military, he was instrumental in maintaining the operation of certain special laws which had been in force under the military system. He ought to have known very well that such laws could never have been enacted and put into effect without the Diet's consent had the island been under the Constitution. Hence he is now in the position of claiming for himself privileges granted by an instrument which his own action proved to be inoperative. We are speaking here of the Constitutional question solely, not of the wisdom of the Government's procedure in removing Mr. Takano, or of the propriety of the method pursued towards him. As to the two latter points, we think that the Government is emphatically blameworthy.

THE ANDREE EXPEDITION.

Colonel Templar, Director of the British aeronautic service, has stated his belief that the Andree balloon was not sufficiently gas-proof to cross the Polar region. If that be so, and scientific men seem to endorse the apprehension, the balloon must have failed to cross the great distance between its starting point and the frontiers of civilization, and several months will probably elapse before anything definite is known as to the adventures of the Swedish explorers.

COUNT OKUMA AND THE CABINET.

The rumours recently circulated with reference to friction between Count Okuma and the Cabinet seem to have some foundation. The *Fiji Shimpō*, an authority generally quite trustworthy, offers an explanation. More than a year has elapsed, we are told, since the present Cabinet gave a public declaration of its general policy, yet only one or two of the promises made by it have been redeemed. The verities of its pledges, so to speak, namely, financial and administrative reform, seem to have been neglected. If it were called the "mendacious Cabinet" (*Shokugen Naikaku*), the Ministers might be puzzled to repel the accusation. Its faults of commission, too, have been grave. The affair of the Audit Bureau, the question of the Formosan Administration, the Takano business—these things have so greatly offended even the supporters of the Cabinet, that certain members of the *Shimpō* are talking of an Address to the Throne next session, impeaching the Ministers. Not ignorant of the complications gathering about them, the Ministers have nevertheless found their hands tied so tightly by personal considerations that to remodel their conduct was impossible. Hence the resignations of Messrs. Takahashi and Komuchi, an earnest of a larger *débâcle*, and hence Count Okuma's standing forth as advocate of the final elimination of clan influences from the Administration and of a sweeping measure of financial reform. The situation is so grave that Count Matsukata has deemed it necessary to telegraph to Count Kabayama, who is now in Kobe, asking him to return immediately. Such is the gist of the *Fiji's* intelligence. We are not in a position either to confirm or to contradict it.

MR. McCABLE'S CASE.

We regret that Mr. McCaleb is determined to maintain a controversy about an incident which has been fully discussed in all its bearings and has little interest for the general public. Since, however, he not only challenges the opinions expressed by us, but also makes use of our opinions as a vehicle for censuring other people, no choice is left but to take up his challenge. We do so, however, with a feeling of despair, for it is unfortunately evident that Mr. McCaleb's method of discussing evidence does not warrant any hope of a mutual understanding. Doubtless this affair has caused him much worry. It may be that his ideas are now perplexed and that he is incapable of distinguishing between the conditions really existing and the shapes they have assumed in his own imagination. That would, perhaps, explain the exordium of his letter, where he complains of not knowing what he is expected to meet, and refers confusedly to charges not one of which has ever been advanced in these columns. It may also explain the fact that while, at one moment, he recognises, at the next, he altogether loses sight of, the distinction between an opinion expressed about the celebration of a victorious war and a declaration referring to his own citizenship. We have said, and we repeat, that his denunciations of the impropriety of commemorating independence secured by bloodshed, concerned himself alone, and could never have affected his status in the eyes of the

American Legation. But we have also said, and we repeat, that when, in the margin of a refusal to join with his fellow-citizens for an essentially national purpose, he made special reference to his own citizenship, an element was introduced that concerned others besides himself, and the whole incident, coming in the sequel of independent causes of uncertainty as to his citizenship, could not fail to receive official attention when he applied for official protection. If Mr. McCaleb does not appreciate that simple distinction, we can only express astonishment. But he evidently does not appreciate it, for he quotes a letter from Mr. Miller, in which not the faintest allusion is made to his religious views, and yet asks us to regard the letter as evidence that the United States Minister has attempted to "exercise a censorship over his religious utterances." We would remind Mr. McCaleb that while every man is entitled to hold what religious views he pleases, he must, at the same time, pay some regard to the context in which he utters them. If, for example, on receiving some information from a friend, he were to reply:—"I said in my haste, all men are liars," he could scarcely complain of his religious utterances being subjected to censorship because his friend slapped his face. We deem it mere waste of time to discuss this point. Mr. McCaleb's religious views were never cited. Not the faintest reference was made to them. The whole question turned on his citizenship. He had made a public statement which, taken in connexion with the occasion on which it was made, and coupled with doubts which had already arisen, compelled the United States Minister, in the exercise of the plain duty imposed on him by the regulations of the State Department, to ascertain whether Mr. McCaleb had satisfied the conditions legally required of every American citizen before receiving the protection of his Legation.

We come now to a point even more astounding than Mr. McCaleb's confusion between his religious views and his citizenship. He declares that his reason for cancelling his signature to a declaration of citizenship was that "the Minister insisted on leaving out two very important clauses." The form of declaration was this:—"I do solemnly state that I am a citizen of the United States, that I will support the Constitution thereof and will bear true faith and allegiance to the same, without any mental reservation or purpose of evasion; and will perform the duties of a law-abiding citizen as I have done for thirty-five years." What are the "two important clauses" that were left out? Why does not Mr. McCaleb quote them? He signed the declaration on July 31st, having written it out with his own hand. On August 2nd, he withdrew it by letter. From first to last his letter does not contain the faintest allusion to the form of the declaration or to any omitted clauses. It simply contends that the declaration was unnecessary, and it concludes with an announcement of the writer's irrevocable purpose not to sign any declaration. Hitherto he has told the public that he refused to sign because he considered that an invidious discrimination was being made against him. Now he says that he refused to sign because two clauses were omitted from the declaration. Mr. McCaleb's sincerity not being in question, we must assume that he is labouring under some hallucination, or that his memory singular-

ly deceives him. For the rest, does he imagine that it is within his right to dictate the form of declaration required by the regulations of the State Department? Does he think that he is competent to insist on the insertion of this clause or of that? We are quite unfamiliar with the kind of respect for law that he exhibits and must leave it undiscussed. But when he says:—"That this withdrawal of my name created doubt in the Minister's mind about my citizenship is mere higgling," we have to remind him of the rudimentary fact that his own compliance with the obligations prescribed by his Government was the desideratum, not the state of the Minister's mind. The Minister's mental processes are not set forth as an alternative to the declarations of citizenship without which the Legation is forbidden to extend its protection to any one. Mr. McCaleb complains that he was treated "more as a criminal than a citizen," because the Minister, out of a kind desire to consult his convenience, offered him a temporary passport pending the decision of the Government in Washington. If that is Mr. McCaleb's interpretation of an act of courtesy, and if, further, while declining to accept a temporary passport, because it did not constitute a complete admission of his citizenship, he nevertheless interprets it as such an admission, we can only repeat our inability to understand his methods of reasoning.

Finally, Mr. McCaleb has found that out of nine Americans to whom he referred for information, six had never been required to furnish proof of their citizenship either in Washington or Tokyo, and three had. We accept that evidence so far as it goes, and frankly admit that we were mistaken in supposing that all American citizens in Japan, or practically all, had satisfied the required conditions. But Mr. McCaleb's discovery does not alter our view. He claims that as a majority of his fellow-citizens do not observe the law, therefore he is entitled to disregard it. We venture to remind Mr. McCaleb of the familiar precept, "Thou shalt not follow the multitude to do evil." He now knows that the Government in Washington has given judgment against him, and yet he persists in refusing to comply with the regulations. We fear that he must take the consequences. It is an unfortunate business. Very likely it has cost the officials of the Legation quite as much pain as it has cost Mr. McCaleb. But if Mr. McCaleb construes kindly consideration as an insult, we can not suppose that he concerns himself much about the trouble that he causes to others, or about the strange illustration that his own conduct furnishes of the long-suffering which is one of the most beautiful traits of true Christianity.

A BANK OF CHINA AND JAPAN.

It has already been mentioned that a Bank of Japan and China (*Nisshin Ginko*) is projected by Japanese men of business. Vernacular newspapers now say that the capital is to be five million yen, one half to be raised in Japan and the other half in China. The Chinese subscribers are to receive preference shares, carrying interest at the rate of four per cent., the payment of which will be a first charge on the profits. The purpose of the Bank is to facilitate operations of commerce between the neighbouring empires. The president is to be an official nominee.

THE TERM FOR EXCHANGING THE SILVER YEN.

The idea of shortening the term fixed for the exchange of the silver yen appears to be seriously entertained by the Authorities. According to the present arrangements, the coins are to remain legal tender up to April 1st, 1898, from which date during a period of five years the Treasury undertakes to exchange them for gold, on presentation, at the ratio of 32.34 to 1. But the Government, it is said, has come to the conclusion that great and needless risks are incurred by extending the time to five years. Under existing conditions, it is possible to form a tolerably clear estimate of the heaviest liabilities that the Treasury is likely to have to bear in connexion with the operation. Even assuming that the exchange has to be effected with silver at 23 pence an ounce, and that 160 million yen have to be exchanged, the loss is not formidable. But during the course of five years very embarrassing circumstances might have to be faced. For example, the coinage of silver yen might be undertaken in some foreign territory on a large scale. There would be little difficulty in turning out yen pieces absolutely perfect in every way, their fineness well within the legal remedy and their technique such as to bear the closest scrutiny. Such coins might be carried here in millions, and it is hard to see how Japan could escape the obligation of exchanging them for gold. Her stock of the yellow metal could not support such a drain, and her new system would soon become unstable. Hence it is alleged that a bill will be introduced in the next session of the Diet, materially shortening the period of exchange. Probably a year will be the new limit, but as to that we have no definite information. It appears to us that the Government ought not to hesitate in this matter. The foreign public can never feel entirely assured about the stability of Japan's gold monometalism until the problem of the silver yen is conclusively solved. It is an element of uncertainty. No one can be quite certain about the dimensions that exchange operations will assume. If—as may safely be supposed—one of the objects of demonetizing silver was to attract the capital of gold-using countries, then the sooner the silver yen is finished and done with, the better for that object.

CAPTAIN GUNJI OPENS FIRE.

An extraordinary story comes from the Kuriles, where Captain Gunji pursues his painful enterprise with patience and resolution that greatly mitigate the impractical and theatrical character of its inception. It appears that the Captain—he was a Lieutenant when he led his romantic expedition northward—and his companions have now inaugurated farming and fishing operations on a large scale, and are able to congratulate themselves on considerable success. In the middle of last month—so the story runs—an American sealing schooner, the *St. Lawrence*, visited the island, Shimushiri, where the little colony is established, on the pretext of procuring a supply of fresh water. Part of the crew landed, and went upon shooting excursions, some of them making their way into the houses of the colonists at sunset, and behaving with rudeness towards the female inmates. Captain

Gunji found these proceedings so intolerable that he advised the men to leave the island, as soon as they had obtained the necessary supply of water. But they treated his suggestion with contempt, and behaved more lawlessly than ever. Finally Captain Gunji informed them that if they continued to insult the women and prolong their stay on the island, he would use his artillery against their ship. That threat, also, they disregarded, and in the end he proved as good as his word, getting out a gun and firing a shot over the *St. Lawrence*. The hint was taken, and the crew, getting aboard with all haste, made sail. There is a postscript to the story, namely, that the people of the *St. Lawrence* probably told the crews of other schooners what they might expect at Shimushiri, for in the case of two vessels that subsequently visited the island, a very different line of conduct was observed. If the tale is truly told, we thoroughly applaud Captain Gunji's procedure. No one sympathises with roughs like the crew of the *St. Lawrence*.

THE BUDGET.

The Cabinet seems to have at length decided upon the course to be adopted with regard to the Budget. According to statements apparently trustworthy, the Treasury cut down the increased expenditures in the estimates to a total of 23 million yen, but subsequent consultation with the various Departments led to the restoration of some of the expunged items, so that the total was brought up to 26 millions. On that basis the Cabinet was invited finally to pronounce a verdict, and the result was that, at a meeting held on the 14th instant, the majority voted in favour of increasing the Land Tax and the *Saké* Tax. The idea is to raise the Land Tax from 24 to 33 per cent., by which means an additional income of 14 millions will be obtained; and to raise the *Saké* Tax from 7 yen a *koku* to 10 yen, by which means the impost will produce 12 millions more than it does at present. There will, of course be a corresponding increase of the rate on mixed *saké*, but the income from that source will be comparatively small.

DOMESTIC LOANS.

The Finance Department announces the issue of War Bonds of the aggregate face value of six hundred thousand yen, the issue price being 95.83 yen. We presume that this trifling amount is needed to close the war accounts which are understood to be almost ready for publication in their final form. It is now plain that the Minister of Finance feels justified in using the proceeds of the sale of Bonds effected in June last to a British Syndicate. By that sale a sum of forty-three million yen is understood to have come into the possession of the Treasury, and the money was doubtless held in gold until the dimensions of the exchange operations in connexion with the new system of currency could be clearly gauged. Since, however, it may now be fairly inferred that no drain of gold has to be apprehended, a portion of the forty-three millions is to be used for purchasing Railway and Public Undertakings Bonds at a price which makes them a good investment. That appears to be the explanation of issues recently announced.

THE "MAINICHI SHIMBUN'S" MONOPOLY.

The *Mainichi Shimbun* says that foreigners can not be supposed to know anything about the applicability or non-applicability of the Japanese Constitution to Formosa. That seems to us to be a decidedly interesting proposition. We should like to propound a question to the *Mainichi Shimbun*. Some foreigners—not many indeed, but still some—have studied painting according to Japanese methods. Suppose that one of those students, having copied a Japanese picture in Japanese style, were to place it on public exhibition, declaring, at the same time, that Japanese folks could not be supposed to know anything about the technical success achieved by the painter, what would be the *Mainichi's* verdict as to his moral equilibrium? The Japanese Constitution is merely a copy of foreign constitutions,—a compilation of them, if you will,—and it is applied according to foreign methods. Yet foreigners are not qualified to pronounce any opinion about its applicability to Formosa. It is a delightful idea. What adds to its charm is that Formosa is Japan's first, her very first, acquisition by conquest, and that her administration of it is her first, her very first, experience of the kind; whereas England has been busily engaged acquiring new territories for several hundreds of years—doing little else in fact,—and practising the science of administering them. Yet Englishmen are not competent to express any opinion about Japan's method of applying Constitutional Law to her new territory, or about her manner of administration there. Well, 'tis said that good, solid self-assertion never harmed any nation.

THE CODES.

In order that the Revised Treaties may go into operation at the time originally appointed, namely, July 1899, it is necessary that the whole of the Codes of Law shall have been in operation for at least a year before that date. A large portion of the Civil Code—which had been under revision since 1891—was submitted to the Diet last session, and passed. The part now remaining is the law of persons and succession. Its revision is said to have been completed. But the section of the Commercial Code treating of maritime law has not yet been fully revised. Still, the intention is to submit the whole to the Diet next session. Doubtless there will be no difficulty in obtaining the Diet's consent, the action of the Houses last session having shown plainly that they have no intention of attempting the impossible task of scrutinizing the new laws, clause by clause.

Referring to the above subject, the *Mainichi Shimbun* justly remarks that the foreign residents of Formosa will naturally object to be brought under Japanese jurisdiction if the independence of the judiciary is not guaranteed, as it certainly is not if Judge Takano's case can be considered conclusive. But we should imagine that the disadvantages under which Formosa labours are only temporary. The Law of the Organization of the Law Courts will certainly become operative in the island before the middle of 1899.

THE "SEKAI-NO-NIPPON."

The *Sekai-no-Nippon*, a paper with which our readers should be tolerably familiar, has ceased to appear. In announcing its demise, it assigns the death of Count Mutsu as a principal reason. "We and our fellow-thinkers," it says, "always regarded Count Mutsu as the statesman who commanded our respect and whose political opinions we desired to see put into execution. From him we derived large aid, and for thirty years we have profited by his assistance in our capacity of journalists. We had pledged ourselves to face the evil and the good in his company, and his death is one of our principal reasons for abandoning this publication." The editor then goes on to explain that the paper has accomplished its mission since it has largely contributed to the downfall of the Matsukata Cabinet, which result he now professes to consider imminent, and that having virtually no enemy to attack, a second reason presents itself for discontinuing publication. Dying men are supposed to speak the truth. Perhaps therefore, we err against orthodoxy when we query the correctness of the *Sekai-no-Nippon's* moribund testimony. But we learn with great surprise that it entertained such sentiments towards Count Mutsu, or that it acted as his mouthpiece. Very few Japanese, we imagine, would have been disposed to regard it in that light.

VISCOUNT TANI & THE FORMOSAN MISSIONARIES.

Viscount Tani is nothing if not outspoken. He has a fearless, straight-forward way of enunciating his views that commands respect, quite apart from the quality of the views themselves. It was he that threw the bomb into the Treaty Revision Conference in 1887. He would not at any cost have foreigners enrolled in the Japanese Judiciary, and he thus succeeded in eliminating for ever from the field of practical politics the only guarantee that could have reconciled the majority of the foreign residents to being placed under Japanese jurisdiction. He can not be called anti-foreign: the epithet would be quite inapplicable. But he is emphatically Japanese-assertive, if the term be permissible. In other words, he stands prominent among the men who are determined that Japan shall not be "put upon" by foreigners, and who are just a little morbidly apprehensive that she is constantly in danger of being "put upon." He is now spoken of as a probable, a very probable, Governor-General for Formosa, in succession to Viscount Nogi, and his opinions about the island, as expressed to a representative of the *Yomiuri Shimbun*, are therefore interesting. "The treatment of foreigners in Formosa," he is represented as saying, "is the point demanding chief attention in the future administration of the island. The insurgents are a trouble, it is true, but they can not hold out long. It is their backers, Englishmen, Frenchmen, Americans, and so on that require consideration. The foreign missionaries had been making a business of propagandism in Formosa before we obtained possession of it, and had constituted themselves a species of *imperium in imperio*. Fearing to see their position disturbed, they appear to have encouraged the insurgents to take up arms, and these were only too ready to obey such sugges-

tions. If that state of affairs be neglected, unlooked for complications may occur. What is wanted for Formosa is a fixed line of policy. With things changing like the colour of a cat's eye, as they do at present, reforming the administrative organization or sending a new Governor-General is practically useless. You must have a definite programme. Whether to treat the island as Russia treats Armenia and Germany treats Alsace-Lorraine, that is to say, seeking to make them a part of the governing country, even in a military sense; or to treat it as England treats India, that is to say, making profit her sole object and neglecting everything else—neither method is entirely satisfactory, but either would be better than the half-ripe, jelly-fish methods now pursued. There are no roads or means of communication worthy of the name ten miles outside Taipei or Tainan, and there is not the slightest chance of getting railways constructed by private enterprise: they must be undertaken by the State. Funds can be obtained by issuing bonds bearing interest at 6 or 7 per cent. Sanitary measures are equally backward. As for the Takano affair, the Government's course has been extraordinarily inconsiderate."

NEW APPLICATIONS OF SCIENCE.

Sheep are now sheared by electricity. The machine is an English invention—the Woolsey, made at Birmingham—but the account of its operation lying before us appears in an American journal. A set of twenty machines is installed at Great Falls in Montana. They are driven by a 6-horse-power engine, and each machine shears a hundred sheep daily. In about three weeks time the twenty recently removed the fleeces from 16,184 sheep.

It appears that we are on the eve of being able to forecast the weather with certainty. The system of prediction depends upon the theory that if certain conditions of wind, temperature, humidity and so on produce a certain result once, the same conditions may be trusted to produce the same result always. Assuming, then, that we can tabulate a sufficiently wide range of conditions, nothing need be done except to extract from them the particular group corresponding with the conditions at the time when the prediction has to be made. Nothing else need be done, indeed, but what an infinity of combinations of conditions must be put together before we can hope to find among them any and every assemblage that the meteorological state of the day presents. M. Jaubert, the inventor of the system, does not see anything deterrent in that difficulty. His observations have already been conducted for so long a period that he has now a complete dictionary in which he can find a reflection of the sky's physiognomy under all circumstances; that is to say, he can find a reflection of all the features necessary for determining what expression the face will wear twenty-four hours hence.

EXCHANGE OPERATIONS.

The total demand for gold from the 1st to the 19th inclusive was 4,363,004 yen; the quantity of silver yen presented for exchange being 1,179,017 yen, and the quantity of notes, 3,183,987 yen.

HAWAII AND JAPAN.

MUCH as the immigration problem between Hawaii and Japan has been discussed in the public prints, some important miscomprehensions still appear to exist. Chief among them is an idea that Hawaii's action in excluding the Japanese immigrants was based on the alleged *mala fides* of their possession of fifty dollars. Prominence has been given to that point by the recent publication of a despatch from the Hawaiian Minister of Foreign Affairs to the Japanese Representative in Honolulu, wherein the writer notes that the Japanese Government declines to submit to arbitration the question of the *bona fides* of the possession of fifty dollars by each of the rejected immigrants, as well as the question whether the provisions of the 1871 Treaty are applicable to non-mercantile Japanese subjects. Commenting upon Japan's attitude, as indicated in that despatch, a Honolulu journal laments that, after three months of debating and waiting, the complication has made no progress towards a settlement, and a Hongkong journal indirectly accuses Japan of bad faith, and asks what on earth the arbitrator is to decide if the fifty dollar issue be excluded. To correct the confusion indicated by these utterances, it may be well to state briefly the simple facts of the case. We preface the statement, however, by noting that, according to Hawaiian law, Japanese immigrants, in order to gain admission, must have visible means of subsistence, evidenced either by the possession of \$50 (gold), in which case they rank as "free labourers;" or by a contract securing employment in Hawaii, in which case they are classed as "contract labourers."

The first batch of immigrants to which the discussion refers, reached Honolulu on the 6th of March, and the majority of them having been refused admittance, left the island for Japan on March 20th. Two other batches subsequently arrived, and were similarly turned back, but it is unnecessary to speak of the incidents separately, since all stand on the same basis and are grouped together for the purposes of the negotiation. Neither need we take any note of the various rumours circulated about the reasons actuating the Hawaiian Government. We have nothing to do with rumours, and shall confine ourselves to official statements. In three despatches the Hawaiian Minister for Foreign Affairs set forth the grounds on which admittance had been refused to the Japanese immigrants. In the first two despatches his language was almost identical. The Japanese immigrants, he said, had been found in possession of fifty dollars each, but it appeared that they had entered into an agreement with a Japanese emigration company, the latter pledging itself, in consideration of

a payment of ten dollars, to procure employment for them in Hawaii, or, in the alternative, to carry them back to Japan. Hence, according to the Minister's view, they had come as contract labourers, not as free labourers. Now the laws of Hawaii declare that the previous consent of the Hawaiian Board of Immigration is essential to the validity of a contract entitling Asiatic labourers to reside in Hawaii, and as the contract between the Japanese labourers and the Kobe Emigration Company had not received that consent, it was declared invalid. We do not pause here to discuss the singular character of such a contention. For the purposes of the point under immediate consideration, it is enough to note three facts:—first, that the Hawaiian Minister raised no doubt whatever as to the *bona fides* of the immigrants' possession of fifty dollars each; secondly, that by implication he admitted the *bona fides*, since he not only stated the fact of possession, but also addressed himself to find a disqualification which would operate in spite of it; and thirdly, that by resting his case on the validity of the contract, he constructively eliminated the fifty-dollars question, since the latter concerns free labourers only, and has nothing to do with contract immigrants. In his third despatch, however, dated June 25th—that is to say, three and a half months after the rejection of the first batch of immigrants,—he referred, for the first time, to the *bona fides* of the possession. He did not, indeed, venture to assert that *mala fides* had been proved. On the contrary, he still adhered to the contract argument, but, by way, seemingly, of a second string he laid down the proposition that the existence of the agreement with the Kobe Emigration Company "threw a cloud on the *bona fides* of the possession of fifty dollars by each immigrant." Thus, after having, in two despatches, not only excluded the fifty-dollar question altogether from his arguments, but also, by implication and by the nature of his contention, declared the impossibility of including it, he suddenly turned round, and when three and a half months had passed, when the emigrants had returned to Japan and dispersed to their homes so that any investigation of such a matter was impracticable, he raised the *bona fides* doubt in a tentative and speculative fashion. It is not for an instant to be imagined that any sane Government would consent to have new and irrational issues sprung upon it in such a manner, or that the Hawaiian Minister ever seriously expected the Japanese Government to consent.

We pass now to the second point, namely, that the privileges secured to Japanese subjects by the Treaty of 1871 with Hawaii, extend to the merchant class only. The contention is farcical on the

face of it, but we quote the Treaty Article relating to it:—

ARTICLE II.

The subjects of each of the two High Contracting Parties, respectively, shall have the liberty freely and securely to come with their ships and cargoes to all places, ports and rivers in the territories of the other where trade with other nations is permitted; they may remain and reside in any such ports and places respectively and hire and occupy houses and warehouses, and may trade in all kinds of produce, manufactures and merchandise of lawful commerce, enjoying at all times the same privileges as may have been, or may hereafter be, granted to the citizens or subjects of any other nation, paying at all times such duties and taxes as may be exacted from the citizens or subjects of other nations doing business or residing within the territories of each of the High Contracting Parties.

It seems almost incredible that the restriction suggested by the Hawaiian Government should be contemplated even with regard to the privileges actually enumerated in this Article; but when we further observe that a most-favoured-nation clause of the widest significance is embodied, and that, consequently, if the merchant class only of Japan are entitled to benefit by the Treaty, then the same limit applies to the subjects or citizens of all other States having treaties with Hawaii, the irrational nature of the latter's claim becomes doubly apparent.

A question that naturally suggests itself is, why did the Honolulu Government think of raising such an extraordinary issue after the Treaty had been twenty-six years in operation. The answer is simple. Evidently, so long as the Treaty remained in force, Hawaii had no right to legislate in contravention of its provisions without having previously sought Japan's consent. No Power is warranted in making laws that over-ride its treaty obligations until the other high contracting party has been consulted with reference to the proposed change. Hawaii failed to observe that plain international duty. In 1894 and 1895, she enacted laws which closed her territories to Japanese immigrants unless they should possess visible means of support. We do not say that, in the last resort, she was not entitled to legislate thus even in spite of Japan's opposition. Undoubtedly she was entitled to do so if she considered the measure essential to her own safety. But she ought to have set out by conferring with Japan. That was her first flagrant failure. Having enacted the laws, however, she did not enforce them in such a manner as to cause any serious inconvenience. Nearly two thousand Japanese immigrants subsequently gained admission. Then suddenly, at the commencement of this year, whether under the influence of an access of alarm lest she should be swamped by Japanese labourers, or in obedience to some other motive, she applied the laws in an unprecedented, arbitrary and plainly extravagant manner. She advanced a claim which, reduced to its ultimate proportions, assumes this form, namely, that because a number of Japanese subjects had made with a Japanese shipping company in Japan an

agreement which had not been submitted for the sanction of a Hawaiian Board in Hawaii, they must be held to have forfeited their Treaty privileges. The result of that sudden procedure, adopted without any previous intimation to Japan, was that three shiploads of Japanese emigrants were irrevocably engaged in the voyage to Hawaii before any suspicion of the latter's novel attitude had been conceived. Of course the Honolulu Government was hopelessly in the wrong, and since some improvements in its position would be effected could it show that no Conventional obligations of any kind devolved upon it in respect of Japanese labourers, it advanced the farcical claim, explained above, with reference to the restricted character of the Treaty's import. There were also other Treaty violations the consequences of which it was probably sought to evade by that device, but we need not enumerate them. We have said enough to show that Japan can never have been seriously expected to submit the above two points to arbitration.

"BUILDERS OF GREATER BRITAIN."

Mr. T. Fisher Unwin has conceived and is now putting into execution an idea that promises to result in a valuable addition to English literature. Taking the Diamond Jubilee as an occasion, he has made arrangements for the compilation of a series of volumes setting forth the life and acts of the men—generals, admirals, and administrators—who have contributed to the construction of that magnificent edifice, the British empire. The editor is Mr. H. F. Wilson, formerly a Fellow of Trinity College, Cambridge, and now private secretary to Mr. Chamberlain. Thus far, arrangements have been made for the compilation of eight volumes only, namely, "Sir Walter Raleigh," "Sir Thomas Maitland," "John Cabot and his Sons," "Lord Clive," "Edward Gibbon Wakefield," "Rajah Brooke," "Admiral Philip," and "Sir Stamford Raffles," the writers being Messrs. Martin A. S. Hume, Walter Frewen Lord, and C. Raymond Beazley; Sir John Arbutnot, Mr. A. Garnett, Sir Spencer St. John, Messrs. Louis Becke and Walter Jeffery (jointly), and the Editor, in the order named. Each volume is to contain the best obtainable portrait of its subject, as well as a map showing his special contribution to the imperial edifice, and the price of each will be five shillings. The series promises to be of the highest interest; a worthy memento of the great occasion in connexion with which its compilation has been commenced.

THE LATE MR. R. N. ST. JOHN.

On Friday evening, at the Masonic Temple Yokohama, a Lodge of Sorrow was held under the auspices of the Yokohama Lodge, No. 1092, E.C., to honour the memory of the greatly lamented Worshipful Master, Bro. R. N. St. John, whose death, in England, we announced on Tuesday. There was a very large attendance of the Brethren, who all wore deep mourning. The beautiful rite was conducted most impressively by Wor. Bro. E. Flint Kilby, I.P.M., who was assisted by Wor. Bro. the Rev. E. C. Irwine, as Chaplain; Wor. Bro. H. J. Sharp, as S.W.; and Bro. E. C. Fox, J.W.; Wor. Bro. Griffin presiding at the organ. During the ceremony Wor. Bro. Flint Kilby delivered an oration, bearing eloquent tribute to the virtues and sterling qualities of the deceased brother in his many walks of life.

O'TENTOSAMA LODGE.

The annual installation meeting of the O'Tentosama Lodge, No. 1263, E.C., was held at the Masonic Temple, Yokohama, on Saturday evening. About forty-five brethren were present, including several from the Tokyo Lodge. The ceremony was impressively conducted by Wor. Bro. Stan. E. Unite, the retiring Master; Bro. the Rev. W. J. White assisting at the organ. Bro. A. B. Brown having been duly installed as W.M., invested his officers as follows:—
 Wor. Bro. S. E. Unite I.P.M.
 Bro. T. W. McIlraith S.W.
 Bro. W. Tucker J.W.
 Wor. Bro. Geo. Hodges Secretary
 Wor. Bro. C. D. Moss D. of C.
 Bro. Rev. A. R. Morgan Chaplain
 Bro. E. C. Herb Organist
 Bro. C. F. Rhine S.D.
 Bro. F. W. Thomas J.D.
 Bro. E. G. Bergeisen I.G.
 Bro. J. B. M. Barlett }
 Bro. T. Herlihy } Stewards
 Bro. H. Ivison Tyler

A banquet was subsequently held at which Wor. Bro. A. B. Brown presided. The usual loyal and Masonic toasts were given from the chair. Wor. Bro. Silver Hall proposed the Rt. Wor. the D.G.M. of Japan and his Officers, to which Wor. Bro. G. Hodges, D. G. Treas. and Wor. Bro. Bourne replied. The toast of the newly installed W.M. and his officers was given by Wor. Bro. Unite, and received hearty recognition. The Chairman having replied, Bro. McIlraith gave the Sister Constitutions and Visitors, to which Wor. Bro. R. Hay, Wor. Bro. Silver Hall, Wor. Bro. Delf, Bro. Ralph G. Forster and Bro. Willison replied. The Past Masters' toast was given by Bro. W. Tucker, Wor. Bro. C. D. Moss replying. The Installing Master, given from the chair, was enthusiastically received, and Wor. Bro. Unite made a feeling reply. Bro. Thomas gave Mothers, Wives, Daughters, and Sisters of Masons; and the W.M. the Tyler's Toast. During the evening vocal and instrumental selections were given by Wor. Bros. Unite and Delf; Bros. Rhine, Neville, Haines, Bergeisen, Herb, and others, a most enjoyable evening being spent.

THE INDIAN TROUBLE AND GERMAN OPINION.

Now that the insurrection of the frontier tribes in India has been completely crushed—a feat which was performed with creditable celerity and thoroughness—, some of the opinions expressed in Europe, especially in Germany, when the fact of the *émeute* first became known, are very interesting to read. We take two from an American exchange. The *Hamburger Nachrichten*, Prince Bismarck's organ, says:—

"As there is little doubt that the nations of Europe are gradually combining against that notorious disturber of the peace, England, we are induced to investigate her position in India, for upon the possession of India's boundless resources exclusively the power of Great Britain rests. The colonies do not count. They will not help her with their own risk, and could not help if they would. Hence the question how England stands in India is one of the weightiest of our times. And her position there is undoubtedly imperilled. Twenty years after the Indian mutiny the Queen assumed the title Empress of India, to show how firmly British rule is established in that singular country. Twenty years later we find that the collapse is imminent. Despite the fact that the population of India is hopelessly divided on religious and national lines, England has been unable to establish her rule firmly."

The *Vossische Zeitung*, an organ of capitalistic Liberalism, writes:—

"Afghanistan is playing false, but it is childish of the British Government to threaten the Ameer. The history of two great campaigns proves that Afghanistan has little to fear from England. Moreover, it must not be forgotten that the Mohammedan danger that threatens British rule is very grave. The British officials in India and the residents at the courts of native princes must exercise all their prudence to remove existing irritation and to avoid fresh dissatisfaction. England is certainly on the threshold of a severe crisis in India. She will have to tack very skillfully in order not to irritate Russia into interference. If Russia once descends from the 'Roof of the World,' the Pamir, into the plains of the Indus, she will never find her way back again."

THE LOG OF THE "GLADYS."

We gather the following particulars of the voyage to Kobe of the steam launch *Gladys*, built by the Yokohama Engine & Iron Works, for the P. & O. Company, from the log of the little craft, which was kindly placed at our disposal. The *Gladys*, which is of about 15 tons burden, left Yokohama at 1.18 a.m. on the 4th inst. under the command of Capt. George Hay, and with Messrs. Tresize and Weaver of the E. & I. Works on board, and arrived at Uruga at 8.08 a.m., where the two last named gentlemen left her to return to Yokohama. She left almost at once and passed Sagami light at 9.25 a.m. During the afternoon of that day the weather looking very threatening. Capt. Hay put into Sunoda at 5.45 p.m. and stopped there till 6.40 a.m. on the 5th, the weather not looking so bad, and wind from the S.E. She passed Irosaki light at 7.45 a.m., a stiff breeze now blowing with a high following sea, but though she rolled a good deal the little craft behaved very well. The wind and sea increasing, however, Capt. Hay put the vessel's head to it and steamed up the bay to Numadzu, arriving there at 6.30 p.m. and remaining all through the next day, the 6th. On the 7th at 6.15 a.m. he started again, but on getting outside, found a strong wind from S.E., and on arriving off Irako-saki anchored at 2.15 p.m. under the Cape for shelter. On the 8th, the wind had shifted to N.W. and the weather looking threatening, so he hove up anchor at midnight and tried to make Mikawa Bay, but in the heavy rain which was falling, missed the entrance and then shaped for Yokkaichi, under half-speed, owing to the heavy sea, arriving there at 10.30 a.m. on the 9th. After provisioning and coaling, he started from Yokkaichi at 4 a.m. on the 10th, the wind still blowing strong from the N.W. At 6.50 p.m. he passed Shimomisaki, and on the 11th at 1.45 a.m., Hinomisaki, making Tamagashima light at 5 a.m., and at 8 a.m. anchored off Kobe pier.

WRECK OF THE "POINTER."

The Suisan Kaisha's schooner *First Chishima Maru*, arrived at Hakodate on the 12th inst. with 256 seal-skins. She also brought down a hunter and 179 seal-skins belonging to the schooner *Pointer*. From information received from the hunter in charge of the seal-skins it appeared that the schooner was wrecked on the 27th of September at 11 p.m. while beating out of Shikotan harbour, an island near Nemuro. She had on board at the time 253 skins but the crew were only able to save 179, the others being washed away. The men saved all but one gun and some other gear. The Captain and all hands are safe, but it is feared the schooner will become a total wreck.

The Suisan Kaisha's steamer *Katwo Maru*, late *Henry Dennis*, and the *Third Chishima Maru*, arrived at Hakodate on the 20th of September and 7th October respectively, the former with 166 and the latter with 155 skins. Another schooner of the same Company arrived at Hakodate on the 12th inst. from the Kurile Islands where she had been otter hunting. She had 4 sea-otter skins only.

THE FORMOSAN ADMINISTRATION.

The new scheme of organization for the Formosan administration has been published. We shall speak of it in a future issue. But, indeed, we attach little importance to it. The re-casting of offices, their abolition or establishment, is not what Formosa wants. She wants a first-rate man in the capacity of Governor-General with almost autocratic power, and she wants a new staff of officials. There are doubtless some good men in the island at present, but we believe them to be in the minority, and, at any rate, their influence seems to be unable to leaven the defective lump. Good men will not go thither from Japan at present. They know that there is much to lose and little to gain.

MONTHLY SUMMARY OF CURRENT
JAPANESE LITERATURE.

Reviewing the literature of the past year, the *Sekai-no-Nihon* observes that, compared with last year the amount and character of the matter published shows a great falling off. The supplements attached to the summer numbers of the magazines were disappointing. But there is one good omen. Vapid writing is becoming scarce. The ill-informed and incompetent critics who in former years used to cover pages with crude remarks, show signs of becoming an extinct race. The literary world has learnt how to separate the wheat from the chaff and to value at its proper price the well-digested learning of the real scholar. Another characteristic of recent literature, noticed by the *Sekai-no-Nihon*, is its conservative or national tendency. There is in literature at the present time a reaction that is anti-European. Increased attention is being paid to Chinese and Japanese literature. From some points of view this is gratifying, says the organ we are quoting, but from others it can only be likened to shutting out of one's house the pure air of heaven. It cannot last. It will not be long before we shall see a movement in an opposite direction.

The *Sekai-no-Nihon* publishes a long article on the internal dissensions of the Department of Education and the officials connected with the colleges and schools under its control. The title of the article is 學閥論 *Gakubatsuron*, the object being to show that the Department is a house "divided against itself." The writer says that there are three distinct parties in the Mombushō, namely, the University party, the Higher Normal School party (called 老練黨 *Meikindō*), and the party consisting of officials of the Department proper. Each of these is said to have its literary organ. The *Sekai-no-Nihon* expresses regret that the cause of education should be injured by these dissensions, and predicts that the only way to put an end to them is for the Department no longer to depend on the University and the Higher Normal School alone for its supply of teachers. Just as the internal dissensions of the Satsuma and Chōshū clans were terminated by the entrance of outsiders into government ranks, so the disputes between the various parties in the Mombushō will be remedied by rendering the Department independent of the two institutions which now hamper its action.

The question of what should be Japan's ideal in fiction is continually discussed in the magazines. In a recent number the *Waseda Bungaku* traverses the views of the *Taiyō* and the *Kokumin-no-tomo* on this subject. The former of these advocates the subservience of fiction to State interests. The latter complains of the modern novel on the ground of the low-class subjects which it habitually discusses. The *Waseda Bungaku* is of opinion that any attempt to confine writers within certain limits would be fatal to success. The *Kyōrin* writes in the same strain, and adds that since the ideas worked out in novels are to a large extent the product of the age in which they find a mouthpiece, in order to change the character of this class of literature, it is necessary to direct men's thoughts into other channels.

The distinctive characteristics of the leading newspapers of the day are thus summed up by the *Waseda Bungaku*—

The *Yūji Shimpō* makes a specialty of writing up the ideas, customs, and maxims of business people and of recording the changes through which society is passing. Politics is consigned by it to a subordinate position.

The *Nichi Nichi* publishes *Kōdan* (lectures), war stories, and witty questions and answers, in addition to serving as a political organ.

The *Mainichi* is noted for its stage criticisms, its reports on provincial affairs, and for the well-executed illustrations that it occasionally publishes.

The *Chūō* delights in casuistry. Its questions

and answers on practical affairs of life are eminently suited to teach people of limited intelligence and to break down the barriers of superstition.

The *Asahi* publishes novels written by Namiroku and Tōsui and criticisms of the stage written by Kōson, in addition to itineraries furnished by various writers.

The *Yoroku Chōhō* prints Ruikū's detective stories and gives publicity to much of the gossip of the city. It is very widely read by the student class.

The *Kokumin Shimbun* resembles the *Yūji* in the importance attached to social questions and the secondary place assigned to politics.

A distinguishing feature of the *Miyako*, not to mention its account of detective investigations (*Tantei no jitsuwā*), is its publication of questions and answers on current topics.

The *Hōchi Shimbun*, in addition to figuring as a political organ, publishes Gensai's novels.

In the *Yomiuri* appear Ozaki Kōyō's novels, reproductions of old and almost forgotten works, and clever skits upon the 100 wise discourses which have been appearing in other papers, entitled the *Iyakubaka*, which consist of that indirect satire known in Japanese as *atekosuri* or 諷刺 *fūshi*.

The *Nippon* has a character of its own. It is fond of publishing the comments of noted men on current events. It gives special prominence to literary subjects, and is usually ahead of its contemporaries in the notice of published or forthcoming works.

In the *Yamato Shimbun* appear Mr. Saikiku's stories concerning old Japan.

Few Japanese have attained greater distinction than Dr. Chiga Tsurutarō. Many years ago, this gentleman was a teacher in the Dōninsha, Mr. Nakamura Keiu's school, an institution which was never very prosperous. Fourteen years ago, Mr. Chiga went to Germany to study Philosophy and Law. He was made professor of Japanese in the Oriental Language School of Berlin, and after many years of application, obtained from the Berlin University the degree of *Doctor juris utriusque*. The examination which has to be passed for this degree is said to be extremely stiff, the candidate being required to be thoroughly versed in Roman Law, as laid down in learned Latin works, and in ecclesiastical Law. Dr. Chiga is the first Japanese who has obtained this degree. Even among Germans, it is stated, few have the courage to try for this degree at the Berlin University, owing to the exceptionally high standard required by that institution. The essay which Dr. Chiga wrote for his examinations was on "Consular Courts in Japan"—a criticism of their constitution and methods. The essay condemned the whole system and attacked the principle of extraterritoriality. Its publication caused a great stir in Germany and other parts of Europe. One of Dr. Chiga's utterances, *Der Papst ist kein Souverän*, aroused the ire of the Roman Catholics and violent attacks on Dr. Chiga appeared in the *Germania*, in which journal it was maintained that the Berlin University had no right to grant the degree of *Doctor juris utriusque* to any but a Christian. The President of the University having been consulted by Dr. Chiga in reference to the abuse to which he as well Dr. Chiga had been subjected by Roman Catholic organs, observed, "It is not at all a bad thing to be spoken evil of by the Roman Catholics."

The *Kyōiku jiron* furnishes a report of an address delivered by Mr. Kinoshita, the President of the Kyōto University, at the opening ceremony held on September 13th last, from which we quote the following details:—The number of students who have entered the University is 53; consisting of 19 from the First Higher School, 10 from the Second Higher School, 7 from the Fourth Higher School, 10 from the Fifth Higher School, 6 from the Yamaguchi Higher School and one from the Tōkyō University. The idea of establishing this University was long in the minds of successive Ministers of Education and others, but from

one cause or another the enterprise was postponed. Viscount Mori always maintained that one University would never supply the needs of the country. With him originated the Five Higher Middle Schools, which were modelled on the basis of American Colleges. These schools were intended to furnish a high class education to students who did not intend to go through a University course. Later on, to three of these schools a department was added whose special function it is to prepare students for the University. This institution is in no sense dependent on the Tōkyō University, and it will be the aim of the faculty to impart to it a character of its own. In one important particular it will, at any rate for the present, differ from the sister institution in Tōkyō. In the Tōkyō University the course to be gone through is extended over 3 years and the advance of students only takes place at the end of each year. If a student fails at the annual examination, he is put back a year. We do not intend to observe any such rules here. Our course will range between 3 years and 6, according to the progress made by students, and we reserve to ourselves the right of advancing a student at any time we think fit. This rule is followed in other countries, but is now adopted for the first time in Japan. It possesses many advantages and unless its drawbacks seem to us to exceed these, our intention is to make it permanent.

The *Shakai Zasshi* has an article on the alleged increase of crime and attributes this phenomenon to the debasing nature of the popular literature of the day. There is no dearth of material of an elevating kind, says this organ, but a large number of journalists prefer grovelling in the gutter when in search of topics on which to write.

Dr. Toyama, commenting on some observations that appeared in the *Taiyō* on the prevalence of crime, denies that people are more wicked than they were a few years ago. The only change that has taken place, says Mr. Toyama is the increased prominence which Japanese newspapers have given to information that in foreign journals would be confined to Police News columns. Even the *Yūji Shimpō* is a great transgressor in this respect.

Dr. Toyama has recently published a small work on "Methods of Teaching English," giving the results of his long experience as a teacher. He discusses the subject of literal and free translation, furnishes examples of mis-translation, gives his opinions on the necessary qualifications for school-teachers and a variety of cognate topics. The *Shigaku Zasshi* speaks highly of a small work on the derivation and uses of words, of which Mr. Kanazawa Shōzaburō is the author. The title the book bears is *Kotoba no Inochi*. It is founded on a French work called *La vie des mots études dans leurs significations*. The principles given in the original work are applied to the Japanese language with great success, according to the *Shigaku Zasshi*.

Mr. Uchimura Kanzō has just published a small volume of translated poems under the title of *Aigin*. The selection has been carefully made and shows the translator to be a man of literary taste. These are some 20 poems in all. The translator's style is pronounced by the *Kokumin-no-Tomo* to be entirely new. He has aimed at reproducing the spirit as well as the words of the original, and has spared no pains to make his work as perfect as the capacity of the Japanese language will allow. The work is issued by the Keiseisha, Izumo-chō, Kyōbashi, Tōkyō.

A book of considerable interest and novelty has just been issued by the Hakubunkan called 三國探検實記 *Sankoku-tanken-jikki*, being an account of Mr. Iwamoto Chitenu's journey through Siam, Laos and Annam. In the garb of a Buddhist priest, Mr. Iwamoto started on his travels in December, 1896. From Siam he made his way to Laos, and after going through Annam traversed Tongking, travelling some eleven

hundred *rin* in 110 days. He met with numerous adventures, owing to the presence of wild beasts, poisonous snakes, and highway robbers in the country through which he passed. He kept a journal the whole time and the result of his observations on the customs, the religion, the government and the commerce of the countries through which he passed, together with a number of illustrations, is now given to the public in a volume which sells at 30 *sen* per copy.

The Minyūsha, Hiyoishi-chō, Kyōbashi, Tōkyō, announce that they are about to publish a work called *Yōku-seiki Gaikō-shi* (A History of Foreign Intercourse in the Nineteenth Century), by Mr. Hirata Hisashi, which will cover 4,500 pages and furnish a connected and minute history of the relations of European countries to each other from the fall of Napoleon I. down to the present time. From the reviews we are unable to say whether or not the work will include a history of Japan's relations to foreign countries. The title is somewhat misleading if the history is no more than a reproduction of Western treatises on the foreign policy of the leading nations of Europe.

In an article which appeared in the *Fiji Shimpō* last month some interesting facts were given bearing on the progress of the study of Botany in Japan, from which we cull the following particulars. The plant known as the *Ginkgo biloba*, called *ichō* or *ginnan* in Japan, during the Tertiary period was most plentiful, but has gradually become so scarce that even in China and Japan, where alone wild specimens are found, it is in danger of extinction. The discovery of a specimen in this country is deemed a great feat by botanists. Hitherto all efforts to propagate the plant have failed. But last year Mr. Hirose Sakugorō, assistant Professor of Botany at the Imperial University, as the result of numerous experiments with spermatozoids, succeeded in finding out a method of reproducing the plant. In the meanwhile Mr. Ikeno Seichirō, assistant Professor of Botany at the Agricultural College attached to the University, has discovered a new method of propagating the sago palm (*Cycas revoluta*). Professor Ikeno has been engaged on the study of this subject for a long time. It is stated that the value of the discovery has been acknowledged in America and elsewhere and has been fully explained in foreign journals. In Germany the *Ginkgo biloba* propagation discovery has attracted a great deal of attention, it having upset all traditional theories in reference to this plant. In a new German text-book on Botany a note is inserted announcing that, owing to Professor Hirase's discovery, the *Ginkgo biloba* must now be considered as constituting a class by itself. The *Fiji Shimpō* observes that the reputation which Japanese win by such discoveries is of a class to call forth the gratitude of their fellow-countrymen.

Mr. Ueda Bin, commenting in the *Teikoku Bungaku* on recently published English prose, makes the following remarks on Japanese current literature. Writers of New Style Verses, of whom there are hardly ten to be found, have been very quiet of late. Of course it is quite impossible to make a living by this class of writing, as poets do in the West. It frequently involves an enormous amount of labour, even a single verse taking a whole day and night to prepare. It is better that such writers should not allow the question of profit to affect them in any way, that they should spare neither time nor labour to make their own compositions perfect. The great evil of the day in the literary world is the presence of so many scribblers whose sole object in writing is a livelihood. The *Meiji Hyōron* writes in the same strain. The collections of New Style Verses that have been published, like the *Tōsai Namboku*, the *天地玄黄 Tenchi-genkō*, the *Kono Hana* and (花), the *松島鈴島 Matsumushi Suisumushi* are small affairs and do not show that there is any real poetical activity among us.

Among miscellaneous items published in the

Meiji Hyōron we find a note containing the views of Prince Konoye on some of the weaknesses of the age. The Prince draws attention to two serious abuses. The first is over-legislation. There is too great a tendency to multiply laws unnecessarily. The excuse given for the passing of a new law is the fact that such a law exists in some other country. Thus it is, says the Prince, that we are saddled with a number of useless laws. The second characteristic of the age which the Prince condemns is the levity and fickleness shown by the nation in dealing with grave financial affairs. Six or seven years ago a fit of economy overcame the Diet, and it insisted on a reduction of the budget amounting to some 6 million *yen*. Recently the Government and Diet alike have been suffering from the spending fever, and a sum of 10 millions added to the yearly expenditure seems a mere trifle. More ambition than wisdom is frequently shown by modern politicians.

In the same magazine Mr. Sasagawa Tōka delivers his opinion on the much discussed subject of Japanese independence of thought. This writer contends that as yet Japan has done nothing but borrow from other nations and that even in blending what she has borrowed she has frequently shown, as, for instance, in education, great lack of ability. The article is pessimistic throughout, and has no claim to be considered a fair statement of the facts relative to the history of thought in this country.

The *Kyōiku Yiron* reverts to the subject of giving more publicity to the lectures and investigations of University professors. There is no reason, says this organ, why the lectures delivered year after year should not be given to the world in book form. For the works which the University now has in hand, such as the *國史眼 Kokushigan*, the *Shokubutsu Samoku-susetsu*, the *Shokubutsu-hyōin-mokuroku* (Catalogue of Botanical Specimens), and the *Dainihon-Shokubutsu-shi* (History of Japanese Botany) it deserves great credit, but these only represent the labours of a few Departments. There are others which publish next to nothing. The *Kyōiku Yiron* thinks that the University Library should be thrown open to the public, thereby insuring increased usefulness for the institution that represents Japan's ripest scholarship.

The *Kyōiku Yiron* is doubtful whether the students who have been sent abroad by the Department of Education have not on their return to Japan done more harm than good. In many cases these students were quite ignorant of the real situation of affairs in their own country, and during their residence abroad only gained a very imperfect acquaintance with foreign institutions, systems and modes of thought. Full of the enthusiasm of youth and dazzled by all the new influences to which they were subjected in foreign lands, they returned to Japan to play the part of ardent reformers, and in many cases their radicalism knew no bounds. Many of the eccentricities of the present day are to be traced to the crude ideas propagated by strongly biased graduates of foreign colleges.

Dr. Katō Hiroyuki is represented by the *Asahi Shimbun* as having given utterance to the following sentiments in reference to the method of governing Formosa adopted by the Japanese Government. It is a mistake, says Dr. Katō, for us to begin by insisting on the Formosans becoming Japanese. It is out of place for us to be always drumming into them the duty of obedience to their new masters and love of Japan. This is not the way England governs India, nor is it the way the Dutch govern Java. The proper method of reconciling the Formosans to their new masters is by giving them as much liberty as possible and by not interfering with their numerous harmless national customs. The new yoke ought to be rendered as easy as possible if it is to be borne without constant resistance. There are some things that must be forbidden, but useless and annoying interference with national institutions should be avoided. We fear, says Dr. Katō, that the

Japanese Government has still much to learn on this subject.

The *Taiyō* has an article on the views of foreigners respecting Japanese art, of which we give an epitome. The Italian Minister of Education, when speaking at the opening ceremony of a Fine Art Exhibition, observed that in order to appreciate the art of any given country it is necessary that the student should be acquainted with the literature of that country, that he may perceive what are the ideas to which art gives expression. The same may be said of the study of poetry. A Japanese student of Dante who is ignorant of the history of Italian thought in the 14th century cannot possibly appreciate the great poet's utterances. It is not surprising that European art critics should fail to apprehend the characteristics in which Japanese art excels. These remarks the *Taiyō* makes the text of the following observations. How far it is possible for a foreigner to become thoroughly conversant with Japanese sentiments and emotions, is a question not easy to answer. How far can the consciousness of a people whose race and history is so different be partaken of by an Occidental? The position assigned to Hokusai by foreign critics and their enunciation of the points in which he excelled are by no means endorsed by Japanese writers on art. The peculiarities of Hokusai's style which foreign art critics select for special notice and praise, such as his faithfulness to nature in the matter of colour and form, and their comparison of his works to those of Michael Angelo, appear to us to be founded on a misapprehension of the nature of Hokusai's talent. It comes to this that the foreign critic of Japanese art selects the peculiarities that most accord with his own tastes, without inquiring whether those peculiarities constitute the chief merits of any given artist according to native standards. We visited in company with a foreign gentleman well versed in art an exhibition of paintings held at Ueno not long ago. We were struck by the character of the remarks made by this gentleman respecting the various pictures. To give a few instances; concerning a picture of a number of storks by the seaside, he observed:—"The storks are too big and the pine-trees too small. Were ever such storks as these seen in the world?" On a picture representing peacocks taking refuge in a pine-tree during a storm, he remarked, "Peacocks are only to be seen in fine weather." On the picture of Minamoto Yoritomo hiding in the hollow of a tree, he said, "How would it be possible for a person standing at a distance to see the hairs of his head and the colour of his clothes in the way represented?" After passing a number of ancient pictures, each of which had a meaning of its own, with the inattention with which one views floating clouds or rising smoke, my companion came to a picture of Kwanon (the Goddess of Mercy) and enthusiastically exclaimed:—"Here is something to look at. Here is a picture in which the difference between Eastern and Western tastes is lost. Who would have expected to find Western ideas so faithfully represented in an Eastern country?"

With the exception of Mr. Lafcadio Hearn, whose views on art we published in these pages a short time ago (summarised by us last month) these criticisms are a fair representation of the notions of Europeans respecting Japanese art. In a word, they amount to saying that though ideas may be expressed clearly by painting, if in the matter of form they do not come up to the foreign standard, as specimens of art, they are defective. This view is no less extreme than the advocacy of sacrificing form altogether to the exigency of thought. In their eagerness to satisfy foreign requirements in respect of form, some Japanese artists produce works which are entirely devoid of latent thought.

The contention of the writer we have quoted seems to be, that the Japanese method of expressing ideas by means of the brush allows of liberties being taken in the form of the objects represented which offend foreign canons of taste.

The question is of considerable interest and one on which there is much to be said on both sides.

Mr. Namikawa Sōsuke of cloisonné fame, has furnished to the *Zaiyō* an interesting account of his career; from which we take the following:—Nineteen years ago, I opened a porcelain shop in Tōkyō. At that time I knew little or nothing about cloisonné ware, but thinking that there was something to be made out of it, I purchased in Kyōto, Osaka, Nagoya, and Yokohama a number of specimens and forwarded them to the Paris Exhibition. Uncertain of the reception they would meet with in Europe, I placed a moderate price on them, regarding the venture as an experiment. My friends all viewed this new departure as foolish and only destined to failure. When the goods were presented at the French Custom House, the officers were astonished at the low price put on them and, thinking that this was done with a view of defrauding the Customs, wrote offering to purchase the articles at the price named. They were not a little surprised when they heard that I gladly accepted the offer. The cheapness of our ware astonished the French, but its inferiority to foreign productions was very manifest, as I learnt from a letter sent from Paris at the time. Thinking that there was a future for our Japanese cloisonné if it could only be brought up to the required standard, I determined to set about experimenting on new methods of manufacture. The first rebuff I met with was from my own artisans, who quietly informed me that the methods of producing this class of ware could not be modified in any one particular without resulting in failure. In order to be able to judge for myself, I determined to become an artisan and watch the process employed narrowly, which project I carried out in 1879. This new freak of mine, as many friends were pleased to term it, was interpreted as a proof that I was not quite right. I assured my friends that I only intended to work as an artisan till my purpose was accomplished. The next difficulty that I encountered was caused by the conservatism and bigotry of other members of the trade. They were so opposed to my experiments that they persuaded my workmen to leave my service. But notwithstanding this, I still persevered and in 1875 exhibited specimens which gained a medal in my own country and three years later had the still greater honour of receiving a medal in Holland. Eventually I succeeded in reproducing the natural colours of the objects imitated, and in the matter of transparency I produced things surpassing in beauty anything made in foreign countries.

It cannot be said, continues Mr. Namikawa, that art receives any great encouragement from the nation as a whole, notwithstanding all that is said on the subject in magazines and newspapers. Men who work for a reputation in many cases have their reward, but there is no such stimulus to art as existed in former days when Buddhism was popular throughout the country. No one unacquainted with the art of enamelling can estimate the enormous difficulty of reproducing certain colours or has any idea of the numerous fruitless experiments that precede success. To combine glossiness, and transparency with every delicate shade of colour it is desired to produce, taxes the ingenuity of the artisan to its very utmost, and it frequently turns out that the price which ordered articles fetch by no means recoups the workman for the losses incidental to the new venture.

The *Zaiyō*, writing on high class female education, says that the number of schools available for the daughters of gentlemen are for too few. The statistics furnished are as follow:—

	Pupils
官立 Government Female High Class Schools	322
公立 Public	8,194
私立 Private	6,651
Pupils of other schools	425

Schools established by foreigners number 26, and have an attendance of 1,566 students. These schools are Christian. That professing

Christians should attend them is natural, but it is a reproach to the nation that girls who have no intention of becoming Christians should be obliged to attend mission schools because there are no others open to them. The object of the missionaries in educating girls is to insure Christian influence being exercised in the home of the future mother, and in this they show great discernment. How is it that the nationalistic party do not adopt similar measures for the propagation of their doctrines?

THE "KOBE CHRONICLE," COUNT OKUMA, AND THE "STRICT ENFORCEMENT" QUESTION.

The *Kobe Chronicle*, while professing that its "time is too valuable to beat the air in a vain war of words," devotes something like a column and a half to that kind of performance. We fail to understand our contemporary's mood. Simple questions of recent history being the topics of discussion, there is no apparent reason for any display of excitement. As to Count Okuma's views on territorial expansion, we are content to take them on his own authority, without troubling ourselves about the singular hypothesis that he may have signed his name to an essay misrepresenting his ideas. As to the *Kobe Chronicle's* assertion that the "strict-enforcement policy" was "common at one time to almost all the Japanese political parties," it is an error so flagrant as to be inexplicable. For the rest, we must beg to bow ourselves out of the controversy. It has drifted into uninteresting and unsightly phases.

A VILLAGE TRAGEDY.

About 10 a.m. on Tuesday morning, Suzuki Nabe (41 years), wife of Suzuki Tomigoro, a farmer living at No. 838, Honmoku, Kurakigun, who has been mentally afflicted of late, killed her baby by striking its head upon the road at Nishi-no-yato. The infant was only a month old. The poor demented creature proceeded homeward and on entering her house told the inmates her story. The matter was notified to the Bluff Station, and Police Inspectors and others proceeded to the house. They took the dead baby to the Station, together with the mother. She is still detained by them. The licentious habits of the woman's husband are said to have turned her mind. He is at present absent from home on a debauch in the gay quarters of the town, where he has been from the beginning of the month.

EARTHQUAKE ON THE BORNEO COAST.

The following telegraphic news has been kindly put at the disposal of the Singapore papers by the General Manager of the E. E. A. T. Co. It is from the Superintendent at Labuan:—

An earthquake was felt at Kudat on the 21st. A slight tremor was observed at several places along the coast.

About the same time a new island was thrown up from the sea between Mempakul and Lambeidan, fifty yards from the mainland opposite Labuan.

The island is composed of clay and rocks, measuring two hundred yards by one hundred and fifty yards and sixty feet high, and appears to be increasing in size. It emits inflammable gas in several places, with a strong smell of petroleum gas. The earthquake was not felt at Labuan.

THE MEIJI FINE ARTS SOCIETY.

The Meiji Fine Arts Society will complete the tenth year of its existence in 1898. The present intention is to celebrate the occasion by holding a grand exhibition of works of art from the 20th of March, during an interval of fifty days. It is to be hoped that Japanese private collectors will be induced to contribute liberally to the display. At present, they show marked reluctance to coöperate in such undertakings.

DYSENTERY.

The returns of the dysentery epidemic during the present year are very shocking. It appears that the number of cases from the beginning of the year up to the 18th instant, inclusive, totalled 74,992, and the number of deaths, 17,591. The death rate, however, was comparatively low, being only 23 per cent. The cities and prefectures in which more than five thousand cases occurred were as follow:—

	CASES.	DEATHS.
Yamanashi Prefecture	8,983	1,820
Tokyo City	6,704	1,002
Kanagawa Prefecture	5,723	1,169
Gunma Prefecture	3,556	1,194
Niigata Prefecture	5,289	1,056
Shizuoka Prefecture	5,266	1,369

FRENCH NOVELS.

Messrs. Didier and Méricant—Rue du Pont-de-Lodi, Paris—have commenced the publication of a series of French novels at the exceedingly low price of 20 centimes. They are tiny volumes, prettily illustrated, and though the type is necessarily small, its great clearness obviates any inconvenience in reading. The idea is that one volume shall be published every Saturday, and sixteen have already appeared. The plan seems well calculated to bring French light literature within easy reach of people living at a distance from France.

THE POSSESSION OF CLONDYKE.

There is an idea in Canada that Americans contemplate a kind of raid upon the Clondyke gold fields. The vast majority of the adventurers who have flocked thither are citizens of the United States. Twelve thousand of them are said to be there, in presence of only a hundred and fifty Canadian mounted police, and the prophets of evil say that America will refuse to allow Canadian reinforcements to pass through her territory. In short, the Great Republic is suspected of contemplating a great robbery. Nothing is easier than to be suspicious.

THE AUTUMN MANŒUVRES.

The autumn manœuvres are to commence on the 2nd or 3rd of next month, and will last until the 16th, approximately. Four Divisions will take part in them, those of Hiroshima, Marugame, Kokura and Kumamoto. The Hiroshima and Marugame Divisions will take the field first, the former landing in the neighbourhood of Moji, and the latter in that of Nakazawa. After performing various evolutions, they will then march towards Tempo-zan, to meet the Kokura and Kumamoto Divisions, when the whole four will engage in a grand campaign.

PRIVATE RAILWAYS.

The *Official Gazette* announces that provisional charters have been granted to private companies for the construction of the following three lines of railway:—

Moji to Tanoura in Fukuoka, on the Kinshu Railway; 2 miles 40 chains; capital, 497,901 yen.
Tanoura to Sune, on the Bushu Railway; 11 miles 37 chains; capital, 800,000 yen.
Kawagoe to Narita in Chiba, on the Narita Railway; 67 miles, capital, 2,050,000 yen.

THE CREW OF THE "POINTER."

Three British and twenty Chinese members of the crew of the British sealing schooner *Pointer*, which was wrecked near Shikotan Island on the 29th of September, arrived at Nemuro on the 21st inst. on board the steamer *Kankō Maru* of the Nippon Yusen Kaisha. They will all be taken on to Hakodate.

JAPANESE FACTS AND COMMENTS.

Owing to the rise in the prices of commodities, remarks the *Tokyo Asahi*, the amount of capital in circulation has decreased and the rates of interest have risen. The maximum dividends declared by some banks for the first half of this year reached 70 or even 90 per cent. Judicious and active as these banks may have been in their management, it would be impossible for them to pay such extravagant dividends unless they had drawn on their reserves, issued loans at abnormal interest, or engaged in speculation. The Bank of Japan, the Sumitomo Bank, and many other sound institutions, have only been able to declare dividends of 20 per cent., and some others 30 per cent. The funds of the former banks, therefore, can not have been employed for the furtherance of industry and commerce. The following table shows the principal banks which have declared dividends of over 30 per cent.:

Districts.	Banks.	Dividend per cent.
Hiogo	65th National Bank	95.4
Kunamoto	9th "	78.1
Nagasaki	18th "	75.7
Ehime	52nd "	73.3
Hakodate	113th "	58.6
Osaka	130th "	52.1
Aichi	Kiyosu Bank	50.5
Nagasaki	102nd National Bank	49.9
Miyagi	105th "	48.2
Tokyo	84th "	47.8
Aichi	Nagoya Bank	44.9
Tokyo	Mitsui Bank	42.9
Tokyo	100th National Bank	42.9
Shizuoka	Shisan Bank	41.6
Shizuoka	35th National Bank	41.2
Aichi	Ito Bank	40.5
Tokyo	Mitsubishi Joint Stock Bank	36.2
Osaka	32nd National Bank	36.2
Osaka	34th "	35.5
Tokushima	Awa Commercial Bank	35.4
Hiogo	38th National Bank	35.2
Tokyo	Yasuda Bank	34.1
Kanagawa	74th National Bank	33.3
Fukushima	17th "	32.3
Osaka	121st "	31.1
Osaka	136th "	30.6
Chiba	98th "	30.4
Kagawa	114th "	30.1

For the purposes of administration, says the *Nippon*, the island of Formosa is now to be divided into three political sections. The first will consist of Soesan and the adjoining provinces; the second will comprise Kimpaoli, Ilan, and the neighbouring districts; and the third will extend over all the provinces of Taipei. The first section is to be governed by the Commandant of the Garrison, who will be specially invested with executive power, the civil officers being required to submit to his direction until the country is more settled. That section, in addition to troops, is to be protected by gendarmes alone, but the second section will be provided with both gendarmes and police, while the third will be furnished with police only.

Commenting upon the lethargic condition of the Orient, Viscount Soga is reported by the *Hochi* to have alleged that the direct cause of Oriental weakness lies in the prevalence of bribery and corruption. A friend of his who lately returned from China informed him that the failure of that country in the development of all such enterprises as railways, spinning mills, etc., is to be ascribed, not to the want of promoters or capital, but to the amount of bribes paid to all classes of government officials. Bribes generally absorb ten to twenty per cent. of the original capital. Corruption on such a scale cripples all enterprises, and demoralises the administration. It is not of course denied that bribery is practised to some extent even in foreign countries. But public opinion is too strong to allow it to thrive. The reputation of the organiser of the Panama Canal was besmirched by the dishonesty which was shown in the management of the work. These facts are more than sufficient to show the benefit of public censure. Such censure, however, is absolutely wanting in the Orient. A few years ago, the Persian

Government disbursed a million *yen* on telegraph works, while the real cost was not more than 250,000 *yen*. Yet the Persian scheme is said to have acquired considerable renown. The countries east of Persia are languishing under a burden of bribery. That it is openly practiced with impunity is the result of the absence of any restraining influence. If Japan has been enabled to maintain her national status among the Oriental nations and to make rapid progress, it is simply because she had not been tainted by the evil practice of bribery. A warning on this point is absolutely necessary for the country as the contagion, if it once spreads, will surely cripple the progress of the nation.

Referring to the import of rice from abroad, the *Nippon* says that while the total value realized in this branch of trade during the 29th year of Meiji (1896), did not exceed five million *yen*, imports for this year have already reached ten millions. Under the general heading of Chinese rice are included the Saigon, Rangoon, and Nanking products, which, when brought to the Tokyo market, are mixed for sale with 4th or 5th class Japanese rice. But the former grain can easily be distinguished on account of its cylindrical instead of oval shape.

The kerosene oil produced in Sumatra, asserts the *Fiji*, is nearly equal in quality to the Yehigo oil, but far inferior to the Russian petroleum. The year before last Messrs. Samuel Samuel & Co. imported Sumatra oil to the amount of 20,000 cases, but failed to realize any considerable profit. The Company therefore has stopped importing the oil, but it is now reported that Messrs. Raspe & Co. are expecting the arrival of over 49,000 cases from Sumatra, which is to be sold at 1.95 *yen* per case.

The *Chuo*, describing the miserable condition of the village of Toyoda in Saitama prefecture, says:—The village is situated in a hollow, and presented the aspect of a lake at the time of the late inundation. The rice crops were all under water. Some of the villagers were seen in a boat trying to reap the grain, but found a large portion of it sprouting or decayed, and unfit for food. The whole district is inundated to a depth of from 1½ to 3 feet. Communication from one house to another can only be effected by boat, while the dwellings are under water above the floor. Drinking water is not easily procurable, most of the wells being flooded.

The *Tokyo Shimbun* reports the import by Messrs. Samuel Samuel & Co. of 130,000 cases of kerosene oil from Russia on the 14th inst. In spite of the arrival of three vessels from America with kerosene oil at nearly the same time, quotations remain firm and unchanged, in view of the increasing demand for winter stock.

The *Fiji Shimpō* is urging strongly the necessity of laying submarine cables between Yokohama and Kobe and from thence to Nagasaki. It says that the slightest storm seems to bring about break-downs on the overland line between Osaka and the capital, and the bill for repairs grows larger year by year. At present the constant disorganization of the telegraphs is not only a continued cause of anxiety in business circles, but also a scandal that grows with every storm and flood.

It is expected that Count Kawamura will take over the duties of Governor-General of Formosa on the day that the new official organization of Formosa is promulgated:

The draft of the regulations for the control of artisans and labourers is finished. It is said that the Factory and Workshop regulations of England have been largely drawn upon by the drafters, but special provisions are provided for guarding against industrial combinations.

According to the *Tokyo Shimbun* 35,711 households in Kanagawa Prefecture were engaged in the rearing of silkworms in the Spring of this year. They succeeded in obtaining 50,307 *koku* of ordinary cocoons; 4,289 *koku*

of male cocoons; 218 *koku* of pierced cocoons, and 4,744 *koku* of waste cocoons.

The *Chuo* announces a police-strike in Kitaku, Osaka, involving some thirty constables. These men feeling annoyed at some alterations made by the Chief Inspector in the regulations governing their common boarding house, refused to comply with them. In the end they sent in their resignations *en bloc*.

From the *Kokumin* we gather that Messrs. Samuel Samuel and Co. lately made overtures for the supply of ten million *yen*—out of the seventeen millions required—of the municipal loan for harbour-building at Osaka. The Municipal Council seems to have decided to accept the offer. Some difficulty exists, we are told, in determining the issue value of the bonds, but the Council will meet the buyers half-way.

The *Tokyo Shimbun* declares that the Cabinet is a house divided against itself, the Satsuma Ministers opposing all suggestions that emanate from Count Okuma. It was owing to the Takano scandal, it says, that Mr. Komuchi resigned the Secretaryship of the Cabinet; while Count Matsukata is being assailed on all sides for the failure of his financial and currency schemes. Our contemporary is "agin the government" so its observations can carry little weight, especially when it goes on to picture the state of panic it imagines will ensue among the Ministry when it becomes generally known that Count Matsukata has turned to his most faithful followers and piteously asked for their advice on the subject of resignation. This is a schoolboy's writing.

It appears that Mr. Inuzaki Katsutaro, Director of one of the Sections in the Railway Bureau, is desirous of establishing examinations for engine-drivers, guards, conductors, and station-masters with a view to the maintenance of better discipline and the selection of only good men for these positions. He has gone to Europe and America with the intention of discovering how these matters are arranged in Western countries.

The *Fomiori* states that Mr. Nakamura and others, with the patronage of Messrs. Hara Zenzaburo and Amenomiyama Keijiro, recently organized a company under the name of the Oriental Iron-Dust Mining Company. The object of the association is to gather the iron dust that lies scattered over an extensive district between Kuji and Kawajiri in Ibaraki prefecture. Permission having been granted by the Department of Agriculture and Commerce, preparations are now being made by the Company to set up machinery of the latest invention. The iron dust is to be refined in the neighbourhood of the Kuji railway station, and work will commence from the 1st proximo.

According to the *Forosū*, the average speed attained on Government railways is 35 miles per hour in the case of fast trains; 30 miles in the case of ordinary trains; 20 miles by mixed trains, and 10 miles by goods' vans. This speed has been found incompatible with the steady development of communications, and the Government is contemplating increasing it to 40 miles per hour. Yet investigations show that the scheme is likely to be attended with serious danger if carried out on the present lines. Its practical enforcement ought to be postponed until the work of doubling the line has been completed.

Marquis Ito was among the speakers at the nineteenth meeting of the Rymonsha Club, held at Mr. Shibusawa's villa at Oji on the 17th instant. In the course of a lengthy speech the ex-Minister President deplored the present tendency of the nation to rush into extravagant enterprises before finding out whether there was a possibility of executing them or even of finding the money wherewith to set them going. During a recent visit to Osaka, he was struck with surprise at seeing the amount of pride and luxury that the citizens indulged in. Of course much of this was due to the influences of the late war. It was the universal experience of nations that emerged successfully from military en-

counters to rush at schemes of extravagant magnitude; this phase was also universally followed by wide-spread depression. He hoped that his nationals would take warning by Germany and proceed slowly and steadily, being content with modest results at first: then, when stability had been built into the foundations, larger schemes could be safely expanded and carried out. The nation had to find out what its income would be before launching out into extravagant expenditures: it was the same in business, and if Japanese capitalists and others bore this principle in mind success would crown their endeavours.

We learn from the *Fiji* that the Sumitomo Bank lately entered into a contract with the Chartered Bank in Kobe for a loan from the latter of one million *yen*, at a daily interest of 1.18 *sen* per 100 *yen*, giving as security public bonds. The *Fiji* does not guarantee the truth of this rumour.

The *Shogyo* calls attention to the recent discovery of a large coal mine in the neighbourhood of Iraushnai, Teshio province, Hokkaido. The discoverer obtained a lease from the Government for a tract of land extending over 1,200,000 *tsubo*. It seems that the mine is contiguous to the Sorachi measures, and the quality of coal is therefore supposed to be the same. The river Rumoi offers facilities for transportation, and it is expected that the new coal can be supplied at much lower prices than the Sorachi product.

The *Sekai-no-Nippon* reports that, on the night of the 13th instant, 120 coolies in Kanda were sentenced to a police fine on a charge of plying for hire with *jinrikisha* without licenses.

Investigations made by the *Saké* Brewing Corporation in Kyoto show the stock in August was as follows:—Clear *saké* 36,252 *koku*; sweet *saké* (mirin), 232 *koku*; distilled *saké* (shochu), 53 *koku*; white *saké*, 8 to. These figures indicate a decrease of ten per cent. when compared with the corresponding period of last year.

The Government has resolved, asserts the *Nichi Nichi*, to grant permission to Messrs. Mitsui and Amenomiyama to lay electric railways in the capital, the two companies having arranged a compromise.

An Imperial Ordinance, No. 356, embodying the Fleet Regulations, was issued on the 14th instant over the signature of Marquis Saigo, Minister of the Navy, with the Imperial sanction. The main features of the Regulations are as follow:—(1) A squadron is to consist of more than two vessels, and is to be provided, if necessary arises, with torpedo boats, torpedo corps, and transports. (2) The ordinary cruising limits for a squadron shall be the seas by which Japan is surrounded. (3) The Commander-in-Chief of a squadron shall be under the direct control of the Emperor or the Minister of the Navy. The Commander may, in any emergency, send a vessel or vessels under his charge beyond the cruising limits, without receiving instructions from his superior authorities. The official staff of a squadron shall consist of a Chief Councillor, Councillors, Navigation-master, Chief Engineer, Chief-Surgeon, Paymaster, and Private Secretary.

The area of land set apart by the Hokkaido Office for colonization, says the *Meiji Shimbun*, extends over 3,276 million *tsubo* (1,200 *tsubo* = 1 acre). The land granted to the immigrants up to the end of last year being 1,215 million *tsubo* in extent, a balance still remains of 2,061 millions. If 200 million *tsubo* are leased every year, the remaining land may be colonized in ten years, and the extent of cultivation will then be equal to that of Tokyo, Kyoto, Tokushima, and Fukui. In other words, every year will see an area equal to one of these cities or prefectures occupied in Hokkaido. But the actual area available for colonization is not limited to the above figures: The plains in the island suitable for cultivation may be supposed to cover 7,327 million *tsubo*, exclusive of tracts of land leased or

sold or set apart for the use of the Government. Should that be the case, a period of thirty-five years will be required to occupy all the land, at the rate of 200 million *tsubo* a year.

The *Kokumin* publishes a report on the foreign trade of Japan for the month of September and compares it with the corresponding period of last year:—

Merchandise.	30th year. Yen.	29th year. Yen.	Increase. Yen.
Exports	12,994,102	8,008,993	4,895,109
Imports	18,254,645	15,813,183	2,441,462
Total	31,248,748	23,912,176	7,336,572
Excess of imports	5,260,543	7,714,189	—
Bullion.			
Exports	194,957	1,485,907	-6,290,950
Imports	4,017,374	586,464	+3,430,910
Excess of exports	—	899,443	—
Excess of imports	3,822,416	—	—

An increase of 5,250,000 *yen* is noticeable in imports of merchandise while the excess of bullion imports reaches 3,820,000 *yen*.

The export of ginseng from Japan increases year by year, alleges the *Kokumin*. It is now divided into four classes according to its place of production: Aizu, Shinshiu, Nikko and Yonezawa. The following table shows the amount of production for the last two years:—

	Aizu. catties.	Shinshiu. catties.	Nikko. catties.	Yonezawa. catties.
29th year.....	180,000	70,000	10,000	13,000
30th year.....	100,000	60,000	8,000	10,000

The decrease noticeable in the figures for this year is doubtless owing to reduction made by growers in production, in view of an expected falling-off in exports after the late war with China. The quantity exported in the 27th year amounted to 326,172 catties, valued at 499,798 *yen*; in the 28th year to 299,636 catties, valued at 373,648 *yen*; and in the 29th year to 318,291 catties; realizing 435,360 *yen*.

The *Shogyo* states that the public loan bonds in Japan being divided into different classes, such as Old Bonds, Pension Bonds, Naval Consols, Railway Bonds, War Bonds, and Public Undertakings Bonds, there is no little difficulty in dealing with them on account of intricacy. The Government has now under consideration the issue of a loan to be designated "Imperial Loan Bonds" in place of the existing securities.

Among the provinces in Hokkaido where sericulture is eagerly pursued, remarks the *Nippon*, the most prominent are Ishikari, Shiribeshi, Oshima, Hidaka, Kushiro, Nemuro, Kitami, and Teshio. Most of these localities, except Shiribeshi, are remarkably well suited for this branch of industry. Last year the number of houses in which silkworms were reared totalled 1,864; silk worm eggs cards hatched were 2,353, while the cocoons obtained did not fall short of 1,998 *koku*. The enterprise promises to be very successful.

A report from the Governor of Osaka, received by the Home Department and published in the *Fiji*, announces that house lots and cultivated fields devastated by the late inundations extended over 105 *cho*; bridges washed away or damaged number 27; and embankments destroyed cover a distance of 3,400 *ken*.

The police constables who were lately arrested in Sahara, Chiba, on suspicion of having caused the death of a drunkard by violence, were acquitted after a preliminary examination. The doctor who examined the corpse was fined 300 *yen*, and is suspended from the practice of his profession for seven years.

At the foot of Mount Asakuma, Tatebayashi, Ise, lies a lonely village surrounded by luxuriant forests. Here lived a man named Takimoto Kinshiro, who had a wife, a son, and two daughters. The wife had been ill for some fourteen or fifteen years, and during the past ten days began to show signs of mental aberration. The husband and children were greatly grieved at this. On the night of the 10th inst., Sadakichi, one of the wife's relatives, with the in-

tention of paying a visit to the husband, knocked at the door. The feeble voice of a woman replied from within. Then followed a ghostly silence, but in a few minutes the door was opened to the visitor. To his great amazement he was told that the man whom he wanted to see had died but an hour ago. Feeling extremely suspicious, he lighted a candle and proceeded, though not without fear, to examine the inner room. Suddenly he saw at his feet three corpses, dreadfully mangled, while in another part of the house the master whom he sought was seen lying dead. He had apparently hanged himself. The terror-stricken visitor at once reported the matter to the nearest police. The tragedy is ascribed by some to Kinshiro, who they think committed the deeds during a fit of mental depression; but others say it is the cruel work of robbers.

Japanese scholars sent abroad to pursue their studies, asserts the *Yomiuri*, were formerly treated with the utmost cordiality. Public schools, factories, and workshops were freely placed at their disposal for inspection, and to facilitate their scientific researches. This hospitable mood on the part of foreigners has entirely changed since the late war with China. Workshops, factories, arsenals, laboratories, have been closed to Japanese students almost universally, while they meet with coolness everywhere. To what can this be attributed?

It was universally supposed, says the *Shogyo*, that the tea crop this year would show a decrease of 15 or 20 per cent. as compared with last year. But on the contrary, arrivals as well as sales indicate an increase:—

	29th year. Catties.	30th year. Catties.	Increase. Catties.
Sales.....	20,399,200	20,614,050	124,850
Arrivals	20,582,400	20,940,650	358,250
Stock on Oct. 14.	184,200	326,600	142,400

Last year, sales increased towards the close of the year, this year a decrease may be expected, but old teas of the year before last having been mixed with new leaves to the amount of 1,500,000 catties, the total output for this year will be much larger than in 1896.

From the *Shogyo* we learn that the members of the High Agricultural, Commercial, and Industrial Council have been nominated as follows:—Nakakamigawa Hikojiro, Shibusawa Eiichi, Masuda Ko, Inouye Kakugoro, Hara Zenzaburo, Otani Kahei, Okuda Shoko, Hamaoka Kotetsu, Shoda Heigoro, Senzoku Ko, Hiroumi Zinzaburo, Murata Ho, Tomita Tetsunosuke, Doi Michio, Nakano Buyei, Sakuma Tei-ichi, Abe Kojin. Article IV. of the Regulations of the Council limits the membership to thirty, while in accordance with Article V. of the same Regulations, the following special members have already been appointed:—Kimotsuki Kanetsura, Tajiri Inajiro, Teshima Seiichi, Furuichi Koi, Komura Jutaro.

The *Official Gazette* announces that military bands may be hired on proper application, in accordance with the following provisions:—(1) A band shall consist of 50 men; half a band of 25. (2) Application for bands must clearly state the number of men desired; the date and place of the entertainment, and this enquiry must be addressed to the bandmaster. (3) Hours for playing shall be limited to five; any prolongation of this period must be arranged beforehand. (4) Applicants shall pay fees of 25 *yen* for a whole band and 15 *yen* for half a band. (5) If the hours of playing interfere with meal-times, refreshments must be provided, and when it is necessary to take conveyances to places on the outskirts of Tokyo or Osaka, travelling expenses must be paid; and in case a night is to be passed away from home, lodgings must be found.

Speaking at a meeting of the Ryumonsha, an association of business-men, who gathered at Oji on Sunday, under the presidency of Mr. Shibusawa, Marquis Ito impressed upon his hearers the necessity of dropping many of the insular prejudices which Japanese entertain against foreigners. In the course of his recent travels

he had noticed how men of all nations combined in every country to develop the resources and industries of Europe and America. English, French, American, German, and Italian capitalists were found putting up money together to develop the mines on the Rand in South Africa. Each nation invested in the other's securities, all thoughts of race being dropped out of sight. So it should be in Japan, but at present foreigners found no inducement to invest their money here: they were not welcomed, in fact were kept aloof, by the Japanese, who seemed to fear that something dreadful must follow if they entered into business or other combinations with foreigners. Many too, feared that when the country was thrown open to mixed residence, the influx of aliens would be so great that Japan would be swamped by them. Such a theory was absurd. Italy, a land possessing attractions surpassing any other country in Europe, was open to all, yet resident aliens did not number more than 60,000—an insignificant total. The Marquis concluded by urging that Japan should at once take steps towards perfecting her laws so that foreigners would find the most perfect security for their lives, their capital, and their property, by which they would be attracted hither to settle and invest their money. If this liberal policy were pursued from the very commencement a bright era of advancement lay before the land that they all loved so well.

Marquis Ito, in the speech delivered by him last Sunday, at the villa of Mr. Shibusawa, expressed great anxiety for the future of Japan if its present policy of education continued to be pursued. He said he was in favour of the European system, and expressed the opinion that Japanese educationists would find their account in abandoning the lines at present followed. The speaker then went on to criticize the methods adopted by teachers in common schools. "I doubt," he said, "whether teachers in our common schools are not encouraging their scholars to foster an anti-foreign spirit. If such is the case, the inevitable result will be that, as the years go by, the outcries against foreigners will grow in volume and intensity, and by the time mixed residence comes into operation an intolerable condition of affairs will have been reached. Collisions between the people and the principles guiding official circles will be inevitable: while broils between Japanese and foreigners will arise in all directions. I cannot but feel grieved when I contemplate such a lamentable crisis. Suppose that the present anti-foreign spirit continues to prevail after the new treaties go into operation and mixed residence has begun: suppose that a number of men conspire together against foreigners to prevent them from carrying on enterprises in Japan in which they have invested their capital; suppose that they organise a mob, as the farmers in this country frequently do when they wish to take the law into their own hands: suppose *soshi* make a violent assault, taking as their ground that the foreigners have encroached upon the privileges of the Japanese and are appropriating to themselves profits that should belong solely to the people of the land, and then break into the foreigners' warehouses and factories—what would follow? The justly aggrieved foreigners would proceed against their assailants in the law courts, impeaching them as malefactors. But suppose the judge before whom the case was heard, was imbued with the same spirit of illogical, ill-conceived patriotism, and gave a partial judgment against the foreigners—what would happen then? Why, the matter would become a diplomatic question and the country would be thrown into a state of indescribable embarrassment, an exit from which would be impossible to find. These are my reasons for desiring an alteration in our educational system; these are my reasons for protesting against a narrow, shoddy patriotism being instilled into the hearts of our rising generation. The anti-foreign feeling of the past few years must be eradicated. Foreign capital will have to be introduced into Japan under appropriate management and by the giving of proper security: foreigners must therefore be received with cordiality."

KOREAN NEWS.

The *Independent* says that the King of Korea refused nine times to adopt the title of "Emperor," though the whole body of officials urged him to do so. Finally he yielded. The *Soul* newspaper adds that, according to Oriental ideas, a country is not really independent unless its ruler is an emperor. We were not aware of the fact, but if such a theory exists in Korea, the King did well to follow his officials' advice.

We do not find in the columns of the *Independent* any explanation of the recent change of Cabinet in Korea: our contemporary merely says that a report had been circulating about it for several weeks. Among the new Ministers, the most promising is Mr. Pak Jungyang, who takes the portfolio of Finance. He studied in Japan some years ago, and served subsequently as Korean Representative in Washington. He now becomes a Cabinet Minister for the third time. The Minister of War—Ye Tongkeun—is described as a statesman of the old school. Concerning the Minister of Justice, the *Independent* can only hope that, inasmuch as he now attends a Christian Church, his nature has been completely changed. The Minister of Agriculture—Chung Nokyong—appears to be an active man of pro-foreign ideas. The Minister of Education—Cho Pyengjik—has served in the Cabinet, during ten years, with intervals and is said to be shrewd and sensible. Finally, the Minister of the Household is of the Min family, a relative of the late Queen, and seems to have shown himself quiet and incorruptible.

A regiment—the Second—of Body Guards has been organized in *Soul* by taking 250 men each from four other corps, and will be drilled by the Russian officers and non-commissioned officers.

The memorial addressed by the Korean officials to the King, with reference to the "Emperor" question, contained the following passages:—

"Your Majesty's enlightened thoughts, chivalrous disposition and grandeur of wisdom surpass the hundred monarchs of the world. Your natural character equals the workings of Heaven above and earth beneath. Your greatness and goodness have reached holy light. You expound the teachings of the three Emperors and inherit the ideas of the five Emperors. Since your coronation your goodness and beneficent influence have been felt everywhere for three decades, and your ruling has been in accord with the spirit of the classics. Of late years the country experienced troubles and dangers, but through Your Majesty's goodness the foundation of the country became again secure and the multitudinous confusions gave way to orderliness and righteousness. The future of the dynasty has been transferred from perilous ground to a solid rock, and prosperity has replaced anxiety and worry. The establishment of independence and maintenance of freedom are solely due to the merciful help of Heaven and to the continuation of your glorious career.

The King's reply was as follows:—

"We have reigned during the last thirty-four years without any goodness, and we have only experienced trouble and confusion. Finally the most horrible calamity has visited us. We have not been able to rule as we ought. When our thoughts reach that point we are simply worried and the sweat of shame wets our back. However, the officials are urging us to assume the undeserved title; the Ministers are pressing us in person and the six armies and ten thousand citizens are clamoring at the Palace gates for the same cause. If we continue our refusal in the matter it seems that it will never end. In consideration of the unanimity of the demand we hereby reluctantly accept your advice to please the multitude. It is a great state affair and we consider that great care must be exercised in consummation of the ceremony in connection with the Coronation."

The scholars of the Confucian School got an artistic answer from the King when they petitioned him to become an emperor. According to the *Independent* His Majesty replied:—"Do not bother us, but go and study the classics."

An extraordinary affair is reported from Chulla province. The Secret Royal Inspector ordered the Magistrate of Suncheon to arrest a man. The Magistrate obeyed. The Governor of the Province, acting on instructions from the Supreme Court, ordered the Magistrate to release

the man. The Magistrate obeyed. The Royal Inspector then proceeded in person to Suncheon and ordered the Magistrate's four soldiers to re-arrest the man. The soldiers refused. They said that they had nothing to do with arrests, having been sent from the Chulla Regiment to protect the Magistrate. The Inspector then had the soldiers beaten until two of them had broken legs, and the other two broken arms, in which condition he threw them into prison. When news of the affair reached the Regiment, a number of the soldiers broke out of barracks, and were hunting the Inspector at the date of latest advice.

It is alleged that a Japanese resident of Wonsan recently seized a Korean who owed him money and beat the man to death. According to the Japanese story the man was found lying intoxicated in the Japanese Settlement. A Korean who reports the incident to the *Independent* says that "it is a common sight to see the Japanese beat and kick Korean coolies in the streets of Wonsan." We had hoped that steps had been taken to put an end to such practices.

CHINESE ITEMS.

The *N.-C. Daily News* declares that the Japanese Post Office in Shanghai carries off the palm for slow delivery, and notes that such a distinction is hard to earn in view of the glaring faults of several other offices. By way of proof our contemporary refers to a letter clearly addressed to a leading resident of Shanghai and duly registered. It was posted in Tokyo on June 1st; it reached Shanghai on June 9th, and it was delivered to the addressee in the first week of October. What became of it during its four months' detention in Shanghai is a mystery.

The English eleven in Shanghai has beaten the Scotch by 98 runs, the scores—only one innings was played—being 184 and 86. Since this match—England and Scotland—began to be played in 1874, England has secured 13 wins, Scotland 5, and 6 matches have been drawn.

The Japanese gun-boat *Oshima* visited Ningpo early in the present month, having on board the Vice-Consul for Shanghai. According to the *N.-C. Daily News* correspondent, the Captain, the Vice-Consul and several of the officers of the ship visited the Taotai, and assured him, among other things, that the war between the two countries had been a great blunder. The correspondent, who accuses the Japanese of "an offensive parade of superiority," and the Chinese of "an inherited hatred for the little Japan," adds that the Japanese officers had the "pure cheek" to ask permission to inspect the Chinghai forts. The Chinese Authorities do not appear to have considered the request "pure cheek" for they granted the desired permission. It is curious that a writer like this correspondent does not recognise with whom the guilt really lies of an "offensive parade of superiority." But men have always found singular difficulty in identifying the reflection of their own moral lineaments.

A fire occurred in Shanghai on the 12th instant, at the junction of the Fukien and Sunkiang Roads. About eighty houses were destroyed. They were in Chinese occupation, belonged to Messrs. E. D. Sassoon & Co., and Messrs. Cushman and Smith, and were insured in the Sun and Royal. The fire was caused by the carelessness of an itinerant cook.

The successful negotiation of the Hooley-Jameson loan is said to have improved Li Hung-chang's position in the eyes of the Emperor of China, and his partial restoration to imperial favour is not unlikely.

Some alarm was caused in Chêngtu in the middle of September, by the display of a huge red flag on the city wall, exhorting the people to rise up, drive out the foreigners and save the country. Happening on the eve of the triennial examination, when the population of

the city would receive an access of forty or fifty thousand people, the incident was disquieting. Nothing came of it, however. On the contrary, everything passed off with exceptional smoothness at the examination, and the missionaries, indirectly aided by the officials, distributed 35,000 gospels and tracts among the students.

It is stated that the Chinese Government has decided to organize two *corps d'armée*, of 35,000 men each, the men to be picked from the various Banner corps at Peking and elsewhere. The *Ad Astra* Brigade at Woonung, which has been under German instruction, is to be taken as a model, and foreign teachers of tactics will be employed. These corps are to be distinct from the Peking Field Force (*Shengchi Ying*), which is also supposed to be drilled after foreign methods.

Detailed information as to the loss of the Douglas Line S.S. *Namoa* shows that she left Amoy on October 2nd bound for Foochow, and, shortly after passing the Haitan Straits, struck an unsurveyed rock. It was considered necessary to beach her, but in that endeavour she was caught among rocks about half a mile from the shore, where the sea made a clean breach over her. The boats were lowered, and the crew and passengers made for the land, but one boat capsized, and the occupants were drowned, some other lives also being lost owing to heavy seas washing people out of the boats. The casualties are estimated at twenty. It appears to be the regular habit of the Chinese to rob foreign vessels under such circumstances. The sea was too rough to permit much plundering in the case of the *Namoa* before the British Vice-Consul from Foochow arrived upon the scene in a Chinese gun-boat, but the mail bags had been broken open, and many of the letters were found in the possession of the villagers.

We learn from a letter addressed by Messrs. Ford, Ruthven & Co. of Sydney to the *Hongkong Daily Press* that the Nippon Yusen Kaisha have promised to equip their Australian boats with refrigerators for carrying meat.

JAPAN'S NEW SHIPS OF WAR.

We have referred in our notes from Japanese papers to the names given by the Minister of State for the Navy to several of the ships now in course of construction for the Japanese Navy. Combining that information with facts recently published, we are in a position to compile the following list:—

Line-of-battle Ships.			
Name.	Tonnage.	Place of Building.	Date of expected completion.
1.— <i>Yashima</i>	12,140.	Lord Armstrong & Co.	Finished and in route for Japan.
2.— <i>Fuji</i>	9,800.	Thames Ironworks	do.
3.— <i>Shikishima</i>	12,140.	Lord Armstrong & Co.	Oct. 1899.
4.— <i>Aishima</i>	12,140.	Clyde Shipbuilding Yard.	Oct. 1899.
First-class Cruisers.			
1.— <i>Yakumo</i>	9,800.	Germany, Stettin	April 1900.
2.— <i>Asama</i>	9,800.	France	April 1900.
3.— <i>Yama</i>	9,800.	Lord Armstrong & Co.	July 1898.
4.— <i>Fubuki</i>	9,800.	Lord Armstrong & Co.	Sept. 1898.
Second-class Cruisers.			
1.— <i>Takasago</i>	4,850.	Lord Armstrong & Co.	Feb. 1900.
2.— <i>Kasagi</i>	4,850.	Philadelphia Ironworks	Dec. 1900.
3.— <i>Chikaze</i>	4,850.	San Francisco Ironworks	Dec. 1900.
Torpedo Gunboat.			
1.— <i>Chikaze</i>	1,300.	Yokosuka	—

It appears that the date of completion of all the vessels now building in England for Japan, has been deferred by two or three months owing to the strike of the engineers. One fact brought out very clearly by the above list is the rapidity of ship-building in England compared with any other country.

Although found as long ago as 1829, gold was not exported from Western Australia till the year 1886, when the precious metal to the value of £1,147 was discovered. In 1890, the output had grown to £16,664, and in 1893, to £421,385. In 1896, the yield amounted in value to over a million sterling, and Sir James Forrest anticipates that, at the close of the present year, the output will have exceeded £2,000,000.

NEWS OF THE WEEK.

M. Patenôtre, some years ago Minister for France at Peking, was recently appointed to Madrid.

A cargo boat named the *Hiyoshi Maru*, owned by Mr. Ikeda, of Kuaki-gun, with 140 iron rails on board, capsized yesterday and sunk in the Creek near Horai Bridge, owing to a rapid current and overloading.

The British barque *Battle Abbey*, from New York to Anjer for orders, arrived at Anjer on the 17th September under command of the mate, the captain having died on the voyage. The vessel has been ordered to Batavia.

Captain C. Christensen, of the German steamer *Rio*, which arrived at Hongkong from the Straits, on Oct. 9th reports that the Norwegian barque *Alida* struck a sunken rock, drawing 19½ ft., in lat 0°55 N., and long. 107°43 E.

There is excitement in the Straw-braid Manufacturers' Guild, says the *Hyogo News*. Two local foreign firms are supposed to have entered into contracts with a non-Guild maker, and this is held to be in contravention of some body or other's agreement.

A Kobe morning contemporary announces that penal servitude for life is the sentence passed upon the notorious "Oni Sada," more properly Yoshihara Katsuzo, for the murder of a coolie in Jack Young's Office some months ago. Judgment was passed in the Kobe District Court on the 16th.

At a farewell dinner given to Prince Ranjitsinji, the cricketer, at Cambridge on Sept. 23rd, he said he was proud that his uncle was fighting for the Queen on the Indian Frontier, and he could assure his hearers that if they knew the feelings of the Indian troops and especially of the Rajputs, they need never fear a foreign foe.

The British community at Sourabaya intend to present that city with a clock in commemoration of the Queen's Jubilee. The funds required have been raised and an order for the clock has been cab'd, says the *Sourabaya Courant*. The clock will be set up in the city gardens at a conspicuous spot, and will bear a suitable inscription.

The sudden unexpected ignition of some prepared chemicals at the Tokwa-kan Match factory, Kano-cho, Kobe, on Monday afternoon, led to an enormous blaze, we hear. It began at 3.50 p.m. and lasted till 7 in the evening, by which time the flames had swept through to Takimachi on the east and nearly to the station on the south. The damage is estimated at yen 13,000, none of which is covered by insurance.

On Saturday evening, a farewell dinner was given at the Grand Hotel to Mr. A. W. Payne, Jr., late of Messrs. Frazar & Co., Yokohama. Mr. Payne leaves for America on the *Coptic* on the 21st after a long and successful career in Japan. Those present included:—Messrs. E. W. Frazar, W. A. Crane, A. F. Cahusac, W. B. Curtis, Capt. Wm. H. Crawford, Messrs. H. K. A. Onderdonk, and Wm. H. Crawford, Jr.

"How is it done?" women ask when at a sale they buy a skirt or blouse for eighteenpence which they could not make themselves for half-a-crown. "How is it done?" A widow in a London police-court the other day explained that her business was the making of sunshades for a well-known firm. She had to find her own thread, and received one halfpenny per sunshade. That's how it's done, says the *Globe*.

We learn from the New York *Observer* that something in the nature of a religious parliament is proposed as a feature of the great world's exposition to be held in Paris in 1900. The objects to be obtained by it were recently set forth by M. l'Abbé Victor Charbonnel in a lecture given in Edinburgh, Scotland. These were stated to be:—1. To affirm the educational value and social power of religion for the

realization of the human ideal. 2. To proclaim religious liberty, that the conscience of every man is entitled to tolerance and respect, and to protest against all fanaticism of race or religion. 3. To seek, in default of doctrinal unity, the fraternal union of all men only as being religious, and to raise above the differences of sects the principles in which they are all united."

Dr. Herbert Giles, of Aberdeen, who was for a quarter of a century in the Chinese Consular service and is the author of a number of important Chinese books, has accepted the Professorship of Chinese at Cambridge University left vacant by the death of Sir Thomas Wade. He commences his duties in November. Dr. Giles retired from the Consular service in 1893, his last appointment being that of Consul at Ningpo.

A rather sharp earthquake shock was felt in Yokohama at 1 minute to 3 p.m. on Wednesday. In H.B.M.'s Court room, where the hearing of the *Melpomene-Patroclus* collision case was going on, the shock was sufficiently severe to bring Mr. Lowder to a temporary standstill in his address and gave him the opportunity to repeat a remark once before made in that Court—*Fiat justitia, ruat cælum*. One of the walls of the room cracked slightly, and the 1887 Jubilee picture of H.M. Queen Victoria looked as if it were coming down from the wall.

The *Journal of Education* is a serious magazine, but in a recent number the editorial mind unbent a little and reclothed a classic nursery rhyme in a most demure Latin frock. Here is the result:—

There was a young lady of Riga,
Who went for a ride on a tiger;
They came back from that ride
With the lady inside,
And a smile on the face of the tiger.

Addit se comitem tigridi lasciva puella,
Ridet et exultum tergo re veta feræ
Non eadem reditus species; sedet illa sub imis
Visceribus, monstri risus in ore sedet.

The *Courrier d'Haiphong* of the 21st Aug., tells how two soldiers—a Belgian and a Dutchman—deserted from the Dutch service in Borneo, last July, and put to sea in a boat belonging to one of their officers. They meant to reach Singapore in the hope of finding employment. But being without chart or compass, they lost their way, and drifted about until the current brought their craft to Pulo Condore, off the coast of Cochin China. One of them was barely 21 and the other 22½ years of age. The French residents at Pulo Condore received kindly these two unfortunates, whom privation had reduced to living skeletons. They were taken to the hospital and carefully brought round again. On recovery, they were looked after by the naval authorities, until an opportunity offered for their enlistment into the Foreign Legion.

A Chicago paper says "that a young Japanese woman aspires to the honour of being the first of her country people to brave the terrors of a winter in Alaska in search of gold. The young woman is Miss Takahashi, known to magazine readers under the *nom de plume* of 'Onoto Watanna.' Like the rest of the people of her country she is energetic, and takes an interest in all new things, especially in the advancement of her sex. She has identified herself with the Woman's Alaska Gold club, and proposes to be one of those who will leave in the spring for the gold fields with Miss Florence King, the head of the organization. Miss Takahashi is enthusiastic on the subject of woman's opportunities in the frozen north and gives it as her opinion that the percentage of those of her sex who start and turn back will not be as great as among the men. In appearance Miss Takahashi is small, she dresses modestly, and is an incessant talker."

It is rumoured that the Auckland law courts are likely to be engaged shortly with a more than usually interesting case. The story goes that a patient was in such a condition that it required human skin to be grafted on wounds

in order to cause them to heal. One or two kind-hearted people volunteered to give portions of their cuticle for this laudable object, and their offers were accepted. Among these martyrs was a young woman, who was greatly dismayed to find when she recovered from the effects of the chloroform that something like 50 inches had been transferred from various parts of her body to the patient. Her friends were also very angry, and their irritation increased when it was found that as a result of being flayed the young woman had in turn to become a patient, and as a matter of fact was laid up for over a fortnight, and has not been quite well since. An action for damages in the New Zealand Supreme Court is said to be now pending.

The *Lokal Anzeiger* learns from Copenhagen that Prince Charles of Denmark, at last yielding to the wishes of his wife, Princess Maud of Wales, has decided to enter the British Navy and to live in England.

The *Straits Times* derives the word "broker" from the Anglo-Saxon word "broc;" and then makes an attempt at a bad pun by remarking that it looks, at present, as if Far Eastern brokers will soon be "stony broke."

Information has been received by Mr. J. Kernan that his schooner the *Golden Fleece*, which was erroneously reported lost, has arrived all well at Miyako—between Sendai and Hakodate—where the schooner put in for some supplies.

A telegram that appears in the *Hiogo News* says that a stabbing affray occurred on the ship *Port Caledonia* in Nagasaki harbour on the morning of the 19th inst., knives being used by two of the crew. One man was badly cut being almost disembowelled, and is not expected to recover. The *Port Caledonia* arrived at Nagasaki on the 18th instant, having left Barry on June 4th.

Dredging for gold in Otago river, remarks a New Zealand paper, has made rapid strides during the past few years. Nearly every dredger at work is more than paying expenses; while the returns from several are very handsome, permitting of the payment of good dividends. Considerable excitement has been caused lately by the rich returns secured by the Electric No. 2, which obtained 600 oz. of gold in one week within a stonethrow of Cromwell, the site of the earliest dredging on the Kawarau River.

By the death of M. Pulszky at Budapest an eventful career is closed. The famous Hungarian archaeologist and publicist, who was 83 years of age, was the intimate friend and colleague of Kossuth, and took a leading part in the revolution, for which he was condemned to death. Like other notable Hungarians, he was pardoned, and afterwards devoted his energies to promoting art and science. During his career he held various important public positions, and was twice elected member of the Reichstag.

It is hoped that the Mandalay-Kunlon Railway will be completed in 1899. Recent explorations have shown that, providing the Chinese Government is agreeable, no insuperable difficulties lie in the way of extending it to Talifu and adjoining towns. The distance between Kunlon and Talifu is 280 miles. The most formidable obstacle is the Mekong, which is some two or three miles across, and the Gorge is about 2,000 ft. The Mandalay-Kunlon line will, no doubt, in the next century, be extended to China.

We greatly regret, says the *Nagasaki Express* of Oct. 15th, to have to announce the death of Mr. Arthur Norman, news of which has just been received by telegram from Hongkong. Mr. Norman originally came out to this country about twenty years ago as printer to the *Rising Sun* newspaper, which had then just been started. Some time afterwards, the *Rising Sun* and the *Nagasaki Express* were acquired by Mr. Sutton, and the two papers

were combined, Mr. Norman being made the manager of the business. Mr. Norman held this position until Mr. Sutton's death about six years ago. During this time the stationery was added to that of printing and publishing. When Mr. Sutton died, Mr. Norman acquired the business and the property by purchase from the administrator of Mr. Sutton's estate, and Mr. Norman continued to take charge of the business until his sad illness in the latter part of last year, the particulars of which will be fresh in the memory of our readers. Mr. Norman had a wide circle of friends in Nagasaki, and his loss will be much regretted.

Powerful electro-magnets with pointed poles are now employed in the United States for extracting iron sparks and splinters from the eye or flesh. The eye of the patient is brought close to the point of a pole, and the magnet, suddenly excited by an electric current, pulls out the intruders. As long ago as 1646, Rildanus employed magnets for this purpose (see his "Opera Observationum et Curationum"). Even when the iron has passed through the sclerotic and is lodged in the retina or the chamber behind it, the magnet enables a surgeon to localise it better ere proceeding to an operation.

Mr. John Clayton, some years ago, took twelve haricot plants of like age and habit: six were exposed to daylight and six kept in darkness. The lighted plants yielded a harvest of beans thrice greater than the unlighted. Some of the beans were sown next year, and those from the darkened plants produced a crop only half as good as those from the lighted plants. Moreover, after four seasons of this experiment in darkening, the offspring of the darkened plants in the third generation flowered indeed, but gave no fruit. The race was extinct.

The following is the programme of a charity concert to be given at the Yokohama Town Hall (Machigaisho), for the benefit of the Jizenkwaï and Charity Hospital, on Saturday, beginning at 5 p.m.:—1. Music, Yokohama Band; 2. Address, Mrs. Inagaki; 3. Japanese Music, Oide, Mikami, Mochida, Tomita, Ando, Nishimura; 4. Japanese Story, Kanda Teisui; 5. Teodori, Japanese children; 6. Address, Yamaoka Hatanoshin; 7. Japanese Music; 8. Address, K. Shiono; 9. Japanese Song, Ichio, Ippo, Tsurusawa Bunkyo; 10. Violin; 11. Teodori, Japanese children; 12. Japanese Song; 13. Violin; 14. Chinese Music, Chinamen. The programme, beginning at 5 p.m., will continue until between 9 and 10 p.m. Any person purchasing a ticket is entitled to stay from first to last, but may leave whenever they choose. The entertainment, being thoroughly Japanese, furnishes a fine opportunity to any person who desires to become acquainted with a Japanese entertainment, besides helping a worthy charity. Tickets can be obtained at Messrs. Moutrie & Co., Main Street.

To have a thief as neighbour in a railway carriage is bad enough, says the *Hiogo News*, but to be subsequently mistaken for the thief is a great deal worse. This was the experience of one of the Kobe cricketers during his return by train from Yokohama. A respectable-looking foreigner entered the carriage near Nagoya and seated himself between two sleeping Japanese. He remained only a short time, and left again apparently in answer to a signal from a Japanese who appeared at the window during the train's stay at a small station. In the morning the sleepers found, one that his Gladstone bag had been ripped open and the other that a valuable *netsuké* had been abstracted from his girdle. At Kyoto information was given and a zealous policeman began questioning the Kobe cricketer in a manner evidencing his very hasty and unfounded suspicions, while a crowd quickly assembled outside. When this was explained to the other passengers they treated it as a good joke, but it might have been otherwise. The gentleman wanted will probably be found ere long.

The *Hiogo News*, reporting the wedding of Mr. Charles Thwaites and Miss Letitia Jane

Cabeldu on Monday, says:—The first ceremony was at the British Consulate, where Mr. Consul Hall conducted the civil contract at half-past two. Proceeding then directly to the Union Church, the service was taken by the Rev. H. J. Foss, M.A., he being an old friend of the bride's family. The altar and altar-rails had been decorated for the occasion by members of the Church Guild. Mrs. Lightfoot presided at the organ and received the bridal party with a brilliant wedding march. The happy bridegroom was attended by Mr. F. W. Grimbale as "best man;" the Misses E. Cabeldu and Pease acted as bridesmaids. The bride was given away by her father, Mr. P. S. Cabeldu. Among many presents received from friends in Kobe, Yokohama, and Shanghai two may be especially mentioned—a clock from the Committee of the K.R. & A.C., and a gold-watch from the Members of the Lodge Hiogo and Osaka, Mr. Thwaites being at this time Treasurer of the former and R.W.M. of the latter. Our congratulations and good wishes go with the newly married couple. They left Kobe by the 5 p.m. train for Kyoto, en route for Yokohama and Miyanosita.

Subways for London streets, says the *Engineer*, is likely to become a rallying-cry in municipal affairs at no future date, since it seems quite unlikely that the numerous subterranean railways for London, now either authorised or actually under construction, will do much to relieve the pressure of traffic in the main thoroughfares. It is interesting, therefore, to note that the long talked-of scheme for a subway between the Middle Temple and the Royal Courts of Justice, apparently doomed to be indefinitely pigeon-holed, is being revived. When the City and West End Railway Bill was before Parliament last summer, a clause was inserted by which the company undertook to construct this subway, as a consideration for the wayleave to be granted to them to drive their own tunnels under the Strand. When the Bill was thrown out—although it will doubtless be reintroduced next session—the subway, of course, was also dropped. The Benchers of the Temple have now taken up the scheme, and power has been granted by the Strand District Board of Works, with the proviso that the subway when constructed shall be always open to the general public during the hours of legal business at the courts.

ENGLISH CYCLING NOTES.

(FROM A CORRESPONDENT.)

Since writing my last letter, the race of the season, so far as London is concerned, has taken place, and new world's records from 33 to 100 miles have been created. I am referring to the Catford Gold Vase Race, which, though of 12 hours duration, is run in three sections, the first being of 6 hours, and the last two of 3 hours respectively. The Gold Vase itself is valued at 130 guineas, and must be won three times, not necessarily consecutively, before it becomes the actual property of the winner. J. W. Stocks had only to repeat his performance of the last 2 years to become the proud possessor of this valuable trophy. On Saturday, August 28th, the first 6 hours of this race was run off at the Catford Cycling Track, and a large crowd of spectators witnessed the struggle between J. W. Stocks, A. A. Chase and A. E. Walters, who were the only starters; Teddy Rale, who holds the world's record for 6 days, and J. Lumsden being the absentees. The first hour of the race was very fast, and Stocks' race gave every one who witnessed his riding the impression that he would have no difficulty in making the Vase his own property. But soon after the completion of what might be termed Stocks' distance, viz. the hour, or 30 miles, he was observed to be labouring somewhat and having a bad time. Now, when Stocks has a bad time it generally lasts 2 or 3 hours, which was the case on this occasion; during this time Chase had been forced to retire, the great speed at which Stocks had travelled in the first part of the race fairly breaking this rider up; but,

Walters, who had been going very steadily, had passed J. W. Stocks, and was leading by about 5 laps. Entering the last hour, Stocks had so much improved as to be able in half an hour to regain a lap, and then, carefully nursing himself behind Walters, he was able, by one of those spurts he is so well known by, to regain another 200 yards in the last 5 minutes. During the ride he put up fresh world's records from 33 to 55 miles, and A. E. Walters, British records from 35 to 102 miles.

The second day's racing was more interesting still, and the large crowd surrounding the track fully expected to see J. W. Stocks retrieve his lost distance, and put himself in such a position that he would be sure of winning the Vase, but it soon became apparent that he was not riding in his best form, and though leading up to the 24th mile, he was then passed by Walters, who, having gained the lead, kept it right up to the finish. This was a surprise to the spectators, but not so great as the marvellous riding of Walters, now an old hand on the track. From the 33rd mile he was well within world's records, and at the close of the 3rd hour he was going so strong that he decided to stay on the track till he had completed the 100 miles, which he did in the splendid time of 3 hours, 25 mins., 53 $\frac{1}{2}$ th secs. He had now nearly 5 miles the lead of Stocks on the 2 days, or 9 hours riding.

The 3rd and last section of this race started in heavy rain and strong winds, yet in spite of the elements three or four thousand people assembled to watch two of England's best riders complete the final 3 hours. Miserable and dreary was the aspect in all directions, and J. W. Stocks, seeing that he had no chance of overtaking Walters, retired before the completion of the 1st hour. Walters journeyed on, solitary, round the track till he had been riding about 2 $\frac{1}{2}$ hours, when he received permission to retire, and was declared winner of the race, having in the 11 $\frac{1}{2}$ hours covered a distance of 311 miles, 1,094 yards.

Various cycle parades have been held during the past season in aid of local institutions, and in nearly every case the collections have proved very satisfactory. On Sunday, August 29th the Cyclists of Kent held their annual Church Parade at Folkestone, when the Rector of St. Michaels, the Rev. E. Husband, gave an interesting address, the Mayor of the town attending in state. The reverend gentleman, who is an ardent cyclist, during his address stated that he considered a bicycle was the best doctor a man could secure. Another parade, not quite of the same character, was recently held in Nottingham: it was a Vegetable Cycle Parade. The cyclist taking part in it were decorated, as well as their machines, with various vegetables. It was a peculiar sight to see the machines passing through the principal streets of Nottingham gaily decorated with cabbages, onions, marrows, and other products of the vegetable world. A strange spectacle, no doubt, but it answered the purpose for which it was originated, and a good collection in aid of the Children's Hospital was made.

Another event which caused a certain amount of interest in London was the 40 miles Scratch Race for the Roberts Shield, which forms the Championship of the South of England. The Roberts Shield is the trophy of the Southern Roads Riding Association, and is ridden for every year by one representative of each club affiliated to the Association. The Anerley Bicycle Club has held this Challenge Shield for the last 3 years, but this year, A. W. Turner, of the Brighton Wanderers, succeeded in beating their representative, F. R. Dixon, W. Ellis, the rider who the club had originally nominated to represent them, having sustained a serious accident while training for this event at the Herne Hill Track. A sealed handicap was run in conjunction with this race, F. G. Growley, who secured 2nd position in the scratch race, being the winner. A very fair attendance witnessed this meeting, which was

run off at the Crystal Palace track, Sydenham, on August 28th.

I was surprised to hear of one of our old amateurs, E. H. Ainsworth, joining the ranks of the Professionals the day before he left England for Australia. He is travelling with J. J. Platt-Betts per P. & O. *China*. C. F. Barden and T. J. Gascoyne will shortly be following.

CORRESPONDENCE.

THE RESCUE CASE.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—So many of your readers have expressed to me privately their interest in the sad case of the woman sold into shame whose rescue was to be attempted, that I beg to report through your columns the result of the endeavor. It gives me great pleasure to say that the effort was entirely successful. It was handled so wisely by the person entrusted with the delicate commission that no antagonisms were aroused and the young woman herself was safely removed to another city and placed amid helpful, sympathetic surroundings. She now has a good home with steady employment and will easily support herself. She is so delighted to be freed from her loathsome bondage and so anxious to prove herself worthy of the great help given her that there is strong reason for expecting the best results that could be desired.

One decidedly interesting feature of the case was that the proprietor of the establishment into which she had been sold, on learning that she was being bought out by strangers as a work of pure benevolence, actually made a contribution himself to "the excellent undertaking."

The total expense of the whole effort, including a few cheap clothes for the freed woman, was \$80. Of this amount \$56 has already been raised. As the balance of the loan must be shortly returned there is still opportunity for any of your readers who may desire a practical share in this life-saving work, to "lend a hand." Not often do we have the chance to accomplish so much in what vitally affects the whole life of an individual at so slight an outlay of time and money, as in the present case. This strong, happy, hopeful young woman, eighteen years of age, who feels that she is out from the jaws of hell and is already entering paradise, is her own sufficient appeal. She thanks her unknown benefactors and promises with God's help to prove worthy of the salvation He and they have wrought for her.

J. H. PETTEE.

Okayama, 14th October, 1897.

THE FUJIN JIZENKAI.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Hearing that it is being said that our hospital at Negishi is closed, we beg to state through your columns that it is not closed, nor is there the slightest intention of closing.

The report must have arisen from the fact that, since the 1st of October, we have been without a house physician, and have, during that time, done only dispensary work; as soon, however, as a competent physician can be secured, patients will be admitted as usual.

During the quarter ending in September, 356 persons received assistance as out-patients, and 23 were admitted into the hospital.

The number treated is limited only by financial considerations, it being contrary to our policy to go into debt. The regular annual entertainment for raising funds for this benevolence will be held next Saturday, 23rd, after which a fuller report will be given.

Very truly yours,

THE FUJIN JIZENKAI.

Yokohama, Oct. 18th, 1897.

FRIEND DOOMAN TO THE RESCUE OF ROMAN CATHOLICISM.

TO THE EDITOR OF THE "JAPAN MAIL."

DEAR SIR,—It is not at all surprising to me that a true, though somewhat wayward, daughter of Mother Rome, should come to the rescue of the sinking craft. Mr. Dooman, in his letter in the *Weekly Mail* of the 16th, has indirectly claimed one point,—the only point really worthy of notice, viz., that the Episcopal denomination is not Protestant. It is a very rare thing that you ever hear an Episcopalian radically criticise the Hierarchy. This is all that really needs to be said in reply to

friend Dooman's dissertation. For the only attempt he makes at reply to my tract is that he has been fortunate not to read it, and that I can't show a case where the Hierarchy ever incited subjects to rebel against the state,—the very thing I have shown in my tract. I would send friend Dooman a copy for his own special benefit if I thought the reading of it would not inflict a misfortune upon him. But a philosopher and erudite investigator of truth who plunges into criticising that whereof he has not read ought to have lived in the age of King John and the early childhood of the Royal Society of England.

It is only two years since I had a discussion with a Roman priest on one of the very points now claimed by friend Dooman for the Hierarchy, namely, that Christian civilization is indebted to the Papacy for its existence. This set me to studying this question. I take it that he means, solely indebted to the Papacy. This is not at all true in a positive sense; and is only partially true in a negative sense. If Mr. Dooman would acquaint himself a little better with the history of Romanism from an impartial and philosophic standpoint, he will find that the Papacy was continually putting a padlock on the lips of learning. She has not ceased to do this to this very day. Surely Mr. Dooman finds no excuse for not knowing these facts when they lie open before him in the pages of Papal decrees. And this fiction, that we are indebted to the Papacy for our Bible is groundless in any positive sense. The Bible exclusively in the hands of the Papacy has been perverted to a death and damnation to every man who would not bend to the interpretations of the Mother of harlots. And is this the considerate, the humane, the with all, Scriptural institution which Mr. Dooman proposes to defend?

Pray tell us, Mr. Dooman, what are the "well-earned rights" for the existence of which the Hierarchy must struggle against the State? Is it the right to destroy the common schools, and in their place put Papal schools? Is this one right? Is another the right to disfranchise a Protestant, as is done in Ecuador? And when you ask, "Is the Roman Church blameable because she is solicitous that civil laws and civil powers should be based upon the fundamental principles of Christianity?" do you not know that the Roman Church is not solicitous at all about such a matter. Her solicitation is that the laws and institutions of the State shall be patterned after the *Hierarchy*, the "true church" as the Pope writes it. And does not Mr. Dooman know that the fundamental principles of Christianity and those of the Hierarchy are very different? And where would your own religious freedom be, friend Dooman, if your lot were cast in some of the South American Roman republics?

Again, is Mr. Dooman really serious when he challenges Dr. Christlieb and myself to show a case where the Papacy has ever incited rebellion against the state? What is absolving subjects from their allegiance to the king but inciting rebellion? And what is the bloody war which followed? Mr. Dooman does not need to have read the Correspondence in the *Mail*, to say nothing of the tract. And when he says that Papacy has never arrayed herself with "the classes against the masses," he slips again. Guizot, who wrote the history of civilization in which due credit is given to the Papacy for the part she played in advancement, makes such a statement.

It is hardly fair, it is hardly true, for Mr. Dooman to step aside to say that Protestantism is working for the aristocratic classes while Rome is ministering to the poor and ignorant. If such were the case, quite a different reason and motive could be assigned to Rome's zeal for the ignorant. Such a comparison is fatal to Mr. Dooman's argument. Congenial soil is necessary to existence.

It is really not far from Canterbury to the Vatican; and in truth the two ought to unite. The contest would be simplified. But for what reason Mr. Dooman should step in to protest against what he very charitably calls "this insensate and disgraceful attack on the Roman Church" (pretty strong words, these) can be discovered by no other means than by the supposition that he is sailing on to Jerusalem in the same kind of a craft. The time to check the growth of evil weeds is when they make their appearance, not when they are full grown, and have sunk their roots deep in the soil. The day will come when Japan will have to meet the hydra-headed dragon of the Papacy, one or two orders of which have been forbidden in nearly every civilized nation of the West. Japan will never banish Christianity from her shores; nor probably religious sects. They could do well without the latter, however. Her leading men have reached a state of deliberate judgment which qualifies them to discriminate. It is a truth evident to my mind, however,

that if Romanism even gained the ascendancy in this country, Mr. Dooman along with the rest of us would have to sail. If this question is not investigated now, it will be when its solution will have become ten-fold more difficult.

The principles which underlie the Hierarchy are contrary to both nature and Revelation, and hence contrary to civil authority, which is according to both nature and Revelation. There has constantly been a struggle in the minds of many Papists to reconcile this conflict. It has never been done. And I would like to see a stronger defence of Romanism than has appeared so far in this discussion. If Mr. Dooman is the man to give us this pleasure, we shall with all courtesy wait upon him.

Very truly,
Kanazawa, Oct. 18th, 1897.

E. SNODGRASS.

NEGLECTED SOMETHING OR SAID SOMETHING: WHICH?

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—It is really difficult to know what I am expected to meet; one day it is because I have said something; the next day it is because I "refuse to take part" in a Fourth of July celebration; and the next thing I hear is that "as a matter of fact the United States Legation did not take any notice whatever of Mr. McCaleb's expression of views about the celebration of Independence Day," but it is because he has neglected to take out a United States passport that has given rise to the trouble.

The accusation that I absented myself from such meeting needs no serious notice. Others invited and living nearer than I did the same but have their passports. If it be on the ground of what I have said in the card, then it follows that one cannot quote the scriptures and be a United States citizen. The "context" of the card was that I opposed war and worldliness. Whether the scriptures given will bear out this idea, a fuller quotation will show: "My Kingdom is not of this world; if my Kingdom were of this world then would my servants fight." "For many walk of whom I told you often, and now tell you even weeping, that they are enemies to the cross of Christ: whose end is perdition, whose god is the belly, and whose glory is in their shame, who mind earthly things." For our citizenship is in heaven. Nothing is plainer than that these scriptures condemn following after the flesh, and carnal warfare. That this has been the point of my contention from the first every one at all acquainted with the facts knows. But the Editor releases me from this accusation any way since now he says, "As a matter of fact, the United States Legation did not take any notice whatever of Mr. McCaleb's expression of views about the celebration of Independence Day," but it is because he neglected to take out a United States passport. I am not surprised at the Editor's informant wanting to abandon the original ground of his accusation, since in addition to its having become quite ridiculous on the very face of it, the Minister is placed in the attitude of exercising a censorship over my religious utterances. But that the Editor has been misinformed let the reader note the following:—

"July 9th, 1897. Mr. McCaleb, No. 12, Tsukiji, Tokyo.—Dear Sir.—Referring to your favor of the 9th instant I am requested by Minister Buck to reply that he had been given to understand that you had recently, in a public manner and over your own signature, practically renounced your citizenship in and allegiance to the United States.

R. S. MILLER, Interpreter."

If further comment were at all necessary on this point I would add that in conversation with Mr. Miller he suggested that he had thought as a possible means of settling the difficulty that I might just consider what I had stated in the card "unsaid." When I called on the Minister to know on what ground my citizenship was questioned, he at once turned to his desk, took up the identical card and read "Our citizenship is in heaven," saying that his interpretation of it was that if my citizenship was in heaven I did not claim any on earth. Up till this very recent "information" the burden of the whole accusation has been what I have said. Mr. Miller and Mr. Herod both gave as a reason for the special action against me that "Others have not said what you have."

The reason for cancelling my signature to the form referred to was not because I did not regard myself as a citizen of the United States; but the Minister insisted on leaving out two very important clauses that I wanted inserted, which afterwards gave rise to some doubt as to the document, and another very important reason was, "if the right of free birth and a peaceable law-abiding

life of thirty-five do not grant to me the privileges of a United States citizen, I feel that it is a mistake to seek such privileges by any formal statement to that effect at this late date, especially since such privileges have been granted me in Japan for the last five years without such statement. I can but feel that it is a reflection on my character." That this withdrawal of my name created doubt in the Minister's mind about my citizenship is mere higgling. I was offered the passport after all this occurred without signing any agreement whatever. I declined it on the ground that it was not a regular passport but was only issued for two months till news could be had from Washington. This seemed to be treating me more as a criminal than a citizen. I may add here that only this two months affair and no regular passport was ever granted me on the form eliminating the Oath. The passport will speak for itself. But as to any doubt about my citizenship, it was only a week or so ago that the Minister expressed himself to me in the presence of a third party that personally he had no doubt about it whatever. Why should he have? I have given him repeatedly just such evidence as has, without a single exception, been received from other citizens, which has been nothing more than a mere statement of the fact, and this often by proxy. I cannot be mistaken here since I have the written testimony of a number of citizens to this effect. That I have declined to take the Oath cuts no figure whatever till it first be shown that it was justly demanded. But that such is not the case and that the Editor is quite mistaken in saying, "We are correct, we believe, in saying that all persons receiving the protection of the American Legation in Japan or obtaining its endorsement for any purpose are provided with passports," will appear from the following correspondence which out of a number of other letters of the same import I have special permission to publish:—

"Oct. 6th 1897. J. M. McCaleb, 12 Tsukiji. Dear Sir,—Replying to your questions in your favor of yesterday I will say that on coming to Japan I did not obtain a passport from the United States Government, nor have I since coming to Japan been requested to do so. I am, yours faithfully,

Hear another citizen to the same effect:—

"Oct. 7, 1897" Dear Mr. McCaleb; I came to Japan 9 years ago when Mr. Hubbard was U. S. Minister. I took out no U. S. passport on coming to Japan; and have lived through the administrations of Ministers Hubbard, Swift, Dun, and had dealings with all of them, but have never been requested by any one to take out a U. S. passport. Moreover, I have never heard of the U. S. Minister being imposed upon by a national of another country attempting to pass himself off as a U. S. citizen. I am persuaded that the present Minister's course, if followed out will become odious to American residents who have been years in this land. There is absolutely no necessity for such a course. When such a necessity arises, it will be time enough to pursue such a course. The circumstances which have brought up this question are ridiculous and laughable to me. It is truly a 'tempest in a teapot!'

When the Editor asserted that I was the only citizen that had not taken out a U. S. passport, I wrote to the U. S. citizens miscellaneously selected. Nine have been heard from. Out of the nine six testify that they have no U. S. passports, never had nor been requested to have any. Every one of them have their Japanese.

It would appear from these letters that two-thirds of the U. S. citizens have no U. S. passports. Yet to make a showing of defence the Minister has betrayed the Editor into the mistake of saying that "other American citizen in Japan have complied with the necessary forms," and of making it appear that I am the only citizen that has not done so. I simply state the facts, others can draw their own conclusions.

Again the Editor is mistaken in saying I ask the Minister to violate the law in my behalf and that he "has absolutely no discretion in the matter," for the Minister stated to me, "I have some discretionary power." He and his predecessors have for years been in the habit of exercising this "discretionary power" in regard to all others without feeling they violate the law; I fail to see what makes it so peculiarly unlawful to extend the same power to me. I only ask for uniform treatment which no doubt would have been given had it not been that the Minister was inveigled into a blunder, which, for his oath's sake and the dignity of his position, he could not retract, by the ill-advice of an overwrought enthusiasm of a Fourth of July effusion.

Most respectfully,
12, Tsukiji Tokyo, Oct. 11th, 1898.

J. M. MCALEB.

IN H.B.M.'S COURT FOR JAPAN.

IN ADMIRALTY.

Before H. S. WILKINSON, Esq., Judge, sitting with ASSESSORS.

Tuesday, Oct. 19th, 1897.

THE "MELPOMENE"—"PATROCLUS" COLLISION.

In the above Court, composed of Mr. Justice Wilkinson, President, and Commander E. H. Grafton, R.N., H.M.S. *Redpole*, and R. Conradi, master of the S.S. *Oolong*, as nautical assessors, the owners of the Austrian Lloyd's steamship *Melpomene* continued the suit against the owners of the Ocean steamship *Patroclus* for \$30,000 alleged damage sustained by the former vessel through collision with the *Patroclus* in Yokohama harbour during the typhoon on the morning of the 9th September.

Mr. Lowder appeared for the plaintiffs and Mr. Walford for defendants.

Mr. Lowder said the ground of the plaintiffs in the case was negligence on the part of defendants' ship and Mr. Walford submitted that there was negligence on the other side.

Mr. Lowder briefly opened the case for plaintiffs and read the pleadings and answer, which were as follow:—

PETITION.

In Her Britannic Majesty's Court for Japan. In Admiralty.

The 20th day of September, 1897.

Between: { The Master and Owners of the Austro-Hungarian Steamship *Melpomene*, Plaintiffs, and
The owners of the British steamship *Patroclus*, Dickens Master, Defendants.
To: HIRAM SHAW WILKINSON, Esq., Judge of the Court.

The petition of the above-named plaintiffs sheweth as follows:—

1.—The Plaintiffs are the Austrian Lloyds Steam Navigation Company.

2.—The Defendants are British Subjects and are not resident within the jurisdiction of this honorable Court.

3.—The *Melpomene* is a steamship of 1,954 register and is owned by the Austrian Lloyds Steam Navigation Company. At the time of the collision hereinafter referred to she was lying moored to a buoy in the harbour of Yokohama and with her starboard anchor down.

4.—At the approach of the equinox, serious atmospheric disturbances are not unusual, but rather to be looked for in the Japan seas; and on the 8th day of the present month there occurred in the harbour of Yokohama occasional showers of rain, with variable winds, which increased during the night to strong squalls accompanied with torrents of rain. At 2.30 a.m. on the 9th September, the weather had become so threatening that the Master, Officers and crew of the *Melpomene* were all on deck or at their stations in order to be ready for any emergency, and orders had been given to get up steam.

5.—From 2.30 a.m. the weather increased in violence; the barometer began to fall, and the wind, in great gusts, strengthened into a gale, until at 5 a.m. it was blowing with typhoon force, when the starboard anchor of the *Melpomene* was let go, and orders were given to get a hawser ready to bend on to the port anchor.

6.—At about 5.15 a.m. or 5.20 a.m., the weather not having moderated, the steamship *Patroclus* was observed approaching the *Kaiser* (which was lying at anchor ahead of the *Melpomene*) and when astern of the *Kaiser* she was brought suddenly up with her head to wind and broadside on to the port bow of the *Melpomene*. In this position, seeing that a collision was unavoidable by any manœuvre safely practicable by those on board the *Melpomene*, measures were taken to render its effect less disastrous to the *Melpomene* by putting fenders over her port bow, and preparing bales of cotton to be used as fenders. At or about 5.40 a.m. the starboard side of the *Patroclus* came into collision with the *Melpomene*, knocking two large holes in her port bow besides doing other damages.

7.—The *Patroclus* did not keep out of the way of the *Melpomene*, and those on board her neglected to take proper and reasonable measures to enable that vessel to ride out the storm with safety to herself and to other vessels in the harbour of Yokohama; she was moored to a buoy with only 5 fathoms of chain: and although the strain threatened to become, and eventually did become, greater than the holding power of her mooring, nevertheless the chain was not

eased or slackened and no other effective measures were taken to relieve the strain, by reason of which neglect the *Patroclus* dragged her moorings, and having no steam up came into collision with the *Melpomene*.

8.—The said collision, and the damages and losses consequent thereon, were caused by the neglect of ordinary precautions and measures on board the *Patroclus* and by some or all of the matters and things stated in paragraph 7 hereof, or otherwise by the neglect, default and mismanagement of those on board the *Patroclus* in not keeping clear of the *Melpomene* and in not avoiding the collision as they might and ought to have done by the exercise of ordinary reasonable and proper care and precaution. Nothing could have been done by those on board the *Melpomene* to avoid the collision, and no blame is attributable to her or to any one on board her for the collision.

9.—The plaintiffs have sustained loss and damage by the reason of the collision amounting to yen 30,000 for which the defendants are liable. The plaintiffs therefore pray:

1.—Judgement against the defendants, the owners of the *Patroclus*, for the damage and loss occasioned to the plaintiffs by reason of the collision and the condemnation of defendant therein and in costs.

2.—That a proper account of such damages and loss may be taken.

3.—That the plaintiffs may have such further or other relief as the nature of the case may require.

(Signed)

J. F. LOWDER,
Counsel for the Plaintiffs.

The Plaintiffs bring into Court the sum of yen 1,000 as security for the Defendants' costs.

ANSWER.

The answer of the above named Defendants to the Petition of the Plaintiffs sheweth as follows:—

1.—On the night of the 8th and the morning of the 9th September 1897 the steamship *Patroclus*, 3,548 tons register, with a carrying capacity of 8,000 tons, was lying moored to a buoy in the harbour of Yokohama with about five fathoms of chain from her bows to the buoy. At a short distance nearly north of the position of the *Patroclus* the German flagship *Kaiser* was lying moored to a buoy, and at a short distance eastward of the *Kaiser* the German warship *Irene* was lying at anchor. The steamship *Melpomene* was lying moored to a buoy nearly north of the position of the *Kaiser*.

The *Patroclus* was almost empty of cargo and was therefore very high out of the water.

2.—Until 2 a.m. on the morning of the 9th September there was nothing to indicate the approach of unusually bad weather, but at and from 2 p.m. the wind was fresh to strong from the South East and afterwards veered to the South and S.S.W. and the glass fell rapidly. At 4 a.m. it was blowing very hard and all necessary preparations were made on board the *Patroclus* for getting up steam as quickly as possible. From 4 a.m. until after the time of the collision hereinafter referred to, the officers and crew of the *Patroclus* were on duty and at their stations. At 5 a.m. the wind had increased to typhoon force and the starboard anchor of the *Patroclus* was let go. No chain was then or had been previously paid out from the *Patroclus* because she was so high out of the water and the position of the German vessels aforesaid (and especially of the *Kaiser*) in relation to the *Patroclus*, was such that to have paid out chain would have greatly increased the danger of collision and must have resulted in far more serious consequences if any collision had occurred.

4.—At about 5 a.m. the *Patroclus* was struck by a terrific squall which caused her to drag her moorings, and although ample chain was paid out to the starboard anchor, both that and the buoy moorings were dragged until the *Patroclus* was brought up astern of the *Kaiser* heading nearly West and afterwards in swinging round with her head coming to the wind she came into collision with the *Melpomene*, those on board the *Patroclus* having first put fenders over her starboard side to ease the shock of the collision.

5.—The dragging of the moorings and anchor as aforesaid happened without any neglect or default or mismanagement of any person or persons on board the *Patroclus* and was the result of inevitable accident.

6.—Those on board the *Melpomene* improperly neglected to keep a good look out.

7.—Before and during the time when the *Patroclus* was dragging as aforesaid the port anchor of the *Melpomene* was hanging in the bridle and on the tackles and although from the time when the *Patroclus* commenced to drag she was continuously approaching the *Melpo-*

mene and threatening a collision, those on board the *Melpomene* improperly neglected to remove the said anchor from that position.

8.—When the *Patroclus* was brought up as aforesaid those on board the *Melpomene* improperly neglected to pay out chain to the buoy to which the *Melpomene* was attached.

9.—Before the collision and when the *Patroclus* was swinging towards the *Melpomene* those on board the *Patroclus* shouted and signalled to those aboard the *Melpomene* who improperly neglected to do both these things.

10.—The said collision and the damages consequent thereon would have been avoided if those on board the *Melpomene* had exercised ordinary care and would not have occurred but for their aforesaid neglect and default in not paying out chain and in not removing their port anchor from its dangerous position, and the said collision and damages were not occasioned by any neglect or default or mismanagement of any person or persons on board the *Patroclus* and nothing could be done by them or any of them to avoid the said collision and damages.

Save as aforesaid the defendants do not admit any of the allegations of the Petition.

The defendants therefore pray that the plaintiffs' petition may be dismissed with costs.

AMBROSE B. WALFORD,
Counsel for the Defendants.

Mr. Lowder then called the following witnesses:—

Kita Nokichiro, Police Inspector of Kanagawa, examined by Mr. Lowder, deposed—My duties are in connection with the policing of the harbour—the Water Police of Yokohama. There are regulations in force regarding the entrance to and exit of ships from the harbour, and also with regard to the approach to the pier. There is a regulation disallowing ships to come within 600 feet of the pier unless they are going alongside; a ship may not anchor within five cables from the entrance of the harbour in a westerly direction. Apart from these regulations foreign vessels entering Yokohama anchor where they please. I know of no other regulations. The moorings of foreign vessels are not inspected by the police.

Patrick Hodnett, before being examined, stated that he was a licensed pilot for Tokyo, Yokohama, Shimoda, and other ports in the Gulf of Tokyo. He was here in obedience to a summons but knew nothing of the case.

To Mr. Lowder—I have been a licensed pilot for 20 years. The regulations say that you are not allowed to anchor a vessel within 5 cables west of each lighthouse in Yokohama harbour—to the northward and southward, yes. Apart from that there is no regulation with exception to anchoring near the pier. We anchor a vessel wherever we get a chance. I know the *China Sea Directory*. I believe it is an authority on the prevailing weather and the coasts. It is used by most shipmasters.

Mr. Lowder quoted from the work referred to as regards the indications of the weather. Mr. Walford entered a protest against evidence being put to witness as a leading question. The quotation referred to the premonitory symptoms of a typhoon.

Witness continuing—I would not call a typhoon in September an unusual occurrence.

Cross-examined by Mr. Walford—It was about three years ago since a typhoon occurred in Yokohama before the one in Sept. last. There is great difficulty in finding a clear berth for a ship in the harbour so she can swing both ways. We always go to a buoy if we can get permission from the people they belong to. The P. & O. buoy is not used now by their ships as they go to the pier.

Re-examined—I remember taking the Russian flagship to the P. and O. buoy last year. She is a very large ship, and lay there six weeks. I did not bring in or moor the *Patroclus*.

To the Court—I was told by the Kencho to take up moorings at the buoys when in want of a good anchorage. Sometimes, as a matter of courtesy, we ask the owners of the buoys, but not always, if pressed for a berth. There is no notification published against using them. The P. and O. buoy is commonly used by other ships.

Jan Carst, examined by Mr. Lowder—I am a Dutch subject and a marine surveyor. I laid the mooring to which the *Patroclus* was made fast, on the 7th June, 1895. It has never been taken up since then. I took it up on the 17th September last; after the collision. The mooring consisted of an old navy anchor, one fluke of which was partially cut and hollowed down to the shank. There was no stock to the anchor. It weighed about 2½ tons. The other anchor was a Trotman's patent, about 2 tons. When I took this anchor up half of the stock was gone. It appeared to be a fresh break. There was a backing to the

anchor of 30 feet of 2½ inch chain, fastened to a crank shaft of estimated weight of about 4 tons. The anchors were attached to the buoy with shackles and a triangle, or ring, and 45 fathoms of 2½ inch chain to each anchor. (Witness then put in a sketch showing how the anchors were laid—north and south.)

At this stage an adjournment was made for tiffin.

Upon the hearing being resumed at 2 p.m. witness was cross-examined, to the effect that the moorings occupied by the *Patroclus* were utilised by many of the largest vessels in the harbour.

Re-examined—On the 9th ult. most of the buoys in the harbour dragged—two of the N.Y.K., the P.M., and the P. & O. buoy. The *Kaiser* was made fast to the P.M. buoy. There were the French Mail, P. & O., 2 Pacific Mail, C.P., and Shell line buoys, and five N.Y.K. buoys; 12 in all. I believe all the buoys dragged on the 9th ult. I know that the *Kaiser's* moorings had dragged, as the anchors were found altogether. The *Irene* also dragged her anchors; they were approximately about 3 tons each. With regard to the other vessels some of them dragged about 1,500 feet, the *Patroclus*, and some of the N.Y.K. boats, 600 or 700 feet.

Mr. Lowder then read the evidence for the plaintiffs taken on commission, which was as follows:—

Mr. Lowder proposed to examine the witnesses through Leopold Martinolich, a cousin of the Master.

Mr. Walford raised no objection to his being interpreter on condition that if he is to be a witness, he is to be called first and his consent was limited to that forenoon, to which Mr. Lowder consented and announced that he did not intend to call Mr. L. A. Martinolich as witness.

Leopold August Martinolich, was sworn to interpret truly.

Antonio August Martinolich, Austro-Hungarian subject, sworn, and examined through Leopold August Martinolich:—I am Master of the Austro-Hungarian steamer *Melpomene*. I have commanded the *Melpomene* two months and a half. I have been at sea 32 years. I have been in command of a steamship seven years. I have been in the China sea before this, but never in the Japan sea. The number of the crew of the *Melpomene* is 36, Captain included. Her registered tonnage is 1,954. The owners of the *Melpomene* are the Austrian Lloyds Steam Navigation Company. The *Melpomene* is now lying in the harbour of Yokohama. She arrived on the 1st September. She is not now lying in the same position she took up on the 1st September. She is not now lying in the same position she was in when the collision with the *Patroclus* took place. At the time of the collision with the *Patroclus* she was lying at the buoy of the Shell Line. I was directed to take up that position by the Kobe pilot with the stevedore. I have caused a diagram to be prepared of the position of the *Melpomene* at the time of the collision. So far as I am able to form an opinion that diagram is correct (diagram marked "C" to be further proved). At the time of the collision I was fast with a chain to the Shell Line buoy. Our starboard anchor was ready to let go. At the time of the collision it was let go. It was let go at 5 o'clock. The collision was at 5:35 to 5:40. My port anchor was ready to let go. It was on the port bow. It was fastened by a chain and fastened to the tackles too. It was not yet fast to the cable. The cable was attached to the buoy. There was a hawser ready to be fastened to the anchor. We took our time from the *Kaiser*, a German man-of-war. She was lying right ahead of us near by. The collision was on the morning of the 9th of the present month. The equinox is on the 20th to 21st Sept. All the day on the 8th Sept. there was rain, and variable winds from the second quadrant (from S. to E.). That commenced on the 8th. It was all day with heavy rain at intervals. The weather changed about from 1 to 2 on the morning of the 9th. Then came heavier rain, with gusts of wind from S.S.E. At 2 a.m. the weather was stronger. At 2:30 a.m. orders were given for all the crew to come up on deck and get steam up. The order to get up steam was given at 2:30 a.m. These orders were carried out. Under the circumstances the quickest we could get up steam was from four to four and a half hours. At the time of the collision we had not steam up. After 2:30 the weather was always stronger, with rain. I looked at the barometer at 2 a.m. It began to fall. I looked once myself and on other occasions the officers looked. Between 2:30 and 5 the weather became always stronger till at 5 o'clock it was a typhoon. At 5 o'clock we let go the starboard anchor. At the same moment the order was given to prepare the port anchor. At 5 o'clock the *Patroclus* was ahead of us, a little on the port side. The *Kaiser* was lying between those two vessels. The positions of the *Melpomene*, *Patroclus* and

Kaiser were as given on the diagram (Ex. C.) After 5 o'clock in the morning—at 5.15 to 5.20, I saw the *Patroclus* drifting broadside with her head W. N. W. She was nearing the *Kaiser*, she continued drifting and came nearer me. The position of the *Patroclus* as I have just described it is marked 1-a and 1-b. After passing astern of the *Kaiser* her head was seen coming to the wind and her anchors got foul of the anchors of the *Kaiser*. Her position then was, as regards the *Melpomene*, with her starboard side on the stem and port bow of the *Melpomene*. They came into collision in this position. The two vessels came into collision I think twice. The first shock and then once more. The first impact on my vessel was on the stem and on the bow, the port bow. The effect was a heavy blow and our ship rolled twice. On the port bow two frames were broken and the plate bent in. The impact was given more ahead of the anchor. This diagram (Ex. D.) show the bows of the *Melpomene* with the anchor. The black part shows the place of the first impact. They separated a slight distance and then came together again. I have marked the *Patroclus* on D, showing her position when she struck us. The *Patroclus* then came more alongside and our anchor got hold of the *Patroclus*'s railings. The original position of the anchor was altered. It was originally in a horizontal position. The *Patroclus* unhooked it and took it away. It was aboard of the *Patroclus*, and when he came again against the *Melpomene* it made the two holes. When they pushed it from the *Patroclus* the anchor fell down outside near the water between the *Melpomene* and *Patroclus*, hanging by the davit. In order that it might not do any more damage, we lowered it down to the water. From the time I saw the *Patroclus* astern of the *Kaiser* until the collision I cannot tell what time elapsed exactly, but I would say 5 or 7 minutes. The collision to me was inevitable 5 minutes before it happened, and therefore I wanted to let go the port anchor too, but I could not unhook it from the tackle, because of the wind, and we let go the line of the tackle. We let go this line a moment before she came alongside. Measures were taken on board the *Melpomene* to lessen the blow of the collision. I ordered fenders to be put out. That order was carried out. First I ordered the fenders to be put out and I let go myself the line of the tackle. Four fenders were put out. I have marked on exhibits D, their position. They are represented by the four lines I have drawn ahead of the anchor. Three were with cork inside and rope outside. We also directly prepared some bales of cotton to put out. They were prepared; afterwards they were put out. The whole of the deck crew were engaged in putting fenders over the side or in preparing other fenders. The officers of the ship were all with me on the fore-castle. I heard no shouting from the *Patroclus*, but I saw gesticulation. I heard nothing. I understood that they meant to slack chain. The depth of water ahead was 24 to 26 feet, and astern a moment after the collision we took the depth and found 23 or 24 feet. Our draft was 21 feet, 21½ feet ahead and 20½ feet astern. We did not give our ship chain because if I had let go the chain we would have grounded. If we had let go the chain the direction of our head would have been the same. I have caused the depth of the water from the stem of the *Melpomene* to the shore to be accurately taken. So far as I know the depths appearing on Exhibit C. are correct (interpreter says, "soude in piede," Ex. C., means "soundings in feet"). Thinking of it now I can think of nothing that could be done to lessen the force of the collision on my ship. I can think of nothing that could have been done with safety to ourselves to avoid the collision. The damage sustained is being repaired here. The repairs are not finished yet. The cost per day of keeping my ship here is about £40 a day, wages, food and interest. I expect I shall be detained one day only—one or two days, because I was discharging slowly. I had iron on board.

Adjourned until 10 a.m. to-morrow, 24th Sept., 1897.

Friday, September 24th, 1897.

Adjourned from 23rd instant. Antonio August Martinovich, cross examined by Mr. Walford:—The age of the *Melpomene* is 14 years. Tonnage is 1,854, that is the register tonnage. Gross tonnage is 4,463. Carries dead weight 3,500. She was not fully laden at the time of the collision. She was carrying about half cargo—a little more. She is an iron ship, not steel. I have no plan of the ship aboard. I don't believe there is any plan of the ship in Yokohama. There is no plan of the port side to show the damaged plates. When we were lying at the buoy on the 9th September we had 13 or 14 fathoms from the hawse pipe. That was before the storm commenced. We paid out no chain. We did not drag our moorings in the storm. The *Kaiser*'s bearing to our ship was S.S.W.

about. The *Patroclus* bore when at anchor S. by W. The *Kaiser* was a ship's length from us. We were about 850 feet from the stern of the *Kaiser*. I don't know what chain was out to the buoy of the *Kaiser*. I can't say whether she had dragged her moorings; I think not. She was not much nearer to the *Melpomene* at 6 o'clock than at 2. I don't think she was any nearer. From the stern of the *Patroclus* to my ship was 1,200 or 1,300 feet about. I had my crew on deck at 2.30, all the 36. They certainly remained on deck from 2.30 till the collision took place. While the *Patroclus* was dragging, the wind was S.S.W., and it was nearly high water. The difference between high and low water is about 5 to 6 feet, but I don't know quite surely. All the distances I have named are estimated by collating the lengths of the ships and their swinging round. I can't say when they swung stern to stern, but they did so several times, that is the *Kaiser* and *Melpomene*. I don't know the length of the *Kaiser*, but I think 300 feet—300 to 400. The *Melpomene* is 320 English feet. I estimate the length of the *Patroclus* as about 40 feet longer than the *Melpomene*. I cannot say whether the *Patroclus* is longer than the *Kaiser*. I cannot say as to the strict correctness of this plan (Exhibit C.) It was not prepared by me. It was prepared under my orders by the 2nd officers. The 2nd and 3rd officers took the soundings. They took them at half tide. They were taken, I think, on the 12th or 13th of Sept. I am not sure. I cannot say at what hour I gave orders to have them taken; I was ashore when they were taken. The officers will say. The shore astern of the *Melpomene* is, I think, soft mud. If I had paid out chain it would not have eased the collision, because the ships would have gone on shore and the shock would have been the same. If there had been plenty of sea room, the easing of the chain would not have eased the collision, as she came with great velocity. I don't think the *Patroclus* dragged 1,200 feet, as the mooring of the *Patroclus* got foul of the mooring of the *Kaiser*. I don't know which of the moorings: the buoy of the *Patroclus*. If the *Patroclus* dragged 1,200 feet the buoy would have dragged about the same distance. There was a short chain from the *Patroclus* to the buoy. I cannot say what length when she was astern of the *Kaiser*, but I should think 4 or 5 fathoms. I had not a watch in my pocket and did not observe the time when the *Patroclus* began to drag, but I heard the hour strike and I think she began to drag at a quarter past 5. She started to drag in a terrific squall, and continued to drag until she brought up, coming down in the direction of the *Melpomene* all the time. At 5 in the morning I gave directions to get the port anchor ready. We were going to get the wire hawser to make fast to the anchor. We were fitting it at 5 o'clock and were getting another shackle, but were not in time to get it ready. When we were at it we saw the *Patroclus* was coming and we left that to attend to the collision. In good weather the shackle could be attached in ten minutes—in weather such as it would take about half an hour. The hawser was not attached to anything on deck. The port anchor was not put out at 5 o'clock. The reason I wanted to let go the port anchor just before the collision was to lower it to prevent it doing damage. It was not to let it go, as the hawser was not fast to the anchor. When the collision appeared inevitable, there was not time to lower the anchor in the tackle. In good weather it would take a few minutes. In that weather I cannot say with precision how long it would take. When I first saw the *Patroclus* coming towards us I could not lower the anchor, and waited to see if the *Patroclus* would be brought up. Yes, I left the anchor in that dangerous position all the time. Steam was up ready to work the engines about 7. The steam was up to work the donkey engines at the time of the collision. At the moment it would have been impossible to take the anchor in. To do that it would have been necessary to have begun half an hour before—in that weather it would take an hour. The anchor was hanging on both davits and fastened to the bridle. The davits are about 12 feet apart. The davits were swung out. They can swing. There is a small chain. When the chain is let go, the davit can swing. The davits were kept in position by those chains which were fast all the time. Those chains were not broken by the collision. The chains are fastened high up. The length of the anchor is about 12 feet. When the anchor was in that position before the collision the anchor was 4 or 5 feet below the top of the rail. I don't know the name of the anchor. The flukes are on a swivel. The stock is set at right angles to the fluke on the shank. There is a projection on the outside of the fluke. I can't say the length of the projection. It might possibly be six inches; it is not a foot. As the anchor lay in position the stock was towards the bow and the flukes toward the stern. I did not at any

times release the bridle. When the *Patroclus* came alongside she struck the anchor, and the stopper was bent and the bridle was let go. We did not try to unhook the anchor from the tackle. When I said the anchor was aboard the *Patroclus*, I mean it was hooked on the half round by one fluke. The half round was between the main deck and the upper deck. The anchor when carried away from the *Melpomene* was on the upper deck of the *Patroclus* and it then fell down and caught the rail of the main deck. A moment before the collision I was on the top of the fore-castle, and at the moment of the collision I went a little away. The crew were on the fore-castle, but I told them to retire. The only preparation made in my ship was to get ready some fenders. Four were put out before the collision—that is before the first impact. I don't know if the ship struck just where the fenders were. Looking at Exhibit D, one fender is marked on one side of the plate that was stove in and three on the other. The fenders were 1½ to 2 feet in diameter. I cannot say how far below the rail they were. Two plates of the *Melpomene* were damaged. One higher up and the other lower down and more ahead. The higher plate is abait the anchor davits; it is a plate in the bulwarks. It was pierced by the anchor. Behind the plate was the water closet and a room for the lamps. That is the upper plate. There is only one more plate damaged. The position of that plate is in the second strake. This plate, the lower plate, is damaged in two places. The damage further forward is bent in, not pierced; the after damage to the same plate is pierced. The after damage to the same plate was, I think, done by the anchor. The forward damage to that plate was not, I think, done by the stock of the anchor. It is too far ahead. The bend in the dent is by the ship not by the anchor. The anchor was horizontal. Two frames were broken, two frames near the mast forward damaged. I have seen the frames both broken and bent. The more forward plate damaged is what I spoke of as having been caused by the first impact. That is slightly forward of a straight line down from the most forward davit. I think the davits did not swing. They have a swinging radius of about 5 feet. After the collision I wrote a letter to the agent. I wrote a letter to the Captain of the *Patroclus* saying if he wished to come on board and see the damage, I would be on board from 5 to 7. The Captain of the *Patroclus* came on board on Saturday evening. When he came on board I did not know the full extent of the damage. I did not know till 2 or 3 days after that time. The Captain of the *Patroclus* came on board, I think on Sunday morning, with another gentleman. The agent of the *Patroclus* said it was a surveyor of his house. I don't know whether it was Mr. Tresize; I did not see him. I think the Chief Officer saw him, and showed him the damage. It will be finished to-day or to-morrow. Mr. Petersen gave an estimate, but before she was opened up. The damage was opened up on Monday the 13th, or Tuesday the 14th. Those repairs are being done by contract. We asked no one else to estimate for the repairs. We are not going to take any cargo from this place, except a little wire for Hongkong. We had that to-day. We finished discharging yesterday.

Adjourned at 12.10 to 2 p.m.; resumed 2 p.m.
Re-examined:—When I said that the whole crew were on deck at 2.30 a.m., I meant the deck crew only, not the engine-room hands. The shoal astern of me I believe is soft mud, but I didn't know that on the 6th of September. When the *Patroclus* was astern of the *Kaiser* I could not see the length of the chain, but I saw it immediately after the collision at 5 o'clock when I gave orders to get my port anchor ready. I did not anticipate a collision. It was the *Patroclus* dragging, and I ordered a stoppage of the work on the anchor and ordered the fenders to be got ready. I did this because I thought it was more necessary to lessen the shock. The fenders I don't think were of any use: I don't know. At the time I exercised my best judgment under the circumstances. Supposing my port anchor had been lowered to the water's edge, before the collision, the impact of the collision would not have been avoided. It may be the holes made by the anchor would not have been done. When we leave Yokohama, I think we go to Moji to load coals for Hongkong.

To Examiner at request of Mr. Walford:—When I said the whole 36 were on deck, I meant that they were at their stations—the deck hands on deck and the engine room hands in the engine room. The total number on deck were 12 of the crew and 4 officers, Captain included. The carpenter was on deck also, and would make 17 on deck altogether. The stewards were below. The 17 were all proper deck hands for working the ship.

The witness wishes to explain the circumstances under which he laid his claim at 30,000 yen: If I

had now to make the claim it would be much less, but when the claim was made I did not know that the weather would be so bad and that we would be occupied so long in discharging. I charged for detention to allow of repairs being made, but the repairs have been made while the cargo is being discharged. I thought that the ship would be empty four or five days after the collision while her discharge was, as a fact, only completed yesterday at noon. Moreover, I did not know with precision what the damage amounted to as the ship was then not opened up. It was a mistake when I said the work was done by contract. Mr. Peterson had to give me a detailed and conscientious account of the work.

To Examiner—In good weather it would be easy to tell how long it would take to lower the anchor to the water's edge by the tackle, but as it was at 5 o'clock, with the weather there was then, it was quite impossible to work it. The Chief Officer has taken the exact dimensions of the anchor and will give evidence about it.

Pietro Pavisich, Austro-Hungarian subject, sworn and examined through Leopold August Martinolich—I am chief officer of the *Melpomene*. I have taken the dimensions of the port anchor of the *Melpomene*.

Cross-examined by Mr. Walford:—The extreme length of the anchor is 11 feet 2 inches. The stock is distant from the end of the shank 2 feet. The full length of the stock is 12 ft. 2 inches. That includes both ends of the stock from end to end. From point to point of the flukes is 5 feet 4 inches. The flange projects from the fluke 1 foot 1 inch. I don't know the name of the patent—I was on the deck of the *Melpomene* when the collision with the *Patroclus* took place. I saw when the *Patroclus* began to drag. I was then engaged about the port anchor. I was going to attach the hawser to the port anchor. I could not do it—the time was too short. The weather would have prevented it. It could not be done in that weather. We were going to make ready the anchor, to attach the hawser to the anchor to let go. We were ready there to do it, but we could not do it, the weather was so bad. The weather was so bad that we could not get near the anchor. We could not let go the bridle when the *Patroclus* was quite near. When the *Patroclus* began to drag, the weather was too bad to get near the bridle. The weather was too bad to lower the anchor to the water's edge, because we could not go near the anchor. I think it would have been let go by that time. Before that we would have attached the hawser to the anchor, and we would have unhooked the anchor from the tackle. We would have let go the bridle. The weather being such as it was it would have taken 30 or 40 minutes. If we had wished to let the anchor down we must let go the line of the tackle—that is done in a moment. There are only the two things to do—to let go the bridle and the line of the tackle. In such weather as there was from 5 to half-past 5 it would take 10 or 15 minutes to let go the anchor by the tackles. It would depend how the anchor was up. To lower the anchor by the tackle in the weather that there then was would take from 6 to 10 minutes. When the *Patroclus* struck us I was on the forecastle. When the *Patroclus* was brought up I saw the chain of the *Patroclus*; there was only about 5 fathoms to the buoy. The *Kaiser* did not drag her moorings. Some days before the collision the *Kaiser* and our ship swung in different directions—opposite directions. I estimated the length of the *Patroclus* from 350 feet to 400 feet. When the Captain of the *Patroclus* came on board on Saturday I was on board. He had a look at the damage to our ship. I let him see what damage there was. The outside damage I knew; but the inside damage that required the opening up of the ship, to know, I did not know. I was on board the following morning when the Captain of the *Patroclus* and Mr. Tiesze came on board. I showed them the damage; the ship had not then been opened up. I don't know who the gentleman was that was with the Captain, or whether he was Mr. Tiesze or not. I showed him all the damage that could be seen without opening up the ship, including damage to the lamps. I showed a gentleman the damage and he took a note. I showed him two plates that were damaged, and the lamps in the lamp room, and I showed him two anchor lamps, and one mast head lamp. I showed him two anchor lamps. Those three lamps were all the lamps I showed. I showed him a scuttle glass. I pointed out the bunks and the ceiling. The beams could not be seen. The edge of the sheer plate on the forecastle head required straightening. I showed the anchor. I don't remember showing him anything I have not mentioned. The damage was both above and below the line of the main deck. I took the time when he began to drag by my watch. It was 15 minutes past 5. The time of my watch is taken from the ship. I did not take

the time of the collision. It was not the time to look at a watch. I think it was about 5.30 or 5.40. When the ship was fully laden she draws 25 feet. She was drawing then aft 20.6, at the bow 21.6.

Adjourned at 5 p.m. till 9.30, 25th September, 1897.

Saturday September 25th 1897.

Pietro Pavisich's examination and cross-examination read over. No re-examination of Pavisich. Antonio Hanzal, Austro-Hungarian subject, sworn and examined through Leopold August Martinolich—I am 2nd officer of the *Melpomene* and have been serving on board of her as such since her arrival in this harbour. (Shown Exhibit C.) This is a diagram of the harbour of Yokohama. It was prepared by me alone. I prepared it four days after the collision. There are certain soundings in feet—English feet; the other officer took those, Starcich, the 3rd officer. On this diagram appear the break-water, pier, and town of Yokohama. The measurements are on a scale enlarged from the Admiralty chart. I have taken the length of the *Patroclus* to be about 380 feet; the *Kaiser* 340; the *Melpomene* 318 about. The vessel marked "1" in red ink is supposed to be the *Patroclus* before she dragged. "1-a" represents her first position after dragging. "1-b" represents her position when in collision with the *Melpomene*. I determined the position of the *Patroclus* when at anchor by the length of our ship. I reckoned about $\frac{2}{3}$ lengths of our ship. I saw the *Patroclus* when she was in that position there. It is from memory. I arrived at the position of the *Kaiser* as being about the length of a ship from our ship. I did not actually measure the distance from the *Patroclus* buoy to the *Kaiser's* buoy. I estimated the distance from the stern of the *Patroclus* to the bow of the *Kaiser* about 400 feet. I did not measure that distance, I estimated it. I estimated at 350 feet about the distance from the stern of the *Kaiser* to the bow of *Melpomene*. This diagram does not pretend to be quite accurate; it is approximate. The distances between the vessels given on the chart are according to scale and are estimated.

Cross-examined by Mr. Walford:—On this diagram the figure 2 represents the position of the *Kaiser* and the figure 3 represents the position of the *Melpomene*. I put down the position of the *Melpomene*, as I estimated her distance from the *Kaiser*, the *Patroclus* and the *Irene*. I took the position of the *Kaiser* from the *Melpomene*; she was right ahead. These red, nearly circular, marks represent buoys. The pier is not according to scale, it is approximate. I have made it about 1,200 feet from the shore to the end. I took 1,200 feet. I took it from the small chart and put it into feet. I would not be surprised to hear it is 2,000. I did not take it exactly. If I took it at 2,000 feet in the diagram I would have to extend the pier and shift the position of the vessels. I cannot be sure that the bearing of the *Melpomene* to the end of the pier is correct. It could not be seen from the ship. The *Patroclus* buoy appears in the diagram to be about 700 feet from the end of the pier. I would not be surprised to hear that it was more than 1,000 feet. I do not put in the pier by bearing. The *Patroclus* buoy may have been in a straight line with the pier, I don't know. I have only estimated the length of the *Kaiser*. I know that it is longer than the *Melpomene*. I was on board at the time of the collision. The wind was S.S.W., a little to the south. I have marked the position of the *Patroclus* as S.S.W. from the *Melpomene*. She drifted north. The wind was more to the south when she was drifting than at the time of the collision. I was an officer of the *Melpomene* when she arrived, of the same grade. I have been second officer five years.

Re-examined—I put the soundings on the diagram as given to me by Mr. Starcich. I copied them from a note given to me by Mr. Starcich. I have the note on board. They are given in the diagram in exact accordance with the note.

Ecole Starcich, Austro-Hungarian subject, sworn and examined by Mr. Leopold August Martinolich—I am third officer of the *Melpomene*. (Shown exhibit C.) There are certain soundings marked in that diagram. I took those soundings myself. I took them two days after the collision, after the bad weather. It was half tide when I took them. I took a note at the time of the soundings. That note I gave to the officer who made the diagrams. The soundings as taken by me are given correctly on this diagram. The first "18" inside the breakwater and nearest to the end of the breakwater, I take from the beacon and from the light at the end of the breakwater. The next "18" I take by bearing and distance. The others are the same. The soundings are accurate, but the bearings approximate. With regard to the irregular line of soundings, I took them from the breakwater. There is a line

of soundings from the *Melpomene* to the shore. I fixed the position of the "20" estimating the distance by the length of the *Melpomene*. The figure "20" ought to be about 30 feet from the stern of the *Melpomene*. The other distances between the soundings are from 21.25 to 30 feet.

Cross-examined by Mr. Walford—The *Melpomene* was at the same buoy when I took the soundings as at the time of the collision. I took the soundings from the stern of the *Melpomene*, and from the buoy to the stern. At the buoy it was 36 feet. These distances astern of the *Melpomene*, are estimated. I took the soundings two days after the collision. I took them about half-past two in the afternoon. The soundings I took first were from the buoy to the stern of the ship. At 600 feet from the buoy there is 13 feet of water. When I took the soundings the bow of the *Melpomene* was pointing S.W. I took the soundings first in a straight line N.E.

Before closing his case Mr. Lowder put in, for the convenience of the Court, the Admiralty chart No. 2657, of Tokyo Bay. Mr. Lowder also put in exhibit "B," a list of vessels in the harbour, from the *Japan Mail* of Sept. 9th.

Capt. Carst, recalled by the Court.—The bearings of the P. and O. buoy were approximately 700 feet from the Pacific Mail buoy; about 1100 feet from the pier, a little to the west. When the buoy was picked up it was about 150 to 200 feet to the South of the Shell Line buoy.

This closed the evidence for the plaintiffs, and it was agreed that Mr. Walford should produce the evidence for the defence, and afterwards Mr. Lowder and Mr. Walford should address the Court. Mr. Walford called:—

Thomas Evans, examined, deposed—I am a British subject and was ship's carpenter of the *Patroclus* when she came into collision with the *Melpomene* last month. I was called on deck on the 9th Sept. at 4 in the morning. I was ordered by the chief officer to go forward to the windlass. That and the anchors and chains were in my special charge. The windlass was a large and powerful one. The windlass and brakes were in very good order that morning. The ship was riding to a buoy by her port cable and a patent anchor to starboard. The anchor was of about 3 tons in weight. The chains to the buoy and anchor were 2½ inch cables. It was blowing fresh in the early morning and increased in force. The starboard anchor was let go but I could not say what time. It was before the ship began to drag, perhaps 20 minutes to half an hour before. The wind was blowing in gusts and the ship was jumping and jerking at the buoy. The clutch or cog of the crutch caught in the windlass, and in consequence two brackets of the engine carried away. We used that engine for heaving in the anchors. It was not used for paying out chain to an anchor. The accident took place before the ship began to drag. We had a messenger to the steam winch for heaving in the anchor. Some time after the ship was struck by a squall and did drag. The brake was screwed up tight before she began to drag and immediately after two men were put on to keep it tight. I was at the starboard brake. We let the vessel take 60 fathoms chain to the starboard anchor and then the chief officer helped me to screw up the brakes tight. The chain stopped running at 90 fathoms, we put the brake on at 60.

By the force of the wind the windlass was jerked round till thirty fathoms of the buoy cable had run out. The sides of the *Patroclus* from rails to bilge were straight up and down. There was a little damage done to the *Patroclus* in the collision, just below the rail, abait the engine. The stem of the *Melpomene* did not come above 30 feet forward beyond midships of the *Patroclus*. After the collision the windlass and brakes were in good order except for the two broken brackets, which were repaired before we left Yokohama. We recovered our starboard anchor which had been unshackled after the gale. It was put upon the deck after recovery.

Cross-examined—The patent anchor was one of the best obtainable. The *Patroclus* was furnished with the best and newest kind of gear. The ship was only 15 months old. Our object was to hold fast to the buoy. The 60 fathoms of chain paid out to the starboard anchor was allowed to run out; we did not use our full strength to prevent it. After allowing the 60 fathoms to run out we screwed up all we knew how to the buoy.

Re-examined—Whilst the 60 fathoms was going out there was a slight check on it. The 60 fathoms was let out purposely.

At this stage the hearing was adjourned till 10 a.m. to-day.

Wednesday, October 20th, 1897.

Mr. Walford called:—Walter Kendal Tiesze, who deposed—I am manager of the Yokohama Engine & Iron Works.

Mr. Walford—This witness undertook the repair of the brackets of the engine of the *Patroclus*.

Witness—It was two brackets of the driving shaft of the engine used for heaving in cable. It might be used for heaving up cable from the locker also, but for no other purpose. I saw an eccentric valve broken on the same shaft. The engine was totally disabled. There was no damage to the windlass and brake except this. I made a plan of the *Melpomene's* anchor. It was drawn to scale—1 inch to the foot. (Plan put in and marked Ex. 5), the break is marked in red. It was an ordinary Trotman's anchor. It had a sharp fluke projecting from the fluke and round balls at the ends of the stock. By direction of the agents of the *Patroclus* I surveyed the damage on the *Melpomene*. I went on board on the 13th Sept. and saw the chief officer. He showed me the whole damage then visible. I made a memorandum of the damage at the time and then drew a plan (put in, Exhibit K). The damage is marked in red. A plate at the break of the fore-castle, port side, was pierced and broken. The flukes of the anchor would account for the piercing, either the point or the flange of the fluke. One plate in the second strake, more forward, damaged in two places, the forward part dented in and the after part pierced. The flukes of the anchor would account for the piercing of the after part. The dent in the forward part extended over a surface of about 2 ft. 3 inches. It was quite possible that both the piercing and the dent were done in one impact, as the field of the two damages corresponded with the spread of the two flukes of the anchor. The appearance of the dent was favourable to its having been caused in this way. The damage to the forward plate was all within the radius of the davits supporting the anchor. The next damage was that the ends of three beams were slightly fractured. That could have been done by the same cause as damaged the plates. Two frames, corresponding to two of the beams, were also damaged. From the position of the beams and frames damaged it was decidedly the case that the cause of damage was the same as that to the plates. The bunks and ceiling and one scuttle glass were also damaged, in the wake of the damaged forward plate. The damage arose from the outside, from the same cause as that to the plates. One anchor lamp, one mast head light and two riding lights were also damaged; they had been thrown out of their sockets on the shelves. The sheer plate forward of the plate, was slightly bent. That was probably caused by the anchor. The anchor itself was broken. There was nothing projecting on the starboard side of the *Patroclus*; she was straight up and down. I have mentioned all the damage the chief officer showed me and I observed nothing more.

Mr. Lowder did not cross-examine.

James Ellerton, examined, deposed—I am surveyor to Lloyds at the port of Kobe. On the 18th September I was instructed by the agents of the *Patroclus* to examine the windlass and anchor gear of the ship. I went on board that day and made an examination. The windlass was of Ellis Walker and Thompson's make, a powerful steam windlass provided with two independent brakes, one on each side. When I saw it, it was in perfect working order. There was no fault to be found with the windlass or gear. It was such as might be expected on such a ship. The brakes were worked by double locking spring gear. There were a pair of horizontal engines attached to the windlass. The engines could be thrown out of gear. They could be used for hauling up an anchor; or for paying out chain, but not the latter in a gale. I saw one anchor on deck forward on the starboard side unattached to anything. I examined the anchor; it was a stockless anchor of an estimated weight of 3 tons. It was a good anchor, in good condition.

To the Court—For a ship of her size, according to Lloyds' requirements, the weight of her heavy stockless anchor should be (in class letter Y.) about 55 or 56 cwt, rather less than that of the *Patroclus* anchor. The anchor was stamped 57 cwt. There were four anchors on board the *Patroclus*. The size of the chain was $2\frac{1}{2}$ inches, that is the size in Lloyds' regulations for a vessel in class Y.

Cross-examined—All the gear and equipment on the *Patroclus* is of the very best. She has a Board of Trade certificate.

Francis Ouston, examined, deposed—I am outside manager to Captain Weston, landing agent. I remember the great storm of the 9th of Sept. I noticed from daybreak that the tide was very high. It was highest about 5.30. The sea was over the breakwater and hid it. At ordinary full spring tides the breakwater would show a foot above the water. In a southerly gale the water was generally higher than usual.

Mr. Lowder did not cross-examine.

William Smith, examined—I am a Norwegian in the employ of Capt. Martin, stevedore. I remember the storm of the 9th and that the water was higher than usual.

John Gillam, examined—I am a ship's officer and have been so for 13 years. I know the Shell Line buoy in the harbour. I took soundings this morning N. N. E. of the buoy. It was about an hour after low water—the first of the flood. The soundings at 350 feet from the buoy I obtained were 30 $\frac{1}{2}$ feet, next, at 400 feet, 28 feet; 450 feet from buoy, 25 $\frac{1}{2}$ feet, at 500 feet 22 feet, at 550 feet, 20 feet, 675 feet, from buoy 18 $\frac{1}{2}$ feet; 600 feet, 17 $\frac{1}{2}$ feet water; 625 feet, 16 feet; 650 feet 16 feet water, 675 ft., 14 feet water 700 ft., 13 $\frac{1}{2}$ feet. The last was 525 feet from the breakwater.

Mr. Walford here put in and read the evidence for the defence taken on commission, which was as follows:—

Edwin George Dickens, British, sworn, deposed—I am Master of the British steamship *Patroclus*, which is owned by the Ocean Steamship Company. Her register tonnage is 3,548, gross tonnage 5,508 and carries 8,000 tons cargo. I have been thirty years at sea. During that time I have had 19 years experience in steamships as Officer and Master in the same Company, the Ocean Steamship Company. I have had a Master's certificate since 1876, that is 21 years. I have been seven years in command of steamships. I have been in command of the *Patroclus* since she was built—15 months. I arrived in the *Patroclus* on the 6th of this month, September. On arrival I moored the ship to the P. & O. buoy inside the harbour; moored by port cable which for that purpose was disengaged from the port anchor. We were moored by 5 fathoms chain, five fathoms to the buoy. I remember clearly Thursday the 9th, the day of the storm. We were attached to the buoy from our arrival until noon on the 9th. Previous to the 9th we had discharged most of our cargo and our ship was consequently then very light, drawing 14 feet 9 inches. She draws 25 feet when fully laden. There was a storm on that Thursday morning; about 2 in the morning the glass began to fall and indicated approaching bad weather. At 4 o'clock it began to blow furiously; half a gale or a gale of wind. I was on deck at 2 o'clock looking at the barometer and continued about from that time for the rest of the day. At 4 o'clock it was blowing very severe squalls. The glass had fallen more then. It fell from 2 to 4 and continued to go down after 4. At 4 I ordered steam and I ordered all hands to stand by—that would be a little after 4; they were really at stations on deck at 4, there being something unusual. Being in port we had let the fires out. We had no steam until I ordered steam at 4 o'clock. In case of our going to sea I give 12 hours' notice. On emergency we can get up steam in 4 hours, and at 8 o'clock we had steam up on one boiler. We could not have done it quicker. At 5 o'clock it was blowing typhoon force—very hard indeed. The glass was still going down. It was about 29 or a little below at 5 o'clock. At 5 o'clock we lowered our starboard anchor down. All hands were on deck at that time, except those on duty in the engine room. All hands had been out for some time, and were then at their stations. I was on the bridge. The Chief Officer was on the fore-castle head. He had with him the boatswain and the carpenter. The 2nd officer was aft. He had some men with him. The 3rd officer was the deck below the bridge, the saloon deck. He had two quarter-masters with him. They were standing by to attend with fenders in case of any collision—of anything occurring. We had not begun to drag them. Afterwards we did drag—that was about a $\frac{1}{2}$ to 6. It was blowing then very heavily indeed, the hardest of the blow I should think, and we dragged our moorings, the buoy and our anchor. We have two bower anchors—54 cwt. each. The moorings of a buoy I should consider 3 times the strength an ordinary ship's anchor. When the ship began to drag our starboard anchor was down. When she commenced to drag the chain rushed out and we held on at about 50 fathoms, but such was the force of the wind that we could not hold on to it, and she took out 90 fathoms of the ship's cable (that is to the anchor) and 15 fathoms on to the buoy (or moorings) before she brought up. Whilst the chain was going out we used the brake. About 50 fathoms were out when we applied the brake. This terrific squall lasted only about 10 minutes and she brought up with the moorings and the chain close to the stern of the German Flagship *Kaiser*—that is after we had been dragging about 10 minutes. When it began to blow—the storm became serious—we could not pay out chain. If I could have done it I would have paid out chain to the buoy when it began to blow at 2 o'clock in the morning—and also on the anchor. If I had room I should have let go anchor earlier in the

morning, but in consequence of the proximity to the men-of-war I could not do so, and had to trust to the moorings. We could have let the anchor go, but we could not pay out chain, and it was no use letting the anchor go unless we could pay out chain. The German Flagship was approximately a ship's length from me on my starboard quarter. The German flagship *Kaiser* was about 7,000, or 8,000 tons. The other German man-of-war, the *Irene*, was astern of me. Her tonnage is over 4,000 tons. She dragged her anchors and went ashore. I was heading South at this time. When I was heading S. to S.S.W. the *Kaiser* was on my starboard quarter, and the *Irene* was astern of me, rather on my port quarter. The wind at 2 in the morning was S.E., but when it came on to blow it was S. and S.S.W. If I had paid out chain on the moorings the effect would have been that the ship would have swung more in the gale—as it was she swung about 8 points. The more chain I would have out the more risk I ran if she dragged. The risk present to my mind was our getting foul of the German Flagship and that would be worse than getting foul of the *Melpomene*. This diagram gives approximately the position of the vessels as they lay in the harbour during the storm. (Exhibit A). I can give an idea of the distances of the ships but not accurately. The *Kaiser* was the nearest vessel and she would be I should judge 300 feet from the stern of the *Patroclus*. When we commenced dragging the leuders were put over the side. In the act of dragging our ship took a sheer and her bow pointed toward the *Kaiser* and drifted the whole length of the *Kaiser* until the moorings brought her up. She continued pointing like that until the moorings brought her up. Then her position was end on to the *Kaiser's* stern. I have marked on the diagram (Exhibit A) the position of the *Patroclus* when brought up after dragging. After being brought up she swung round with our starboard waist to the port side of the *Melpomene*. In dragging we passed so close to the *Kaiser* that they had to swing in their boats and booms. They were looking out, and when they saw a risk of collision they immediately set about getting in their boats and booms. The *Melpomene* made no preparations to receive us that I saw. She was moored with her port chain to the buoy. Her port anchor was hanging on the tackles over the bow unattached to any cable or hawser. She did not take in her anchor as we approached. She did not pay out any chain to her moorings. She put out no fenders when we collided—whether she did so afterwards I don't know. She had no fenders out when we came in collision and I saw no one there; what with the wind and spindrift I would not like to say there was no one there; but I saw no one there doing anything. They took no precautions to lower their anchor or take it in (they had plenty of time to do either) or let out chain or anything to avoid the collision. As we swung towards the *Melpomene* I motioned and shouted to them and the 2nd and 3rd officer also shouted to them and motioned to them to lower their anchor, which they did eventually, but not till after the collision, and the damage done. I motioned to them to pay out chain.

When we dragged the starboard anchor was out, the port cable was attached to the buoy, so we could not put the port anchor out. When we came alongside the *Melpomene*, the *Melpomene's* port anchor was hanging outside on the tackles and came in contact with my steamer's starboard side, damaging my rail, my bulwark and penetrating the plates of the *Melpomene*. The anchor was broken with the impact. Besides the damage done by the anchor to the *Melpomene* I don't think she sustained any other damage. After the collision I asked those on board the *Melpomene* why they did not take the anchor in or lower it. It was the Captain I spoke to. I spoke to him on Saturday evening. I said why did you not have your anchor in? I made a general survey with him of the damage done. I have no doubt whatever that the damage done to the *Melpomene* was all done by the anchor. I say that from the survey I then made. He gave no reason with regard to the anchor. He said nothing about the anchor. He said he could not pay out chain. He said nothing at all about his anchor except showing me the damage done. I asked him why he did not pay out chain. He said he would have liked to do it, but he could not for fear of getting ashore. The *Irene* was then on shore and also two other vessels. They had been blown ashore or dragged on shore—the *Glensicht* and the *Lonsdale* sailing ships—and several other steamers had dragged their buoys and moorings the same as myself. The *Melpomene*, to get ashore, would have to go at least twice her length from her stern—the buoy she was moored to was the nearest buoy to the breakwater—the most northerly buoy, I think so. Inside the breakwater there is shoal ground. The

two sailing ships and the *Irene* went ashore on that—they got ashore before they touched the breakwater. I have marked on the diagram (Exhibit A) roughly the shoal and the buoy marking it. After passing the buoy steamers coming in passed nearer the breakwater—there is a passage there and the distance from the *Melpomene* to the shore there may be perhaps five times her length. I have not measured it. I believe the *Melpomene* was attached to the Shell Line Buoy. After the anchor penetrated the plates of the *Melpomene*, as soon as we could get clear of it they lowered it with their cat tackle to the water's edge. If they had lowered it before there would have been no damage—my rail might have been damaged, but there would have been no damage to him—the whole damage was caused by the anchor. It could have been easily lowered. It requires no steam. The wind shifted a very few minutes after the impact. It came out from the North and blew us clear. They then commenced to act and put out bales of cotton over the side but we did not touch them again after that. I have nothing further to say than that if they had taken precautions to lower their anchor or taken it on board, there would have been no damage. If they had paid out 30 fathoms of chain I should say we would have cleared them: Later on—it took some time as I had to confer with the Captains of the men-of-war, as the *Kaiser* had to shift to let us get our anchor. About 12 o'clock—about noon—we unshackled from the buoy and tried to recover our anchor. We had to slip it eventually at 15 fathoms. We afterwards recovered it. I then steamed out of the harbour and took up another berth, and moored with my own anchors. We returned the same afternoon. I had steam up and was all ready to go on Monday afternoon when the ship was arrested. I had cleared at the Consulate. We have been under steam ever since ready to go.

Edwin George Dickens, cross-examined by Mr. Lowder—I have been here before in this harbour half a dozen times as a Master. I was here this time last year about 10 days earlier in the year. I should not say that from the 6th to the 8th violent showers with variable winds prevailed. The 6th was not a very bad day; we put out cargo that day. It was close on to full moon on the 8th and the equinox was approaching.

Did the fact that the moon was nearly full and the equinox approaching not indicate to you that atmospheric disturbance might be expected?—No.

On the evening of the 8th of September were there strong gusts of wind accompanied by torrents of rain?—Yes, very heavy rain. At 2 o'clock I was uncertain; I thought the weather was very threatening. I had asked no questions of anyone about the buoy to which we were moored. I did not know—I had no special knowledge of the buoy. I had 5 fathoms of chain from my ship and the depth was about 5 fathoms. Five fathoms is the usual amount you moor with to a buoy: the buoy is moored with heavy moorings. I lowered my starboard anchor at 5 o'clock. We could not give her chain, that was a precaution in case we dragged. There would be 10 to 15 fathoms chain out. I could not give her more. If I had had room I would certainly have given her more. If I had had plenty of room I would have given her 30 fathoms—as much chain as I could, and I would have given the same on the buoy. I was in a very dangerous position in case of a gale springing up. The *Kaiser* was there before me. Had I had all the steam in the world I could have done nothing in a close harbour as I was—I won't say it would not have helped me. I could have gone ahead on that. When I said I could have done nothing I meant I could not have gone away. I did not consider I ought to have got steam earlier. I question if any ship had steam up at 2 o'clock.

Mr. Lowder—I suggest to you that between 2 and 3 o'clock the weather increased in violence and the barometer was falling rapidly and that the wind strengthened into a gale.

Witness—Not at 2.30 It was between 4 and 5 before you could call it a gale. It was blowing hard at 5 but it attained its strongest force at 5.40. I put the anchor down at 5 but it was long after that before she dragged. Looking at the list of vessels in harbour given in the 6th column of the last page of the *Japan Daily Mail* of the 9th of Sept., I should say all the ships mentioned there were in harbour on that day and also three large Japanese steamers whose names are not given (Exhibit B) all of which three Japanese steamers dragged during the gale. To my knowledge those three large Japanese steamers dragged, and there were very few ships that did not drag—those Japanese steamers I saw drag.

How do you account for their bringing up when you did not?—We did bring up eventually, but unfortunately there were ships in the way: one of the large Japanese ships had a narrow escape from the *Kaiser*; much closer than we. My anchors

must have fouled the anchors of the *Kaiser*. The *Kaiser* could not get her anchors up and I could not get up mine. It may have been that my vessel was brought up by my anchors so fouling the anchors of the *Kaiser*. I admit the brake did not bring her up. No preparation was made to let go a second anchor. I should say a 3rd anchor—the mooring was my second anchor. No preparation was made to let go my port anchor—because my port cable was attached to the buoy. A hawser could have been made use of, but it would have been no use—I am speaking of the time I let go my starboard anchor—we don't ride by hawsers in 8,000 ton ships. A hawser would not have helped with the starboard anchor down and my port cable fastened to the buoy. The cable of the *Melpomene* was to the buoy the same as ourselves. That would not account for her not taking in or lowering her anchor. Her anchor was fastened to the tackles and she could lower it without any cable. She eventually did lower it without any cable. I should say that there was a very extraordinary strain put upon the cable of the *Patroclus* moored to the buoy. We did not ease it. I dared not do it. I could only let my starboard anchor go so as to be to be ready in case she dragged. It had no hold of the ground until she dragged. The strain on my mooring cable was not relieved by my starboard anchor—not to any extent. When the moorings dragged it did help. When I got fenders ready I did not anticipate we should drag. I was hoping we would not. It is an ordinary precaution to take. The reason I did not pay out chain either to the anchor or the buoy was that I was in a dangerous position. That position—we were moored to the buoy—we took that position ourselves. There are permanent moorings in the harbour. The *Kaiser*, the *Melpomene* and myself were each moored to permanent moorings. Seeing that the distance between myself and the *Kaiser* was about 300 feet I don't think I could have taken 150 feet of that. I was afraid of a greater sheer. We were very light. It was the close proximity to the *Kaiser* made me hold on to our moorings, instead of giving her more chain. But for that I would have given her more chain. I think there was room for the *Melpomene* to pay out 30 fathoms of chain with safety. I did not see any fenders on the *Melpomene* at the time of collision. They put bales of cotton out about half an hour after. I think I should have seen the fenders on the *Melpomene* if there had been any. The mist and spray would not have prevented me seeing the fenders. It was when we were drawing towards each other that I saw people—they were rushing about the deck. The wind was blowing from us and although it was a typhoon I think they could have heard our shouting and understood our motioning. From the time of our clearing the stern of the *Kaiser* and coming in collision with the *Melpomene* probably about 2 minutes elapsed. We were not brought up when the shouting was going on. It was before that. When we brought up we rushed with the fenders. I spoke in English to the Captain of the *Melpomene* when I went on board, and the Captain replied in English; we did not use an interpreter.

Re-examined—On the evening of the 8th before 6 o'clock I was in the harbour in a sampan, there was rain but no wind then. The rain continued. My attention was not called to the wind till after midnight. There was no dangerous weather till about 2 in the morning. It was towards midnight when I noticed the gusts of wind. I was then in bed. I was not on deck. The mooring I took up was dangerous in the gale. In all ordinary weather the berth was a good one. I should consider all the ships in the harbour on that day in rather a dangerous position. Because the harbour was rather crowded with ships, and there was not room to manoeuvre a ship. I had to come into the harbour to discharge my cargo. The *Melpomene's* anchor being in the tackles she could either have lowered it down or taken it on board: she could have lowered it down quicker. If the ship had not brought up when she did she would probably have struck the *Melpomene* broadside on across her bows. When I spoke to the Captain of the *Melpomene* he spoke to me in English. He did not speak good English, but intelligible English. He quite understood what I said to him.

Alexander Douglas, British, Chief Engineer of the British steamer *Patroclus* sworn, deposed—I have been at sea as Engineer about 30 years. I have been Chief Engineer about 14 years. I have been Chief Engineer in the *Patroclus* 15 months, since she was new. The *Patroclus* arrived in this harbour on the 6th of this month. We let the fires die out when we arrived in the harbour and finished with the engines. We have fires for donkey engines and winches from about 4 in the morning till 7 in the evening, but that has nothing to do with the

working of the main engines. When the storm came on on Thursday the boilers were all right, but the fires were out. There had been no fires in the boilers from the 6th, Monday. Under those circumstances the shortest time to get up steam to work the engines would be 4 hours. If the water had been quite cold it would have taken longer, but the water being a little warm we got it up in 4 hours. On the morning of Thursday the 9th I got orders from the Captain to get up steam. As near as I can judge it was about 4 o'clock, it may have been a little after. On receiving those orders I made all necessary preparations to get steam up as quickly as possible. We had as a fact steam up between 8 and 9 o'clock ready to work the engines.

Cross-examined by Mr. Lowder—The water was not quite cold. We came in on Monday and the water would not be quite cold on Thursday morning: it would be luke-warm.

THURSDAY, September 16th, 1897.

John Young, British, Chief Officer of the British steamship *Patroclus*, sworn:—I have been at sea 20 years: of that I have spent about 10 years as an officer in steam ships of the Ocean Steam Ship Company continuously. I have had a Master's certificate since 1887. This is the log-book kept by me of the S. S. *Patroclus*. Referring to it I can say what the weather was in Yokohama on the 8th. The entries here were made by myself while things were fresh in my mind. The entry referring to the 8th of September was made by me about 6 o'clock the same evening. There is no entry referring to the time between six that evening and midnight. The state of the weather up to 6 p.m. was light S.E. winds, overcast and incessant rain. From my recollection I can speak of the weather after that up to 8 o'clock, when I turned in. It was similar to what it had been during the day. I turned out again at 2 a.m. Referring to my log I can say what the weather was after 2 a.m. on Thursday the 9th. It was fresh to strong winds, heavy rain. The wind increased to typhoon force at 5 a.m. At 5.45 there was a terrific squall. At 6.30 the wind decreased. The readings of the barometer were 29° 60' at 2 a.m. At 4 o'clock it was 29°, at 6, 28° 80', at 8, 29° 20'. I only entered them every two hours. I took the readings myself at 2 o'clock, and 4 o'clock, and at six o'clock they were entered on the slate by the 3rd officer. The same at 8 o'clock. I was on deck from 2 a.m. the rest of that day. At 4 a.m. I received orders from the Captain to call all hands on deck. I called them on deck and the officers went to their respective stations, and remained at their stations till after the ship was brought up. My station was at the fore-castle head, and my special duty was attending the chains and anchors. I received an order from the Captain at 5 o'clock to let go the starboard anchor. I let it go. At 5.45 there was a terrific squall, and the ship began to drag her moorings. When she began to drag we put on the buoy brake. She did not drag her anchor at first, she dragged her moorings. We put the buoy brake on as soon as she commenced to drag. There were two men working that brake. The ship in dragging took out some of the chain of the anchor, 45 fathoms were out on the anchor cable when we began to put the brake on that cable. Two men were on the anchor chain brake—myself and the carpenter. The anchor brake and buoy brake are quite close together, so that I had no difficulty in seeing what they did at the other brake. One man at the brake would usually check the chain with great ease, with one turn. On this occasion the two men at each of the brakes were using the utmost of their power. We have a very powerful windlass—about one of the most powerful built. The chains ran out so quickly that they broke the windlass—that was after the brakes were on. The breaking of the windlass had nothing to do with the bringing up of the ship. It did not affect it one way or the other. With the brake on the ship took 90 fathoms on the anchor chain before she brought up. The buoy chain was out 40 to 50 fathoms. I cannot say exactly how much was out on the buoy chain. The buoy cable was slack when she brought up. The anchor chain was marked. I did not notice the shackle on the buoy chain. The ship was drawing very little water—14.6' I think, her full draught when laden being 25 ft. We dragged from 5.45 for about 10 minutes. Then we brought up and swung against the *Melpomene*. Our fenders were out on the starboard side. I did notice any fenders on the *Melpomene*. I was looking the other way. I saw the anchor of the *Melpomene*. It was hanging in the bridle on the bow—that is it was outside the ship. It remained there until we came in contact with the ship. The *Melpomene* was moored to a buoy. She did not slacken her chain when we approached so far as I saw. I did not see her

slacken her chain. The wind was from the South. The *Melpomene* I should say was 400 feet—a ship's length—from where she would go ashore. I cannot say exactly, I did not sound. After the ships came together I came aft to assist in clearing the *Melpomene's* anchor. It was caught on our ship and we prized it up with a piece of timber. The *Melpomene's* people then lowered it into the water with the tackle. It had been hanging in the tackle and the bridle all the time. After the two ships had separated the *Melpomene's* people put out bales of cotton. It would not have been of the slightest use if I had attached a hawser to the port anchor and let that go—not the slightest we had not a hawser strong enough to hold that anchor. It would require a hawser of very unusual strength to do that. I don't think I have ever seen a hawser that would hold that ship in the trim she was in that wind.

Cross-examined by Mr. Lowder—The wind, after attaining typhoon force, began to moderate about 6 o'clock. It began to moderate immediately after we got clear of the *Melpomene* and shifted. That was a few minutes after six. I don't think it took a much longer time than 10 minutes or a ½ of an hour from when we began to drag till we got alongside the *Melpomene*. The time, 5.45, as the time of the terrific squall, I took from the slate. I can say from my own observation that 5.45 is correct. I looked at my watch. I did not take the time when we came in contact with the *Melpomene* so that the 10 minutes or quarter of an hour is more or less guess work. The calling of all hands on deck at 4 o'clock was because the derricks were swinging about. At 4 o'clock there was a strong gale. I can't say when our fenders were put out. The second officer looked after that. It was after we began to drag. I am quite sure of that. They were out before we got to the *Kaiser*. Seven fenders were put out. Four of them were bundles of bamboos—cane fenders 8 to 10 feet long, 2 feet in diameter. The others were what are called cork fenders—made of rattan—round—spherical. I can't say where they were placed. When first put over the side, after the first impact, they were shifted about as wanted. The ships were held together by the anchor and were rubbing against each other. Our object would be to prevent chain running out even before we began to drag; our object would be to remain stationary. When I said the ship brought up, that is, when we were astern of the *Kaiser*, for all I can say to the contrary she may have been brought up by our anchor catching in the anchor of the *Kaiser*. When we were brought up the buoy cable was slack, the anchor cable was tight. We slipped our anchor in the afternoon between two and three o'clock—at two o'clock. We steamed as near our anchor and got in as much chain as possible before we slipped. When I saw the anchor of the *Melpomene* it was hooked on an iron ledge above our bulwarks in the waist. That was after the first impact; the vessels were then laying side by side. The anchor being in the bridle was horizontal and one of the flukes caught in the ledge at the point where the ledge rises above the bulwarks. I did not see whether the flukes were torn off. It was a patent anchor—with the flukes on a swivel. That is the proper place for carrying an anchor—on the tackle and bridle. Before we dragged, supposing we had a hawser, I would not have thought of attaching it to the port anchor and letting it go.

Re-examined—The brake is always on when the ship is at anchor. When a certain strain is exceeded the chain will run out unless extra force is put to the brake. When I say we put on the brake when she began to drag I mean that extra force was applied to the brake. I saw the anchor of the *Melpomene* before the collision. When I saw it after the collision it was hooked on the ledge on our bulwarks. When I said that "I did not see fenders on the *Melpomene*, I was looking the other way" I meant that I did not see the position of our fenders as I was looking the other way. As a fact I did not see any fenders on the *Melpomene* at the time. They might be there without my seeing them.

William Rushton Bailey, British, Second Officer of the British steamship *Patroclus*, sworn:—I have been 13 years at sea, of which I have spent 5 years in steamships, and I have had a Master's certificate 5 years. I have been two years in the service of the Ocean Steamship Co. I remember quite distinctly the storm of the 9th of Sept. Early in the morning I came on deck; at 4 o'clock in the morning, and remained on deck the rest of the morning. At 5.45 or thereabouts the ship began to drag. I was then stationed in the after part of the ship. I had been looking after the fenders. The fenders were stowed away and were got out, but not until after the ship began to drag. They are kept where they can be got in 2 or 3 minutes.

They were not put over the side right way. They were not put over the side until after the collision. At the time of the collision our fenders were not over the side. Our ship dragged past the *Kaiser*, very close to her. I could see the men on the *Kaiser* getting in boats and booms and doing everything possible to avoid our touching them. I did not see any similar preparations made on the *Melpomene*. I did not see any one on the *Melpomene's* deck; not at the time. We touched the *Melpomene* before we brought up. We put fenders out and swung round. There were no fenders out when we struck. The *Melpomene's* stem struck the midship section of our bulwarks. It was after that we swung round and came alongside the *Melpomene*. I was close to where the first impact was on our ship. Our fenders were not put out until after we were alongside the *Melpomene*. There were no fenders out on the *Melpomene* when we came alongside—not as I could see. I saw the two tackles on the anchor of the *Melpomene* on the port side—and the anchor in the bridle. As we approached the *Melpomene* I saw some of the officers and crew (I took them to be) coming up on the forecable head and I called out to them to take in the anchor. I pointed with my hands to the anchor. The *Patroclus* eventually came into collision with the anchor while it was hanging out. I was very near that point of collision. The anchor went through the upper plates of the after part of the forecable head of the *Melpomene*. The anchor was carried away by the first impact, that is carried out of the bridle. We first struck the stem of the *Melpomene*, then swung round and caught the anchor. The anchor when we swung round and struck it was carried out of the bridle. It then fell down and hung by the tackle at the davits. It penetrated the *Melpomene* after it had fallen. I saw the anchor afterwards lowered into the sea; we did not assist, it was lowered into the sea by the tackles by the *Melpomene's* men.

Cross-examined by Mr. Lowder—It was after the bridle was carried away that I called out and motioned to the men of the *Melpomene* to take it in. I was on the main deck, starboard side, amidships. It was after the first impact and before we caught the anchor that I called out. The anchor was swinging, when the fluke caught in our ledge. The bridle had then been carried away. It was after the anchor had left the bridle that I called out. In saying it was 5.45 when we began to drag I judged from the time our coffee was brought. They generally bring our coffee at half-past five. I did not look at any clock. We take our time from our own chronometer—allowing for the difference of time. We keep 135th meridian time, Japan mean time. Yokohama is further East, L. 139.40, that is 18½ minutes faster.

Thomas Laurus Stephen Garrett, British, 3rd officer of the British steamship *Patroclus* sworn:—I have been about 12 years at sea, have had about 3 years experience of steam ships. Have had a Master's certificate since January of this year. I remember the storm of the morning of the 9th of Sept. I came on deck about 3 a.m. and remained on deck the rest of the day. I was at my station before 4 and remained at my station until after the blow was over. I was on the bridge deck under the flying bridge about midships. Later on the *Patroclus* dragged and eventually came into contact with the *Melpomene*. There was an anchor hanging in the bridles on the port side of the *Melpomene*. I saw that before the collision. I saw the *Melpomene* was attached to her buoy by a chain. I should think the chain was fully about 5 fathoms. As we approached the *Melpomene* I signalled to them to veer chain. The *Patroclus* when she dragged approached the *Melpomene* at about an angle of 45 and struck the stem of the *Melpomene* with her starboard waist (close by my position), rebounded and then came alongside. We did not strike the anchor at the first blow. At the 2nd impact the anchor caught in the half round and the bridle was carried away. The anchor was broken at the crown. This was quite close to my position. We prized off the anchor from our half round. It did no damage to the *Melpomene* when it was stuck in our half round. When we prized it away it went between the ships and it was then it damaged the *Melpomene*. After that they lowered it down to a point where it was no longer crushed between the two ships. I had to do with the fenders in our ship. We got some fenders out before she began to drag—cane fenders. Several were put out afterwards. I could not say whether any were put out before we came alongside the *Melpomene*. As soon as we struck we were getting fenders along. Some were getting the anchor out of our side and some were bringing the fenders along. Fenders might have been of use right aft. The two fenders—one was put abait the half round and the other nearly quite aft. I made no note of the time we began to drag—only a mental note. It

was about 5.45. I took the readings of the barometer from 6 to 8. I marked them on the slate. That is where the Chief Officer would take it from—the log slate.

Cross-examined—When I took the barometer at 6 we had struck the *Melpomene*; it was only a few minutes from when we started to drag until we struck her. When we prized the anchor off it was touching her side and was on our rail and caught in the half round. Immediately after we got it over, the two ships came together again and that caused the damage.

This concluded the evidence taken on commission and the Court adjourned till 2.30 p.m.

Upon the Court re-assembling at 2.30 p.m. Mr. Walford called:—

Robert Ross Thompson, a citizen of the United States, examined—I am shipping clerk in the office of Messrs. Butterfield and Swire, agents of the *Patroclus*. On the 9th Sept. the *Patroclus* was in the harbour of Yokohama, moored to the P. & O. Co.'s buoy. I arranged that berth for her. My proper berth, the German mail buoy, which I chartered, was occupied by a German cruiser. I went to the shipping clerk of Messrs. Strachan & Co. agents of the Mutual Line, and asked them for the use of what is known as the P. & O. buoy, which I heard was chartered by them. They gave me the permission. The harbour was full at the time. A message was sent me from the P. & O. office after the *Patroclus* was moored, telling me to remove her from the buoy. I afterwards saw the agent, Mr. Woolley, who agreed to let the steamer remain there for the time being, until the arrival of the Fleet.

Mr. Lowder objected to the Fleet being mentioned and His Honour allowed the objection.

Witness continuing—I gave instructions that the *Patroclus* should be taken to the buoy. I go afloat whenever one of our steamers comes in. The P. & O. buoy was in very frequent use, by very large ships—the *Moyuna* over 3,000 tons net, the *Ningchow* and other large ocean steamers; the *Antenor*, on her previous voyage, and large cruisers. I knew nothing as to the strength of the moorings, beyond that they were used by large vessels. I had no reason to suppose that they would drag in a storm.

Cross-examined—The German cruiser was put at the German mail buoy without seeking my permission. The agent of the N. G. Lloyd did not remove the cruiser. I spoke to him on the matter. I got no satisfaction and as it would have taken days to come to an arrangement I decided to get another berth.

To the Court—The cruiser at the buoy must have been the *Princess Wilhelm*.

Mr. Walford said that concluded his case.

Mr. Lowder then addressed the Court, commencing by commenting on the evidence adduced as to the excellence of the gear and fittings of the *Patroclus* and the conduct of the Captain in trusting simply to the statement of a shipping clerk in taking up a mooring of which he practically knew nothing, instead of trusting to the ship's tackle. That he submitted constituted an act of gross neglect on the part of the master of the *Patroclus*. That the moorings were insufficient for the strain put upon them was shown by the fact that they carried away. Did the master take all due precautions in the circumstances of the case? The ship was almost empty and in the month of September bad weather might be anticipated.

Mr. Walford objected to the line taken by Mr. Lowder, as it was not pleaded that they were wrong in taking up the moorings they did, and quoted authorities on the point. The petition had been filed after the cross-examination of the master of the *Patroclus* but the point had not been raised in the petition. He took the case he had to argue from the petition. There were specific acts of negligence charged in the petition and this was not one of them.

After hearing Mr. Lowder again on the point, His Honour said he thought he would allow Mr. Lowder to go on, Mr. Walford having a right to be heard on the point later on if he desired to argue it.

Mr. Lowder referred the Court to the case of the *Secret*, in *Law Times Reports*, 26, p. 670, on the point, and also to the cases of the *Merchant Prince*, the *East Lothian*, *Lushington*, etc. Counsel submitted that the burden was not on him to prove negligence on the part of defendants, there was *prima facie* evidence of that, and the burden lay with the other side to show that the damage occurred through an inevitable accident which was unavoidable by him. Counsel drew attention to the light trim of the *Patroclus* and the time of the year, the typhoon season, and the dangerous position she placed herself in at a time when bad weather might be expected. The master had taken a position where

he was unable to veer chain when the storm came on, and showed negligence.

Mr. Walford objected to the charge of negligence founded on the position of the ship as contrary to the preliminary act and petition. His objection was noted by the Court and Mr. Lowder continued his argument, submitting to the Court the question whether or not it was the duty of the master of the *Patroclus* to have made use of his own anchors and chain instead of the buoy.

At this stage the hearing was adjourned till 10 a.m. on Thursday, when Mr. Lowder will cite his authorities and Mr. Walford will address the Court for the defendants.

Thursday, Oct. 21st, 1897.

Mr. Lowder for plaintiffs continued his address to the Court. Counsel called the attention of the Court to the premonitory symptoms of the weather at 2 a.m. on the 9th Sept. and the readings of the barometer at the time, and suggested that it would then have been an ordinary precaution to have ordered steam up on the *Patroclus*, instead of which the master waited till 4 o'clock.

His Honour—Would it have been of use at the time of the collision, if steam had been ordered at 2?

Mr. Lowder—The time of the collision was, in evidence, 5.55 a.m. and it was stated steam could have been got up in four hours.

His Honour—The earliest time that steam was ordered on any vessel in the harbour appeared to be at 2.30, when it was ordered on the *Melpomene*, and their time was $\frac{1}{2}$ hour or so later than the time on the *Patroclus*.

Mr. Lowder, continuing—It was pleaded by the defendant that he was unable to pay out any chain, and it would have been an ordinary precaution that the starboard anchor should have been laid out before the storm, when taking up his position in the harbour. The master of the *Patroclus*, according to his own statement, had 300 feet between him and the vessel lying nearest to him, the *Kaiser*. Had he paid out chain, say 150 feet, at 2 a.m. would it not have rendered the collision less probable? Also whether he could not have made use of his starboard anchor in addition to that measure, Counsel then referred the Court to various cases bearing upon the point raised by Mr. Walford as to whether a vessel drifting was really under way in the ordinary acceptance of the term, quoting the case of the *Massachusetts*, 1 William Robinson, 371, 1842, a case of collision by the dragging of the damaging ship, through the anchor being too light and not sufficient chain paid out, in which damages were given. The next cases cited were those of the *Volcano*, 2 William Robinson, 244, and the *Virgil*, 1843, 2 William Robinson, 205, in which latter case a definition of "inevitable accident" was given. Counsel then cited the case of the *Marpesia*, 1872, Law Reports Privy Council, p. 220, in which the definition laid down in the case of the *Virgil* was accepted, as it was also in 1876 in the case of the *Plada*. Counsel further cited the judgment in the case of the *Kepler*, which he considered to be on all fours with the case before the Court, in which the colliding steamer was pronounced alone to blame; the cases of the *Lidschalf*, 1856; the *Egyptian*, in 1861, Privy Council New Series, 373; Counsel considered that the deduction to be drawn from the latter case was that when taking up an anchorage it was incumbent on a vessel not to bring up in such a place that she endangers another ship. She should not bring up directly ahead or in the stream of another ship having regard to the current and the prevailing wind. If she bring up directly in the hawse of another ship or elsewhere in the neighbourhood of another ship, there must be such a distance between them that in the event of her dragging, she may have an opportunity to keep clear. He further quoted the cases of the *Excelsior*, 2 Law Reports, p. 272; the *Ruby Queen*, Lushington, 266; the *Secret*, Law Times Reports, vol. 26, p. 672; the *Nitrate Phosphate Manure Co. v. the London Dock*, 1578, Law Reports Chancery Division, p. 510; Pandorf v. Hamilton, 1886, Queen's Bench Division, p. 675, which gives a definition of "the act of God" as used in a mercantile sense; the case of the *City of Peking*, Law Reports 14, Appeal Cases, p. 43, year 1888, a collision which occurred in the harbour of Hongkong. It was pleaded by the *Patroclus* that she was very high out of the water and on the point whether the owners were responsible for damages to which her trim may have contributed, Counsel quoted the case of the *Argo* and a case decided in the Supreme Court of the United States, in which it was laid down that it lay with the defaulting ship to prove the efficiency of her moorings and tackle. Counsel also referred to the cases of the *Indus*, 12 Probate Division, 86; the *Albano* (1892) 8 Times Law Reports, p. 425; the *Merchant*

Prince, same vol. p. 430. In the *Albano* case the Master of the Rolls laid it down that the "greatest care and skill" required to be proved to justify the plea of inevitable accident.

Mr. Walford pointed out that the statement of the Master of the Rolls on this point was overruled by the other two judges sitting in the case referred to.

Mr. Lowder, continuing, referred to the statement in the defence that the accident was due to the *Melpomene's* anchor not being removed and to cable not having been paid out. As regards the anchor, it was hanging from the davits in the usual position, and work was in progress on board to get ready a cable to attach to the anchor. Certainly the absence of the anchor could not have averted the collision, the first impact of the *Patroclus* being forward of the anchor. The case which the defence would probably rely upon was that of the *Margaret*, 6 Probate Division, 76, in which a collision occurred on the Thames between a barge and a schooner, the injury to the former being caused by an anchor hanging in an improper position on the schooner but the barge being also found to blame for improper navigation, damages were divided. The case cited differed, Counsel submitted, from that before the Court as regarded the position of the anchor on the respective vessels. On the schooner it was in an improper position, and on the *Melpomene* in an ordinary and proper position; but even supposing it to be held that it was in an improper position the evidence showed that there was not sufficient time after the *Patroclus* dragged to take the anchor in board, or drop it, and the weather was so bad that the crew could not get near the anchor.

At this stage an adjournment was made till 2 p.m.

On continuing after tiffin, Mr. Lowder resumed his address. With regard to the line of the *Melpomene's* anchor the question had been raised by the Court as to whether it had been let go when it should have been, or could have been. Counsel submitted that the collision appeared inevitable only five minutes before it occurred. The evidence of the chief officer was to the effect that the wind would not permit them to get near the anchor. The Captain stated that he let go the line a moment before the collision but it had no effect. Mr. Lowder quoted from Marston to show that a wrong step at the moment of agony of the collision, or the omission of a proper step, on the part of the vessel struck could not be imputed to her in the way of making her in any way responsible for the damage done. Counsel further cited from 14 Moore's Privy Council, p. 83, in the year 1890, and Marsden, p. 345. It was not a case of a vessel breaking from her moorings, but he cited it to show that if a vessel is in a wrong position and a vessel in motion runs into her, the mere fact of her being in a wrong position does not exonerate the other vessel from blame, or prove contributory negligence, and the same would apply if not the ship, but its anchor, were in a wrong position. The next case on the other side would probably be that of the *William Lindsay* 5 Privy Council, p. 78, but in that case the ship was ordered by the port authorities to move to a certain buoy from which she broke and drifted after a gale and collided with the *Exeter*, in spite of an anchor having been immediately dropped. Judgment was given to the effect that the collision was the result of unavoidable accident and each ship paid its own costs. On appeal the decision was upheld, and on first sight the ruling would appear to be in favour of the defence in the case before the Court; but there were differences in the two cases. In the case of the *William Lindsay*, the master fastened to a buoy under the orders of the Harbour Authorities, who were responsible for the safe condition of the moorings. Here there were no such harbour authorities, and the buoys in the harbour are not guaranteed by any authority. Sanction had been given, it was shown in evidence, by the Kencho to the use of the buoys, but this was not sufficient to justify the master in trusting to the buoy. It was also shown that the *William Lindsay* had an anchor ready to drop in case of dragging, and that it was dropped, but did not reach the bottom. In that case therefore all possible precautions had been taken to prevent an accident. The *Patroclus* was in a position in which her only chance was to hold on to the buoy and Counsel suggested that they might have laid out their starboard anchor for one thing. He thought the question to be put to the Assessors was whether they were satisfied that everything possible had been done by defendants to prevent the accident.

His Honour considered he could only ask the Assessors their opinion with regard to the points raised by Counsel in support of the charge of negligence on the part of the defendants.

Mr. Lowder said one of the points he had made was whether the Captain was justified in making use of the buoy with no personal knowledge of its

condition, solely on the authority of the shipping clerk. Also whether he should not have laid out his starboard anchor in addition to the buoy. He also suggested that it would have been a proper precaution to have got up steam at 2 a.m. With all due deference however, Counsel could not agree with His Honour's statement that Counsel was bound to suggest all the questions which should be put to the Assessors. In conclusion, Mr. Lowder referred to one point which he had overlooked, which was whether the *Melpomene* should have veered chain. Soundings had since been taken, but at the time the Captain did not know the exact depth of the water, except that it was shoal at a very short distance, and that there was danger of his running aground if he had veered chain.

Mr. Walford then addressed the Court. Referring to the last point raised by Counsel for the plaintiffs, he had taken the trouble to have accurate soundings taken of the depth of water between the *Melpomene* and the shoal, the depths given by the witnesses for plaintiffs being only estimated. Counsel complained that Mr. Lowder had departed from the pleadings in his argument, and cited as authority in support of his objection—the *Marpesa* case. He could plead in two ways, either giving no particulars, or, if giving particulars, must stick to the definite allegations made. Mr. Lowder now contended that the *Patroclus* had no right to be at the buoy at all; a point that was not raised in the pleadings.

His Honour thought that Mr. Walford had met that in cross-examination.

Counsel, continuing, said that if it fell upon him to prove that there had been no negligence, it was incumbent on Mr. Lowder to show how he had failed to prove it. Taking the fact that nearly all the ships in the harbour dragged their anchors, some going ashore that morning, it might be assumed that a storm involving these casualties must have been an act of God. Although such typhoons occurred occasionally in the month of September they were not common, and this was an exceptionally severe one. There was nothing to indicate extraordinary bad weather until 2 a.m., according to the Captain of the *Patroclus*. It had been suggested that the *Patroclus* should have laid out her starboard anchor; that was a question for the Court; it was also said she should have got up steam at 2 o'clock; but if this had been done it was shown that it would not have been in time to prevent the collision. As to the distance between the *Patroclus* and the *Kaiser* it was put at 300 feet and 400 feet respectively, it is questioned whether the *Patroclus* was justified in taking up the position at the buoy. If she could have paid out 90 fathoms of chain she would have done so, but the paying out of only a little chain would have only made his position worse with regard to the *Kaiser*. Captain Dickens was on board at 2 p.m. and what he did was done deliberately, he held on close up to the buoy, and was not to blame for doing so. In ordinary weather, Captain Dickens said, the position was a safe one, during the typhoon it was a very dangerous one, but so were the positions of almost every vessel in the harbour. Passing on to the case made by the defence against the *Melpomene*, the two charges were that she did not remove her port anchor and that she did not let out chain to avoid the collision. If the *Melpomene* had veered chain for about 200 feet the *Patroclus* would have swung round and just cleared her. At 550 feet from the buoy there were usually 20 feet of water and on that occasion there would be several feet more, as the tide was exceptionally high. At 600 feet from the buoy there were 18 feet of water, according to their own witness, much more than sufficient to allow of veering 200 feet of chain, which would have prevented the collision. Defendants attributed the collision solely to the position of plaintiffs' anchor. The excuse given for the position of the anchor by the Captain and chief officer of the *Melpomene* was that the weather prevented them from getting near the anchor, but it was added that but for the collision the anchor would have been lowered by 5.40. It would take, in the weather there then was, from 6 to 10 minutes. It was clear that the anchor could have been lowered, and should have been lowered, directly the *Patroclus* was seen dragging, which was 20 minutes before the collision. Counsel considered it was proved that all the damage done to the *Melpomene* was done by the anchor. If the plaintiff's ship is found to blame for negligence, defendants claimed entire immunity from damage, even supposing previous negligence had been proved against defendants. In support of this contention Counsel cited Marsden, p. 20, Davis and Mann and the *Verona*, 12 Probate Division, p. 89. The same doctrine was recognised in the *Khedive*, Five Appeal Cases, p. 892, and other cases. Pollock on Torts also stated (p. 405)

that the party who has the last opportunity of avoiding an accident, even if negligence occur on the other side, is solely responsible. Counsel also quoted further authorities on the point. The defendants' case was that the *Patroclus* had done everything she could do to avoid the accident and on the other hand the *Melpomene* did nothing, although she saw the *Patroclus* coming down on her for 20 minutes; that she did not remove the anchor, the most dangerous thing on board, or veer out chain.

Mr. Lowder said he would not occupy the time of the Court with any reply.

His Honour—The Court will consider the case—judgment reserved.

LATEST TELEGRAPHIC NEWS.

(FROM THE "JAPAN TIMES.")

TYPHOID FEVER IN LONDON.

London, Oct. 15.
Typhoid fever has broken out in London, and there are eighteen cases among the staff of University College Hospital.

THE VENEZUELA ARBITRATION.

Professor Maertens, of St. Petersburg University, has been chosen umpire in the Venezuela Arbitration, and the court will assemble at Paris next autumn.

NAVAL MOVEMENTS.

Five British men-of-war have sailed from Malta for Alexandria.

RESIGNATION OF LORD ESHER.

The Master of the Rolls (the Right Hon. Wm. Balfour, Lord Esher), has resigned.

BIMETALLISM.

The *Times* states that a letter is being drawn up for the purpose of expressing the grave objections of the majority of the leading City men to any movement by the Government in the direction of bimetalism.

London, Oct. 18.

A memorial has been forwarded by the leading men of the City (London) to Sir Michael Hicks-Beach, Chancellor of the Exchequer, which urges the maintenance of the single standard, and that no retrograde step be taken with regard to the Indian Mints except after the most exhaustive enquiry, and then only if Indian interests are to be primarily benefitted. The Canadian banks have also forwarded a similar memorial.

The Cabinet on Saturday considered several memorials from bimetalists and goldites, including one signed by 1,500 members of the Manchester Exchange, urging the fulfilment by the Government of its pledges to cooperate in securing a stable par exchange.

It is understood that the home Government has consulted the Indian Government, and that the latter is strongly averse to reopening the mints, but it is believed that Saturday's Council will probably result in further negotiations with the United States and other foreign silver states.

London, Oct. 19.

The *Times* states that the Cabinet has decided upon declining to reopen the Indian mints or to enter the proposed monetary conference, but the Government will very likely intimate that it will be prepared to consider further or alternative proposals by the United States and France for the rehabilitation of silver.

ENGLAND AND FRANCE IN AFRICA.

London, Oct. 16.

Although the French Press discusses the West Africa question with some degree of heat, the French Government is moderate and conciliatory, and hopes that

the approaching negotiations will terminate in the adjustment of existing differences. Nevertheless, there is a strong divergence between British and French views on certain points, especially in regard to the banks of the Niger.

THE AFGHAN FRONTIER.

London, Oct. 20.

A British force has stormed the Chagen Plateau, on the Samana range, and captured the fortified village of Dargai, with the loss of Major Branley and nine men killed, and Lieutenant Pears and 23 men wounded. The enemy's loss was heavy.

London, Oct. 21.

The force under Brigadier-General Yeatman-Biggs yesterday captured the Dargai Ridge, which was held by many thousands of Orakzais and Afridis. The position is immensely strong, the ridge being crowned by precipitous rocks, but after a prolonged bombardment the Gurkhas and the Gordon Highlanders rushed the position and captured it under a destructive fire. It is feared that our losses have been severe.

GERMAN MINISTER TO TURKEY.

The German Secretary of State for Foreign Affairs, Baron Marschall von Bieberstein, has been appointed Ambassador to Constantinople.

THE NEW MASTER OF THE ROLLS.

Judge Lindley (the Right Hon. Sir Nathaniel Lindley, of the Court of Appeal), has been appointed Master of the Rolls.

MARRIAGE OF SIR EDWIN ARNOLD.

Sir Edwin Arnold has married a Japanese lady educated in England.

THE "FUJI."

Hongkong, Oct. 19.

The *Fuji* will stay here for six days, and will start for home on the 24th inst. Yokosuka will be reached on the morning of the 31st inst.

(FROM TONKIN PAPERS.)

THE INDIAN FRONTIER.

Paris Sept. 29.

Simla reports that the Mohmands have promised to surrender their arms.

ATTACK ON DOCTORS.

Paris, Sept. 29.

The populace attacked the English doctors at Igalspuri; four were wounded.

THE UNITED STATES AND SPAIN.

Paris, Sept. 30.

Mr. Woodford, Ambassador of the United States at Madrid, is continuing negotiations with regard to Cuba.

It is believed that Germany and Austria are supporting Spain.

WEST AFRICAN BOUNDARIES.

Paris, October 1.

England and France have agreed to appoint a commission to settle the frontier lines in West Africa.

THE AMIR AND THE AFRIDIS.

The Amir of Afghanistan has ordered the arrest of all the Afridi chiefs who appear in Cabul.

Paris, October 2.

The Amir has forbidden his subjects to participate in the Indian Frontier war.

FLOODS IN FRANCE.

Paris, October 3.

Great floods have occurred in Ariège and Garonne districts.

FRENCH POLITICS.

Paris, October 4.

M. Barthou, Minister of Home Affairs, delivered a speech in Bayonne, in the course of which he called the attention of the electors to

the gravity of the elections of 1898, which will have an important effect on the future of the country. He repudiated all dangerous Utopias, and extolled all works that would tend to social solidarity.

AN ENGLISH TRAVELLER IN THIBET.

The English traveller, Landor, who had been kept a prisoner a long time in Thibet, has returned.

HAKODATE NEWS.

(FROM OUR OWN CORRESPONDENT.)

Hakodate, 18th Oct., 8.10 a.m.

H.M.S. *Peacock* has arrived here.

Hakodate, Oct. 23, 8.15 a.m.

H.M.S. *Peacock* has left for Yokohama.

(FROM THE JAPANESE PAPERS.)

STORM IN THE NORTH.

Niigata, Oct. 16.

Since the 13th inst. a storm has been raging on land and sea. All the vessels in the harbour have taken shelter behind Sado Island.

Sapporo, Oct. 15.

The Japanese man-of-war *Musashi*, which started for Soya, has three times had to put back to this port on account of the severe gale.

GENERAL KONO.

Kobe, Oct. 16.

Major-General Kono, Chief of the Military Bureau in Formosa, arrived here yesterday from Tokyo. This morning he started for Ujina, whence he sails for Formosa.

MAN-OF-WAR FOR FORMOSA.

Nagasaki, Oct. 16.

The Japanese man-of-war *Sakô* left here for Formosa this afternoon.

EXCHANGE OF GOLD AT KOBE.

Kobe, Oct. 16.

Silver *yen* and notes presented for exchange into gold from the 1st up to the 15th instant amounted to *yen* 1,668,380. Silver *yen* imported from Hongkong and Shanghai district during ten days ending the 10th inst. amounted to *yen* 96,238.

LOOTING A FISHING BOAT.

Niigata, Oct. 22.

The fishing-vessel *Ajiu Maru*, owned by Mr. Irizawa Torajiro of this Prefecture, returned here yesterday from Siberia and reported that while the crew were fishing on the 7th inst. at a place on the Siberian coast, they were attacked by some Siberians and all the money they possessed was seized by the robbers, though no one was killed or wounded.

THE NAVAL MANŒUVRES.

Tsu, Oct. 21.

The war-vessels *Hashidate*, *Naniwa*, *Yasuyama*, *Amagi*, *Tatsuta* and *Heiye* arrived here from Yokosuka to-day for the manœuvres.

Tsu, Oct. 22.

Three torpedo-boats entered this port to-day to take part in the manœuvres which will commence to-morrow.

A NEW CANAL.

Sapporo, Oct. 21.

The work of cutting a canal between Sapporo and Zenibako has been completed and the canal was formally opened to-day.

ANOTHER KOREAN PRINCE.

Sŏul, Oct. 21.

Madame Gencho-kyu gave birth to a prince yesterday.

INDUSTRIAL BANK.

Matsuyama, Oct. 21.

The Matsuyama Agricultural and Industrial Bank is to be established with a capital of *yen* 700,000, of which over *yen* 233,000 is a Government subsidy.

DISSATISFIED WORKMEN.

Yokosuka, Oct. 21.

The workmen employed in the Shipbuilding Yard, machine-shops and other factories, have made a demonstration for an increase of wages.

ILLEGAL RICE SPECULATION.

Kyoto, Oct. 22.

About 40 speculators in rice have been arrested and are now being examined.

PASSENGERS.

ARRIVED.

Per Japanese steamer *Saikio Maru*, from Shanghai via ports.—Mr. K. Tosawa, General La Gaudre, Madame Espeisse, Mrs. Ayabe, Mr. J. F. Duff, Mr. Kuhn, Mr. C. Kadono, Lieut. R. Fujino, Mr. C. Gibbons, Rev. O. Cary, Surgeon Captain Watson, and Mr. F. S. Morse, in cabin, Miss K. Kondo, Messrs. G. Robert, T. Asahina, Y. Yamataka, K. Sugihara, I. Noma, Law Kin Jai, and T. Tomita, in 2nd class; 89 in steerage.

Per British steamer *Tacoma*, from Tacoma and Victoria, B.C.—Mr. and Mrs. S. J. Milliken, Mr. W. L. Worcester, and Mr. J. J. Long, in 2nd class; 15 Japanese in steerage. For Kobe:—Miss R. Edwards, Dr. R. A. Hardie, Mrs. V. J. Edwards and child, Rev. and Mrs. W. N. Brewster and 2 children, and Mr. T. T. Paget, in cabin; 3 Japanese in steerage. For Nagasaki:—Mr. and Mrs. John Makins and child, in cabin. For Shanghai:—Mr. R. de Malherbe, Mr. A. E. Alagar, Mr. A. J. Friedstrom, Miss Hilda Anderson, Miss Clara Anderson, Miss Hannah Lund, Miss E. Roehl, Mr. and Mrs. Geo. Duff and 2 children, Miss Mary A. Antick, Mr. & Mrs. G. P. Bestick and 3 children, Rev. T. J. Preston, in cabin; Mrs. A. H. Smith, in 2nd class. For Hongkong:—Misses Clara Martin, Mary Jackson, and P. N. Worley, in 2nd class; 51 Chinese in steerage.

Per British steamer *Verona*, from Hongkong via ports.—Mr. J. Smith, Mrs. Goldstein, Mr. A. Stead, Mr. Hough, Mr. Chongkwong, Miss Smithers, 7 Japanese, 2 Indians and 3 Chinese.

Per French steamer *Oceanic*, from Marseilles via ports.—Mr. Emile Chaix, Mr. Reich, Mr. and Mrs. L. Kerr, Mr. J. Orange, Mr. Y. Kawase, Mr. Roux, Mrs. Carl Le Gaudic de Poulon, Mr. Uyeno, Miss Broadman, Mr. and Mrs. L. Ratard, Mrs. Couperus, Niman Mohamed, Mr. Taminet, Captain Gay, Mr. Morris, 1 Japanese, Mr. M. Riemer d'Wenzel, Mr. and Mrs. Hecker, Mr. Strauss, Mr. Voulmier, Mr. A. de Ridet, Mr. Yanny, Mr. Benzakia, Mr. Hagi, Miss Alice Letz, Mr. Heuerthorn, and Mr. Oglesby, in cabin.

Per British steamer *Coptic*, from Hongkong via ports.—Dr. H. L. Norris, Mr. Jas. Ellerton, Mr. Mr. T. H. Eberhart, Mr. C. F. Heinlein, Mr. E. J. Plaza, Mr. H. J. Rothwell, Mr. Z. N. P. Hermann, Mr. W. O. Kohnmeyer, Miss H. Wallace, Mr. H. Merick, Mr. J. O. Van Buren, Mr. A. C. Byer, Mr. H. Ryder, Mr. F. Jones,

Mr. and Mrs. Von Trentler, Mr. H. Von Varchmire, Rev. H. Loomis, and Miss Loomis, in cabin. For Honolulu:—Mr. and Mrs. Lee Lat, son and native servant, in cabin. For San Francisco:—Mr. J. Samson, Rev. F. L. Hawks Pott, Rev. and Mrs. J. R. Graham and 2 children, Mr. D. F. Hennessey, Mr. H. Carr, Mr. and Mrs. Erickson, Mr. Chang Hay, Mr. A. W. Schumacher, Mr. Denitsky, and Mr. P. W. Edwards, in cabin.

Per American steamer *City of Peking*, from San Francisco via Honolulu:—Mr. and Mrs. W. A. Behrens, Mr. A. Alexander, Dr. G. W. Robinson, Mr. O. F. Oberbeck, Paymaster McDonald, U.S.N., Mr. F. M. Burgess, Mr. H. Kobayashi, Mr. Chas. Fink, Mr. A. Piesmeyer, Mr. Jas. Simpson, Mr. Oswald Simpson, Miss E. Simpson, Mrs. C. M. Presby, and Miss B. Presby, in cabin; 127 in steerage. For Kobe:—Rev. and Mrs. A. W. Stanford, Rev. and Mrs. Galick and 3 children in cabin; 2 in steerage. For Shanghai:—Mr. J. T. Hamilton, Miss E. B. French, Mr. A. W. Davidson, Rev. and Mrs. C. B. Titus, Rev. and Mrs. J. L. Stuart, in cabin. For Hongkong:—Mr. C. Prakte, Rev. W. H. Dobson, Mr. Yang Kay, Mr. and Mrs. R. P. Scherwin, nurse and child, Mrs. H. W. Elliott, Mr. J. E. LATEST COMMERCIAL.

IMPORTS.

A steady business has been done during the week in yarns, 2/42s. principally, at a slight reduction in prices, with the market rather weak at the close. Nothing at all doing in shirtings, fancy cottons or woollens, quotations being nominal.

COTTON PICKER GOODS.

	PER PICK.
Grey Shirtings—8 1/2 yds. 39 inches	\$2.50 to 3.80
Grey Shirtings—9 yds. 39 inches	2.80 to 3.35
1. Cloth—7 1/2 yds. 39 inches	1.60 to 1.90
Indigo Shirtings—12 yds. 44 inches	1.05 to 2.00
Prints—Assorted, 24 yards, 30 inches	2.00 to 3.75
Cotton—Italians and Sattains Black, 39 inches	0.18 1/2 to 0.25
Valves—Black, 35 yards, 22 inches	7.75 to 9.90
Victoria Lanes, 12 yards, 42 inches	0.75 to 1.00
Turkey Reds—2 to 2 1/2 yds. 24 1/2 yards, 30 inches	1.50 to 1.70
Turkey Reds—2.8 to 3 1/2 yds. 24 1/2 yards, 30 inches	1.75 to 2.10
Turkey Reds—3.8 to 4 1/2 yds. 24 1/2 yards, 32 inches	2.40 to 2.70
Turkey Reds—4.8 to 5 1/2 yds. 24 1/2 yards, 32 inches	3.00 to 3.50

WOOLLENS.

	PER YARD.
Flannel	\$0.30 to 0.50
Italian Cloth, 30 yards, 32 inches	0.35 to 0.41
Italian Cloth, 30 yards, 32 inches	0.30 to 0.34 1/2

RAW COTTON.

	PER POUND.
American Middling	\$1.10 to 1.25
Indian Broach	91 to 92
Chinese	80 to 81

MILLS.

There has been a considerable improvement in the tone of the metal market, and a good demand exists for forward delivery in several lines of iron. Tin plates are weak, with heavy arrivals in view. A native nail factory is in course of establishment and as a consequence dealers will give no considerable orders for American nails until they see what the home manufacturers can do.

	PER PICK.
Round and square 1/2 inch and upward	4.15 to 4.60
Iron Plates, assorted	4.10 to 4.50
Sheet Iron	5.10 to 5.30
Galvanized iron sheets	9.20 to 10.50
Wire Nails, assorted	6.00 to 6.50
Tin Plates, per box	5.90 to 6.00
Pig Iron, H.C.	2.05 to 2.20
Hoop Iron (1 to 1 1/2 inch)	5.00 to 5.25

KEROSENE.

A small steady business has been done at unchanged prices. A cargo of Langkat oil is expected shortly, part of which has been sold at \$1.02 per case, but this has not influenced the rates for American and Russian oils.

	PER POUND.
American	\$2.00 to 2.15
Russian	2.00 to 2.15
Langkat	—

SUGAR.

Arrivals since the 6th include 31,680 piculs Manila and 4,612 piculs China. There has been a fair demand at prices from 5 to 10 cents higher than quotations. Sales amount to 4,460 piculs Manila, 8,600 piculs China and 3,400 piculs Formosa. In white refined a fair business has been done at former rates.

	PER POUND.
Brown Takao	\$3.90 to 4.10
Brown Manila	4.20 to 4.90
Brown Datong	3.20 to 3.35
Brown Canton	3.30 to 4.20
White Java and Penang	6.50 to 6.60
White Refined	7.30 to 8.90

EXPORTS.

RAW SILK.

A considerable business, principally for America, has been transacted at prices rather below quotations, but at the close the market is firmer. Stocks amount to about 7,900 piculs, of which 2,500 piculs are sold but not delivered. Shipments have been:—per *Caledonian*, on the 17th, 539 piculs; per *Socotra*, Oct. 19th, 2 piculs, for Europe; per *Coptic*, Oct. 21st, 847 piculs, for America.

QUOTATIONS.

THE GREATEST WONDERS OF MODERN TIME

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated
constitutions will discover that by the use
of this wonderful medicine there is "Health
for all." The blood is the fountain of life, and its
purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the dragoon Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. Cooper, in his account of his extraordinary travels in China, published in 1891, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors throughout the World.

Printed and Published for the Proprietor, at 51, Main Street, Settlement, by ARTHUR BELLAMY BROWN, of "Noonlands," No. 156, Bluff, Yokohama.—SATURDAY, OCTOBER 23, 1897.

YOKOHAMA: SATURDAY, OCT. 30TH, 1897.

BIRTHS.

At Foochow, on the 17th inst., the wife of WILLIAM GRAHAM, of a daughter.
On the 7th October, at 4, Chao-fong Road, Shanghai, the wife of P. A. H. CHAMBERS, of a son.

MARRIAGES.

At Beauregard, Hongkong, on the 19th Oct., by the Rev. Dr. Chalmers, J. L. CHALMERS, of the Korean Customs, to DAISY, second daughter of Alexander Davidson, of Woodbank, Aberdeen, Scotland.

DEATHS.

At the Shanghai General Hospital, on the 13th Oct., Captain MCINTOSH, of the American barque *St. Katherine*.
At Hangchow, on the 8th October, 1897, the Rev. H. HUGHESDON, of the Church Missionary Society.
In San Francisco, on Oct. 2nd, GEORGE NEWHALL MACONDRAY, beloved brother of William and Horatio N. Macondray, a native of San Francisco, aged 33 years 6 months and 9 days.
At the Shanghai General Hospital, on the 18th of October, 1897, ALFRED JONES I.M.C., Hangchow, aged 27 years.

SUMMARY OF NEWS.

A strike of match-box makers has occurred in Kobe.

COLONEL SHAEFFER, of the Luxemburg Army, is to be appointed Governor of Crete.

TURKEY and Greece have agreed upon most of the articles for a definite treaty of peace.

THE Japan Red Cross Society will shortly establish branches in three Prefectures in Formosa.

It is reported that the forthcoming session of the Diet will open about the 26th of December

next and the Houses begin business early in January.

THE barracks of the Commissariat battalion at Komaba, Ebara-gun, were totally destroyed by fire on the 24th inst.

THE *Shimpo-to* (Progressive Party) has convened an urgency meeting of Parliamentary Representatives in the capital.

By an accident to an express train on the New York Central Railway on the 25th, twenty-eight persons were killed.

THE Koku Railway Co. has declared a dividend of 14 per cent. and the Sanyo Railway one of 13 per cent. per annum.

THE Agricultural and Industrial Bank of Tokyo-fu, now in course of organization, will commence business early in December.

THE Hooley-Jameson Chinese loan scheme has broken down and China is now negotiating with the H. and S. Bank for a loan.

THE Treasury has granted yen 270,000 towards the repair of damages by recent floods to embankments etc. in Niigata Prefecture.

An explosion of percussion caps occurred at Koishikawa Arsenal on the 25th inst. One employe was injured about the legs.

THE Bank of Japan, and all the principal banks in the country, will abolish the use of the *rig* in their accounts from the 1st Nov. next.

A few days ago a man named Yoshida Shintaro, of Yokohama, was run over and killed by a passenger train at the Takashima-cho crossing.

H.I.H. the Crown Prince will leave the capital for the Imperial estate at Atami, Izu Province, in a few days and stay there until next Spring.

THE cable between the Pescadores and Formosa has been interrupted since the 21st inst. The cable steamer *Okinawa Maru* has been ordered to effect repairs.

THE Autumn Meeting of the Nippon Race Club was held at the Negishi Racecourse on the 26th, 27th, and 28th inst., and proved in every way successful.

MR. TAKANO, the dismissed President of the High Court in Formosa, has returned to Taipei and entered the Court, against the orders of the Governor-General.

MARQUIS ITO, ex-Premier, returned to the capital on the afternoon of the 24th inst., and visited Count Inouye, who is at present a patient in the Red Cross Hospital at Shibuya.

THE Court being still in mourning for the late Empress Dowager, there will be no reception at the Palace, and no review, on the Emperor's Birthday, the 3rd of next month.

THE Aomori Prefectural Assembly, for passing a vote of want of confidence in Mr. Maki, Governor of the prefecture, was dissolved by order of the Authorities on the 26th inst.

THE Korean Government, at the request of the Russian Minister, has dismissed Mr. McLeavy Brown, adviser to the Treasury, and appointed Mr. Alexieff, a Russian nominee, to the post.

THE P. & O. steamer *Kaiser-i-Hind* encountered terrible weather on her last run from Singapore to Hongkong, and lost all her boats and received a great deal of damage to her upper works.

It has been decided to continue the use of the silver yen in Formosa, for the payment of taxes

and customs dues, as well as for private transactions, the authorities affixing a special stamp on the coins when received.

THE imports of foreign rice at Yokohama from January to September of this year amounted to 60,271,100 *kin*, while imports of rice from the 1st up to the 21st of October reached 7,700,381 *kin*.

THE revised Treaty between Chili and Japan, signed at Washington on the 25th of September, is stated to have been brought home by Mr. Hoshi Toru, who arrived in Japan on the 24th instant.

THE yearly output of rice in Echigo Province stands at 3,000,000 *koku* on an average, out of which 500,000 *koku* is usually sent to other localities. This year the farmers there are obliged to buy foreign rice.

On the 21st inst. fire broke out in the Sakatani railway workshop on the O-u line, between Yamagata and Fukushima, and six buildings were reduced to ashes. Six persons were severely injured during the fire, two of them fatally.

FOLLOWING on the coronation of the King of Korea as Emperor, the Korean Minister for Foreign Affairs has given notice to all the foreign Representatives in Seoul that the Peninsula is hereafter to be named *Tai Han*, or Great Korea.

A scheme is on foot for the establishment of a new club, to be called the Bankoku Keizai (International Economic Club), in which both Japanese and foreign merchants in Yokohama may meet and discuss commercial affairs at home and abroad.

THE Naval manoeuvres have commenced. The attacking squadron, consisting of the *Hashidate*, *Tatsuta*, *Yayeyama*, *Heiyen* and *Amagi*, which left Yokosuka the other day for the Bay of Ise, was to make a descent upon Yokosuka, the attack to last till the 27th and 28th. The manoeuvres continue till the 4th of November.

THE Import market during the past week has been anything but brisk. Cotton piece goods of all kinds were utterly stagnant, and woollens are in the same condition. Some business has been done in yarns, but buyers are by no means eager and prices have a downward tendency. There has been a slight fall in quotations for raw cotton, owing to good reports of the crops in China and the United States, though the Indian crop, which has hitherto supplied the larger portion of Japan's demands, is said to be considerably below the average. In metals, a small, steady business has been done at current prices. Arrivals of Brown sugar have been considerable and fully up to the requirements, while sales have not been large. A steady demand continues for White refined, and some business has been done in this line. The kerosene market is quiet for the time of year, and former quotations are fully maintained. There has been a considerable import of rice from Rangoon, Saigon, and China to meet local requirements, the price of home grown grain having risen to an abnormal figure owing to a much reduced crop in most parts of the country. Among the imports may be noted a trial shipment of Australian coal, which is reported to have compared favourably in quality and price with the native product. In the Export market a fair business has been put through in silk, both raw and waste, dealers having in some instances made slight concessions. Shipments have amounted to 455 bales for Europe and 1,039 bales for America. The purchases of tea have fallen off considerably, and stocks are low, prices being well maintained. Exchange remains steady.

SPIRIT OF THE VERNACULAR PRESS.

The fact that popular attention has been diverted from Hokkaido since Formosa came into Japan's possession is deplored by the *Nichi Nichi Shimbun*. Strategically speaking, the northern island is just as important to Japan as the southern, and that the resources of the former admit of great development is certain. Thirty years, almost, have elapsed since the celebrated Colonization Bureau was organized on account of Hokkaido. During that long interval, the policy of the Central Government towards the island has undergone various changes, but there has been a uniform desire to promote emigration, and no less than sixty million yen have been spent by the Treasury for that purpose. What are the results? Out of 4½ million acres of arable land, only three hundred thousand have been brought under cultivation; in a district capable of supporting five millions of people, only seven hundred thousand are living, and an area representing eleven provinces is not as populous as a single prefecture in the main island. Meanwhile, in Japan proper, the prices of all the necessities of life have risen so that the struggle for means of subsistence has become terribly painful and a sense of despair is supplanting the confidence that should be inspired by the sight of such vast resources as those of Hokkaido lying undeveloped at the nation's doors. The great want in Hokkaido is means of communication. People do not care to raise crops or engage in manufacturing industries if they have no means of carrying the products of their toil to a profitable market. There is a programme of State railways, but it relates to one line only, and twelve years are to be occupied in carrying it out. As to private enterprise, two or three companies have been started, but they have not yet assumed tangible form. Such a state of affairs means that the troops and militia organized for the defence of the island could not be effectively mobilized, to say nothing of the fatal effect upon industry of every description. The *Nichi Nichi* does not understand why Japanese subjects should flock to foreign countries in the capacity of labouring emigrants, when such a field invites their enterprise at home.

Mr. Shimada Saburo, writing over his own signature in the *Mainichi Shimbun*, attacks the Government strongly with reference to the Formosa Railway. He describes the projectors of the road, Viscount Okabe and Baron Yasuba; as semi-officials; declares that their only qualification for the enterprise was the possession of many friends in the ranks of officialdom, and says that they planned the line by way of speculation rather than investment at a time when the share fever was rife, and when "potential shares" commanded absurd prices in the market. In short, Mr. Shimada hints very plainly that the whole business was a job. He wants to know why no surveys have been made in Formosa and why no experts have been sent there to investigate the financial prospects of the road. He heads his article, "Advice to Counts Matsukata and Okuma and Viscount Shinagawa," and he addresses himself specially to Count Okuma, whom he charges with having performed a *vulgar face* since he took office, since he had previously advocated the State ownership of railways whereas he is now using his influence to promote private enterprise in that field. To Mr. Shimada no prospect presents itself of the Formosa Railway's being built within any reasonable time unless the Government takes the work into its own hands. The question of funds he dismisses by observing that money can easily be obtained abroad. One ground of his assault upon the Government is that the latter's policy is inconsistent. On the one hand, it obliges the Bank of Japan to raise the rate of interest in order to check speculative enterprise, and, on the other, it encourages the formation of a company headed by speculators. The article is long and ably written, as might be expected considering the signature it bears, but the main

lines of contention will be sufficiently understood from what we have said above.

The *Fiji Shimpō* strongly urges the advisability of starting an iron foundry as a private enterprise in Japan. It holds that the country's future lies in manufacturing industry, and that the demand for machinery must grow larger and longer. At present, virtually all machines have to be imported from abroad. A few have been made in Japan from foreign materials and the results have clearly demonstrated that, owing to the cheapness of labour and the manual dexterity of the Japanese, such work can be accomplished much more cheaply in this country than in Europe or America. Further, the progress that has been made in shipbuilding proves that the Japanese are qualified to become expert workers in iron and steel. Thus with the certainty of a large demand, on the one hand, and of the ability to supply it, on the other, there should be no doubt about the result of such an enterprise. At the same time, it is not the kind of enterprise to tempt ordinary persons, who have no very large stores of capital to invest, and who look for speedy returns. Considerable outlay is required, and a comparatively long interval must elapse before profits can be realized. But these very facts should constitute an inducement to great capitalists, for the first to undertake the enterprise may fairly count on monopolizing the field. Now, however, is the moment to make a beginning. Two years hence, it will be possible for foreigners to start industries in any part of the empire, and they will certainly avail themselves of every really favorable opportunity that presents itself. Already, indeed, there are signs of active preparation on their part. The *Fiji*, therefore, earnestly commends this subject to the notice of the few capitalists capable of taking it up. There are difficulties to be overcome, it is true. Doubtless foreign experts would have to be engaged at the outset. But that an issue would be attained profitable from the point of view of those engaged in the enterprise, and highly beneficial to the nation, can not be questioned.

The Behring Sea Conference is the subject of an article in the *Yomiuri Shimbun*. After recapitulating the history of the steps leading up to the Conference, and of England's attitude in the matter, our contemporary alleges that the exclusion of Japan and Russia on the ground of their having no *locus standi* is merely a pretext. The fact is that Great Britain and the United States have never been on good terms since the War of the Secession in 1863, and that this sealing question has not tended to remove their mutual feeling of umbrage. A very strongly worded despatch addressed by Mr. Sherman, the United States Secretary of State to the British Government, seems to have given much offence to the English people, and is probably the proximate cause of Lord Salisbury's sudden resolve to stand aloof from the Conference, a change of front which he has made under cover of the pretence that Japan and Russia must be excluded. The question then arises, what is Japan to do. In consideration of the American Government's intention, she agreed to send delegates. They were actually on their way to Washington before the news of England's decision reached Tokyo. Some publicists urge that they should be recalled. These persons argue that without England's co-operation the Conference must be a fiasco, since no agreement come to, nor any system of preservation elaborated, by America, Russia and Japan can bear practical fruits unless Great Britain gives her adhesion to it. Since, then, the Japanese commissioners would be merely wasting their time did they attend the Conference in its altered form, and since the meeting in which Japan was invited to take part was a meeting of four Powers, not of three, the best plan, they argue, would be to abstain from any further action in the matter. But the *Yomiuri Shimbun* holds a different opinion. It points out that no independent course adopted by Japan can be

satisfactory to one of the disputants without embarrassing the other. If Japan declines to take part in the Conference, she might please England, but would offend the United States; whereas by taking part in the Conference on its new basis, she helps America to escape from a dilemma, and, at the same time, does not give any cause for umbrage to England, since the latter has agreed to a separate conference of Canadian, British and American experts. Considering the conduct of America in the Hawaiian matter, there are doubtless many Japanese who would be gratified by contributing to her embarrassment at this juncture, but that is not a spirit that can be properly admitted into international intercourse. As to the abortive character of the Conference, it need only be said that Japan will have the United States and Russia for partners in the failure, if failure there is to be, a result by no means assured.

The *Times* recently published a letter on the subject of commercial education in Japan, and made some editorial comments on it, suggesting that Japanese industrial competition might soon become formidable to Great Britain. The subject is discussed by the *Kokumin Shimbun* in a very sensible and moderate strain. The *Kokumin* notes that whereas the Japanese used formerly to be regarded by Western nations as a superior kind of school-boys, to be sometimes petted, sometimes chastised, and sometimes applauded for their unexpected progress, they are now ranked with grown men worthy of serious consideration, and even of being treated as formidable rivals. In years gone by, the tendency was to despise and underrate them; nowadays, the tendency is to exaggerate their capacities and entertain unnecessary dread of them. The *Times'* article is an example of this modern propensity. It can not but be counted remarkable that the leading journal of a nation which is the only genuinely practical exponent of free trade in the world, and which, by faithful adherence to its liberal principles, has climbed to the very summit of the commercial ladder, should complain of peril to its supremacy because a comparatively insignificant Power has entered the field of competition. Japan has certainly made a marked advance in industrial competence, nor can it be denied that she has slightly cut into markets which were previously monopolized by Great Britain. But, on the other hand, her increased sales have resulted in an increase of purchasing power, and the result is that her imports, the greater part of which come from Great Britain, have grown enormously. Japan's gain in one direction is England's gain in another; the growth of the former's prosperity means that she becomes a better customer of the latter. No exposition of these facts can mitigate the racial prejudice which dictates anti-Oriental legislation by Occidental nations, and which unquestionably tends to exaggerate the dimensions of the cheap-labour problem in their eyes. Still facts are facts, and it may be hoped that calmer reflection will not only dispel the chimera that Japan's industrial competition can be an injury to England, but will also demonstrate the slenderness of the basis on which the supposed labour advantage stands. Japanese labour was cheap a few years ago; but the conditions are rapidly changing. The demand for skilled hands has enormously appreciated the wage they command in the market, and the remarkably rapid rise in the price of commodities constitutes another factor operating to diminish any advantage hitherto enjoyed by this country. The facts are not welcome to the Japanese themselves, but they ought to be recognised by Englishmen. Doubtless there is a political element in these apprehensions of industrial competition, but as to that, nothing can be said except that persons who fear a development of unscrupulously aggressive or bellicose sentiments in this country, greatly mistake the true character of the Japanese.

The story of political parties is discussed by the *Nippon* in an article that shows a remark-

ably broad grasp of the facts. In the early days of constitutional institutions, all the political parties were opposed to the Government. The first departure from that rule was made by the National Unionists. It is true that the National Unionists were the offspring of official interference in elections, and that they may not unjustly be called "the party of the clan party." Still to them belongs the historical credit of having been the first to support the Cabinet. The Liberals followed suit, and the Progressionists were the last to adopt that line of procedure. Now while it is true that the ultimate object of a political party is to secure the enforcement of the principles it advocates, and while it is also true that the line of cleavage between one political party and another is, or ought to be, a line of principles, there is, at the same time, no doubt that the tactics of every political party consist in getting the administrative power into their hands. Harshly considered, a political party may be called an organization having the sweets of office as the object of its efforts and movements, but if the facts be scrutinized more closely, there is no difficulty in recognising that since the possession of power is a necessary preliminary to putting into operation any given programme of principles, the apparently unseemly scramble for power in which political parties engage, is an unavoidable means to a praiseworthy end. It follows, therefore, that the degree of power actually secured by a party is an accurate measure of its political success. Applying that gauge, the National Unionists are found to have been a complete failure: they never obtained any share, however small, of administrative power, nor is the fact wonderful when the circumstances attending their evolution are recalled. The Liberals, a greater, and in every way more respectable, party, achieved a much larger success, but the palm undoubtedly belongs, in this respect, to the Progressionists. Apart from other considerations, the results of the policy of "employing popular talent" stand as a conspicuous score to the credit of the Progressionists. They have not, indeed, carried their success so far as to gain access to the Cabinet itself, but quite a number of their members have been drafted into the ranks of the administration in good, though not leading, positions, and they have fully established the principle that the claims of the Cabinet's supporters in the Diet must be duly recognised in distributing the rewards of office. Their success, however, carries with it a corresponding responsibility. The Cabinet is now their Cabinet. They do not actually hold the portfolios, but so many of their number are serving in prominent administrative posts that the whole party is emphatically identified with the Administration. Has the Cabinet given effect to the principles advocated by the Party? Is it apparent that to secure offices for themselves has not been the sole object of the Progressionists, but that accession to office is regarded by them merely as a means of giving effect to their political views. If these questions can be answered satisfactorily, well and good. If not, it behoves the Progressionists to adopt some definite and resolute line of procedure.

The *Shogyo Shimpō* writes in terms of strong approval of Count Okuma's resolve to sanction the establishment of silver bullion exchanges (*ginkuwai torihikiyo*). The settlement of this question devolved finally upon the Count in his capacity of Minister of State for Agriculture and Commerce. There had been much opposition, many persons contending that no necessity existed for such exchanges, and that they would only constitute additional instruments for speculative gambling. But Count Okuma has wisely brushed away such frivolous arguments. There can be no reasonable doubt that public convenience loudly calls for the establishment of these exchanges. In Tokyo alone there are no less than 380 merchants engaged in the purchase and sale of silver and gold bullion. Nothing like a uniform rate exists. It is a matter of bargain, and much embarrassment is often experienced. No one can be sure of obtaining bullion if he

wants it or of selling bullion if he has it. That alone proves the need for an exchange in Tokyo, and when we remember that mercantile transactions with silver-using countries will henceforth involve transactions in bullion also, no room for discussion remains. The *Shogyo* writes at some length, but its arguments are familiar to foreigners, and need not occupy us here.

NEW PEERS.

The *Official Gazette* announces the creation of twelve new Barons, namely—Hosokawa Okimatsu (in consideration of his father's distinguished services); Nakane Koremi; Nabeshima Naoki; Nabeshima Shigemasa; Isahaya Iyetaka; Mori Yoshihisa (in consideration of the distinguished services of his father); Tamiya Suzutaro; Shimazu Hisamatsu; Shimazu Hisakata; Shimazu Takanobu (the last three in consideration of the distinguished services of their fathers); Fukuhara Motozo; and Takuken Ichiro.

Baron Hosokawa is a relative of Marquis Hosokawa. He was a Karo of the Kumamoto fief, enjoying an income of ten thousand *koku*, and he distinguished himself in the war of 1877.

Baron Nabeshima Naoki belongs to the family of the elder brother of the feudal chief of Kashima in Hizen. His father distinguished himself in the Saga rebellion of 1874 and the Satsuma rebellion of 1877.

Baron Nabeshima Shigemasa was a Karo of the Saga fief with a revenue of 21,600 *koku*. He performed good service in the Satsuma rebellion of 1877.

Baron Isahaya Iyetaku was also a Karo of the Saga fief, with an income of 30,000 *koku*. He distinguished himself in the Saga and Kagoshima rebellions.

Baron Mori Yoshihisa is a relative of Prince Mori. His father distinguished himself at the battle of Fushimi.

Baron Tamiya Suzutaro is a grandson of Tamiya Joun of the Owari fief: he distinguished himself at the Restoration.

Baron Shimazu Hisamatsu's father was the second son of Shimazu Hisamitsu. He distinguished himself on the occasion of the Choshu attack at Kyoto and also in the rebellion of 1877.

Baron Shimazu Hisakata is the heir of Shimazu Tadaakira—second son of Shimazu Iyehisa—who distinguished himself in the rebellion of 1877.

Baron Shimazu Takanobu represents a branch of Prince Shimazu's family. His father distinguished himself on the occasion of the British bombardment of Kagoshima and in the Satsuma rebellion.

Baron Nakane Koremi is a grandson of Nakane Sekko of the Echizen fief. He distinguished himself at the Restoration and in the Satsuma rebellion.

Baron Fukuhara Motozo's, father Major-General Fukuhara, distinguished himself in the war of 1894-5.

Baron Takuken Ichiro was a Karo of Saga fief and had a revenue of ten thousand *koku*. His father distinguished himself in the Satsuma rebellion.

SUICIDE IN SINGAPORE.

There appears to be something like an epidemic of suicide among the Chinese women at Singapore. A recently married girl, having lost heavily at gambling, killed herself on Oct. 12th by swallowing caustic alkali, and another girl tried to drown herself on the preceding day. No explanation of this reckless tendency is offered.

COUNT INOUE.

We are glad to be able to report that Count Inoue's health is improving. The trouble was a severe carbuncle on the side. Dr. Hashimoto operated successfully a few days ago, and since then the patient has been steadily though slowly mending. The Count is at the Red Cross Hospital, and will probably remain there some days longer.

ELECTRIC RAILWAYS FOR THE CAPITAL.

Two or three years ago, remarks the *Nippon*, a scheme was set afoot for supplying the Capital with electric railroads. But the fates were against the idea then, and the matter failed to reach a practical stage. Now the rumour is revived that Tokyo will soon be able to remove the stigma cast on it by Kyoto's greater enterprise, for electric trams of the latest design will shortly supplant the horrible public conveyances that now ply for hire in metropolitan streets. The Cabinet has resolved to grant permission to the schemes formulated by the Yokoyama, Okura, Mitsui, and Mitsubishi companies. Originally each firm fought for its own hand, but an amalgamation was effected between some of them, and two parties now alone hold the field. The Cabinet, it is said, has resolved to divide the capital between the two, the *Yamanote*, or hill district, and the *Shitamachi*, or lower land. The Fukuzawa party—Messrs. Mitani and Mitsubishi—receive the *Shitamachi* district. The Amenomiya party—Messrs. Yokoyama and Okura—have the hill district allotted to them, and the parties were to sign the documents connected with the charters on the 14th instant. It is rumoured, however, that the Amenomiya section are urging the Government to give them the sole monopoly, and some of their agents even followed Count Kabayama to Osaka, to importune him into granting the concession.

UNRAVELLING THE POONA TRAGEDY.

A Bombay telegram, dated 4th October says:—The man who has been arrested for the Poona murder is Damoder Chapkar, aged 28. He has had a most remarkable career, and confesses to having daubed the Queen's statue at Bombay a year ago. Concerning the Poona tragedy, he confesses that he had been seeking an opportunity to kill Mr. Rand for more than a month. On the night of the Diamond Jubilee Celebrations at Ganeshkhond, he followed Mr. Rand's carriage from Government House, accompanied by a confederate, who is still at large. When near a convenient and secluded spot he fired at Mr. Rand, while his companion shot Lieutenant Ayerst, because he happened to be near Mr. Rand's carriage and they were afraid he might intercept their flight. Their revolvers and swords were thrown into a well. The police having recovered these weapons, traced their owners. Damoder has incriminated a younger brother, who is now wanted by the police; and he is reported to have confessed that he was put up to execute the terrible deed by some wire-pullers.

PICTORIAL SINGAPORE.

We have received from the *Straits Times* three sheets representing the results of Mr. Wellesley Parker's visit to Singapore. They are appalling productions. It would be difficult to conceive anything more execrably vulgar. They carry us back to the time, many years ago, when insurance offices were beginning to send out coloured calendars, and they find their contemporary counterparts in the posters of travelling menageries. This, we presume, is the Mr. Wellesley Parker who afforded so much amusement to Yokohama residents a short time ago by proclaiming his "art advertising" mission, and who has been telling the good people of Shanghai that he secured the patronage of the Japanese Government and the Foreign Representatives. It was also announced, if we remember aright, that his doings were to have some mysterious effect in bridging the social gulf that separates foreigners and Japanese. We begin now to understand that he had conceived the subtle idea of providing a new species of entertainment for the public, and that these flaming sheets, shocking studies in red, yellow, and black, are the final act of the burlesque. It is incumbent, therefore, to tender him our thanks, and to his subscribers our commiserations.

THE POLITICAL SITUATION.

Rumour continues to be very busy about the political situation. The *Fiji Shimpō* represents the Progressionists as much excited. They think that anything in the nature of a compromise with the Cabinet on ambiguous terms would seriously impair their credit with the constituencies, and that they must show a most obdurate front. Indeed, not a few of them believe that success at the hustings in the general election next year can be best assured by a rupture with the Cabinet at this juncture. Hence whatever be the nature of the answer given by the Prime Minister to their memorial—or, rather, ultimatum—their idea is to be recalcitrant. The contingency that Count Matsukata may delay his answer, or may even treat them with such unconcern as not to give them any answer at all, does not appear to be seriously contemplated by them. Yet, for our own part, we regard that result as very probable.

The *Yorossu Choho* gives another version of the situation. It says that, at a meeting of Progressionist leaders in the residence of the President of the House of Representatives, a new Cabinet was proposed and approved. Count Matsukata was to remain at the head, Count Okuma to be Minister of Finance, Mr. Hoshi Toru to be Minister of Foreign Affairs, Mr. Oishi to be Minister of Agriculture and Commerce; Mr. Kusumoto to be Minister of Communications; Mr. Hatoyama to be Minister of Justice. No reference is made to the portfolios of Home Affairs, War, the Navy or Education. The present holders of these would presumably remain undisturbed. Mr. Hoshi Toru is spoken of as the leader of the *Kodō-kai*, a position which, so far as the public knows, he does not occupy. In fact the whole scheme is most vaguely outlined. It suggests that the members of the *Kodō-kai* are endeavouring to act independently of Viscount Takashima, and the *Yorossu* alleges that the latter has taken umbrage, and threatens to form a Satsuma Cabinet on his own account, which resolve, as well as the Viscount's anger, Count Kabayama is reported to be combatting. We need scarcely say that little value attaches to these rumours. The pivot of the situation, in our opinion, is the question of increased taxation. It was from the first predicted that no political party could be induced, on the eve of a general election, to cast its vote for an addition to the people's burdens. On that point, therefore, the Progressionists are likely to stand firm. As for the talk about the Cabinet's having failed to carry out the programme to which it pledged itself on taking office, we shall begin to believe in its sincerity when any politician clearly states what he understands by Administrative reform. We doubt very much whether it would be possible to find in the political history of any other nation a parallel to the state of affairs that has existed in Japan for the past seven years. Administrative reform has figured on the platform of every political party, and not one politician has ever attempted to define what Administrative reform means.

There are reasons for thinking that, whether the dimensions of the political crisis have been exaggerated, or whether some medicine has been found for the "swollen heads," the tension is not so acute as to be really dangerous. That the *Shimpō* to have been passing drastic

resolutions, as reported in our issue of Monday, seems certain. But they have failed to secure the coöperation of the *Kodō-kai*, and without that coöperation they do not command the situation in the Diet. An effort to obtain the endorsement of the newly organized party has been made, and delegates from both sides have met at the residence of Dr. Hatoyama, President of the House of Representatives. But the conference was too thinly attended to justify the passing of a representative vote. It is confidently alleged, however, that the members of the *Kodō-kai* are radically opposed to the resolution in which the Progressionists call upon the Cabinet to abjure all unconstitutional procedure, and that they also denounce as impracticable the idea of again revising the Budget. They justly object that unless the Progressionists are in a position to indicate explicitly what they mean by "non-urgent works" (*fukiu no kōjō*), it is impossible to support a vague declaration that such works should be eliminated from the Estimates. Meanwhile, the Cabinet itself gives no indications of a ferment preliminary to disruption, and we are disposed to think that the cloud will pass without bursting. There is talk of obtaining funds to meet the deficiency in the Budget without recourse to increased taxation. The State possesses forests covering an area of some seventeen and a half million acres, and it has often been maintained that some reduction of the area is desirable in the interests of better administration. The sale of one-tenth would easily produce thirty million *yen*, wherewith to tide over the difficulties of the moment, and next fiscal year, doubtless, the money market will be easier, the leaf-tobacco monopoly will be more productive, and the Custom's returns will be greatly augmented. We can not assert that such a device has obtained the endorsement of Cabinet Ministers, but it is mooted, and it would certainly serve as a temporary expedient. The country has to face the fact that, owing to the recent marked appreciation in the price of all commodities and of labour, the appropriations voted in the past two sessions for public works, spreading over a term of years, will have to be proportionately augmented. It is not a question so much of undertaking enterprises as of carrying to completion those already undertaken. The money has to be found.

The most trustworthy information about the political situation, so far as we can judge, is given to-day by the *Fiji Shimpō*. It says that at the conference of four Ministers of State, held a few days ago in Count Okuma's official residence, no decision was reached, and on the following day, Marquis Saigo left Tokyo for Kure. From the latter fact various inferences may possibly be drawn, but the fact is that Count Matsukata has undertaken to make certain investigations with regard to the problem of increased taxation, and that until they are completed, another meeting of the Cabinet would be futile. The *Fiji* also publishes an interesting interview which one of its representatives is said to have had with Count Kabayama, subsequently to the Cabinet meeting at the official residence of Count Okuma. Count Kabayama is reported to have spoken as follows:—

THE QUESTION OF INCREASED TAXES.

Count Okuma was originally a consenting

party to the project of increased taxation. The noisy discussion that has now been started on the subject is nothing more than a commotion in the ranks of his political following. Speaking broadly, the Government has decided to augment the *Saké* Tax and the Land Tax. The trouble about the finances is that they have no firm foundation. If, despite the existence of urgent necessity to raise the taxes this year, that step, instead of being taken at once, be deferred to next year, the confusion will only become worse confounded, the necessity next year may be even more imperative, and the corresponding burden to be borne by the people may be still greater. When the occasion demands an increase of taxes, they ought to be increased.

THE QUESTION OF CABINET HARMONY.

The Progressionists call upon the Cabinet to secure union among its members by eliminating the foreign elements, and desire that this should be done before deciding the question of increased taxation. Such a procedure can not be adopted in deference to the demand of the Progressionists. The adjustment of the Administration was a prime object from the time of the Cabinet's organization, and whatever is difficult of accomplishment in connexion with it can not be accomplished any quicker because of the Progressionists' desire. As for removing foreign elements, the appointment or dismissal of men serving together officially depends upon their fitness or unfitness for their posts. Ministers can not be changed in obedience to other considerations.

THE FORMOSA QUESTION.

The Government too has always had in view the reforms of the Administration in Formosa. If I am ordered to go there again as Governor-General, I will willingly go. When I was appointed to direct the affairs of the island, I concluded that whereas people had taken many years to discover the advantages of developing Hokkaido, they would fix their eyes from the very outset on Formosa, and that, consequently, integrity must be the first aim of the administration. Contrary to my expectation, however, the trouble was found to be not with the people but with the corrupt conduct of officials. But it is easy to get rid of corrupt officials and put good men in their place. With regard to a change of Governor-General there have been many rumours. The facts are that the Government, in consideration of the difference between the conditions existing in the island and those existing in Japan proper, has revised the administrative organization, and decided to leave Viscount Nogi at his post. Mr. Nomura, Head of the Bureau of Formosan Affairs, has been sent to the island, to make known the Government's intentions. France has spent fifteen years getting Algeria into order. The first year of our occupation of Formosa was devoted to fighting. It is unreasonable to look for success already in the second year. There are bandits in Formosa; there are aborigines; there are good people; there are white men, and there are Japanese. It is impossible to bring all these under the laws of Japan proper. When a great Western Power has to do with an African district, it pursues the course that we have to follow in Formosa; namely, subjugate it from one side by force of arms, and then confer on the subjugated portion the benefits of civil government. Formosa is in the neighbourhood of Hongkong and of Tonkin. It constitutes, so to speak, the gate of intercourse between Japan and the Great Powers of Europe. In the event of any trouble in the East, the Powers would at once fix their eyes on Formosa. That goes without saying. We must seek to establish ourselves there by a military policy and by a colonization policy. If our policy be firmly fixed, the removal of an official is a small matter. I too regard it as essential that full guarantees of independence should be given hereafter to the judiciary in Formosa. But I am unable to endorse the constitutional arguments that have been raised about Mr. Takano, for the chief of the judicial section in Formosa being one of the heads of the civil administrative bureaux, it is undoubtedly within the competence of the Governor-General to remove him. I am well

aware of the importance of having a specially organized system of law courts for Formosa and of making the judiciary independent, but I consider that the provisions of the Civil Code are too complicated to be enforced among the Chinese in the new territory.

The *Yiji Shimpō* gives a very interesting *résumé* of the various cliques into which it believes the leading politicians of the time to be divided:—

THE PURE SATSUMA CLIQUE (*Jun satsu-ha*).

The central figures are Count Kabayama and Viscount Takashima, and their following are the *Kōdo kai*. They do not hide from themselves that the complete supremacy of Satsuma is no longer possible, but they aim at getting into Satsuma hands as large a share of administrative power as possible. They have gone with Count Okuma as far as they could persuade themselves to go, but the time to part from him has come, and they are determined to spare no effort to maintain the present Cabinet without him.

THE MODERATE CLIQUE (*Ommei-ha*).

Marquis Saigō is the head and his colleague is Mr. Kioura. Count Kuroda is a fellow-worker. This clique may see themselves obliged to separate from the Pure Satsuma clique, according to the latter's procedure. Their relations with Count Kabayama and Viscount Takashima are closer than their relations with Count Okuma, but they do not feel obliged to follow the Satsuma men to the tomb, and their great object is to effect accommodations and reconciliations.

THE UNION CLIQUE (*Rengo-ha*).

Mr. Oishi Masami and his friends are the promoters, and have a large following of tacticians. Their idea is to eliminate the so-called "clau elements," and form a constitutional Cabinet with an enlightened policy under the leadership of Marquis Ito, Count Matsukata and Count Okuma. But they have by no means secured the consent of Counts Matsukata and Okuma, and Marquis Ito seems disposed to stand aside, and watch the tossing of the political sea. Some of this Clique would accomplish their purpose by having Count Okuma resign and Count Matsukata follow his example, leaving the Satsuma men to stand alone until their fall, after which the new Cabinet should be organized. But others would have Count Matsukata remain Premier.

THE RECLUSE CLIQUE (*Inton-ha*).

Count Inouye stands at the head. After him come Marquis Yamagata and Marquis Ito. They are all in the position of mere onlookers. They leave the Cabinet to do just what it pleases, and even when their advice is sought, they refrain as far as possible from giving it. They remember that they were once called by the ugly name of camera statesmen. Hence they restrain exhibition of jealousy or impatience on the part of their followers.

SILVER YEN IN FORMOSA.

It will be remembered that there has been much talk about the circulation of silver money in Formosa. The natives of the island have never been in the habit of using gold, and great difficulties would be experienced, it is supposed, in reconciling them to give up the silver currency with which long established custom has rendered them familiar. The Authorities seem to have come to the conclusion that the best plan is to leave the *yen* in circulation there, but to limit the supply by enacting that only coins bearing the official stamp shall be received in payment of taxes or used in Governmental transactions. Moreover, the *yen* is not to have a fixed sterling value for these purposes, but will pass at its current price. The Im-

perial Ordinance relating to the subject is as follows:—

We hereby authorize the use of officially stamped (*Kyoku-in-zuki*) one-yen silver coins in Formosa for purposes of tax paying and official disbursements, and order the fact to be proclaimed.

[Sign Manual]. &c., &c.

IMPERIAL ORDINANCE, No. 370.

Art. I.—Silver one-yen coins bearing the Government's stamp may for the present be used at their current value in the payment of taxes and for official disbursements. Provided that such a method of making official disbursements shall depend upon the consent of both parties.

Art. II.—The stamp referred to in the last Article shall be affixed on the face of silver one-yen coins of which the exchange has been effected by the Government, and shall take the form of the ideograph "silver" (銀) in a circle fifteen hundredths of an inch in diameter.

Art. III.—Foreign coins and privately stamped coins may not hereafter be used for paying taxes. Provided that this prohibition shall not apply to foreign coins the use of which for tax-paying purposes has been specially determined.

It will be seen that the Government's plan is to stamp silver *yen* which are now in the Treasury's possession, or may hereafter come into its possession, and to use them for official disbursements when no objection is raised by the receiver of the money. With regard to the employment of stamped coins in tax-paying transactions, it would seem that provision can not have any immediately practical effect, since there are no stamped coins in circulation. Probably the main object of the Ordinance is to facilitate the conduct of administrative affairs and the construction of public works in Formosa by authorizing payments in silver, which is the favourite metal of the Chinese and native inhabitants. On the whole it seems to us that the Government displays wise discretion in making this concession to the habits of the Formosans.

SILVER AND WHEAT.

It certainly seems as if the fates were arrayed against silver. The issue at stake in the last Presidential elections in the United States may be briefly stated to have been whether the remonetization of silver was necessary to restore prosperity, or whether that result could be attained by recourse to the old panacea of protection. Protection won by something less than one-thirteenth of the votes cast by the nation, and almost before a protective tariff could be put into operation, wheat rose to a dollar, and a flush of prosperity overspread the country, furnishing, in the eyes of the unreasoning masses, a conclusive proof that the medicine of protection was the real tonic. Mr. Bryan has been lifting his voice against the fallacy of such an inference. He justly points out that wheat has risen because of a great shortage in the European and Indian supply, and that protection had not the smallest share in bringing about the result. He predicts that when America ceases to profit by the disaster which has overtaken other wheat-growing countries, her people will feel the pinch of adversity all the more keenly because of this temporary sunshine, and the protectionists will be doubly discredited because of their folly in claiming the appreciation of wheat as a result of their legislation. Speaker Reed, on the other hand, contends that the great returns now obtained by America for her crops of wheat and other cereals will start the national machine on a career of work which will continue long after the cause to which it was primarily due has ceased to be operative.

THE FORMOSA ORGANIZATION.

The new organization of the Formosa administration is a very interesting piece of legislation. Its most noteworthy feature is the extensive nature of the power vested in the Governor-General. He is to control the military, naval and civil affairs of the island. In the former sphere, namely the military and naval, he is subject to the direction of the Ministers of War and of the Navy, as well to that of the Chief of the Central Staff, the Chief of the Naval Board of Command in the Empire, and the Inspector-General of the Forces. But in the domain of civil affairs, he is virtually autocratic. He may delegate civil functions to military officers; he may suspend or rescind the orders issued by local governors or headmen; he may appoint or dismiss officials of *hannin* rank; he may inflict disciplinary punishments; and he may issue ordinances with penal provisions up to a year's imprisonment or a fine of 200 *yen*. Virtually the only restrictions imposed on the exercise of his civil authority are that he may not appoint, dismiss, or inflict disciplinary punishments on officials of *sonin* rank and upwards, without obtaining Imperial sanction through the Minister President of State. He may employ military force for the maintenance of public peace and good order, but in such an event the fact must be reported, without loss of time, to the Minister President of State, and to the Departments of the Army and Navy. It is to the Minister President that he has to look for final supervision in affairs of civil administration, but it will be seen from the above enumeration of his powers that his competence greatly exceeds that of a governor of a British Crown Colony before it has received any measure of local autonomy. The Government has acted wisely, we think, in this matter. The only hope of administering Formosa successfully, for the present at all events, is to place the island under the control of a really able man, and to invest him with large powers. It will no longer be possible for the Governor-General to plead divided authority in extenuation of administrative failures.

For the rest, the new system presents no very notable features. There are to be four offices, namely, the Military Staff, the Naval Staff, the Bureau of Civil Affairs and the Bureau of Finance, and there is also to be a Governor-General's Secretariat. The Governor-General must be a military or naval officer, having at least the rank of Lieut.-General or Vice-Admiral. Apparently it is not yet considered expedient to place a civil official at the head of the Administration. There is room to doubt the wisdom of such a restriction, but if military or naval officers competent to undertake the task are available, no theoretical objection exists to their appointment. In British Crown Colonies it used always to be the rule that the post of Lieutenant-Governor was held, *ex officio*, by the officer commanding the troops, and that the affairs of the colony were administered by him in the Governor's absence. In Japan's case, however, there has not yet been found any military officer capable of governing Formosa successfully, and we imagine that the new system would have inspired more confidence had the resources of the civil service also been available for its control.

SAN FRANCISCO, HAWAII AND JAPAN.

The San Francisco journals are engaged in an attempt to create a public scare about Japan's intentions towards Hawaii, and are resorting to methods of the most sensational character. The usual device, striking headlines in type of various magnitudes, is resorted to. Here are some of these headings:—"To check the Schemes of Japan"; "No Longer any Doubt as to Measures of Precaution"; "Warned by a Message from Miller"; "Admiral sent Word of Peculiar Move of the *Naniwa Kan*"; "Pointed Instructions taken by the *Wheeling*"; "An Order to Miller to Closely Watch the Mikado's Men at Honolulu, and to Hold the Islands Against All Opposition"; "Distrust of the Mikado"; "*Baltimore* to be rushed to Honolulu"; "Japanese Soldiers landed as Laborers at Honolulu"; "To Offset the Greedy Japanese"; &c. Then there is a half-page picture of "Rear-Admiral Joseph Nelson Miller, U.S.N." in full uniform, and the legend:—"This fearless officer in command of the Pacific Squadron, who is now at Honolulu, duly warned the Navy Department of the peculiar movements of the Japanese cruiser *Naniwa Kan*. The new gun-boat *Wheeling*, now speeding to Honolulu, carries instructions to Admiral Miller to watch every move of the Japanese, and at the first sign of any unusual step, to hoist the stars and stripes over the islands and to hold them against all opposition." People in Japan will naturally inquire what on earth is meant by all this silly bluster, and some of our Yokohama contemporaries may possibly have the grace to ask themselves how it compares with the Japanese journalistic utterances which they recently denounced as so terribly "Jingo." The fact is that the San Francisco papers are not so hopelessly hysterical as they seem to be. Washington is the principal dupe. Telegrams from Washington to two or three San Francisco journals, dated Sept. 26th, announced that the Administration entertained grave suspicions of Japan's design, the principal ground of alarm being an alleged message from Admiral Miller to the effect that the *Naniwa* had left Honolulu merely to throw the Hawaiian Government and the United States Authorities off their guard; that she was lurking at one of the neighbouring islands, and that she would slip back to accomplish some fell purpose so soon as Japan's sinister design had matured. It really appears that the Government in Washington attached some importance to this delirious nonsense, for the *Wheeling* was sent off before her trial had been concluded—so, at any rate, the telegrams say—and the *Yorktown* also was instructed to proceed to Honolulu. Another story told by the *San Francisco Chronicle* deserves to be quoted in full:—

The steamer *City of Peking* landed 174 Japanese at Honolulu, and the officers and passengers brought by the vessel to San Francisco say that every one of the Mikado's subjects who made the voyage on the steamer was a drilled soldier. Among them were a number of officers who commanded them. A veteran Sergeant was the superior officer, and squads of twenty were under the more immediate command of inferior non-commissioned officers. A steamship official at Yokohama recognized in one of the pretended coolies a corporal of the regular Japanese army, whom he had seen often recently in his uniform.

During the voyage from Yokohama to Honolulu a marked military discipline was maintained in the steerage, even though there was an at-

tempt to dissemble the military character of the supposed emigrants. At Honolulu the Japanese marched down the gangplank in single file with an action and a symmetry of movement nothing except thorough drill can produce. They landed at Hawaii as labourers, and it is the presumption of the passengers and crew of the *Peking* that they are now waiting orders from the Mikado to do whatever that ruler may deem politic.

An officer of the *Peking* states that arrangements were being made at Yokohama with the steamship company of which he is an employé to carry about 400 Japanese to the Hawaiian islands on the next steamer of the company that touches at Honolulu. It was said that that lot would be all veterans of the late Japan-China war. Rumours of the presence of the Mikado's soldiers in the islands are not new. It is said that if all the reports are true of the landing there of Japanese subjects that there are fully 1,000 of the little brown men among the hordes of labourers, all trained to carry arms and all under a strict military discipline.

One does not know to whom the palm of credulity belongs, to Rear-Admiral Miller or to the officers and passengers of the *City of Peking*. And the trouble is that nothing will convince these people of their mistake. When they find that the *Naniwa*, instead of "lurking at a neighbouring island," was taking part in naval manoeuvres at Yokosuka, and that the soldiers in disguise were mere myths, they will simply say that the *Naniwa* would have lurked and that the soldiers would have been realities, had not the "fearless Admiral" given warning and had not the wide-awake folks in Washington taken precautions. They do now allege, in this very context, that the *Naniwa* played precisely such a game in 1892, at the time of the overthrow of the native Government, and that want of opportunity alone prevented her from making a coup. These things must constitute curious object-lessons to the Japanese.

MR. TENNANT AND "THE TIMES."

Mr. H. Tennant, editor of the *Japan Gazette*, has addressed *The Times* with reference to a leading article published by the latter on June 12th. We quote a portion of Mr. Tennant's letter:—

Some of the statements made by you are inaccurate and misleading, and calculated to do serious injury to men who are merely striving to earn a livelihood in a country where the protection of British law, hitherto extended to them, is shortly to be withdrawn. It may or may not be known to you that, of the many foreign papers in Japan, all, with the exception of two weeklies, are owned and conducted by Englishmen. You say we have been thrown into a state of excitement by an "imaginary discovery that the Japanese Government's recovery of judicial autonomy will be the signal for depriving aliens of the privilege of publishing newspapers." I do not deny the excitement. Probably London newspapers would also display a little excitement if they knew that in two years' time they were to be extinguished. The "imaginary discovery" unfortunately, is only too real. Of the notification issued by Sir Harry Parkes I do not complain, nor of the subsequent enactment by the Japanese of a law forbidding foreigners to print papers in the vernacular; but what chiefly concerns us is that, when the Press law was recently revised for the purpose of meeting the new conditions which treaty revision will introduce, the clause forbidding foreigners to own or edit papers in any language was allowed to remain. The Japanese papers construed that to mean that after 1899 foreign papers will cease to exist unless they are owned and edited by Japanese. I asked a prominent Japanese official what he thought the Government intended to do, and he frankly gave it as his opinion that our foreigners would not be allowed to own papers. Our Judge, Mr. Justice Mowat, in a conversation I had with him, expressed the opinion that there was nothing in the new treaty to prevent the Japanese dooming the English papers in Japan to extinction.

The danger is due to a defect in the drafting of the treaty, which has not expressly provided that all occupations and professions which the Japanese may follow in England may be followed by Englishmen in Japan. The treaty was intended to place the subjects of the two Powers on an equal footing in either country, and all we ask is reciprocity. Your comparison between the English newspapers in Japan and the French newspapers in Egypt is, I

can only conjecture, made in ignorance, as I cannot think you would, if cognisant of the facts, so gratuitously insult men, many of whom were, and in some cases still are, connected with English newspapers of unimpeachable standing. No paper here has ever attempted to do other than to uphold the cause of order and of good government. No paper has taken sides in politics, sought to create dissensions among the people, or aimed at casting discredit on the Throne.

What we ask is that the British Foreign Office, before the treaty comes into operation, shall have a distinct understanding with the Japanese authorities that the clause which permits Englishmen to rent houses and to carry on any business that a Japanese subject may conduct shall be understood to include a newspaper and printing business—an inclusion it is evident the Japanese are desirous of evading.

The experience which induces Mr. Tennant to advance the above assertions is singularly defective. It is unfortunately true that the influence of some of the foreign newspapers published in Japan has often been exerted in a manner very far from conducive to order and good government; it is unfortunately true that some of the foreign papers have taken sides in politics against the Government; it is unfortunately true that one foreign paper has used language insulting to the Throne. Every old resident whose memory is ordinarily retentive must admit these truths, and must further admit that the tendency of a great part of the writing which used to appear in the foreign local press was emphatically of a nature to cause bad blood between foreigners and Japanese. Mr. Tennant himself is responsible for some of the grossest and most unjust things that have even been written or said about the Japanese. If he is unconscious of his own sins in that respect, we may perhaps be justified in drawing the charitable inference that he is too deficient in discernment to appreciate the sins of others. But, indeed, the whole tone of his letter indicates a point of view that few will be disposed to applaud. He descends at once to cheap cant and spurious patriotism: seeks to enlist sympathy with the maligned "men who are merely striving to earn a livelihood," and to invoke racial prejudice by reminding *The Times* that "of the many foreign papers in Japan, all, with the exception of two weeklies, are owned and conducted by Englishmen." However, the point most worthy of notice is the flagrant inaccuracy of which Mr. Tennant is guilty. He says:—"When the Press Law was recently revised for the purpose of meeting the new conditions which Treaty Revision will introduce, the clause forbidding foreigners to own or edit papers in any language was allowed to remain." We invite our readers attention to the words "for the purpose of meeting the new conditions which Treaty Revision will introduce." Now we do not hesitate to affirm that, with the exception of Mr. Henry Tennant himself, there is not a foreigner in Japan so grossly ignorant as to imagine that the changes effected in the Press Law by the Diet last session had any connexion, however remote, with the conditions which Treaty Revision will introduce. There was not the faintest relation between the alteration of the Law and Treaty Revision. How did Mr. Tennant fall into such an egregious blunder? Of course the value that the misrepresentation possesses for the purpose of his argument can not be under-estimated. If it were true that the Press Law was altered "for the purpose of meeting the new conditions which Treaty Revision will introduce," then indeed the retention of the clause restricting to Japanese subjects the ownership and editing of journals in

Japan would have an emphatic bearing on Mr. Tennant's presentation of the case. But it is not true. It is utterly false—so false that with all the good-will in the world we find almost insuperable difficulty in giving Mr. Tennant the credit of being merely a gross blunderer. At all events, whether he deliberately invented a connexion between the alteration of the Law and Treaty Revision—a hypothesis which we decline to entertain—or whether he is phenomenally ignorant of the history of press-law agitation in Japan during the past fifteen years, his incompetence to discuss the subject set forth in his letter is demonstrated.

RICE.

The market price of rice has shown a strong tendency to rise since the 15th instant. It was then quoted at 13.70 *yen* per *koku*; but on the 18th the quotation was 14.09 *yen*, and on the 21st it was 14.49 *yen*. The average quotations for each month during the year were as follows:—January, 10.40 *yen*; February, 10.20 *yen*; March, 10.64 *yen*; April 10.75 *yen*; May, 10.95 *yen*; June, 11.90 *yen*; July, 11.77 *yen*; August, 12.20 *yen*; September, 12.35 *yen*. It must not be supposed, however, that rice is retailed at the figures we have here set down. People buying the grain for their daily consumption have to pay a *yen* for 4.8 *go*, which means nearly 21 *yen* per *koku*. Such a price is unprecedented. Of course there is a loud outcry, and the usual rumours are circulated by agitators. Some allege that speculation by a combination of five or six big merchants is the root of the trouble; others allege that the Ministers of State have bought up all the available supplies. But the fact is that, owing to the shortness of last year's crop, the supply of old rice has now run very low, and instead of a fine yield this year, as was predicted in August, the bad weather of September, the inundations in the Hokuriku and Tokai districts, and the ravages caused by insects elsewhere, have completely changed the prospect, and a considerable shortage is now expected. Prices in Tokyo depend approximately on the supplies lying in the Fukagawa store-houses, and it is said that the total now remaining there is only 110,000 *koku*. Under all these circumstances, high quotations are natural. The Authorities, however, seem to have supposed, for a moment, that speculation was more or less responsible, for they suspended transactions at the Exchanges in Nagaoka and Niigata, and are understood to have contemplated the advisability of interfering similarly in other centres of trade. The idea has now been abandoned, however, though it is said that numerous letters reach the Department of Agriculture and Commerce, setting forth the miserable condition of the lower orders, and urging that the Rice Exchanges be closed or restrained. In Niigata, especially, much distress is reported. The inhabitants of three districts in that prefecture recently held secret meetings, and appointed deputies to solicit some measure of relief from the Authorities. They were unsuccessful, of course, and there are fears that they will resort to violence. We read in a Tokyo contemporary that the municipal council in Sendai adopted the practical device of buying up a large quantity of the grain by means of a 9-per-cent. loan, and that the police had

considerable difficulty, a few days ago, in dispersing a mob that assembled on a bill in the Futai district of Niigata for the purpose of attacking the public offices.

In view of the extraordinarily high price of rice at present, and the prevalent rumours that the yield throughout the country will be fifty or sixty per cent. below the average, the following returns officially published are of much interest:

PLACE.	YIELD AS COMPARED WITH THAT OF AVERAGE YEAR.
Kyoto	Twenty per cent. less.
Osaka	Up to average.
Kanagawa	Fifteen per cent. less.
Hyogo	Up to average.
Gumma	Slightly over average.
Chiba	Twenty to thirty per cent. less.
Ibaraki	Up to average.
Tochigi	Ten to fifteen per cent. over.
Nara	Up to average.
Miye	Good.
Shizuoka	Twenty per cent. less.
Yamanashi	One and a half per cent. less.
Shiga	Slightly less.
Gifu	Slightly less.
Nagano	Good.
Miyagi	Up to average.
Fukushima	Twenty per cent. less.
Iwate	Ten per cent. less.
Aomori	Ten per cent. less.
Yamagata	Twenty per cent. less.
Akita	Twenty to thirty per cent. less.
Ishikawa	Twenty-five per cent. less.
Toyama	Slightly less.
Shimane	Twenty per cent. less.
Okayama	Up to average.
Hiroshima	From ten to fifteen per cent. less.
Yamaguchi	Twenty per cent. less.
Wakayama	Up to average.
Tokushima	Twenty per cent. over.
Kagawa	Twenty per cent. less.
Kochi	Twenty per cent. over.
Fukushima	Ten to twenty per cent. less.
Oita	Up to average.
Kumamoto	Twenty per cent. over.
Miyasaki	Thirty to forty per cent. over.
Kagoshima	Ten per cent. over.

This list is not complete, Tokyo city and six prefectures being omitted. In the case of Tokyo, however, the yield is known to be bad. We may say, then, that out of 37 districts, the crop is expected to be up to, or over, the average yield in seventeen; slightly below the average in four, and from ten to thirty per cent. below the average in sixteen. On the whole, that ought to signify a crop very little below the average.

THE INDEMNITY FROM HAWAII.

We read in the *Mainichi Shimbun* that the Japanese Government has demanded a sum of two hundred thousand dollars (gold) from Hawaii, by way of indemnity in connexion with the immigration affair. Our contemporary says that this sum includes the losses suffered by the immigrants to whom admission was denied, as well as by the companies that sent them, and the expense of sending a man-of-war to Honolulu. No particulars as to the items are given, but as we know that some twelve hundred immigrants were turned back, and that 200 *yen* each would not be an unreasonable rate of compensation: there is here a sum of two hundred and forty thousand *yen* at once. A hundred and sixty thousand more for the expenses of the *Naniwa* and the companies by which the three steamers—*Shinshu Maru*, *Sakuma Maru* and *Kinai Maru*—were despatched, would seem to be a very low estimate.

The general meeting of shareholders of the Naniwa Railway Company was held in the rooms of the Geological Association, Nihonbashi, on the 27th inst. Mr. Ogura, President of the Company, took the chair and read the report for the past six months. A dividend of over 14 per cent. per annum was declared.

SCORING THE REVOKE.

Considerable discussion has been provoked in connexion with the question of scoring the revoke at whist, to which allusion was made in one of our recent issues. We desire, therefore, to add a few words to our previous remarks. The point in dispute may be stated thus:—According to the laws of short whist, one of the penalties for a revoke is to reduce the revoking party's score by three: if they are four up, they may be put back to one; if they are three up, they may be put back to nothing. But suppose that their score stands at two, or one. Then obviously it cannot be reduced by three, and the question is whether, under such circumstances, the option of exacting the penalty by a reduction of the revokers' score is absolutely forfeited. Drayson says that it is. He alleges that, unless the revoking party have already marked more than two, the penalty for the revoke must be exacted in one of two ways only, namely, by adding three to the other party's score or appropriating three of the revokers' tricks. Now it is plain that if the revoking side have not made anything in the revoking hand, and if they have less than three already marked up, three cannot be taken from their score. But if, in the revoking hand, they have made the odd trick, or two odd tricks, then, according to our view, they can be required to add their new score to their old, bringing the total to three or four, after which the penalty may be enacted by reducing them to nothing or one. On what principle does Drayson interdict that method of scoring? On the principle that the penalty for the revoke takes precedence of all other scores at whist—that the revoke points count before tricks. A moment's thought will show that such a rendering of the rule is illogical. The precedence accorded to the penalty is obviously intended to emphasize it: in other words, to enhance its value to the non-revoking side. Yet Drayson actually adduces that precedence as a reason for curtailing the range of the penalty; a reason for depriving the non-revoking side of one of their three optional advantages. Among the many beauties of whist, not the least notable is the perfect logic that underlies all its rules and dictates all their interpretations. If Drayson's interpretation be accepted, it becomes virtually the first and the only illogical clause in the laws of whist. When we wrote upon this subject some days ago, we had not consulted any book. But being confronted with Drayson, an acknowledged authority, we have thought it worth while to refer to the latest and greatest writer, "Cavendish" (Henry Jones), whose exposition of whist, written for the "Encyclopedia Britannica" in 1891 is much more recent than Drayson's work. Here, then, is what "Cavendish" says:—

The penalty for a revoke—(i.) is at the option of the adversaries, who at the end of the hand, may either take three tricks from the revoking player, or deduct three points from his score, or add three to their own score; (ii.) can be claimed for as many revokes as occur during the hand; (iii.) applicable only to the score of the game in which it occurs; (iv.) can not be divided, i.e. a player can not add one or two to his own score and deduct two or one from the revoking player; (v.) takes precedence of every other score, e.g.—the claimants two, their opponents nothing—the former add three to their score and thereby win a treble game, even should the latter have made thirteen tricks and held four honours.

It will be seen from (v.) that "Cavendish" interprets the precedence of the

revoke score exactly as we interpreted it when recently writing on the subject, and that he does not, however remotely, suggest Drayson's interpretation. "Cavendish" is logical: he does not make the precedence of the penalty a reason for curtailing its consequences. The question does not seem worth further discussion, but we may add one obvious consideration. Drayson's method of applying the rule has the inevitable effect of enabling the revoking side to score their honours, if they have any, under the given circumstances. For if the penalty can take only one of two forms, namely, appropriation of three from the revokers' tricks or addition of three to the other side's score, then plainly the revokers are necessarily left to count any honours they may have held. In other words, honours take precedence of the revoke penalty. Assuredly the framers of the rule never contemplated anything of that kind. The second consideration is that Drayson's rule brings about the very result it professes to avoid: it gives to the score already marked precedence over the revoking score, for it declares that if the revoking party have scored less than three, their score can not be penalized on account of the revoke. Surely that can not be the intention of the law.

PERIOD FOR EXCHANGING SILVER YEN.

It appears tolerably certain that the Government will introduce a Bill in the approaching session of the Diet for shortening the exchange period of the silver yen from five years to one year, or even to six months. One of the cogent reasons for the change is the fear of coinage operations in the event of silver's falling to such a price as to make an enterprise of that kind profitable. We believe that plans were actually laid for undertaking extensive coinage work in Canton, and that they would have matured had not the appreciation of silver altered the outlook. It has been urged that no solid grounds exist for any such apprehension, and the case of Great Britain has been cited, the argument being that if people do not find it worth while to coin English shillings and half-crowns, though the intrinsic value of those tokens is fifty per cent. less than their currency value, still less would they find it worth while to coin Japanese yen when the margin of profit is only ten or twelve per cent. There are two very obvious answers to that. The first is that the bullion value of the yen may at any moment fall to twenty or thirty per cent. less than the sterling value at which it is rated in the Japanese system. The second is that, silver, not being legal tender to the value of more than a sovereign in England, exchange operations would be trivial, and moreover it would be exceedingly difficult not only to coin large quantities of shillings and half-crowns in a European or an American country, but also to get them into England without detection. In the case of the Japanese silver yen, there is no limit to the quantity that may be presented for exchange, and they can be imported openly. Nor would there be much impediment to their coinage in China. If Japan depended on the Peking Government to protect her against such a danger, she would be extremely fatuous.

FREEDOM OF RELIGIOUS BELIEF IN JAPAN.

It seems necessary to make one or two comments on a letter published in our correspondence columns over the signature "S.S.W." We need scarcely say that we entirely endorse the principle for which our correspondent contends, but the difficulty is its enforcement. So far as the Central Authorities are concerned, we imagine that there is no discrimination against Christians in any capacity, whether as civil officials or as school teachers. We are persuaded, also, that if conclusive evidence could be furnished of the dismissal of a teacher from a school by the local government on the declared ground of his belief in Christianity, the act would not be condoned. But has there been any case in which such proof was forthcoming? We are not aware that there has. Of course the absence of direct proof does not indicate that the spirit of the Constitution is fully respected. If it be desired to deprive a man of his post because he is a Christian without, however, letting that reason appear publicly, there are many pretexts available for the purpose. A man may be well aware that to embrace Christianity would be fatal to his prospects of continued official employment, and yet he may know, at the same time, that his Christianity will not be openly alleged against him by those in authority. It is a question of the greatest delicacy. As to the meeting of school-teachers mentioned by our correspondent, we fail to see what remedy could be applied. School teachers, in every country where freedom of speech exists, are undoubtedly entitled to meet for the discussion of religious problems, and to pass resolutions declaring that, in their opinion, a belief in some particular form of creed disqualifies a man to be entrusted with the education of youth. Many Protestants hold that Roman Catholicism constitutes such a disqualification, and many Roman Catholics entertain a similar idea about Protestantism, while both would probably agree that a Buddhist was quite unsuited. The resolution passed by the Kobe association of teachers did not carry with it a sentence of dismissal for any teacher professing Christianity. The power of appointing or dismissing a teacher does not rest with his colleagues. But very likely a body of teachers holding such views could find means of giving them practical validity. How is that to be prevented? How is the passing of such resolutions to be prevented? It is a good thing to denounce bigotry in every form, whether it be the bigotry of the atheist, the Christian, the Agnostic, the Buddhist or what not; but there are some exhibitions of bigotry which governments are powerless to control.

THE AOMORI ASSEMBLY.

The sentence of dissolution pronounced against the Aomori prefectural assembly appears to have been due to its persistence in passing a vote of want of confidence in the Governor. Such action is beyond the competence of a local assembly, but has nevertheless been frequently taken, and always with the result now recorded against the Aomori legislators. Japanese administrative affairs will be conducted more smoothly when the system of local governors appointed by the Central Authorities comes to an end.

THE "NIPPON" ON THE CABINET.

The Progressionist Party originally credited the present Cabinet with a certain degree of excellence as compared with the former Government and combined to assist it in developing the policy which it pledged itself to unfold at the time of its organisation. The Party, however, has since perceived that the Cabinet's declarations are not carried into execution, and that serious bungling continually occurs. Suggestions towards improvement have been made by the Progressionists, who threaten to sever their connection with the Cabinet if their admonitions are not listened to, for they are in no way disposed to bring ruin upon themselves in support of the Cabinet. The Party hold themselves free to take any course they please in case their suggestions are rejected. In the event of Count Okuma's retiring from his present post owing to failure to secure the consent of the Cabinet to his proposals, the Progressionists will become a purely political party, and in that capacity will assault the Government upon the proposed increase of taxation and other schemes. The result will be the dissolution of the eleventh session of the Diet, and the ascendancy of the two Ministers—Count Kabayama and Viscount Takashima—in the organization of a purely Satsuma Cabinet; Count Matsukata, the Premier, being, of course, supposed to share the fate of Count Okuma. In predicting the policy of a Cabinet organised under the two Ministers referred to, it may be noted that the *Kodo-kai* would display a certain amount of sympathy. A section of Liberals headed by Mr. Matsuda might prove subservient to the new authorities, and yet would hesitate to sacrifice themselves to Satsuma clansmen. The Government would then exert all its energies to secure Mr. Hoshi's services, but the latter will firmly reject any proposals. The embarrassment of the Takashima-Kabayama Cabinet would thus manifest itself in the course of time. What would follow at that juncture would be a vehement conflict between the Constitution and Clannism. Each would endeavour to gain the victory over the other. Shall Clannism stand and the Constitution be ruined? Men of public spirit ought to solve these questions in the interests of the country. So writes the *Nippon*.

THE CHRYSANTHEMUMS.

The vernacular press reports that the chrysanthemums are in full bloom, and gives the names of the various subjects represented at the flower-puppet shows. The facts may interest such of our readers as contemplate a visit to the various places of note, though it must be confessed that an array of head-lines from Japanese history does not convey much information to the average foreigner. At Dangozaka are shown—the conference between Commodore Perry and Ii Kame-no-Kami; a hunting scene on Fuji-yama; the Loyal Komu; Yoshitsune; the *Neko-sodo* of Okazaki; a spring shower; the fight between Orita and Takao, &c. At the Senju garden, the *Kwanjin-cho*, and some of the principal events since the advent of American ships. At Shinmomi garden, the fight of the Kagoshima amazons, and the crossing of the Sumida by Abe Bungo no-Kami. At Kambu garden, the Otomaya of Nikko, and the two hundred belles of Tokyo. At the Yabusoba garden, the puppets of the Tokugawa era.

THE IMPERIAL BIRTHDAY.

The Household Department has issued the following notification, dated the 22nd inst.:

With reference to the Imperial Fête on the 3rd of the eleventh month, the Court being now in the Third Period of Mourning, the Ceremony of Congratulation at the Palace will not take place. It is, therefore, unnecessary that visits should be paid or congratulatory addresses presented, by superior officials, by noblemen, by holders of ranks, or by possessors of decorations.

THE CABINET CRISIS.

WHEN we find that even the *Yomiuri Shinbun*, which is usually the Cabinet's strongest supporter, absolutely abandons the rôle of defence and comes out "flat-foot" as an assailant, we can no longer conceal from ourselves the fact that something very like a political crisis impends. The *Yomiuri* says that, comparing the Cabinet's achievements with the promises it made when assuming office, the ratio is about one to ten, the only things standing to its credit being the amendment of the newspaper regulations, the abolition of the Department of Colonization and the employment of "popular talent" on a limited scale. We do not know whether it may be counted characteristic of the financial light-heartedness of the Japanese that the adoption of gold monometallism, which history will certainly regard as the preëminent work of the MATSUKATA Cabinet, is omitted altogether from the *Yomiuri's* list, but omitted it certainly is. On the other hand, continues our contemporary, the mistakes committed by the Cabinet in the short space of a year are numerous. For example, it has allowed the so-called "after-dinner clique" to have their own way in various matters; it has blundered about the Educational Department; it has permitted the illegal removal of members of the Board of Audit; it has made a mess of the Formosan administration; it has erred in the TAKANO affair; it has failed to secure union among its own members; it has rejected many of the proposals of the Progressionists; it has forfeited public esteem; and it has resolved to meet the deficit in next year's revenue by raising the rate of the Land Tax. Such is the indictment. Apparently it is formulated at the dictation of the Progressionists, for immediately following it we find an announcement that the great majority of that Party being firmly opposed to any increase of the Land Tax, and weary of waiting for the fulfillment of the Cabinet's promises, have determined to resort to decisive measures. Accordingly, they held a meeting on the 22nd instant, and passed resolutions to the effect that certain propositions should be submitted to the Cabinet, and that the latter's reply should determine the Party's ultimate demeanour. The meeting having been secret, no certain information as to its proceedings is forthcoming, but there appears to be little doubt that the following five points were voted by way of ultimatum to the Ministry:—First, that the Cabinet should "swear" to do nothing unconstitutional; secondly, that, in order to secure Ministerial harmony, all "extraneous elements" (*ibunshi*) should be eliminated; thirdly, that the Budget should be once more revised with a view to regulating the finances and reducing administrative expenditures; fourthly, that the administra-

tive policy in Formosa should be changed, and that corrupt government should be reformed throughout; and fifthly, that the President of the Board of Audit should be punished.

If these demands are rightly recorded, and we have no reason to suppose that they are not, they seem remarkable on account of what they omit rather than of what they embody. For they say no word whatever about administrative reform, so far as the Central Government is concerned, neither do they make any reference to the TAKANO affair. Administrative reform, as we have repeatedly pointed out, is a farce. Politicians that clamour for it are like children crying for the moon. When they succeed in indicating what they mean by "administrative reform" the public may begin to believe that they are in earnest about it. Its omission from the list of demands is a wholesome sign. For the rest, the resolutions of the Progressionists indicate clearly that their prime object is to secure the removal from the Cabinet of Marquis HACHISUKA, Viscount NOMURA and Mr. KIOURA, Ministers of Education, of Communications, and of Justice, respectively. If that were done, they could be easily placated in other respects. They carry Count OKUMA with them, it is understood, in their opposition to an increase of the Land Tax, and, of course, their movement derives its chief force from his association.

Such appears to be the situation. The vernacular journals allege that Cabinet meetings have been held at the official residences of the Minister President and of Count OKUMA, but that nothing definite has yet been resolved. It is also stated that, on the 23rd instant, Messrs. KUSUMOTO, HATOYAMA, NAKAMURA, INUKAI and HASEBA, as representatives of the Progressionists, waited upon the Minister President, and submitted the resolutions of the Party, and that Count MATSUKATA replied, promising to give the matter mature consideration. It is, of course, very plain that if the dictation of political parties in the above sense be obeyed by the Cabinet, there exists in Japan a kind of party government far more radical than that existing in any other part of the world. We do not say so because a demand for the dismissal of certain Ministers of State is included in the ultimatum of the Progressionists. That in itself is certainly a striking feature when we remember that the Ministers are appointed by the EMPEROR and can not be deprived of office except by his order. In fact, when the Progressionists call upon the Cabinet to swear fidelity to Constitutional methods, and, at the same time, themselves attempt to over-ride the prerogatives explicitly reserved to the SOVEREIGN by the Constitution, they betray a singular lack of consistency. But even that point is less notable than their general plan of

procedure. If in Great Britain, the home of party cabinets, a deputation of Conservative members of the House of Commons were to wait on Lord SALISBURY, and submit to him an ultimatum of five articles, the alternative to its acceptance being a campaign by the whole party against the Ministry, the nation would unanimously denounce the step as irrational and farcical. However, we must remember that Japanese politics are in a wholly exceptional state, and that they cannot be judged by Western standards. The links that bind political parties to Cabinets do not represent any genuine bond of coöperation, and since neither side admits any responsibility to the other, there is no real perception of discipline or mutual obligation.

THE BEHRING SEA QUESTION AND JAPAN.

MOST unfortunately the very limited space at our disposal renders it impossible to reproduce in full the principal despatches which have passed between the Cabinets in London and Washington on the subject of pelagic sealing in Behring Sea. Our personal sympathies are with every reasonable exercise of neighbourly coöperation to secure a valuable property against destruction, but we confess that the diplomatic methods of the United States Government in this controversy have been such as to rouse a strong feeling of indignation. It appears quite impossible to derive from a careful perusal of the despatches any conclusion other than that the accusations preferred by the Secretary of State in Washington are, if not altogether baseless, at any rate egregiously unjust. We insert the qualifying clause "if not altogether baseless," not because we can ourselves discover any ground for the accusations, but because we are bound to assume that the statesmen in Washington think they have discovered some ground, and the opinions of such able men can not be lightly set aside. Moreover, as the controversy now stands, the last word is with Mr. CHAMBERLAIN. Possibly when the American answer is published, the public will be enabled to take a less harsh view of the Washington Cabinet's extraordinarily intemperate language and seemingly wild charges. But, in the meantime, Mr. CHAMBERLAIN'S admirable despatch, perfectly consistent with all the best canons of diplomatic courtesy, crushingly powerful in its calm logic, and clear as crystal in its marshalling of premises and drawing of conclusions, appears to have dealt with Mr. SHERMAN'S petulant and unsupported denunciations much after the manner that a Nasmyth-hammer deals with a fragment of red-hot iron. There is nothing left of Mr. SHERMAN except a few paling sparks. With regard to the offensive declaration of the American Secretary of State that the report of the English expert, Professor

THOMPSON, was withheld "until an opportunity could be afforded to examine that of" the American expert, "Dr. JORDAN, so that the former might be enabled to pass the latter in review, criticise his statements and, as far as possible, minimize his conclusions," it now appears that, three days before this monstrous accusation was penned by Mr. SHERMAN, a despatch left London from Lord SALISBURY to Sir JULIAN PAUNCEFOTE, fully explaining the reasons for the delay in the preparation and publication of Professor THOMPSON'S report. Of course those reasons were not before Mr. SHERMAN when he wrote, but the incident shows that, without waiting to learn anything about the causes which had retarded the report, he hastened to accuse its author of chicanery and the British Government of a contemptible scheme. We can not but note in this context that Mr. SHERMAN, while, on the one hand, lamenting that "the impartial character which it has been the custom to attribute to the reports of naturalists of high standing has been greatly impaired by the apparent subjection of this report to the political exigencies of the situation," does not hesitate, on the other, to declare that "Professor THOMPSON'S report is plainly written with a view to minimize, as far as possible, the depleted condition of the herd on the Pribiloff Islands," and that the Professor "has been very careful throughout to say nothing likely to embarrass his Government." Thus Mr. SHERMAN'S avowed respect for "the impartial character of the reports of naturalists of high standing" does not restrain him from reading into the report of Professor THOMPSON motives of the meanest and most partial nature. Nothing can be more satisfactory than to observe that Mr. CHAMBERLAIN does not condescend even to notice Mr. SHERMAN'S accusation of bad faith, so far as it concerns HER MAJESTY'S Government. Having curtly observed that the reasons for the delay in preparing and publishing the report had already been forwarded to Washington, he adds, even more curtly:—"Mr. CHAMBERLAIN would not refer to the point, although so prominently put forward, if he did not feel it necessary for the vindication of Professor THOMPSON'S high character and reputation to declare that the allegations made against him are totally unfounded, and therefore equally unjustifiable." Mr. CHAMBERLAIN'S despatch, dated from the Colonial Office on July 26th, occupies four columns of *The Times* of Sept. 18th. We earnestly commend its perusal to the editors of the leading Tokyo journals, since Japan is directly interested in this matter. Here, however, we are reluctantly compelled to confine ourselves to one extract. Referring to the fact that the United States Government apparently aims at nothing

less than the suppression of pelagic sealing, and that it accuses Great Britain of "unneighbourly" conduct for declining to consider an immediate revision of the Fishery Regulations established by the Arbitration Tribunal at Paris in 1893, Mr. CHAMBERLAIN says:—

In support of their views the United States' Government have departed from the noblest tradition of their country, which had earned universal honour by their efforts to vindicate the freedom of the high seas.

The nation which is now so zealous for prohibiting the killing of seals on the high seas was, in 1832, with equal zeal asserting a claim of right for its citizens not only to kill seals on the high seas, but to land and slaughter them on the shores of a friendly nation. The Power which now reproaches her Majesty's Government with "unneighbourly" conduct because they decline to abolish an industry the lawfulness of which has never been questioned except by the United States, and has, only four years since, been vindicated by the highest international Tribunal, did not shrink in 1832, when the United States' sealing-vessel *Harriet* had been seized for violating the territory of the Republic of Buenos Ayres in the pursuit of fur-seals, from landing an armed party at Soledad and carrying off the crew and cargo of the vessel, and from declaring that the seal fishery on those coasts was in future to be free to all Americans, and that the capture of any vessel of the United States would be regarded as an act of piracy.

The shores of the Pribiloff Islands are to-day just as much uninhabited as were the shores of the Falkland Islands and Tierra del Fuego fifty years ago, but no British subject has ever claimed the right to land and kill seals there as the United States' citizens did on the South Atlantic under the protection of the guns of a United States' man-of-war.

British subjects, and her Majesty's Government for them, have only claimed the right of every subject of a free State to exercise their undoubted right of fishery on the high seas; yet, while exercising that right, British subjects have been seized, fined, and imprisoned, in the face of the protests of Her Majesty's Government. And now, after Her Majesty's Government, in their desire for an amicable arrangement with the United States, had agreed to submit to arbitration their claim to exercise a right never before disputed, and to leave to the Tribunal to determine when that right had been vindicated, under what restrictions it should, in the interests of both countries, continue to be exercised, and after they have ever since scrupulously adhered to those restrictions, they find themselves, notwithstanding these concessions and sacrifices, accused of unneighbourly conduct.

When the award was made it was welcomed in the United States because it was believed that the restrictions were sufficient to render pelagic sealing unprofitable, and that the interests of the lessees of the Pribiloff Islands would not, under the new condition of affairs, be materially or injuriously affected.

When it was discovered, from the results of the first year's fishery, that the regulations, severely as they pressed on the British industry, were not sufficient to destroy it, the United States Government began to press her Majesty's Government to agree to revise the regulations. The same arguments as had just before been urged in vain upon the Tribunal were repeated. Pelagic sealing it was declared was suicidal, and the extermination of the fur-seal was imminent. Her Majesty's Government refused to agree to set aside an award arrived at after the most careful deliberation by the Tribunal, merely because it was found that British subjects could, under the restrictions imposed by it, still continue to prosecute their industry successfully.

The agitation and pressure were continued, and exaggerated statements as to the condition of the herd were circulated, till, when her Majesty's Government sent their agents to inquire into the actual facts in 1896, it was found that, in spite of the large catch of 1895, the herd actually numbered more than twice as many cows as it had been officially asserted to contain in 1895. The result of these investigations, as pointed out in Lord Salisbury's despatch of May 7, has further been to show that pelagic sealing is much less injurious than the practice pursued by the United States' lessees of killing on land every male whose skin was worth taking. If the seal herd to-day is, as Professor Jordan estimates, but one-fifth of what it was in 1872-74, that result must be, in great measure, due to the fact that, while the islands were under the control of Russia, that Power was

satisfied with an average catch of 33,000 seals, subsequently under the United States' control more than three times that number have been taken every year, until the catch was, perforce, reduced because that number of males could no longer be found.

Last year while the United States' Government were pressing her Majesty's Government to place further restrictions on pelagic sealing they found it possible to kill 30,000 seals on the islands, of which Professor Jordan says, (p. 21) 22,000 were to the best of his information, three-year-olds, though on p. 17 he estimated the total number of three-year-old males on the islands as 15,000 to 20,000. If such exhaustive slaughter is continued it will, in the light of the past history of the herd, very quickly bring about that commercial extermination which has been declared in the United States to be imminent every year for the last 12 years.

All this, however, relates to the question between England and the United States only, and we desire particularly to draw the attention of our Japanese contemporaries to a very signal misapprehension under which they have hitherto been labouring with reference to England and Japan. They have taken it for granted throughout that the British Government originally agreed to a conference of the Powers concerned, tacitly including Russia and Japan, and that a more or less perfidious change of front was made by Lord SALISBURY at the eleventh hour by way of Roland for Mr. SHERMAN'S unsightly Oliver. But the official papers now published render it perfectly clear that the British Government never agreed to anything of the kind. Here are Lord SALISBURY'S words, written at the Foreign Office in London on July 28th, in reply to Mr. SHERMAN'S notorious despatch of May 10th:—

In reply I have to state that her Majesty's Government are willing to agree to a meeting of experts nominated by Great Britain and Canada and by the United States in October next, when the further investigations to be made on the islands during the present season will have been completed. The object of the meeting would be to arrive, if possible, at correct conclusions respecting the numbers, conditions, and habits of the seals frequenting the Pribiloff Islands at the present time as compared with the several seasons previous and subsequent to the Paris Award.

Lord SALISBURY, as he states here in the plainest terms, agreed to nothing more than a meeting of experts nominated by Great Britain, Canada and the United States. Thus there has not been the smallest change of front on Great Britain's part from first to last. Under what strange hallucination the United States Government laboured when, on the strength of such a despatch as the above, it invited Japan and Russia to join in a conference with Great Britain, we are unable to divine. Lord SALISBURY'S despatch of July 28th must have been in Mr. SHERMAN'S hands by August 4th, yet America's invitation to Japan and Russia was allowed to stand, and the Japanese Representatives were suffered to leave Tokyo for Washington two months later. It is a most singular instance of diplomatic blundering. We can not suggest any explanation, but we desire to emphatically record the fact that the situation in which Japan now finds herself is due, not to any variability or inconstancy on Great Britain's part, but to the curious circumstance that the American Government invited Japan and Russia to sit with England in a Conference which England had not agreed to join,

RECENT DEVELOPMENTS OF THE EVOLUTION THEORY.

WITH ESPECIAL REFERENCE TO THE PROGRESS OF THE HUMAN RACE.

I.—ZYMOTIC DISEASE AND HUMAN EVOLUTION.

LAST year was published a work on evolution, entitled "The Present Evolution of Man," by Dr. ARCHDALL REID, which is unquestionably the most important contribution to the evolution theory since WEISMANN'S work on "The Continuity of the Germ Plasma."

DARWIN, by making the evolution theory comprehensible by every well-educated man, removed it at one stroke from the position of a doubtful and derided hypothesis to that of a well-grounded and almost universally accepted theory. WEISMANN brought forward apparently indisputable grounds for rejecting the view that the inheritance of acquired variations is a factor in evolution; and proved almost beyond cavil that natural selection by the survival of the fittest has been the sole cause of organic evolution. Dr. REID, adopting WEISMANN'S view, states, in a most convincing manner, the arguments against the possibility of the inheritance of acquired characters by any but the lowest organisms, and gives further a new and remarkable contribution to the theory of human evolution.

Let us first consider the simpler portion of his work, that which deals with the effect of natural selection on the human race. The methods of natural selection among the lower types of animal life, which may be summed up in the phrase, "the race to the swift and the battle to the strong," ceased to a large extent to be operative on man as soon as he emerged from the most primitive state of savagery. HERBERT SPENCER says somewhere, "The first requisite to success in life is to be a good animal," and the pithy phrase contains an important truth; but it is evident that the more man becomes civilized, the less does mere animal excellence remain a principal factor in promoting survival. The decay of many animal powers in the human race, notable in this regard being the loss of a keen sense of smell, affords ample proof of this assertion.

What, then, is the mode in which the struggle for existence is now chiefly operative among the races of civilized man? We can best determine this by ascertaining the principal causes of premature death. We find they can be arranged in two classes: zymotic diseases, that is, diseases due to the invasion of the body by low parasitic organisms; and the abuse of intoxicants, of which among western races the chief is alcohol.

Zymotic disease constitutes a part of the price man has had to pay for civilization. The conditions of life among fœral animals are such as practically prohibit

the origin and dissemination of these diseases; but *pari passu* with the evolution of civilized man there has been an evolution of organisms that are the deadly hereditary foes of the human race. Let us consider, for simplicity's sake, one only of these diseases, tuberculosis, which at the present time is responsible for one-seventh of the deaths that occur in England. The contagion of the disease is found to require two conditions for its dissemination; first, a certain concentration of infection in ill-ventilated dwellings; secondly, an individual susceptibility, innate or acquired, on the part of the recipient. Concentration of infection in ill-ventilated dwellings occurs wherever in cold climates men among whom is a tuberculous patient herd together under cover. Susceptibility to this form of infection was at one time probably universal, but in races that have for thousands of years been exposed to the contagion, the susceptibility has been gradually diminished by the progressive elimination of those with more susceptibility, and by the survival of those stocks only in which the susceptibility was less extreme. It is only necessary that this severe form of selection should be continued for a sufficiently long period, for the race to acquire an immunity, at least to the more deadly form of the disease.

The validity of this reasoning is readily tested and confirmed by an appeal to experience. There can be no reasonable doubt that the races of the more civilized parts of the old world have been familiar with tuberculosis from immemorial times. On the other hand, the sparser and less domesticated natives of the New World have until recently been free from the disease. Now, among the Old World races, racial immunity has so far been acquired that many persons escape infection altogether, though exposure to infection must in our large towns be a matter of almost daily occurrence; and the acute forms of tuberculosis, "galloping consumption," etc., are quite exceptional. Among the New World races, on the other hand, as soon as they adopt our domestic habits and are exposed to the contagion disseminated by an individual suffering from the disease, tuberculosis proves itself a deadly and almost universal scourge.

The same reasoning applies to other diseases which, in virgin communities, assume a deadly pestilential type previously unknown to scientific observers. Measles among the South-sea Islanders is a well-known instance of the kind. It is the deadly effect of these diseases in races not protected against them by many generations of evolution, that accounts in great part for the disappearance, often regarded as mysterious, of so many savage and semi-civilized races in contact with a higher civilization. Dr. REID writes as follows concerning the decay of the New World Races:—

"There is no more mystery connected with

their decay than with the extinction of the dodo or the bison. It cannot be doubted that the New World races have suffered or are suffering extinction in consequence of the introduction among them of Old World diseases, and because of one other cause, likewise an importation, of which more hereafter. So much is quite beyond dispute, and these causes may be seen in operation over half the world at the present day—in North and South America, in Australia, in New Zealand, in the islands of the Eastern Hemisphere. The sole mystery has lain in the circumstance that the races of the New World are less resistant to diseases of the non-malarial type than those of the Old World, and to that mystery I trust I have furnished a key. It is no question of freedom or of domestication, or even of civilization *per se*. The continental savages of the Old World do not perish when brought into contact with civilization. In India and Ceylon are tribes of an excessively wild type that have existed for thousands of years in contact with, and in the midst of, most ancient civilizations and very crowded populations. There is no conceivable reason why the Caribs should have been less capable of enduring domestication, or slavery, or civilization than equally barbarous negroes. But they perished, because, unlike the negroes, they had not been rendered resistant to the non-malarial zymotic diseases which the Spaniards introduced, and they would have perished had the Spaniards come among them as slaves, not as masters, and adopted their manners and habits of life, instead of forcing on them a change; for their islands lay in the very highway of the commerce that then sprang up, and in the very path of selection.

"It is probable that most if not all of the still persistent races of America, Australia, and Polynesia are doomed irretrievably to extinction. In the presence of zymotic disease, and of conditions that ever grow increasingly favourable to it, they are as unfit as was the dodo when man invaded Mauritius. But at least we need not favour their extinction by means that are ignorantly intended to prevent it. We need not crowd the American Indians, the Australians, and the Polynesians into school-rooms and churches, and so subject them to conditions most favourable for acquiring zymotic disease. We need not teach such of them as dwell in warm climates that morals are inseparably connected with clothes, and that the wearing of garments is a necessary prelude to eternal bliss. We need not persuade such of them as are nomadic to form death-traps for themselves in the shape of settled communities. In fact, we need not attempt to civilize them, at least in so far as civilization depends on settled and crowded communities, air-tight houses, and unnecessary clothes. Above all, we need not send to them as teachers and guides men who are infected with disease, especially with tuberculosis. Only by preserving intact, as far as possible, the conditions under which their ancestry lived, and for which their evolution has therefore fitted them, can we hope to save for a time these—in many cases—noble and interesting races."

It may be asked why it is that these weaker races cannot themselves undergo a protective evolution against zymotic disease, similar to that which, according to the argument, has been undergone by the Old World races. The reason is that during the many thousand years in which the Old World races, since the beginnings of civilization, have been painfully acquiring their immunity, the micro-organisms themselves have been undergoing an evolution of their own by which their virulence is proportionately increased—this must have been the necessary result of the working of the law of the survival of the fittest as applied to them. Confronted with these virulent germs the New World

aces have not time to undergo a protective evolution; they are too rapidly exterminated. A concomitant cause of their extermination is the abuse of alcohol of which, as the other great factor in present-day human evolution we have spoken above. The influence of alcohol on human evolution will be the subject of our next article.

II.—ALCOHOL AND HUMAN EVOLUTION.

In the first section of our review of Dr. REID's book, we traced the effect of natural selection in bringing about the evolution of a type comparatively resistant to the zymotic diseases that have grown up concomitantly with the growth of civilization. In the effect of alcohol as a cause of human evolution there is a strong resemblance with, and also a striking difference from, the effect of zymotic disease. The resemblance consists in the fact that just as the virus of the different zymotic diseases has tended to grow more potent as civilization has advanced, so, with the increasing knowledge of the technical arts that has marked the growth of civilization, there has come the power of preparing stronger and stronger varieties of alcohol liquors. In Guiana, for instance, the intoxicant manufactured by the natives from cassava is so weak that it takes a man from thirty-six to forty-eight hours of hard drinking to bring about the desired state of intoxication; the heir of all the ages, on the other hand, can drink enough neat whiskey or brandy at a draught to make him dead drunk within a few minutes. The difference between alcohol and the zymotic diseases consists in this, that whereas for the most part there is nothing men seek more earnestly to avoid than such sickness as zymotic disease, the exposure to the toxic effects of alcohol has the appearance of a deliberate voluntary action, the motive force being the charming sensations peculiar to the state of intoxication.

It is to be observed that the peculiarity of nervous tissue on which the craving for intoxication depends, must be an accidental product merely of evolution. Dr. REID's ideas on this matter, and his idea that evolution is bringing about the persistence of a type to which drunkenness is no longer charming, were anticipated some years ago by Professor JAMES of Harvard University, in his great work on Psychology. Speaking of affections of the nervous system that cannot have been due to experience of relations with the outer world, Professor JAMES writes:—

"One of the most striking of these affections is *susceptibility to the charm of drunkenness*. This, taking drunkenness in the broadest sense, as teetotallers use the word, is one of the deepest functions of human nature. Half of both the poetry and the tragedy of human life would vanish if alcohol were taken away. As it is, the thirst for it is such that in the United States the cash-value of its sales amounts to that of the sales of meat and of bread put together. And yet what ancestral

"outer relation" is responsible for this peculiar reaction of ours? The only "outer relation" could be the alcohol itself, which, comparatively speaking, came into the environment but yesterday, and which, so far from creating, is tending to eradicate, the love of itself from our mental structure, by letting only those families of men survive in whom it is not strong. The love of drunkenness is a pure accidental susceptibility of a brain evolved for entirely different uses, and its causes are to be sought in the molecular realm, rather than in any possible order of "outer relations."

Dr. REID's words on the same subject may fitly be adjoined:—

The question as to how the craving for alcohol and other narcotics, the love for those frames of mind which they severally induce, arose, can be answered in one way only. It can have arisen only as a by-product which, in the absence of narcotics, was harmless, but which in the presence of them is harmful, and against which, in races long afflicted by this or that narcotic, a secondary evolution has occurred; just such a by-product as paresis which accompanies the life-saving faculty of fear (e.g. in birds or frogs, fascinated or frightened by snakes), against which a secondary evolution is also doubtless occurring. In intellectually the highest animals only is the love for that state of mind which narcotics induce present, and only in the highest of all animals, *i.e.* only in man, is the craving for that state of mind present in the highest degree. Elephants and monkeys, for instance, but not fish or reptiles, can be brought to enjoy indulgence in alcohol; in man alone is the love for such indulgence easily awakened."

After giving some remarkable figures to show the direct influence of alcohol in promoting mortality, Dr. REID goes on to say:—

"Dr. Ridge's statistics place beyond question the fact that alcohol is a considerable cause of mortality. But his figures, however significant are by no means significant enough. Alcohol not only causes disease and death among the breadwinners of the community, to whom his statistics chiefly refer; it is also a cause of destitution to their families, and therefore a factor in the elimination of those who, inheriting the inborn traits of their progenitors, would in the next generation indulge in it to excess. Every shilling spent in drink is a shilling less for food, clothing, shelter, and the provision of better sanitation. Moreover, apart from the question of disease and death, individuals who indulge in alcohol to excess, *i.e.* to such an extent as to leave them appreciably poorer, or to such an extent as to damage their health, must on the whole have fewer offspring than those who do not so indulge, for the reason that they are less able to support wives and families, and because men and women are generally unwilling to marry the intemperate.

In generation after generation alcohol is therefore the cause of a considerable diminution of the unfit in relation to it, and therefore, like a very prevalent and deadly disease, in generation after generation, it must be the cause of a considerable evolution against itself. This evolution may be in one or both of two directions; it may be in the direction of an increasing power of tolerating the poison, or in the direction of an increasing power of avoiding it, that is, of abstaining from it, or both, *i.e.* it may result in an increased power of imbibing alcohol without ill effect, or it may result in a diminution of the craving for it, or both. In the presence of an abundant supply of alcohol and of a craving for it, it can hardly result to any great extent in an increased power of toleration, for, under such circumstances, the drunkard would simply drink more, and thereby poison himself just as effectually as a less resistant person would with a smaller quantity. The evolution against alcohol must therefore be in the direction of an increased power of avoiding it—in a diminution of the craving for it. *A priori*, therefore, we should

expect that races that have long been familiar with alcohol, like races that have long been familiar with a very prevalent and deadly disease, are less harmfully affected than races that have had little or no experience of it, and this because they crave less for it, and therefore drink less of it. *A posteriori*, this is exactly what we do find. The peoples inhabiting the northern coast of the Mediterranean, the Greeks, the Italians, the Southern Frenchmen, and the Spaniards, who have lived for thousands of years in the presence of an abundant supply of alcohol, are pre-eminently temperate, whereas savages who have had no racial experience of it, or a slight experience only, the natives of North and South America, Australia, Polynesia, Africa, Greenland, etc., whether inhabiting the arctic, the temperate, or the torrid zone, crave for it to such a degree that, unless we protect them by prohibitory laws, they perish in its presence. Moreover, races that in their experience of alcohol are intermediate between the Italian and the North American Indians, crave for alcohol, and are inclined to excessive indulgence in it, more than the former and less than the latter, *e.g.* the inhabitants of Northern Europe, the English, for example.

It has commonly been supposed, that in the use of alcohol we find a striking example of the inheritance of acquired traits. We are all unhappily familiar with cases in which a tendency to drink to excess is inherited, and most persons believe that the drunkenness of the child is the direct result of the drunkenness of the parent. As a matter of fact, however, what the child inherits is not an acquired variation, but the inherited tendency of the parent in virtue of which that parent himself became a drunkard. If the use of alcohol by the parent tended of itself to induce a craving for alcohol in the child, the disappearance of the human race would be speedily assured. As Dr. REID puts it:—

"In such a case the son would inherit the father's craving plus an increment to it, and would therefore drink more; the grandson would inherit the son's increased craving, plus a further increment caused by the drunken habits of the latter, and would in consequence drink still more; so also as regards the great grandson and subsequent descendants, till, in the presence of alcohol, the race would become more and more unfit, and would ultimately suffer extinction."

The fact cannot be denied that the less experience a race have had of alcohol, the more disastrous to them is the poison when once it has been put into their hands. Those among us known as dipsomaniacs, who have an irresistible craving for intoxication of the most profound type, comparable in its intensity to the craving for intoxication experienced by the savage without previous racial experience of alcohol, are dipsomaniacs in virtue of the well-known phenomenon of reversion, whereby an organism displays mental or physical characteristics that were at one time universal among the ancestors of the race.

The practical conclusions drawn by Dr. REID are striking and somewhat novel. So far, his facts and arguments will have been received with approbation by the most enthusiastic temperance reformers, who will perhaps expect to hear that Dr. REID is an ardent advocate of prohibition. Far from it. Dr. REID considers all pro-

hibition schemes to be utterly mistaken. He thinks that prolonged and generally enforced abstinence from alcohol would, owing to the cessation of the evolutionary process whereby a type desiring the slighter degrees of intoxication only has been evolved, result in retrogression to a type in which extreme drunkenness would be ardently desired. Since alcohol, so important in the arts and manufactures, cannot possibly be eliminated from daily use, a time would surely arrive when all legal and moral restraints would be overcome, a universal outburst of drunkenness would ensue, and the whole process of anti-alcoholic evolution would have to be begun over again.

"If, then," asks Dr. REID, "racial abstinence from alcohol must have for ultimate result only excessive indulgence in the poison, how may we save posterity from the curse of intemperance? How cause our race ultimately to crave for it as little as the South European? Most assuredly only by imitating the process of alcoholic selection, by eliminating those individuals among us who crave for alcohol to an excessive degree, at least in so far as to prevent them influencing posterity by leaving offspring, who, by marrying the children of the naturally sober, would contaminate the whole race. In other words, we must either permit alcoholic selection to run its cruel course, or we must assist it by artificial selection, and so prevent much of the misery, by weeding out the obviously unfit, either by forbidding marriage to drunken individuals, or in the married by preventing the procreation of children by separating the parents, or such other means as science may devise."

III.—HUMAN EVOLUTION AN ARTIFICIAL PROCESS.

Twenty-five years ago, Mr. WALTER BAGEHOT, one of the most accomplished thinkers of his time, wrote a fascinating work with the quaint title of "Physics and Politics," the aim of which was to throw light on the origins of civilization. At that time, the view that acquired traits are transmitted was almost universally accepted, and on the inheritance of acquired traits Mr. BAGEHOT'S argument was based. "The special laws of inheritance," he wrote, "are, indeed, as yet unknown. All which is to my purpose is, that there is a tendency, a probability, greater or less according to circumstances, but always considerable, that the descendants of cultivated parents will have, by inborn nervous organization, a greater aptitude for cultivation than the descendants of such as are not cultivated; and that this tendency augments, in some enhanced ratio, for many generations."

I do not think that any who do not acquire—and it takes a hard effort to acquire—this notion of a transmitted nerve element, will ever understand the "connective issue" of civilization. We have here the continuous force which binds age to age, which enables each to begin with some improvement on the last, if the last did itself improve; which makes each civilization, not a set of detached dots, but a line of colour, surely enhancing shade by shade. There is, by

this doctrine, a physical cause of improvement from generation to generation; and no imagination which has apprehended it can forget it; but unless you appreciate that cause in its subtle materialism, unless you see it, as it were, playing upon the nerves of men, and age after age, making nicer music from finer chords, you cannot comprehend the principle of inheritance, either in its mystery or its power."

We do not now propose to recapitulate the arguments against the inheritance of acquired characters; we shall assume it to be proved almost beyond the possibility of question that they are not inherited. Failing this mode of evolution, which explained things so satisfactorily for BAGEHOT, civilized man can have been evolved from the animal in one of two ways only, or in both ways combined, α by natural selection, β by an artificial process which we shall presently describe.

In the last of these articles we shall examine Dr. REID'S view as to the mode in which natural selection has been chiefly operative in bringing about the change from animal to man. In the present article we propose to show that the kind of natural selection operative in the lower animal world, the selection that is, as we have already said, summed up in the phrase "the race to the swift and the battle to the strong," cannot have been an important factor in promoting the change from savage to civilized man.

At first sight, if we abandon the old view of inheritance, if we cease to believe that acquired characters are transmitted, and if we admit that natural selection of the kind that promoted the earlier stages of man's evolution cannot account for the final stages, the development of civilization seems to be relegated to the limbo of the miraculous. A modern writer on evolution, Mr. BENJAMIN KIDD, has placed on record his belief that a supernatural element has been present in social evolution. Within the last few years, however, it has been becoming increasingly clear that to account for human progress it is not necessary to invoke the childish Greek expedient of a god from a machine; the whole process has become perfectly explicable within the sphere of ascertained natural causation.

In an essay on Heredity published last year, Mr. LESLIE STEPHEN, after some discussion of the latest view of heredity, goes on to say:—

Let me quote what has been said by an authority who expresses, I believe, the accepted scientific view. "There can be no doubt," says Professor Huxley, "that vast changes have taken place in English civilization since the days of the Tudors. But I am not aware that there is a single particle of evidence in favour of the conclusion that this evolutionary process has been accompanied by any modification of the physical or the mental characters of the men who have been the subjects of it. I have not met with any grounds for suspecting that the average Englishmen of to-day are sensibly different from those that Shakespeare knew and drew." The statement might, I imagine, be very greatly extended. I do not suppose that the average cockney of to-day is a superior animal, physically or morally, to the average Athenian

of the days of Pericles, or even, it may be, to the prehistoric savage who made flint implements for the amusement of our antiquaries. Briefly, whatever change has taken place, within the historical period, has been a social change, not a change in the structure of the individual.

Mr. STEPHEN goes on to show that the power of accumulating knowledge is like the power of accumulating wealth: by both alike each generation is placed on a different platform from that occupied by the preceding generation. Following this growth of knowledge along one line only, for the sake of example, we see three great changes in what Mr. STEPHEN calls the social factor, made by the development of the power of speech, by the discovery of writing, and by the discovery of printing, respectively, each of these changes in the social factor being accompanied by an enormous and almost sudden advance in civilization, without any correspondingly gigantic change in the physical and mental structure of the units of which society is made up.

Our illustration is perhaps a trifle strained from our having included the invention of speech; this must of course have been a much slower and more painful process than the discovery of writing or of printing; but once the rudiments of speech gained, the growth of the power of language would proceed with remarkable rapidity, and would be accompanied by a correspondingly rapid change in the social state of developing man, a change altogether disproportionate in its rapidity to any possible change in inborn structure and acquirements. Mr. STEPHEN thus writes of the transition period from monkey to man and of subsequent social evolution:—

Monkeys must have grown into men before they could begin to accumulate capital, either material or spiritual. The faculty of accumulating must itself have been developed. Only, when once it was developed, another process would begin, the process of social evolution, which, however it may resemble the other, or possibly be in some sense its continuation, proceeds, at least, at a totally different rate. The difference is comparable, one may say roughly, to the difference between the speed of an express train and the speed of a four-wheeled waggon. Beneath the surface, it may be, the slower process is still continuing; men, for anything I can say to the contrary, may be acquiring large brains and more sensitive bodies; and it is further possible, or rather obvious, that if we can do anything to facilitate this proceeding, to behave so as to give nature a better chance of turning out better work, we ought to do so. Only nature is pretty sure to take her time about it. How far, again, one process is to be considered as a modification of the other, or even as in opposition to it, is a point which I cannot now touch. What I have to say is simply this: that if we take any two periods of society, the present, for example, and that of a thousand years ago, we shall find enormous or incalculably great differences in the social structure, in the amount of knowledge, in the character of the ethical, religious, and philosophical beliefs, and in the relations between the individuals of which the society is constructed; but between the individuals at the two periods we may find hardly any definable difference whatever. For anything we can say, we should be able, if we could move people about in time as well as in space, to exchange a thousand infants of the nineteenth century A.D. for a thousand infants of the nineteenth century B.C.

and nobody would be able to detect the difference that would result.

Hence it follows, in my opinion, that the evolutionary process with which moralists and political philosophers have practically to deal, is what I have called the social, and not the individual process. We inherit thoughts as we inherit wealth; we inherit customs and laws and forms of worship, and indeed our whole mental furniture; we can add enormously to our inheritance, and can transmit the augmented fund to our descendants. But the other process of inheritance, to which the word "heredity" is taken to apply, is not, immediately at least, cumulative. We inherit the old faculties, bodily and mental, unaltered, or with infinitesimal alterations, though we live in a different environment, and are ourselves as much altered as our environment. The modern social organism is built up, if I may say so, of cells almost identical in their properties with those of the old organism, although the mode of combination gives entirely new properties to the whole, and brings out new actions and reactions among the constituent cells themselves.

Not the least part of the interest of the above passage lies in the fact that it comes from the pen of a man who has lived throughout the period when BAGEHOT'S view of heredity was the accepted view, and is now an outspoken adherent of the newer view. The other writer from whom we have to quote to-day is young, one of the most daring and original imaginative writers of our time. In an article in the *Fortnightly Review* for October, 1896, under the title we have chosen as that for to-day's section of this series of papers on evolution, "Human Evolution an Artificial Process," Mr. H. G. WELLS challenges the doctrine that the social evolution of man is brought about by natural selection. Natural selection, he says, operates by means of death. Only by a process of killing out the unfit, generation after generation, does it operate in producing efficiency. Now the human family breeds too slowly for this ruthless machine to get a chance of improving him much by killing off the unfit. Man does not begin to multiply until he is at least sixteen years old, and when he does begin to breed, his offspring are very few compared with those of, let us say, the rabbit. Then, again, the human being dies a natural death for the most part; other animals are usually killed off before they attain their full length of years:—

Taking all those points together, and assuming four generations of men to the century—a generous allowance—and ten thousand years as the period of time that has elapsed since man entered upon the age of polished stone, it can scarcely be an exaggeration to say that he has had time only to undergo as much specific modification as the rabbit could get through in a century. Indeed, I believe it an exaggeration to say that he can possibly have undergone as much modification as the rabbit (under rapidly changing circumstances) would experience in fifty years.

Therefore, it appears to Mr. WELLS impossible to believe that man has undergone anything but an infinitesimal alteration in his intrinsic nature since the age of polished stone. Prior to the age of polished stone, was the age of unpolished stone, lasting probably 100,000 years, during which mankind slowly

fashioned the wonderful instrument of articulate speech. *Pari passu* with this was the growth of a moral disposition, which became far more rapid during the subsequent age of polished stone, and was associated with the formation of higher social types. Now it seems incredible that in palæolithic savages a moral disposition could have been developed by natural selection, as moral restraint is directly prejudicial to the interests of semi-brute savages. How then was civilised man evolved? Mr. WELLS'S solution of the problem is as follows:—

That in civilised man we have (1) an inherited factor, the natural man, who is the product of natural selection, the culminating ape, and a type of animal more obstinately unchangeable than any other living creature; (2) and an acquired factor, the artificial man, the highly plastic creature of tradition, suggestion, and reasoned thought. In the artificial man we have all that makes the comforts and securities of civilisation a possibility. That factor and civilisation have developed, and will develop together. And in this view, what we call Morality becomes the padding of suggested emotional habits necessary to keep the round Palæolithic savage in the square hole of the civilised state. And Sin is the conflict of the two factors—as I have tried to convey in my "Island of Dr. Moreau." If this new view is acceptable, it provides a novel definition of education, which obviously should be the careful and systematic manufacture of the artificial factor in man.

The artificial factor in man is made and modified by two chief influences. The greatest of these is *suggestion*, and particularly the suggestion of example. With this tradition is inseparably interwoven. The second is his reasoned conclusions from additions to his individual knowledge, either through instruction or experience. The artificial factor in man, therefore, may evidently be deliberately affected by a sufficiently intelligent exterior agent in a number of ways: by example deliberately set; by the fictitious example of the stage and novel; by sound or unsound presentations of facts, or sound or fallacious arguments derived from facts, even, it may be by emotionally propounded precepts. The artificial factor of mankind—and that is the one reality of civilisation—grows, therefore, through the agency of eccentric and innovating people, playwrights, novelists, preachers, poets, journalists, and political reasoners and speakers, the modern equivalents of the prophets who struggled against the priests—against the social order that is of the barbaric stage.

In the future, it is at least conceivable that men with a trained reason and a sounder science, both of matter and psychology, may conduct this operation far more intelligently, unanimately, and effectively, and work towards, and at last attain and preserve a social organisation cunningly balanced against exterior necessities on the one hand, and the artificial factor in the individual on the other, that the life of every sentient creature on earth, may be generally happy. To me, at least, that is no dream, but a possibility to be lost or won by men, as they may not have the greatness of heart to consciously shape their moral conceptions and their lives to such an end.

This view, in fact, reconciles a scientific faith in evolution with optimism. The attainment of an unstable and transitory perfection only through innumerable generations of suffering and "elimination" is not necessarily the destiny of humanity. If what is here advanced is true, in education lies the possible salvation of mankind from misery and sin. We may hope to come out of the valley of Death, become emancipated from the Calvinistic deity of Natural Selection, before the end of the pilgrimage. We need not clamour for the Systematic Massacre of the Unfit, nor fear that degeneration is the inevitable consequence of security.

IV.—DR. REID'S CONTRIBUTION TO THE THEORY OF HUMAN EVOLUTION.

Among the lower orders of organisms, reactions to the environment are entirely automatic, and are, presumably, not accompanied by consciousness. Actions of this character, the consciousness of which, when it exists, is purely secondary, persist in higher organisms, including man. Such automatic responses to stimulation are known as reflex actions. As we rise in the animal scale, we meet with other reactions to external stimulation, of a more complex character, accompanied by consciousness, but still inevitable responses, determined by the reaction of the inborn nervous organization to the stimulus. Such responses are known as instinctive. These instinctive actions also are met with in man. Finally, in the higher animals, and preeminently in man, we meet with reactions to the influence of the environment that are conscious adaptations of means to ends, dependent, not on inborn nervous organisation, but on acquired knowledge. These are known as rational actions, and the faculty on which they depend is called reason.

As man developed from the brute, the reflex and the instinctive life became less important to his survival than his new power of responding to his environment by the conscious adaptation of means to ends. Hence the instinctive character of his mental life, like many of his animal capacities, has undergone a progressive decay. Mentally as well as physically he is when new-born the weakest of animals, but in his capacity for acquiring knowledge he is remotely approached by a few of the higher animals only, such as the dog, the elephant, and the ape, all of which the child of three years old has already left far behind. In one department only of human life has instinct remained supreme, in the sexual life, for the reason that, in this department, the conscious adaptation of means to ends would not on the whole tend to favour survival. There is no wide-spread instinct that leads man to desire the perpetuation of the species as an end in itself; nor does the developed reason, in the more highly trained minds that can grasp such abstract considerations, necessarily prompt to acts tending to perpetuate a race in which the balance of pleasures and pains is so uncertain, and of which the ultimate destiny is so obscure. It is certain that ordinary self-interest would lead the average man to avoid the cares and responsibilities of a family, and the average woman to shun the pains and perils of maternity, were the choice left solely to the arbitrament of reason. Hence natural selection has preserved, to guarantee the perpetuation of the species, an uncontrollable animal instinct. Where man learns on the large scale to gratify the sexual instinct without providing for the perpetuation of the species, the in-

evitable result is decline of population and national decay. The struggle for existence among families and among nations will necessarily lead to the survival of those stocks only in which the national result of the gratification of the sexual instinct is not prevented by artificial means. This, however is a side issue, and we must return to our main argument.

When we examine man's physical organization, we find that while, as an animal, he is in most respects inferior to other animals, in one respect he excels them all in an extraordinary degree, namely, in the size of his brain. Thus we see that man differs from other animals principally in two points, a mental and a physical, the mental being his power of acquiring reason (for it most clearly understood that "reason" is not inborn, but merely the capacity for acquiring it); and the physical, the greater size and complexity of his brain; and this discovery alone would lead us confidently to believe that the mental and physical differences are in some way correlated. That they are so is of course abundantly proved by other lines of research. As a pure animal, man inherits from his forefathers a dwindling and decaying physical organisation, and he is utterly unfitted, as an animal, to cope with the hostile forces of nature. But man as man inherits a large and intricate brain, and with it the power of acquiring reason, that is the power of learning consciously to adapt himself to his environment and to modify that environment in a manner that makes him lord of the visible and of the invisible world. Without the larger brain, man, the enfeebled, degenerate animal, would speedily disappear from the face of the earth. Even with the larger brain, but without the social factor of which we spoke in the last article, without the inheritance of knowledge laboriously acquired from generation to generation, and acquired afresh by each one of us in the process of education, man would become the jabbering, ape-like creature he was a hundred thousand years ago. Destroy for a single generation the power of communicating by spoken and written signs, and the whole painful process of civilization would have to be begun over again.

We are now in a position to grasp how natural selection has operated in evolving man from the brute, in the discovery of which Dr. REID's indisputable claim to originality chiefly consists. It has acted by giving to the individuals of each generation an increasing power of modifying in response to stimulation and of adapting means to ends, in simpler terms, an increasing power of acquiring knowledge; the physical concomitant of this, the physical change in virtue of which survival was promoted, being the increasing size and complexity of the brain. During

the hundred thousand years or more in which palæolithic man was being evolved from the brute, his brain was increasing in size because the large brain, in virtue of the increased power that went with it of intelligently adapting means to ends, gave advantages in the struggle for existence that promoted survival far more effectually than any increase in mere animal excellence. Since then, since the perfection of speech, social evolution, quite independently of any organic change, has proceeded at an enormously enhanced rate.

"Savage man," says Dr. REID, "differs from lower animals chiefly in that he possesses the power of acquiring articulate speech, and the knowledge he thereby acquires enable him to place himself in harmony with an environment of a far greater complexity than that of any other animal. Civilized man differs from savage man chiefly in that he has invented, and more or less perfected, certain artificial aids to speech, in virtue of which he is enabled to acquire or store in available shape vastly more knowledge than the savage, and is therefore able to adapt himself to an environment of vastly greater complexity. By means of written symbols, representing words or thoughts, he is not only able to store in a form easily available to himself, his fellows, and his descendants, accumulations of knowledge so immense that no memory could contain them, but by means of these symbols he is able (e.g. in the mathematics) to perform feats of thinking utterly beyond the powers of the unaided mind; just as by means of tools, machinery, and other mechanical contrivances he is able to perform physical feats utterly beyond the unaided powers of his body. To written symbols representing words or thoughts is due, practically speaking, his whole advance beyond the savage in the past, and to them are due also his vast potentialities for future advance."

We must now bring to a conclusion our review of this remarkable book. It fills a yawning gap in the theory of the evolution of man, a gap that was left by the enforced abandonment of the Lamarckian theory of the inheritance of acquired characters. By the Darwinian theory of natural selection as hitherto expounded, without the aid of the Lamarckian theory, much in the later stages of human evolution was difficult to explain. But Dr. REID's theory, that natural selection as applied to the highest animals and to man, operates no longer exclusively, nor in man even chiefly, by the survival of those possessed of mere animal excellence, but by the development in the individuals of each generation of a continually increasing power to vary in response to external stimulation—this theory, in combination with the recognition of the enormous importance of the accumulation of a "capital fund" of knowledge and of principles of conduct increasing from generation, throws light on all the dark places of human race history.

JAPANESE FACTS AND COMMENTS.

The *Yomiuri* reports the arrest in Osaka, on the 21st inst., of fifty merchants who had speculated in rice on time bargains.

The authorities of Tokyo have given consent to the erection of large advertisement hoardings in the capital on condition that Municipal notices are to be given free access to the top portions of the erections.

Through an explosion that occurred in the powder dépôt at Yamakami—a village lying between Fukushima and Yonezawa on the O-u railway—a man was killed and eight others injured. The accident occurred on the 21st instant.

The *Yomiuri* reports that the total production of *habutaye* in Fukui Prefecture this year, up to the 16th instant, reached 30,821 rolls, equivalent to 114,971 *tan*, showing an increase of more than 10 per cent over the figures for the corresponding period of last year.

Messrs. Jardine Matheson and Co.'s plans for starting spinning factories in Japan, says the *Tokyo Asahi*, are slowly but surely maturing, and the "Princely House" will be, as usual, in the van of foreign enterprise when the opportunity arrives for taking advantage of the trade privileges conferred upon aliens by the new treaties.

A proposal is on foot to establish a paupers' school with a capital of 500,000 *yen*, of which 150,000 *yen* will be put up by Mr. Okura Kihachiro, the principal projector, and the rest by men of wealth. Marquis Ito is said to have expressed approval of the scheme, and Mr. Hiranuma, the Yokohama millionaire, has promised a liberal subscription.

The *Chuo* reports a scandalous affair that lately occurred in a train on the Takasaki-Naoyetsu line. On the night of the 18th instant a beautiful young lady was travelling alone in one of the cars, when the conductor of the train, Fujimatsu Takejiro, perceiving her unprotected position, entered the car and committed an assault. The lady's father has taken steps to prosecute the scoundrel.

America is still the best buyer in the Japan raw silk market, Europe apparently neglecting the finer sorts of filatures that she usually purchases at this time of the year. The explanation is very easy. The United States are entering upon a phenomenally successful autumn trade, wheat is rising in value day by day, bringing money into the hands of the working and farming classes, money which they will freely spend: whereas Europe has serious strikes and other industrial disturbances to face in nearly every country, in addition to a huge deficiency in the wheat and barley crops.

The import of cotton from China in the 30th year of *Meiji* (1887), says the *Fiji*, did not exceed 86,300 bales, valued at 826,428 *yen*. In the 28th year (1895), however, the amount increased to 906,787 bales, valued at 14,160,300 *yen*. Such an enormous augmentation in the import of this commodity is the result of the progress made in the spinning industry by the mills established in the interior.

According to the *Nippon*, the amount of silk exported to Europe and America from July 1st to September 30th for each of the past three years was as follows:—30th year, to America 9,693 bales, to Europe, 6,518 bales, total 16,211 bales; 29th year, to America 1,525 bales, to Europe 2,351 bales, total 3,882 bales; 28th year, to America 10,865 bales, to Europe 10,119 bales; total 20,984 bales.

It was suggested some time ago, says the *Shogyo*, that the insufficiency in the supply of native coal and the extravagant rise in its price would eventually lead to the importation of Australian fuel. The forecast has proved correct. The Mitsui Bussan Kaisha recently imported 4,300 tons of Australian coal by the *Hikoyama Maru*, and the new coal proved not only excellent in quality but comparatively cheap. If

the present high quotations for Japanese coal continue for any length of time the import of the Australian product will increase by leaps and bounds.

According to the *Nichi Nichi*, preparations are being made under the auspices of Messrs. Tomita Tetsunosuke, Iida Kosaku, and other gentlemen from Miyagi Prefecture, to send a representative to Formosa with a consolatory address to Mr. Takano. The project becoming known to persons in the capital interested in the Takano affair, it was proposed that the message should also be signed by them. The representative chosen for this mission is to leave the capital by a steamer sailing on the 27th instant.

The *Fiji* contains a report of another assault upon Japanese fishermen in Siberian waters. This time the crew of a smack known as the *Eiju Maru* were the victims, and the assault was committed while the Captain and some of his crew were sheltering in a hut on shore. The assailants were Manchurians belonging to a village some 15 miles distant from Vladivostok. The Japanese are said to have lost a supply of clothes, fish, stores, and 300 yen in cash during the encounter.

It is of great interest to note, alleges the *Osaka Asahi*, that the construction of Water Works has had a remarkable effect in diminishing the force of epidemics, as may be perceived from the following table:—

	1893.	1894.	1895.	1896.	1st half of 1897.
Cholera	12	21	2,981	36	8
Dysentery	7,066	2,420	449	252	23
Typhus	512	740	416	276	90
Diphtheria	191	139	155	227	304
Small-pox	1,635	15	16	287	2,055
Eruptive typhus	8	8	1	4	0
Total	9,424	3,378	4,018	1,082	2,480

On the evening of the 21st instant, says the *Fiji*, more than a hundred farmers assembled before the Village Office in Iriai-mura, in the suburbs of Tokyo. The police, noticing that something extraordinary was going on, hastened to the spot and attempted to disperse the mob. On making inquiry, however, they found that the supposed rioters had gathered for the purpose of importuning their landlords to decrease by forty per cent, the quantity of rice which they had to deliver to the latter in lieu of rent. Their request having been granted to the extent of a twenty-five per cent. reduction, the men had just determined to return home when the police arrived.

From the *Official Gazette* we learn that mails collected at various post offices throughout the empire during May totalled 42,986,781, showing an increase of 7,192,665, or about 20 per cent., as compared with the figures for the corresponding period of last year. In Formosa the total did not exceed 390,217, while Weihaiwei, (with the exception of military mails) footed up to 24,194. The following are the details:—

	May, 1897.	May, 1896.	Increase or decrease.
Letters	12,274,102	9,846,205	+2,427,897
Post cards	21,027,529	16,876,635	+4,150,894
Newspapers & magazines	7,378,072	6,795,550	+582,522
Books, &c.	651,828	528,034	+123,794
Samples	66,948	56,798	+10,150
Agricultural seeds	13,882	9,117	+4,765
Money enclosures	12	29	-17
Postage free	1,573,508	1,681,659	-108,150

The *Yoroku* reports the suicide of a certain law student, the cause of which is put down to the indignation he felt at the Takano affair. The facts may be epitomized as follows:—One Tamimoto Kofuku, of Tottori Prefecture, came up to Tokyo in July of the 26th year of *Meiji*, and lived at Nishikicho, Kanda, under the care of Mr. Yagii, a newspaper agent. Not being provided with sufficient funds, he became a newspaper vendor, and studied law at leisure moments with the utmost diligence, soon making himself an object of admiration among persons with whom he became acquainted. On the night of the 22nd instant, he stabbed himself in the throat with a fish knife. He left the

following note behind:—"I can not support the indignation that I feel, and have resolved to reprove the authorities by my death. Favour me with your prayers, after I am gone, and redouble your efforts in the interests of our Empire." The letter was addressed to his friends.

The consumption of Chinese *samsu* was formerly confined to Chinamen in Yokohama and other treaty ports. Japanese workmen in the habit of visiting Chinamen in the Settlements gradually became accustomed to the strong beverage, however, but the quantity consumed by them was, until recently, very insignificant. The late war entirely altered the financial conditions of Japan, and the appreciation of commodities has led to many changes. Above all, the extravagant rise in the cost of *sake* has driven the labouring classes to indulge in the Chinese liquor, which is comparatively strong and cheap. Taverns devoted to the sale of this liquor have increased greatly since the Spring of last year. It is said that vast quantities are now transported to all parts of the empire, even to the extremities of Hokkaido. The import, according to the *Kokumin*, was doubled last year, as compared with the year before last, while the figure for the first half of this year had already exceeded the amount for the whole of the previous year.

On the afternoon of the 22nd instant the Head Office of the Nippon Ginko and its branches throughout the empire announced the raising of the daily rate of interest by one *rin*, transactions with private individuals alone remaining unchanged. The revised rates of interest are as follows:—

TRANSACTIONS WITH BANKS.			
	Sen.	Sen.	Sen.
Interest on loans and discount	2.5	2.6	2.6
Discount of notes on security	2.2	2.3	2.3
Discount of commercial bills	2.4	2.6	2.6
Discount of commercial bills from other banks	2.4	2.6	2.6
Interest on temporary overdrafts	2.6	2.7	2.8
TRANSACTIONS WITH PRIVATE INDIVIDUALS.			
Interest on loans and discount	2.7	2.9	2.8
Discount of Bank commercial bills	2.4	2.5	2.5

The scale of interest charged by the Bank of Japan was first raised on June 15th, next on August 11th, and lastly this month, the total rate of increase amounting to three *rin*.

BISHOP AWDRY AND THE ROMAN CATHOLICS.

In an address delivered by the Rt. Rev. Bishop Awdry to a meeting at Malshanger in Hampshire, he was journalistically reported to have said:—"The Roman Catholics in Japan deserve their success, not so much because of their work now, as on account of their work two hundred and fifty years ago, stamped out as it was in blood." This statement constructively suggested that the work now done by Roman Catholic propagandists in Japan is at least not as worthy of success as was the work done by them two and a half centuries ago. Against such a statement we deemed it a duty to protest in strong terms, for though not of the Roman Catholic faith, we are constrained, in common honesty, to bear testimony to the noble character of the Catholic priests' labours. It gives us much pleasure, therefore, to be able to explain, on the authority of Bishop Awdry himself, that his words were wrongly reported. What he really said, was:—"The Roman Catholics deserve their success if only because it is the reaping of the harvest from their work 250 years ago, stamped out as it was in blood." The Bishop writes:—"I did not refer to the present work of the Roman Church, which, I daresay, is very good, but only wished to acknowledge that their past work deserved this fruit." Our readers may perhaps remember that by way of preface to our comments on the original version of Bishop Awdry's remarks, we said, "we wonder whether Bishop Awdry has been correctly reported." It turns out that he was not.

CHINESE NOTES.

"A telegram from Viceroy Lu of Szechuan has been received," says the *N.-C. Daily News*, "by the Nanking Viceroy asking the latter to open a famine fund in aid of the people of Eastern Szechuan. The distress there will be very great this winter owing to the almost complete destruction of an already poor harvest by heavy rains and by hail during the summer. Frequent cases of cannibalism are reported from Yuyang and other districts, and it is feared that the present distress in Szechuan will be twice as severe as that experienced by the populace of Shanai in the great famine of 1884.

Fifteen shops and houses in the Foochow Road, Shanghai, were destroyed by fire on the 17th instant. The disaster was caused by the explosion of a Korean lamp owing to carelessness in handling it. Messrs. D. Sassoon, Sons & Co. owned the property, and it was fully insured.

Concerning the rebellion in the North of China, we take the following from the *N.-C. Daily News*:—

According to a despatch received at Tientsin the other day, it appears that the insurgents in the Jehol country, outside the Great Wall, mentioned in these columns recently, have been making it very lively for the Imperial troops on the spot. In other words it is reported that the Military Governor of Jehol and his Tartar troops have been defeated in several encounters with the insurgents, and it is further said the sub-prefectural city of Pingchi'uan has recently fallen into the hands of the insurgents and that the sub-prefect has been slain. The number of the insurgents at Pingchi'uan is estimated at over 8,000, and General Nieh, the Chihli Provincial Commander-in-chief, who had started from Lutai to the aid of the Governor of Jehol with some 3,000 cavalry and mounted infantry and a couple of guns, has found his progress barred by the insurgents near the newly captured city of Pingchi'uan. General Nieh has, therefore, formed an entrenched camp some sixteen miles from Pingchi'uan and is now waiting for the rest of his brigade, which will swell his forces to about 8,000 men, with one battery of horse artillery and two mountain batteries. His next step will be to re-take the city of Pingchi'uan and, in conjunction with the Tartar General of Fengtien, who will attack the insurgents from the east, attempt to surround the latter somewhere in the vicinity of Chi'aoayang. The Governor of Jehol, who has 1,500 troops, will have all he can do to preserve his seat of government from also falling into the hands of the rebels, hence he is not counted upon at all in the above sketch of the proposed campaign against the insurgents. The whole country about Jehol and Pingchi'uan is reported to be laid waste by the insurgents, who are expecting reinforcements from the members of the secret societies who rose unsuccessfully against the constituted authorities in the winter of 1893, just prior to the war with Japan. These societies are reported to be able to put 40,000 men in the field but, of course, almost unarmed, although rumour has it that they and their secret emissaries have purchased or picked up more than seven-tenths of the arms and ammunition abandoned by the thousands of "braves" who had been sent to fight the Japanese. There are apprehensions that if general Nieh and his troops be defeated by the rebels, the latter will at once attempt to capture the railway and threaten Tientsin. It is further stated by despatches received here on Thursday, that the disciplined troops of Yuan Shih K'ai, now stationed at Hsiao-chau, 15 miles west of Tientsin, have also received orders from Viceroy Wang to be ready to start for Tientsin at a moment's notice. Yuan Shih K'ai, it will be remembered, was, previous to the last war, Chinese Resident at Seoul and has been occupied for the past three years, during which he has resided at or near Tientsin, in organising a disciplined brigade of 8,000 men at Hsiao-chau.

The old familiar anti-Christian agitation is again afoot in Hunan. A proclamation professing to contain the sentiments of the *literati* and people of Tachou has been distributed widely in the province. One paragraph of it reads thus:—

We have found that these barbarians have various tricky ways of propagating their doctrines. They disguise themselves as fortune tellers and physiognomists and thereby spread broadcast their tenets, gathering and beguiling the unwary into

their meshes either by promises of wealth or displaying their knowledge of the black art to compel their victims voluntarily to embrace their faith. The moment a man does this he is fed with a black draught to confuse his mind while his women folk are outraged at pleasure. They have gone so far as even to open the stomachs of the women to obtain the unborn babe, while they have gouged out the eyes of male children, scraped the brains and marrow and cut them to pieces in a manner heartrending to witness. As soon, moreover, as the foreigner enters a country to propagate his doctrines the inhabitants begin to lose their women and children, and although the utmost efforts are made to seek for the lost ones they are never found. Although, indeed, the people may really know that their lost ones had been beguiled into the chapels and therefore had met their fate, no one dared to call for an investigation [in the absence of tangible proof] But no sooner does an inkling of the truth appear than the people rise up in their indignation, and this is how we hear of chapels burnt or destroyed and foreign devils slain. As a matter of fact not a province of this empire can declare that it has been free from such riots. And now these people dare to encroach into the Yochou prefecture! Yochou is the gate of Human, and if the foreigners be permitted to enter therein they will be able to pry into, as it were, the very heart-stones of our homes, and the danger affects our very persons. Hence there is no time to be lost. We must oppose the invaders before harm has been done, rather than do so after some of us have suffered from the wiles of these barbarians.

Our readers may remember that a charge of extraordinary delay in delivering a registered letter was recently preferred against the Japanese post office in Shanghai. The Japanese post-master has written to the leading Shanghai paper explaining that it is the custom to send to the addressee of registered mail matter a printed form which he is required to sign and return before the registered matter is delivered to him. The forms are sent through the local post office. Several were thus despatched with reference to the letter in question, but not one of them reached its destination, nor could the addressee be reached until the services of the local post office were dispensed with. Thus the blame is transferred to the local post office.

The Korean correspondent of the *N. C. Daily News* writes:—

M. de Speyer is a much abler diplomat than was M. Waerber, in fact the two can scarcely be mentioned in one sentence, they are so utterly unlike, not only in manner but in policy. M. Waerber spent most of his time in the study and left the duties of his office to others, whilst M. de Speyer has been most active since he landed, and although he has been in Korea scarcely more than a month, he now has the whole country in his grasp. The army is entirely under Russian instructors (and I must add that the troops are wonderfully well instructed), the Arsenal is in charge of a Russian officer, and now Mr. Alexieff has come to Korea to take Mr. McLeavy Brown's place as adviser to the Finance Department. A number of other foreigners whose contracts have now expired are not to have them renewed. Some of these were never needed, for their advice was never sought nor taken if given, and they were chiefly employed at the earnest solicitation of their country's representative at Seoul. With Mr. Brown, however, the case is different. He has been enabled in twenty months to accumulate sufficient money to pay off the three million dollar loan of Japan, and now just as he has accomplished it the finances are to be taken out of his hands. This fact will be very much regretted, for, as I said before, unless one of the Treaty Powers (besides Japan, which need not be reckoned) interferes Mr. Alexieff will take charge of the finances almost before this letter reaches Shanghai.

According to telegraphic information received by Messrs. Holiday, Wise and Co., Hongkong; the accident to the China Mutual Steamer *Moyune* (Captain Kemp) is not of a very serious nature. The vessel is now at anchor in Kalanderang Bay, on the east side of Balabac Island, just below Palawan Island, having made that position with her own steam. Telegrams were sent to Singapore for pumps and gear. She will probably proceed on her own steam to Singapore, where she will dock for inspection and, if necessary, repairs.

NEWS OF THE WEEK.

One of the Achinese pirates concerned in the murder of Captain Ross of the *Pegu*, has been hanged at Edi Besar. Another pirate has confessed to taking part in the murder.

The retiring Lord Mayor of London, Sir George Faudel Philips, has achieved a record as far as obtaining charitable funds are concerned. During the 12 months he has been in office Sir George raised £700,000, the bulk of it being for the Indian famine fund.

We learn that a telegram has been received at H.B.M.'s Legation in Tokyo, appointing Mr. W. J. Kenny, at present H.M.'s Consul at Anping, Formosa, to a Consular post at Honolulu. Mr. Kenny is to be congratulated on the change.

On the 9th October, with all befitting ceremonial, the Governor of the Straits Settlements, acting on behalf of the Queen, invested the young Sultan of Johore with the dignity of a Knight Commander of the Most Distinguished Order of St. Michael and St. George.

The British Coroner's jury at Nagasaki have returned a verdict of wilful murder against the man Cuthbert who stabbed his shipmate Gerard on the *Port Caledonia*, in Nagasaki harbour on October 18. The jury were:—Messrs. J. M. Dow, A. B. Glover, and S. Officer.

Yamai Jisaburo aged 11 years, third son of Mr. Yamai Kijuro of Gocho, Takashimachio, Yokohama, decamped from his father's house on the early morning of the 23rd inst. and could not be found anywhere. His corpse was found floating at the foot of Takashimachio, Ichome, about 7 a.m. on the 24th inst.

Advices from the West Coast of Africa state that the King of Benin has been deported to Old Calabar. He has been exonerated from participation in the massacres of British officers near Benin last January. Six chiefs have, however, been found guilty, and two have been executed.

Mrs. Carew was removed from Victoria Gaol, Hongkong, on Tuesday afternoon, October 19th, to the P. & O. steamer *Sumatra*, which sailed for England soon after the convict arrived on board. The removal was, of course, kept a profound secret. Mrs. Carew is in charge of ex-Sergeant Phelps and a female warder.

Mr. Horatio D. Davies, the new Lord Mayor of London, is 55 years old. He was educated at Dulwich College and was formerly in business in London, but is now an owner of oyster fisheries. He has been a member of the London Common Council for twelve years and an Alderman since 1889. He is a member of Parliament for Chatham. In politics he is a Conservative.

It is stated that a new Bank is to be started in Saigon with a capital of one million francs. The 40,000 shares of 100 francs each are almost all taken up already by the leading merchants and traders of Cochin-China. A prosperous future is predicted for the new concern. A branch will be started in Tonkin later on, and *L'Avenir du Tonkin* approves of the new concern, saying that Indo-China has been badly in need of such an institution.

The annual financial statement of the American Board of Foreign Missions, issued on September 16, shows unprecedented receipts for the month of August, amounting to \$120,289, nearly twice the amount received in August last year. The total receipts for the fiscal year were \$643,283, and the total disbursement \$688,144, leaving a debt of about \$45,000. The results are considered gratifying, because previous to the August receipts a much larger debt was expected.

One of the finest specimens of figurehead carving now extant in the world, remarks the *Globe*, is to be removed before the vessel is sold out of the service. The figurehead of the

Indus, which represents a fighting Hindoo, is by direction of the Admiralty to be added to the already large collection in Devonport Dockyard. It was built with the ship in 1839.

The *London and China Express* says that the statement that Dr. Herbert Giles, of Aberdeen, has accepted the Professorship of Chinese at Cambridge University is rather premature. The election for the post of Professor of Chinese does not take place till November, when we anticipate that Dr. Giles will be selected, but such an event has not yet taken place.

Writing on Oct. 19th, the *China Mail* says:—The accident to the China Mutual steamer *Moyune* (Capt. Kemp), which we briefly noted in last night's issue, appears to be more serious than was supposed. She is stated to have left Cebu with a valuable cargo for home, some days since, and to have gone ashore near Palawan Island. Pumps and gear were despatched from Manila, and nothing can be heard as to the condition of ship or cargo for some time. We learn that the cargo—hemp, sugar, and other Manila produce—is of great value, and a considerable portion is insured in local offices. We understand, however, that one or two large lines are held by offices at home.

Russia is just now concerning herself with the work of connecting all the European and Asian railways in the Empire. To this end Prince Khilkoff, the Minister of Public Works and Railways, will shortly leave St. Petersburg for the Caucasus, where he will examine the surveys which have been made. Among the new lines to be constructed is one through Turkestan to the neighbourhood of the Pamirs, and it is rumoured that another will run due north-east, the idea being eventually to bring the Trans-Siberian road into connection with the Black Sea. The Government is credited with the intention of establishing a large factory at Tashkend, where it is expected that most of the rolling stock will be manufactured.

Rumour is a fickle jade. She is responsible for the statement that the Duke of York will go to sea again, but the story is not to be trusted. Though he will not hoist the broad pennant next year, at any rate, his continued interest in the Service is evidenced by his action in regard to the old *Bacchante*. He made his first long voyage in this vessel—as many Yokohama residents know by personal acquaintance—and when she was ordered to be broken up he applied to the firm which had undertaken the job for something which he could utilise as a memento. All he could get was a portion of the old timbers, so he has now asked the Admiralty for a drawing of her stern in order that he may have a model of it made out of the timbers of his old ship.

Cable termites are the latest things in entomology, and they are said to be playing havoc with the French cable in Tonkin. They bore through lead and other metals. The Tonkin cable was composed of seven copper wires protected by an insulation envelope coated with cotton and jute. In addition to this it was placed in a lead pipe. A few months after it was laid it began to show signs of decay. The cable was taken up and replaced. On examining the cavities in the old cable, Professor Bouvier, of the Paris Academy of Science, discovered that they had been made by a new termite. Prof. Milne Edwards, commenting on this, said that it was not the first time that injury had been done to metals by these insects. They were numerous in some portions of China. Mr. Edwards also said that some other species of insects had been known to attack metal.

When the last mail left England, the "gilded youth of Great Britain" were said to be in a great flutter, for a report had gone abroad that the Prince of Wales was bringing home with him from Bohemia another variety of hat, a memento of his visit to the little watering place where he has stayed his prescribed three weeks, and gained so much benefit from a not too severe cure. The Marienbad hat,

says a fashionable gazette, will probably take the place of the Homburg hat, and the Bohemian village, by this accident of fashion, become a familiar name to many who to this year had no knowledge of its existence. Latterly there has been rather a revolt against the bowler shape, and the Prince himself led it when he brought back with him the soft felt, high-crowned, but with a cleft in its crown, which we know as the Homburg hat. The Homburg hat was brown, a sort of Bismarck brown. The Marienbad is green and with a wider brim. The Bohemians have known it for centuries; indeed the Prince will scarcely be its absolute introducer into Western Europe. Something like it was popular in England years ago.

The *China Mail* reports that a fatal accident occurred on board the Blue Funnel steamer *Patroclus* on 8th Oct., while lying at her buoy in Hongkong harbour, one man being suffocated and two others having a narrow escape. Three Chinese workmen had gone into the bilges to clear the ship's grating. As soon as this was done the foul air which had been boxed in by the clogged grating made its escape and the men were overcome by the fumes. Assistance was given by some other workmen and the three men were taken out, and after a time two of them were resuscitated. The third, however, died from suffocation.

The wreck of the *Aden* is reported by the *Madras Mail* to have broken up and almost entirely disappeared. It has been thought, however, that a fair proportion of salvage might be recoverable, especially such dead-weight as copper, tin, etc., of which she carried a considerable quantity. Negotiations have resulted in an agreement being concluded between the P. & O. Company and two Aden firms, by which the latter have engaged to be in readiness to make a start at the earliest advisable moment. On Tuesday, the 14th September, the party left Aden for Socotra, where the attempt will be made jointly. Operations are impracticable until the cessation of the south-west monsoon, but an expedition of divers well accustomed to such work has been sent out from England. They will form a miniature encampment, living in tents on the island, with moored buggalows to work from and use as lighters.

A Bombay telegram, dated Sept. 30th, which appears in Rangoon papers, reports that while at ordinary target practice outside Bombay Harbour—in which the turret ship *Magdala* and some torpedo boats, belonging to the defence fleet, were engaged—torpedo boat No. 102 circled round with the targets on the starboard beam. Petty Officer Hodges brought the three-pounder quick-firer into action at the same time, with the result that the combination of recoil and heavy swell carried both man and gun overboard. A plucky attempt at rescue was made by Signalman Patterson. A heavy sea was running, and the rescuer and his charge were dashed violently against the boat's side, compelling Patterson to relinquish his hold. Hodges sank immediately and was drowned. The Court of Enquiry found that the mishap was caused by the gun being improperly secured to the mounting, and the recoilunshipped the gun from the holding ring. It is unlikely that the gun will be recovered.

The *Times of India* publishes the following:—In May last Mr. Henry Savage Landor, a grandson of Walter Savage Landor, and himself an artist, traveller, and writer of repute, set out from Almorá on a journey through Tibet, with the intention of crossing into China. Little or nothing had been heard of him since his departure, until yesterday (Friday last) when a Bombay friend received from Mr. Landor a postcard which, in laconic terms, tells a story of hardships and suffering which would not be easily paralleled in the history of travel and adventure. We give Mr. Landor's brief but terrible story in his own words:—"I am back, half mutilated by the Thibetans, as I dare say you have already heard by this time. All my men deserted me, and I proceeded for 56 marches with only my bearer and one sick

coolie. We lost all provisions, and when half starved, were arrested for treason by 400 Thibetans. We were tortured, and I was condemned to death and brought to the execution ground. I have twenty-two wounds. They injured my spine very much."

The Hokkaido administrative office is passing through another period of "reform," and as a consequence the District Headmen—officials receiving salaries varying between yen 600 and yen 800—are to be replaced by Directors of Branch Offices, who will receive 800 yen to 1,800 yen per year.

Hongkong possesses an amateur comedian of exceptional versatility in a Mr. C. T. Robinson, if a paragraph in the *China Mail* is any indication. Recently at the Kowloon Institute Mr. Robinson sustained an hour and a half's entertainment all by himself. He appeared no less than twenty-two times, giving humorous stories and sketches, coster and cockney delineations, and low comedy pieces.

The microbes of fever may be scattered, Prof. Charles Tichborne believes, in dew from sewers. As sewer water is usually two or three degrees warmer than the cold air at certain hours of the night, the watery vapour rising through traps may be frequently condensed, when each article of dew is liable to become a raft on which microbes may be carried for miles, to be finally deposited wherever the dew is dissipated—perhaps in a dwelling reached through a warm shaft.

An action was commenced in Hongkong on the 18th instant, in the Supreme Court, sitting in Admiralty, in which Count Rudolphe Festetics de Tolna and Countess Ella H. Festetics de Tolna (his wife) are plaintiffs and the owners of the steamer *Maria Rickmers* defendants. The claim is for \$4,000 damages for a collision which occurred at Kobe between the plaintiff's yacht *Tolna* and the steamer *Maria Rickmers* during the gale that was experienced there on the 29th of September, 1897. The steamer *Maria Rickmers* was arrested the same day by Mr. F. Howell, the Bailiff, under a warrant.

Mr. A. M. Bisbee, Coast Inspector, for the Chinese Imperial Maritime Customs, Shanghai, issues the following notice to mariners, No. 312. It refers to the Shanghai District of the China Sea. Southern entrance to the Yangtze:—Intended change in position of Fairway Bell Buoy:—Notice is hereby given that, owing to the movement of the Southeast Spit to the south-westward, as shown by the recently completed survey of that vicinity, the Fairway Bell Buoy will be shifted 1 mile to the south of its present advertised position on or about the 20th November next, its intended new position being with Gutzlaff bearing south and the *Tungsha* Lightship N. 54° W., magnetic.

The biography of Alfred, Lord Tennyson, Poet Laureate, arranged by his son Hallam, appeared in London at the beginning of October and is naturally arousing a great deal of interest. Many letters from the Queen appear in the two portly volumes, as well as letters from most of the men and women of light and leading during Tennyson's long life. Many of these communications emphasize the poet's regard for the United States and his earnest desire that the parent country and its offshoot should ever dwell in unity. Writing to Longfellow, Tennyson said:—"We English and Americans should all be brothers as none other among nations can be, and some of us, come what may, will always be, so I trust." But this appreciation of the great Republic did not prevent Tennyson from holding strong views upon the *Alabama* claims, and he presented them in a letter to Mr. Gladstone in which he remarked:—"Heaven help you through this session, which, like enough, will be a rough one, but if you let those Yankees get anything like their way of you in the *Alabama* claims I won't pay my 'ship money.'"

The *British North Borneo Herald* says:—The past year has witnessed some little progress on the part of the Museum. Undoubtedly the most striking and popular object in the collec-

tion is a *Gadel* or "disease boat," which was picked up in Brunel Bay, and presented by H.E. the Governor. It is a roughly constructed boat, or canoe, about 12 feet long and built to imitate a prahu, with cotton awnings, sails, wooden guns, and a crew carved in wood of less finish than the ordinary gutter-child's doll. When small-pox or any other epidemic disease appears in a riverine kampong, a boat of this sort is built, some fowls, rice, &c., are placed on board with written invocations, and the craft is launched. As it floats downward with the stream its appearance off another village is the signal for a vigorous effort to prevent its grounding in the vicinity, as this, it is believed, would transfer the disease to the place where it happened to stop. It thus, as a rule, reaches the open sea where the specimen in question was picked up.

Hongkong Volunteers have lately had a gay and giddy time at the encampment on Stone-cutter's Island, but the Governor, Sir Wm. Robinson, evidently did not wish "the boys" to have the merit of perpetrating all the jokes that set Hongkong laughing. The Volunteers chose the *Camp Gazette* as their medium for distilling fun; so the Governor—in revenge we presume—made use of the sober columns of the *Official Gazette*. And this is how he did it. The Commodore of the British Naval Head-quarters having found room in the Naval Yard for the fine old figure-head of the *Princess Charlotte*, which for years has been reposing at Victoria Peak, informed His Excellency of the fact and, at the same time, said:—"I expect that before very long the figure-head of the *Victor Emanuel* will be placed in a prominent position in this establishment, and it would seem fit that a Royal Consort should be provided for him. Provision is made in the yearly Naval Estimates for keeping these interesting relics of the past in a state of preservation." Thereupon Sir Wm. Robinson replied:—"I have no objection to the union in the Naval Yard of the figure-heads of the *Princess Charlotte* and *Victor Emanuel*, but I trust that no objection will be raised on behalf of His Majesty to his proposed Royal Consort on account of her somewhat mature age."

Japan's new battle-ship, *Fuji-kam*, received high praise in Hongkong where she put in on her way up to Yokosuka. Her whole appearance delighted the naval men who paid visits to Captain Miura during her stay in the waters of a Colony. It must be remembered that the *Fuji* is an exceptionally powerful fighting ship; for although she only exceeds in displacement by 100 tons the *Renown*, she is more heavily armed and armoured, the heaviest ordnance of the latter vessel being 10in. 20-ton guns, and her thickest armour 10in. The armour belting of the *Fuji* is, however, of Harveyed steel plates, 225 feet long, 18in. thick at the mid length and 19in. at the end. Above the main armour belt there is a secondary one—for the protection of the battery—7ft. wide and 4in. thick, slanting off at its ends to meet the armoured sides of the barbettes, both belts having a backing of teak—to which they are bolted—bringing up the thickness of the vessel's sides at these parts to 22in. At both ends of the main armour belt a screen of 6in. armour runs square across the main and lower decks to protect the guns from a raking fire. The armament of the *Fuji* comprises four 12in. breech-loading 49-ton guns, two being carried in each barrette; ten 6in. quick-firing guns, three of which are disposed on each side of the upper and two on each side of the main decks; the upper deck guns being protected by heavy steel shields, and those on the main deck by casemates plated with 6in. nickel steel armour. There are also carried 30 3-pounder and four 2½-pounder Hotchkiss quick-firing guns, the 3-pounders being distributed on the bulwarks, main deck, and the bridges, and the lighter guns carried in the tops. The barrette guns will fire through an arc of 240deg., the forward and after 6in. guns in the battery through 150deg., or 90deg. before and 60deg. abaft the beam; and the midship 6in. guns through 120deg., or 60deg. both before and abaft the beam.

ENGLISH CYCLING NOTES.

(FROM A CORRESPONDENT.)

Since writing my last letter, the race of the season, so far as London is concerned, has taken place, and new world's records from 33 to 100 miles have been created. I am referring to the Catford Gold Vase Race, which, though of 12 hours duration, is run in three sections, the first being of 6 hours, and the last two of 3 hours respectively. The Gold Vase itself is valued at 130 guineas, and must be won three times, not necessarily consecutively, before it becomes the actual property of the winner. J. W. Stocks had only to repeat his performance of the last 2 years to become the proud possessor of this valuable trophy. On Saturday, August 28th, the first 6 hours of this race was run off at the Catford Cycling Track, and a large crowd of spectators witnessed the struggle between J. W. Stocks, A. A. Chase and A. E. Walters, who were the only starters; Teddy Rale, who holds the world's record for 6 days, and J. Lumsden being the absentees. The first hour of the race was very fast, and Stocks' race gave every one who witnessed his riding the impression that he would have no difficulty in making the Vase his own property. But soon after the completion of what might be termed Stocks' distance, viz. the hour, or 30 miles, he was observed to be labouring somewhat and having a bad time. Now, when Stocks has a bad time it generally lasts 2 or 3 hours, which was the case on this occasion; during this time Chase had been forced to retire, the great speed at which Stocks had travelled in the first part of the race fairly breaking this rider up; but, Walters, who had been going very steadily, had passed J. W. Stocks, and was leading by about 5 laps. Entering the last hour, Stocks had so much improved as to be able in half an hour to regain a lap, and then, carefully nursing himself behind Walters, he was able, by one of those spurts he is so well known by, to regain another 300 yards in the last 5 minutes. During the ride he put up fresh world's records from 33 to 55 miles, and A. E. Walters, British records from 35 to 102 miles.

The second day's racing was more interesting still, and the large crowd surrounding the track fully expected to see J. W. Stocks retrieve his lost distance, and put himself in such a position that he would be sure of winning the Vase, but it soon became apparent that he was not riding in his best form, and though leading up to the 24th mile, he was then passed by Walters, who, having gained the lead, kept it right up to the finish. This was a surprise to the spectators, but not so great as the marvellous riding of Walters, now an old hand on the track. From the 33rd mile he was well within world's records, and at the close of the 3rd hour he was going so strong that he decided to stay on the track till he had completed the 100 miles, which he did in the splendid time of 3 hours, 25 mins., 53 $\frac{1}{2}$ th secs. He had now nearly 5 miles the lead of Stocks on the 2 days, or 9 hours riding.

Various cycle parades have been held during the past season in aid of local institutions, and in nearly every case the collections have proved very satisfactory. On Sunday, August 29th the Cyclists of Kent held their annual Church Parade at Folkestone, when the Rector of St. Michael's, the Rev. E. Husband, gave an interesting address, the Mayor of the town attending in state. The reverend gentleman, who is an ardent cyclist, during his address stated that he considered a bicycle was the best doctor a man could secure. Another parade, not quite of the same character, was recently held in Nottingham: it was a Vegetable Cycle Parade. The cyclists taking part in it were decorated, as well as their machines, with various vegetables. It was a peculiar sight to see the machines passing through the principal streets of Nottingham gaily decorated with cabbages, onions, marrows, and other products of the vegetable world. A strange spectacle, no doubt, but it answered the purpose for which it

was originated, and a good collection in aid of the Children's Hospital was made.

Another event which caused a certain amount of interest in London was the 40 miles Scratch Race for the Roberts Shield, which forms the Championship of the South of England. The Roberts Shield is the trophy of the Southern Roads Riding Association, and is ridden for every year by one representative of each club affiliated to the Association. The Anerley Bicycle Club has held this Challenge Shield for the last 3 years, but this year, A. W. Turner, of the Brighton Wanderers, succeeded in beating their representative, F. R. Dixon, W. Ellis, the rider who the club had originally nominated to represent them, having sustained a serious accident while training for this event at the Herne Hill Track. A sealed handicap was run in conjunction with this race, F. G. Growley, who secured 2nd position in the scratch race, being the winner. A very fair attendance witnessed this meeting, which was run off at the Crystal Palace track, Sydenham, on August 28th.

The 3rd and last section of this race started in heavy rain and strong winds, yet in spite of the elements three or four thousand people assembled to watch two of England's best riders complete the final 3 hours. Miserable and dreary was the aspect in all directions, and J. W. Stocks, seeing that he had no chance of overtaking Walters, retired before the completion of the 1st hour. Walters journeyed on, solitary, round the track till he had been riding about 2 $\frac{1}{2}$ hours, when he received permission to retire, and was declared winner of the race, having in the 11 $\frac{1}{2}$ hours covered a distance of 311 miles, 1,094 yards.

AUTUMN MEETING OF THE NIPPON RACE CLUB.

PATRONS:—H. I. H. Komatsu-no-Miya, H. I. H. Fushimi-no-Miya, and H. I. H. Takehito-no-Miya.
PERMANENT COMMITTEE:—Sir Ernest Satow, K.C.M.G., President; Dr. Wheeler, Vice-President; Count H. E. O. Fini; W. B. Walter, Esq.; Jas. Dodds, Esq.; F. Strahler, Esq.; A. Dumelin, Esq.; and R. D. Robison, Esq.

EXECUTIVE COMMITTEE:—W. W. Till, Esq., Chairman; Akakawa Yoshitaro, Esq.; T. Thomas, Esq.; E. Knaff, Esq.; S. Isaacs, Esq.; V. Blad, Esq.; and H. Tennant, Esq., Secretary.

CLERK OF THE COURSE:—E. Knaff, Esq.

STARTER:—W. G. Bayne, Esq.

FIRST DAY.—TUESDAY, OCT. 26TH.

In the finest of racing weather, with not too bright a sun, and a course in admirable condition, the Autumn Meeting of the Nippon Race Club was opened on Tuesday at noon. The attendance of visitors, at the commencement, was as usual rather meagre but increased during the afternoon, and by 3 or 4 o'clock the Paddock and Grand Stand contained a larger number of spectators, including ladies, than has been usual during recent years on the first day. A Band was in attendance and performed a varied, if not very original, selection of music. The sport afforded was fully up to the average, some of the largest fields on record contesting several of the events, while the times made generally were exceptionally good, three races of the day—Chiyo-da's win in the first event, the Banzai Stakes, half-a-mile, in 57 $\frac{1}{2}$ secs.; Saikio's time in the Negishi Stakes, Five furlongs, 1.11 $\frac{1}{2}$; and Idaho's win in the All Aged Stakes, 1 min. 23 $\frac{1}{2}$ secs. forming records for Yokohama racing. Only two of the events, the third and last races, failed to secure a fair field, and honours were fairly divided between the different stables. The arrangements generally were satisfactorily carried out by the officers and Committee of the Club, Mr. H. Pickney officiating as Judge, with Mr. S. Warming as assistant; Mr. G. W. Bayne assisted by Mr. G. Philip, gave general satisfaction in the thankless task of Starter; Dr. Wheeler had charge of the scales, Mr. F. J. Hall, assisted by Mr. J. McArthur performed the duties of official time-keeper, and Messrs. T. Thomas

and Nicholson, those of handicappers. Mr. Knaff made an efficient Clerk of the Course and Messrs. L. Abel, L. Longin, W. F. Mitchell, A. Bianchi and G. Middleton, officiated as stewards. The various events were as follow:—

1.—THE BANZAI STAKES, value yen 150 for Subscription Country-breds of Spring, 1897, that have not won more than one race at date of entry; weight as per scale. Half a Mile. Entrance fee, yen 10.

Major Trick's Chiyo-da, 128lb. (Sugihara) 1
Baron Foy's Signorina, 125lb. (Baron Foy) 2
Mr. Four-in-Hand's Chance, 131lb. (Goto) 3
Mr. Worthington's Idler, 130lb. (Yasu) 0
Mr. Splinx's Mezurashi, 129lb. (Miyagawa) 0

Idler gave some trouble at the start, breaking away once or twice, but after the second attempt a fair start was effected, Chiyo-da getting to the front right away, with Signorina in second place. At the Trees, Chance came up and challenged the leader, but was unable to maintain the pace. In the Straight, Chiyo-da increased his lead, and running well within himself won comparatively easily by four lengths or so from Signorina, who had taken Chance's place in the Straight. Only three-quarters of a length separated second and third. Time, 57 $\frac{1}{2}$ secs.

PARI MUTUEL, \$5 Pool.—Idler 3, Midzurashi 4, Signorina 1, Chance 2, Chiyo-da 7; total, 17=\$85—Chiyo-da, \$10.90. \$2 Pool.—Idler 21, Mezurashi 19, Signorina 8, Chance 11, Chiyo-da 37; total 96=\$192—Chiyo-da, \$4.60.

2.—THE NEW CHINA SWEEPSTAKES, 1st Prize yen 340, and yen 150, 3rd yen 50, a Sweepstake for Subscription China Ponies of Autumn, 1897; weight as per scale. One Mile. Entrance fee, yen 20 (prepaid).

Mr. News' Eclairer, 147lb. (Mr. Kingdon) 1
Mr. States' Colorado, 145lb. (Sugihara) 2
Mr. Campredon's Pointeur (late Realization), 144lbs. (Kobayashi) 3

Messrs. Tippett & Clifford's Jubilee, 144lb. (Mr. Elliot) 0
Mr. News' Voltaire (late Chance), 147lb. (Mayeda) 0

Mr. R. Field's Tradesman (late Quantox), 144lb. (Botan) 0
Mr. Worthington's Herald, 150lb. (Hayashi) 0

Mr. Four-in-Hand's Romulus, 147lb. (Ichi) 0
Mr. Taisuta's Maidzuru (late Tiny), 144lb. (Riki) 0

Mr. Campredon's Artiller (late Spring), 146lbs. (Mr. Campredon) 0
Major Trick's Minet (late Myna), 145lbs. (Mr. Mottu) 0

The good muster of eleven ponies turned out for this event, which excited considerable interest. It was not an easy matter to get the large field away on fair terms, though China ponies are not so difficult to handle as half-breds. When at last a start was accomplished Minet got away with a lead of three lengths or so, but was soon collared by Colorado, the rest being in a bunch. Between the half-mile and the Trees Eclairer came through his horses and took the lead, with Maidzuru and Pointeur close up, Minet having now finished himself. In the run home Eclairer, capably ridden by Mr. Kingdon, increased his lead, in spite of the efforts of Colorado and Maidzuru, and won cleverly by a couple of length from Colorado, who finished about half a length from Pointeur, who, hard ridden, had passed Maidzuru in the distance. Time, 2m. 14secs.

PARI MUTUEL, \$5 Pool.—Eclairer 6, Voltaire 0, Tradesman 0, Herald 1, Jubilee 0, Colorado 1, Romulus 3, Maidzuru 1, Pointeur 12, Artiller 0, Minet 11, Field 2; total, 37=\$185—Eclairer, \$27.70. \$2 Pool.—Eclairer 24, Voltaire 5, Tradesman 1, Herald 5, Jubilee 1, Colorado 11, Romulus 12, Maidzuru 6, Pointeur 21, Artiller 2, Minet 36; total, 124=\$248—Eclairer, \$9.00

3.—THE MAIDEN SELLING PLATE, value yen 200.—A Selling Race for Country-breds, Maidens at date of entry, and Subscription horses of 1896-1897; to be entered at a stated value of from yen 450 to yen 100; if entered at yen 450, to carry 155lb., with an allowance of 5lb. for every yen 50 below yen 450. One mile. Entrance fee, yen 10.

Mr. Four-in-Hand's Rigi, 140lbs. (Goto) 1
Mr. Avis' Philomel (late Aida), 135lbs. (Sugihara) 2
Sir Ernest Satow's Tantalus, 450lbs. (Riki) 3

Only three starters appeared out of an entry of five. At the start Tantalus got left a length or two behind, the other two going off neck and neck. At the Shakespeare, Philomel led by a length, but between there and the Trees Rigi came up and took a slight lead. Between the two it appeared to be anybody's race till the Straight was entered, when Rigi, who appeared to have more left in him, came away and won a good match—if not a

race—by between two or three lengths, Tantalus wandering in about five lengths in the rear. Time, 2min. 2secs. After the race, Rigi, the winner, was, in accordance with the terms of the entry, put up to auction by the Clerk of the Course, but there being no offers, he was withdrawn.

PARI MUTUEL, \$5 Pool.—Tantalus 15, Rigi 14, Philamel 21; total, 50=\$250—Rigi, \$16. \$2 Pool.—Tantalus 33, Rigi 29, Philamel 44; total, 106=\$212—Rigi, \$6.50.

4.—The **TRIAL PLATE**, value, yen 200, for All China Ponies; weight as per scale. Three-quarters of a Mile. Entrance fee, yen 10.

Mr. Four-in-Hand's Kindar, 144lb. (Ichii) 1
Mr. Worthington's Orion, 147lb. (Hayashi) 2
Mr. Tatsuta's Usugumo, (late Terror) 150lb.

(Riki) 3
Mr. Worthington's Cleeve, 144lb. (Yasu) 0
Mr. Avis's Philmel, 141lb. (Mr. Kingdom) 0
Mr. Partner's Jido (late Aquidaban), 150lb.

(Kobayashi) 0

After a fair start, with a field of six, Kindar took the lead, the others being strung out with about equal distances between—Orion in second place and then Tomtit, Jido, Cleeve and Usugumo. At the Trees Orion challenged Kindar, but failed to collar him, and the latter, running strong down the Straight, won easily by from one and a half to two lengths, from Orion, with Usugumo a good third. Time, 1m. 36secs.

PARI MUTUEL, \$5 Pool.—Orion 9, Cleeve 8, Kindar 19, Usugumo 11, Tomtit 4, Jido 4; total, 55=\$275—Kindar, \$13.00. \$2 Pool.—Orion 32, Cleeve 17, Kindar 76, Tmy 27, Tomtit 17, Aguldoban 15; total, 114=\$320—Kindar, \$4.30.

5.—The **NEGISHI STAKES**, value, yen 150, for Subscription Country-breds of Autumn, 1896, and Spring, 1897; weight as per scale. Winners at date of entry 5lb. extra for each race won. Five-eighths of a Mile. Entrance fee, yen 10.

Mr. Yodo's Saikio, 143lb. (Hakodate) 1
Major Trick's Chiyoda, 128lb. (Sugura) 2
Mr. Durand's Hermine, 138lb. (Kobayashi) 3
Mr. Sphinx's Mezurashi, 128lb. (Miyagawa) 0

An easy start was effected, Mezurashi going to the front with a rush, with Hermine in second place and Saikio next in order. After passing the Shakespeare, Saikio came away and before reaching the Trees took the lead from Mezurashi, who then dropped behind, Chiyoda and Hermine both passing him. On entering the Straight, Saikio still led, and a capital race was made for second place by Chiyoda and Hermine. The race resulted in Saikio finishing a length and a half before Chiyoda, who came in second by about half a length ahead of Hermine. Saikio was the winner of three races last spring and therefore carried extra weight. Time, 1m. 11½ secs.

PARI MUTUEL, \$5 Pool.—Saikio 16, Hermine 7, Mezurashi 3, Chiyoda 7; Total, 33=\$165—Saikio \$9.20. \$2 Pool.—Saikio 92, Hermine 30, Mezurashi 17, Chiyoda 44; total, 183=\$366—Saikio, \$3.50

6.—The **NANKIN STAKES**, 1st Prize yen 200, 2nd yen 50, for All Subscription China Ponies that have not won two races in Japan at date of entry; weight as per scale; winner at date of entry 5lb. extra; winner of No. 2 race 7lb. extra. Three-quarters Mile. Entrance fee yen 10.

Mr. News' Eclairer, 154lb. (Mr. Kingdom) 1
Major Trick's Minet, 144lb. (Mr. Mottu) 2
Mr. States' Colorado, 144lb. (Sugura) 3
Mr. News' Voltaire, 147lb. (Mayeda) 0
Mr. R. Field's Torpedo, 149lb. (Mr. Lungin) 0
Mr. Ralph Page's Tourist, 144lb. (Kato) 0
Mr. Worthington's Mulberry, 153lb. (Yasu) 0
Mr. Derby's Martingale, 153lb. (Takahashi) 0
Mr. Nishimura's Niitaka (late Morisan), 155lb.

(Hatori) 0
Mr. Four-in-Hand's Romulus, 147lb. (Ichii) 0
Mr. Four-in-Hand's Remus, 147lb. (Goto) 0
Mr. Tatsuta's Maidzuru, 144lb. (Riki) 0
Mr. Campredon's Pointeur, 144lb. (Hakodate) 0
Major Trick's Minet, 147lb. (Mr. Mottu) 0
Messrs. Bent & Owen's Melbourne, 147lb.

(Mr. Owen) 0
Mr. Partner's Ji-ji, 153lb. (Mr. Kobayashi) 0
Mr. Nemo's Monaco, 155lb. (Nakazawa) 0

One of the largest fields on record in Yokohama started for this event, no less than sixteen out of twenty entrants facing the starter. Remus gave a lot of trouble at first, but after a little delay the big field was got away to a very fair start under the circumstances. The troublesome pony, Remus, was first off and, with apparently a lot of gallop in him, kept ahead for some time, with Maidzuru in second and Niitaka in third place. After passing the Shakespeare, a change took place in the order and the field got scattered. Remus was overhauled by Eclairer, and

Minet ran up into second place. In the Straight, this position was maintained, while Colorado passed Remus and Maidzuru, the race ending in this same order, Eclairer finishing about two lengths ahead of Minet, with Colorado, running strong, a length behind the latter. Time 1m. 39secs.

PARI MUTUEL, \$5 Pool.—Eclairer 36, Voltaire 0, Torpedo 3, Tourist 3, Mulberry 0, Martingale 3, Niitaka 15, Colorado 5, Rumulus 0, Remus 0, Maidzuru 1, Pointeur 0, Minet 3, Melbourne 12, Jiji 1, Monaco 4; total, 92=\$460—Eclairer, \$11.50. \$2 Pool.—Eclairer 72, Voltaire 3, Torpedo 13, Tourist 5, Mulberry 3, Martingale 13, Morisan 41, Colorado 11, Romulus 3, Remus 5, Maidzuru 4, Pointeur 10, Minet 12, Melbourne 3, Jiji 29, Monaco 8; total, 234=\$468—Eclairer, \$6.

7.—The **ALL-AGED STAKES**, value yen 200, for All Country-breds; weight as per scale. Three-quarters Mile. Entrance fee, yen 10.

Mr. States' Idaho, 145lb. (Sugura) 1
Mr. Tatsuta's Tatsuta, 131lb. (Riki) 2
Mr. Nishimura's Hayakaze, 145lb.

(Takahashi) 3
Mr. Field's Cigarette, 137lb. (Kato) 0
Mr. Worthington's Traveller, 142lb.

(Mr. Kingdom) 0
Baron Foy's Tambour Major, 125lb.

(Baron Foy) 0
Mr. Nemo's Madame, 140lb. (Ichii) 0
Mr. Nemo's Sasha, 137lb. (Goto) 0

Eight out of nine entrants came up to scratch, Idaho and Tatsuta appearing to be the favourites. Some trouble was experienced in getting the field away, the first futile attempt ending in a quarter mile gallop for most of the ponies. After another fruitless try the field started fairly well together, Idaho at once going into front place, with Sasha next and Cigarette in third place. At the Shakespeare, Hayakaze ran up into second place but failed to come up to Idaho, who held her lead without any apparent effort. In the Straight, Tatsuta came up and took second place and, in spite of a spurt by Hayakaze near the post, finished in that order, Idaho winning by a length or a length and a half. Hayakaze had a good race with Tatsuta for second place and only lost it by half a length or less. Time 1m. 23½secs.

PARI MUTUEL, \$5 Pool.—Cigarette 1, Traveller 13, Tambour Major 2, Hayakaze 6, Idaho 40, Tatsuta 13, Madame 4, Sasha 0; total, 79=\$395—Idaho, \$9.80. \$2 Pool.—Cigarette 10, Traveller 41, Tambour 10, Hayakaze 34, Idaho 100, Tatsuta 45, Madame 15, Sasha 7; total, 262=\$524—Idaho, \$4.70.

8.—The **SHANGHAI PLATE**, 1st Prize yen 200, 2nd yen 50, for All China Ponies; weight as per scale. One and a half Mile. Entrance fee, yen 10.

Mr. States' Maine, 150lb. (Mr. Pakenham) 1
Major Trick's Pantin, 153lb. (Mottu) 1
Mr. Nemo's Opportuniste, 150lb. (Ichii) 1
Mr. Yodo's Suma, 150lb. (Hakodate) 0
Mr. H. M. Bevis's Troubadour, 150lb. (Riki) 0
Mr. Worthington's Orion, 144lb. (Mr. Kingdom) 0
Mr. Sphinx's Samurai, 144lb. (Takahashi) 0
Messrs. Tippet & Clifford's Jubilee, 147lb.

(Mr. Elliot) 0
Messrs. Bent & Owen's Express, 144lb.

(Mr. Owen) 0
Mr. Partner's Jido, 150lb. (Kobayashi) 0
Mr. Nemo's Entry, 150lb. (Nakazawa) 0

1st Heat.

A field of eleven out of fourteen entrants, faced the starter and were got away to a very fair start with no delay. Samurai was the first to take up the running and was followed by Suma in second place, up to the Shakespeare, where Jubilee came away from the ruck and made a good show for second place. At the Trees Samurai still kept the lead, and Opportuniste came away and ran into third place. This order was maintained in passing the Grand Stand, but in going up the hill after the dip Jubilee drew away from the field and took second place for a time, and a little after Maine also came away from his field and ran into the front ranks. Just after passing the Shakespeare the second time, seven out of the eleven runners drew up together and ran in a close bunch till after passing the Trees, when Maine took the lead and kept it to the finish, gradually increasing his distance and winning easily by five or six lengths, while Pantin, who had come up in the Straight, and Opportuniste ran a dead heat for second place. Time 3m. 27½secs. It was afterwards decided by Pantin's and Opportuniste's owners to divide for second prize.

PARI MUTUEL, \$5 Pool.—Suma 2, Troubadour 6, Orion 44, Samurai 2, Jubilee 0, Maine 26, Pantin 17, Express 0, Jido 0, Opportuniste 0, * * * 1, Field 3; total, 91=\$505—Maine, \$17.40.

\$2 Pool.—Suma 15, Troubadour 15, Orion 114, Samurai 7, Jubilee 4, Maine 56, Pantin 57, Export 4, Jido 5, Opportuniste 5, * * * 2; total, 284=\$598—Maine \$9.00.

9.—The **JAPAN STAKES**,—Value, yen 150, for Country-breds, Maidens at date of entry and Subscription Horses of 1896-1897; weight as per scale. Three-quarters of a Mile. Entrance fee, yen 10.

Mr. Yodo's Saikio, 127lb. (Hakodate) 1
Mr. Avis's Philmel, 123lb. (Sugura) 2

The last race of the day resulted in a match between Saikio and Philmel, these being the only two ponies that started out of seven entries. The betting was mostly on Saikio and the result justified public opinion. The favourite took up the running very soon after the start and gradually increasing his lead won as he liked by anything from six to eight lengths. Time 1m. 29secs.

PARI MUTUEL, \$5 Pool.—Saikio 35, Philmel 13; total, 48=\$240—Saikio, \$6.00. \$2 Pool.—Saikio 124, Philmel 40; total, 164=\$328—Saikio, \$2.50.

SECOND DAY.—WEDNESDAY, OCT. 27TH.

The second day of the Autumn meeting opened with a dull and somewhat cheerless aspect, but during the afternoon the sun broke through at times and brightened up the scene at the Negishi course. Owing to the Court being still in mourning there were no Imperial visitors or representatives of His Majesty present, as is frequently the case on the second, or Ladies' day, but towards the latter part of the afternoon there was a large attendance of visitors on the Grand Stand and in the Paddock, including a numerous gathering of ladies, and a strong contingent from Tokyo, among whom were to be seen the Russian, Italian, Spanish, Netherlands and Brazilian Ministers, and the *Chargés d'Affaires* of Great Britain, France, Germany, Austria-Hungary, and Portugal. The size of the fields which appeared to contest most of the events was fully up to the average, and even the races which only produced three competitors were full of interest and well fought out. In the seventh race, the Country Bred Handicap, another local record was made, Idaho covering the mile in 1 min. 52½ secs., the previous record being Tatsuta's achievement at last Autumn meeting, in doing the same distance, carrying 11b. more, in 1 min. 55 secs. Some complaints were made as to the conduct of two of the professional jockeys Takahashi and Goto; the former being cautioned by the Committee for flourishing his whip in the face of ponies approaching him from behind, so as to prevent them coming up, while the latter was suspended from riding to-day for striking another rider, Hakodate, on the head with his whip. Plenty of speculation was indulged in, adding keenness to the interest in the various events, the Pari Mutuel being particularly well patronised. The Town Band performed the following programme during the afternoon:—

- 1.—The "Beg 4" March, by Southwell.
- 2.—Overture "Olivia," by J. H. Hyde.
- 3.—Traumbilder Fantasie, by Lumby.
- 4.—Reveille de Lion, by Kontski.
- 5.—"Forest Park" Waltz, by W. H. Thomas.
- 6.—The Columbian Exposition March, by Wiegand.
- 7.—Romaneska, by Zikoff.
- 8.—The Glass in hand Polka, by Fahrback.
- 9.—Der Kladderadatsch Potpourri.
- 10.—Vielliebchen Gavotte, by Wallfesch.
- 11.—Golden Beauty Waltz, by Millocker.
- 12.—Grand Selection Esmine, by Ferrazzi.
- 13.—La Dame du Lac Cavatina, by Rossini.
- 14.—Pist-pist Masurka, by Rossini.
- 15.—Arabesken Quadrille, by Budik.
- 16.—Die Schöne Augusta Redova, by Quintin.
- 17.—Fantasie Mary Night, by Zikoff.
- 18.—The Mikado Waltz, by Zikoff.
- 19.—Nettchen Pulka, by F. Eckert.
- 20.—Hyon Galop, by Braumlich.

The various events were as follow:—

1.—The **NIICAPU CUP**, value, yen 150, a handicap for Country-breds, Maidens at date of entry, and Subscription horses of 1896-1897; handicap after 1st day's racing. One and a quarter Mile. Entrance fee, yen 10.

Mr. Four-in-Hand's Rigi, 140lb. (Goto) 1
Mr. Durand's Hermine, 129lb. (Kobayashi) 2
Mr. Avis's Philmel, 123lb. (Sugura) 3
Sir Ernest Satow's Tantalus, 140lb. (Riki) 0
Mr. Nemo's Madame, 135lb. (Ichii) 0

Five ponies went to the post out of eight entrants, Rigi and Philomel being apparently the favourites. After a fair start Madamelle, with Philomel second. Going up the hill after the dip, Tantalus came to the front and challenged the leader, but at the half mile post gave place to Hermine, who ran into first place. On entering the straight Rigi came to the front, with plenty of gallop in him, and took the lead, and gradually increasing this, won by about four lengths from Hermine, who finished about a length ahead of Philomel, the latter having run into third place in the distance. Time, 2m. 35½ secs.

PARI MUTUEL, \$5 Pool.—Tantalus 3, Hermine 0, Rigi 15, Philomel 4, Madame 3; total, 25= \$125—Rigi, \$7.50. \$2 Pool.—Tantalus 7, Hermine 11, Rigi 65, Philomel 26, Madame 9; total, 118= \$236—Rigi, \$3.20.

2.—**THE BROKERS' AND BANKERS' CUP**, for Subscription China Ponies of Autumn, 1897; weight as per scale; winners at the meeting of one race 7lb. extra; of two races 10lb. Once round. Entrance fee, yen 10.

Major Trick's Minet, 144lb. (Mr. Mottu) 1
Mr. News' Eclairer, 157lb. (Mr. Kingdon) 2
Mr. States' Colorado, 144lb. (Sugiyura) 3
Mr. R. Field's Tradesman, 144lb. (Kubota) 0
Mr. Derby's Martingale, 153lb. (Takahashi) 0
Messrs. Tippitt & Clifford's Jubilee, 147lb. (Hakodate) 0

Mr. Four-in-Hand's Romulus 147lb. (Ichio) 0
Mr. Campredon's Artiller, 147lb. (Kobayashi) 0

Eight came to the post out of 16 entries, and after a capital start, Jubilee got away to the front, followed closely by Martingale and Tradesman, the latter taking the lead from Jubilee before the half mile post was reached, and kept it till after passing the Trees, when Minet came up with a rush and took first place. Colorado also made a game effort with Eclairer and in the straight a fine race was made for second place, but neither Eclairer nor Colorado were able to collar Minet, who won by about a length and half from Eclairer, with Colorado a good third. Time, 2 min. 15½ secs.

PARI MUTUEL, \$5 Pool.—Eclairer 31, Tradesman 0, Martingale 1, Jubilee 0, Colorado 12, Romulus 0, Artiller 13, Minet 1; total 58= \$290—Minet, \$20. \$2 Pool.—Eclairer 77, Tradesman 1, Martingale 3, Jubilee 1, Colorado 34, Romulus 3, Artiller 1, Minet 34, Field 1; total, 155= \$310—Minet, \$8.00.

3.—**THE NIPPON PLATE**, value, yen 200; for All Country-breds; weight as per scale. One Mile and a half. Entrance fee, yen 10.

Mr. Nishimura's Hayakaze, 140lb. (Takahashi) 1
Mr. Worthington's Traveller, 145lb. (Mr. Kingdon) 2

Mr. States' Idaho, 140lb. (Sugiyura) 3
Mr. R. Field's Cigarette, 137lb. (Kato) 0
Baron Foy's Tambour Major, 125lb. (Baron Foy) 0

Mr. Nemo's Sasha, 142lb. (Ichio) 0

Six started, and after one false start the horses got away well together, Traveller and Tambour Major leading the field to the Shakespeare, where Idaho came through her field and ran to the front, and kept the lead till the Trees were reached, with Hayakaze in second place and Traveller third. On entering the straight, Hayakaze came up with a rush and took the lead from Idaho, and after a capital scurry in the home stretch won a splendid race by half a length from Traveller, who finished about a length ahead of Idaho. Time, 2 min. 56½ secs.

PARI MUTUEL, \$5 Pool.—Cigarette 2, Traveller 23, Tambour Major 8, Hayakaze 44, Idaho 20, Sasha 4; total, 101= \$505—Hayakaze, \$10.30. \$2 Pool.—Cigarette 14, Traveller 71, Tambour Major 14, Hayakaze 109, Idaho 64, Sasha 13; total, 285= \$570—Hayakaze, \$4.70.

4.—**THE KANAGAWA STAKES**, value yen 150, for Subscription Country-breds of Spring, 1897; that have not won more than one race at date of entry; weight as per scale; winners at the meeting of one race 5lb. extra; of two races excluded. Three-quarter of a Mile. Entrance fee, yen 10.

Major Trick's Chiyoda, 133lb. (Sugiyura) 1
Mr. Four-in-Hand's Chance, 132lb. (Goto) 2
Mr. Worthington's Idler, 131lb. (Yasu) 3

Only three ponies started, all mares, Chiyoda carrying most of the money. At the start Chance took up the running, with Idler second, and led at the Shakespeare by several lengths. Chiyoda then came up, rushing to the front, Idler dropping into third place. In the straight, Chiyoda came away from the others and won easily by four or five lengths from Chance, who finished some two lengths in front of Idler, who worthily sustained her patronymic. Time, 1m. 30secs.

PARI MUTUEL, \$5 Pool.—Idler 4, Chance 8, Chiyoda 31; total, 43= \$215—Chiyoda, \$6.20. \$2 Pool.—Idler 46, Chance 79, Chiyoda 166; total, 291= \$582—Chiyoda, \$3.10.

5.—**THE MANCHURIA STAKES**, 1st Prize yen 200, 2nd yen 50, for All China Ponies. Weight as per scale, winners at the meeting of 2 mile races 5lb. extra; of 1 mile or over 7lb. extra; of two races excluded. One mile. Entrance fee yen 10.

Mr. Tatsuta's Usugumo, 150lb. (Riki) 1
Mr. Worthington's Orion, 147lb. (Hayashi) 2
Major Trick's Pantin, 150lb. (Mr. Mottu) 3
Mr. H. M. Bevis's Troubadour, 150lb. (Kubota) 0
Mr. Worthington's Cleve, 144lb. (Yasu) 0
Mr. Sphinx's Samurai, 147lb. (Takahashi) 0
Mr. Nishimura, Niitaka, 150lb. (Hattori) 0
Mr. Four-in-Hand's Kindar, 149lb. (Ichio) 0
Mr. Partner's Ji-do, 150lb. (Kobayashi) 0
Mr. States' Maine, 150lb. (Mr. Pakenham) 0
Mr. Avis's Tomtit, 141lb. (Mr. Kingdon) 0

Eleven out of fifteen entrants came out, Mr. Worthington, who had two in, declaring best to win. After a little difficulty, owing to the eagerness of the ponies to get away, a fair start was effected, Usugumo soon showing in front, with Maine and Kindar close up, the rest in a bunch. At the Shakespeare Pantin came away from his field and for a few seconds took the lead from Usugumo, but the latter passed him again before reaching the Trees, where Kindar and Pantin were running in second and third places. In the straight, Usugumo kept his lead, though Orion came up and took second place in the home run, Pantin also displacing Kindar, and the race finished in the same order, Usugumo getting the best of a good struggle by a length from Orion, who finished about half that distance ahead of Pantin. Time, 2min. 11½ secs.

PARI MUTUEL, \$5 Pool.—Troubadour 3, Orion 16, Cleve 1, Samurai 1, Niigata 1, Maine 19, Kindar 44, Usugumo 1, Pantin 7, Tomtit 5, Ji-do 0; total, 99= \$495—Usugumo, \$445.50. \$2 Pool.—Troubadour 11, Orion 37, Cleve 4, Samurai 10, Niitaka 6, Maine 77, Kindar 113, Usugumo 13, Pantin 33, Tomtit 11, Ji-do 3; total, 318= \$636—Usugumo, \$44.00.

6.—**THE TAIWAN STAKES**, value, yen 200, for Subscription China Ponies of Autumn, 1897; weight as per scale; winners of one race at the meeting 7lb. extra; of two races excluded. Three quarters of a Mile. Entrance fee, yen 10.

Mr. Worthington's Herald, 150lb. (Hayashi) 1
Major Trick's Minet, 151lb. (Mr. Mottu) 2
Mr. Derby's Martingale, 153lb. (Takahashi) 3
Mr. News' Voltaire, 147lb. (Mayeda) 0
Mr. Ralph Paget's Tourist, 144lb. (Kato) 0
Mr. Four-in-Hand's Remus, 147lb. (Goto) 0
Mr. Tatsuta's Maidzurn, 144lb. (Riki) 0
Mr. Campredon's Pointeur, 144lb. (Kobayashi) 0
Messrs. Bent & Owen's Melbourne, 147lb. (Mr. Owen) 0

Mr. Partner's Ji ji, 153lb. (Hakodate) 0

After a capital start the field of ten got away well together and ran in a cluster to the Shakespeare, where Minet came to the front, with Martingale and Ji close up. At the entrance to the straight, Herald came away from the field and challenged Minet for leading place, Martingale being next in order. A fine race ensued down the distance between Minet and Herald, the latter winning cleverly on the post by a head, or half a head, with Martingale a good third, about a length behind Minet. Time, 1m. 39secs.

PARI MUTUEL, \$5 Pool.—Voltaire 3, Tourist 3, Herald 7, Martingale 5, Remus 3, Maidzurn 10, Pointeur 20, Minet 39, Melbourne 4, Ji ji 2; total, 96= \$480—Herald, \$61.70. \$2 Pool.—Voltaire 3, Tourist 10, Herald 17, Martingale 17, Remus 9, Maidzurn 24, Pointeur 43, Minet 56, Melbourne 6, Ji ji 7; total, 192= \$384—Herald, \$20.30.

7.—**THE COUNTRY BRED HANDICAP**, 1st Prize yen 150, 2nd yen 50, a Handicap for all Country-breds, Handicap after 1st day's racing. One Mile. Entrance fee, yen 10.

Mr. States' Idaho, 143lb. (Sugiyura) 1
Mr. Nemo's Sasha, 133lb. (Ichio) 2
Mr. Nishimura's Hayakaze, 139lb. (Hakodate) 3

This race excited considerable interest, as although it brought out only three starters, they were the cracks of the country-breds and the result was anything but a foregone conclusion. Idaho appeared to be the favourite, but the other ponies both found plenty of supporters. A capital start resulted in Idaho taking up the running and making the pace, Sasha coming next and Hayakaze third, the same positions being maintained down the dip and up the hill, about two lengths separating each of the ponies. When approaching the Trees, Hayakaze closed up with Sasha and ran neck and neck, Idaho still leading by a couple of lengths. From the straight

a fine race ensued for second place but Idaho had it all her own way, for first having plenty left in hand, and coming away won easily by half a dozen lengths from Sasha, who beat Hayakaze for second place by a neck only. Time, 1m. 52½secs.

PARI MUTUEL, \$5 Pool.—Hayakaze 38, Idaho 58, Sasha 30; total, 126= \$630—Idaho, \$9.70. \$2 Pool.—Hayakaze 130, Idaho 156, Sasha 65; total, 351= \$701—Idaho, \$4.00.

8.—**THE HOKKAIDO PLATE**, value, yen 150, for Subscription Country-breds of Autumn, 1896, and Spring, 1897; weight as per scale; winners at date of entry 5lb. extra for every race won; winners of one race at the meeting 5lb. extra; of two races excluded. One Mile. Entrance fee, yen 10.

Mr. Avis's Philomel, 138lb. (Sugiyura) 1
Baron Foy's Signorina, 128lb. (Baron Foy) 2
Mr. Durand's Hermine, 128lb. (Kobayashi) 3

Although only three ponies started, this race created considerable interest and each of the starters found backers, Hermine being apparently the first favourite. Philomel made the pace and took the lead, the other two changing second and third places repeatedly before reaching the Trees, which they passed neck and neck. In the straight, Philomel still led by a couple of lengths and kept her position to the finish, Signorina beating Hermine for second place by a length or more. Time, 2 min.

PARI MUTUEL, \$5 Pool.—Hermine 41, Signorina 22, Philomel 37; total, 100= \$500—Philomel, \$12.10. \$2 Pool.—Hermine 109, Signorina 51, Philomel 103; total, 263= \$526—Philomel, \$4.50.

9.—**THE MANDARIN PLATE**, 1st Prize yen 200, 2nd yen 50, for All Subscription China Ponies that have not won two races in Japan at date of entry; weight as per scale; winners at date of entry 5lb. extra; winners of two races at the meeting excluded. One and a Half Miles. Entrance fee, yen 10.

Mr. Nishimura's Niitaka, 155lb. (Takahashi) 1
Mr. States' Colorado, 144lb. (Sugiyura) 2
Mr. Yodo's Suma, 155lb. (Hakodate) 3
Mr. News' Voltaire, 147lb. (Mayeda) 0
Mr. Ralph Paget's Tourist, 144lb. (Mr. Mottu) 0
Messrs. Tippitt & Clifford's Jubilee, 147lb. (Mr. Elliot) 0

Mr. Four-in-Hand's Romulus, 147lb. (Goto) 0
Mr. Campredon's Pointeur, 144lb. (Kobayashi) 0
Mr. Campredon's Artiller, 144lb. (Mr. Campredon) 0

Messrs. Bent & Owen's Express, 152lb. (Mr. Pakenham) 0

Mr. Nemo's Monaco, 155lb. (Ichio) 0
Mr. Nemo's J'Menfoutiste, 156lb. (Nakamura) 0

Twelve out of eighteen ponies stripped for the last event of the day, and were got away, after two or three futile attempts, on fairly level terms. Romulus was the first to make the running, followed by Monaco, with Colorado in third place, the rest in a bunch until after passing the Shakespeare, when Monaco took the lead from Romulus, who dropped to the rear, Colorado running into second place. On passing the Stand Monaco still led, with the rest of the field strung out. After negotiating the dip, in going up the hill Express drew to the front and took the lead, with Colorado close up in second place, and the same order was maintained till after passing the Trees, where Suma and Niitaka came to the front and a fine race ensued down the home stretch between Niitaka, Suma and Colorado, the former shaking off his two opponents in the run in and winning by five or six lengths from Colorado, who beat Suma for second place by two lengths. The field straggled in at wide intervals. Time, 3m. 30½secs.

PARI MUTUEL, \$5 Pool.—Voltaire 8, Suma 27, Tourist 6, Jubilee 4, Niitaka 11, Colorado 47, Romulus 3, Pointeur 18, Artiller 3, Express 9, Monaco 23, Menfoutiste 2; total, 161= \$805—Niitaka, \$65.80. \$2 Pool.—Voltaire 14, Suma 56, Tourist 16, Jubilee 12, Niitaka 35, Colorado 101, Romulus 13, Pointeur 26, Artiller 9, Express 26, Monaco 36, J'Menfoutiste 13; total, 357= \$714—Niitaka, \$18.00.

THIRD DAY.—THURSDAY, OCT. 28TH.

The last day of the Autumn meeting was favoured with brighter and more summer-like weather than either of the preceding days, and the attendance on the Course and Grand Stand was, in consequence, quite equal in numbers to that of the second day, though there were naturally fewer distinguished visitors from Tokyo. The ladies again graced the scene in great force and took fully as keen an interest in the sport provided—and we might add if permissible, in a little backing and speculating—

as the sterner sex. The weather being more tempting for promenading than on the previous day, the lawn and the enclosure were patronised during the afternoon more perhaps than the Grand Stand, and enlivened by the bright and varied toilettes of the ladies presented quite a gay scene, the Town Band adding to the entertainment of the promenaders. Several of the events brought out good fields, notably the first race of the day, the Czarewitch, the China Champions and China Solace. The Country Bred's Champion and Solace only produced four starters each—rather a disappointment—and one race was reduced to a match. Most of the events however were well contested and there were several very close finishes. Another record was broken by Tatsuta in the Country-Bred Champion Race, the one and a quarter mile being covered in 2 min. 25½ secs. At the conclusion of the race for the China Champion's the winning rider, Mr. Kingdon, on Eclairer, was received in entering to weigh in with enthusiastic applause. The victories of the meeting have been divided between ten stables, Mr. Four-in-Hand's stable coming first with five wins, Major Trick and Messrs News, States, Tatsuta, and Worthington, three each, Messrs Yodo, Nishimura and Avis two each and Baron Foy one. Of the winning riders Mr. Kingdon scored three, Baron Foy, Mr. Pakenham and Mr. Mottu one win each, and among the professionals Sugimura six, Riki and Ichi three, Goto, Hakodate, Takahashi and Hayashi two each, and Yasu one. Honours and prizes have thus been more equally divided than is often the case, and this should give satisfaction to the greatest number and prove an encouragement both to owners and riders. The day's events were as follow:—

1.—The CZAREWITCH, 1st Prize yen 300, 2nd yen 100, 3rd yen 50, a Handicap for all China Ponies; a forced entry of yen 20 for all China Ponies entered at the meeting; non-starters half forfeit; Handicap after second day's racing. One mile.

Mr. Worthington's Orion, 148lb. (Hayashi) 1
Mr. Tatsuta's Usugomo, 156lb. (Riki) 2
Mr. Worthington's Cleeve, 135lb. (Yasu) 3
Mr. Yodo's Suma, 145lb. (Hakodate) 0
Mr. R. Field's Torpedo, 133lb. (Baron Foy) 0
Mr. R. Page's Tourist, 135lb. (Kubota) 0
Mr. H. M. Bevi's Troubadour, 143lb. (Kato) 0
Mr. Sphinx's Samurai, 140lb. (Miyagawa) 0
Mr. Four-in-Hand's Romulus 137lb. (Nakajima) 0
Major Trick's Pantin, 154lb. (Mr. Mottu) 0
Mr. Avis' Tomit, 137lb. (Mr. Kingdon) 0
Messrs. Bent & Owen's Express, 135lb. (Mr. Owen) 0
Mr. Partner's Jido, 140lb. (Kobayashi) 0
Mr. Nemo's entry 140lb. (Ichi) 0

Fourteen, out of an entry of thirty-five ponies, started for this race. Mr. Worthington declared best of his two to win. After one false start the big field was got away well together, but were stung out before reaching the Shakespeare. There Usugomo took up the running, with Cleeve and Orion well up, the rest some lengths behind. After passing the Trees, Orion worked to the front, and down the straight raced hard with Usugomo for first place, eventually winning cleverly by half a length; about a length between Usugomo and Cleeve, second and third. Time 2 min. 12 secs.

PARI MUTUEL, \$5 Pool.—Suma 11, Torpedo 7, Tourist 1, Troubadour 1, Orion 15, Cleeve 5, Samurai 0, Rennis 1, Usugomo 3, Pantin 6, Tomit 1, Express 0, Jido 1, * * * 3, Field 31 total, 58=\$290—Orion, \$17.40. \$2 Pool.—Suma 17, Torpedo 5, Tourist 0, Troubadour 2, Orion 31, Cleeve 10, Samurai 3, Romulus 2, Usugomo 10, Pantin 15, Tomit 7, Express 0, Jido 6, * * * 3, total, 111=\$222—Orion, \$6.00.

2.—The MAIDENS' HANDICAP, value, yen 200, a Handicap for Country-breds, Maidens at date of entry, and Subscription horses of 1896-1897; a forced entry of yen 20 for all horses of this class entered at the meeting; non-starters half forfeit; Handicap after second day's racing. One Mile.

Mr. Avis' Philomel, 125lb. (Sugimura) 1
Mr. Four-in-Hand's Rigi, 152lb. (Riki) 2
Mr. Durand's Hermine, 125lb. (Baron Foy) 3
Major Trick's Chiyoda, 132lb. (Mr. Kingdon) 0

Only four ponies stripped for this race, Rigi being the favourite. The start was about the worst of the meeting, Chiyoda, with Mr. Kingdon up, being left six lengths or so behind. Philomel took the lead, with Rigi next in order, but going up the hill Chiyoda pulled up into second place and Her-

mine dropped behind. At the Shakespeare Philomel still led, with Rigi next, while Hermine got up into third place. On entering the Straight, Rigi challenged Philomel and had a game try for first place, but failed to collar the leader, who passed the post two lengths ahead of Rigi, with Hermine a good third. Time, 1 min. 59½ secs.

PARI MUTUEL, \$5 Pool.—Hermine 6, Chiyoda 11, Rigi 28, Philomel 13; total, 58=\$290—Philomel, \$20. \$2 Pool.—Hermine 18, Chiyoda 36, Rigi 69, Philomel 34; total, 157=\$314—Philomel, \$8.20.

3.—THE PRIX DES HARAS, value, yen 200, a Handicap for all Country-breds, a forced entry of yen 20 for all horses of this class entered at the meeting; non-starters half forfeit; Handicap after second day's racing. One Mile.

Mr. Tatsuta's Tatsuta, 137lb. (Riki) 1
Mr. Nemo's Sasha, 133lb. (Ichi) 2

This resulted in a match between Tatsuta and Sasha, the only starters. The former took the lead from the start and won as he liked, passing the post half a dozen lengths before his opponent. Time, 1 min. 55½ secs.

PARI MUTUEL, \$5 Pool.—Tatsuta 24, Sasha 13; total, 37=\$185—Tatsuta, \$6.90. \$2 Pool.—Tatsuta 60, Sasha 57; total, 117=\$234—Tatsuta, \$3.50.

4.—THE CHINA SUBSCRIPTION CONSOLATION, 1st Prize yen 150, 2nd yen 50, a Consolation Race for all Subscription China Ponies that have not won two races in Japan at date of entry, and have started and not won a race at this meeting; weight as per scale. One Mile. Entrance fee, yen 5.

Mr. Four-in-Hand's Romulus, 147lb. (Ichi) 1
Mr. R. Field's Torpedo, 147lb. (Kato) 2
Mr. States' Colorado, 144lb. (Sugimura) 3
Mr. News' Voltaire, 147lb. (Mr. Kingdon) 0
Mr. Yodo's Suma, 150lb. (Hakodate) 0
Mr. Worthington's Mulberry, 153lb. (Yasu) 0
Mr. Derby's Martingale, 153lb. (Mr. Pearson) 0
Messrs. Tippitt & Clifford's Jubilee, 147lb. (Mr. Elliot) 0
Mr. Tatsuta's Maidzuru, 144lb. (Riki) 0
Mr. Campredon's Pointeur, 144lb. (Kobayashi) 0
Mr. Campredon's Artiller, 147lb. (Takahashi) 0
Messrs. Bent & Owen's Melbourne 150lb. (Mr. Owen) 0

Twelve, out of twenty-three, started for the China Consolation, Mr. Campredon, who ran two, declaring best to win. Two fairly good starts were spoiled by Mulberry, with Yasu up, the pony being first held by a betto and then by Mr. Thomas, when the others were all ready to go; eventually he was left several lengths behind. Torpedo led for the first furlong when Romulus went to the front and Pointeur ran into third place. Going up the hill, Colorado came away and ran neck and neck with Romulus to the Shakespeare. At the Trees Romulus obtained the lead again, with Pointeur in second place, but in the home run Torpedo came up and displaced the latter, Romulus passing the post a couple of lengths before Torpedo, who beat Colorado for second place only by a length; the others followed in a bunch. Time 2 min. 14 secs.

PARI MUTUEL, \$5 Pool.—Voltaire 4, Suma 21, Torpedo 4, Mulberry 3, Martingale 5, Jubilee 33, Colorado 4, Romulus 6, Maidzuru 12, Pointeur 3, Artiller 1, Melbourne 2; total 98=\$490—Romulus \$110. \$2 Pool.—Voltaire 12, Suma 46, Torpedo 10, Mulberry 11, Jubilee 12, Colorado 91, Romulus 6, Maidzuru 25, Pointeur 26, Artiller 16, Melbourne 6; total, 269=\$538—Romulus, \$80.00.

5.—THE JUVENILE CONSOLATION, value, yen 150, a Consolation Race for Subscription Country-breds of Spring, 1897, that have not won more than one race at date of entry, and have started and not won a race at this meeting; weight as per scale. One Mile. Entrance fee, yen 5.

Mr. Four-in-Hand's Chance, 130lb. (Ichi) 1
Mr. Sphinx's Mezurashi, 129lb. (Miyagawa) 2
Baron Foy's Signorina, 125lb. (Baron Foy) 3
Mr. Worthington's Idler, 234lb. (Yasu) 0

Four out of five entrants started. Yasu, this time on Idler, again spoiled two fair starts by not being ready and in the third attempt got away with a lead of three lengths, with Signorina next and Chance in third place. The same order was maintained until the Shakespeare was passed when Signorina ran into first place and the others closed up behind so that the proverbial blanket could have covered them. At the bend Signorina gave place to Chance, and Mezurashi took third place. Chance, hard ridden down the distance, passed the post two lengths ahead of Mezurashi, who beat Signorina for second place, by about a length. Time, 2 min. 4½ secs.

PARI MUTUEL, \$5 Pool.—Idler 10, Mezurashi

16, Signorina 29, Chance 29; total 82=\$410—Chance, \$12.70. \$2 Pool.—Idler 40, Mezurashi 51, Signorina 112, Chance 94; total, 297=\$594—Chance, \$5.60.

6.—THE COUNTRY-BRED CONSOLATION, 1st Prize yen 150, 2nd yen 50, a Consolation Race for all Country-breds that have started and not won a race at the meeting; weight as per scale. Three-quarters Mile. Entrance fee, yen 5.

Baron Foy's Tambour, Major, 125lb.

(Baron Foy) 1
Mr. R. Field's Cigarette, 137lb. (Riki) 2
Mr. Nemo's Sasha, 142lb. (Ichi) 3
Mr. Durand's Hermine, 128lb. (Kobayashi) 0

Only four horses came out for this race. After a capital start Tambour Major went to the front, closely followed by Hermine and Sasha, with Cigarette last. After scaling the hill Sasha ran into second place and Cigarette also passed Hermine. At the Trees Tambour Major still led and the order of the others was unchanged until nearing the Stand, when Cigarette rushed into second place, Tambour Major winning by between two and three lengths, a bare half length separating second and third. Time, 1.25½.

PARI MUTUEL, \$5 Pool.—Cigarette 20, Hermine 15, Tambour Major 22, Sasha 45; total, 102=\$510—Tambour Major, \$2.80. \$2 Pool.—Cigarette 53, Hermine 26, Tambour Major 52, Sasha 53; total, 184=\$368—Tambour Major, \$6.00.

7.—THE CHINA CHAMPION, value, yen 300. A Champion Race for all China Ponies; a forced entry for winners at the meeting; for winners of one race yen 10; of two races yen 20; and of more than two races yen 40; optional to beaten ponies at an entrance fee of yen 25; weight as per scale. One Mile and a quarter.

Mr. News' Eclairer, 150lb. (Mr. Kingdon) 1
Mr. Tatsuta's Usugomo, 150lb. (Riki) 2
Mr. Four-in-Hand's Kindar, 144lb. (Nakajima) 3
Mr. Worthington's Orion 147lb. (Hayashi) 0
Mr. Nishimura's Nittaka, 150lb. (Hattori) 0
Mr. Worthington's Herald, 150lb. (Yasu) 0
Mr. Nemo's Opportuniste, 150lb. (Ichi) 0
Major Trick's Minet, 147lb. (Mr. Mottu) 0
Mr. States' Maine, 150lb. (Mr. Pakenham) 0
Mr. Sphinx's Samurai, 147lb. (Takahashi) 0
Major Trick's Pantin, 153lb. (Baron Foy) 0

Eleven China ponies faced the starter to compete for the Championship, the favourite being Maine. Mr. Worthington and Major Trick, who ran two each, declared best to win. After three futile starts the field was got away on fairly level terms. Pantin got the lead and passed the Stand first, with Samurai second, and Usugomo in third place, the rest in a rack. At the Dip, Usugomo took the lead from Pantin and at the top of the hill Eclairer came away from the field and ran into third place. At the Shakespeare Usugomo still led, Eclairer second, and Minet came away to the front, in the Straight the former rushing into first place and running a fine race won by a head from Usugomo, who finished about a length and half ahead of Kindar. Time, 2 min. 49½ secs.

PARI MUTUEL, \$5 Pool.—Eclairer 27, Kindar 11, Maine 34, Minet 17, Usugomo 14, Herald 7, Nittaka 7, Orion 27, Opportuniste 17, Samurai 5, Pantin 7; total 173=\$405—Eclairer \$28.80. \$2 Pool.—Eclairer 54, Kindar 28, Maine 81, Minet 46, Usugomo 28, Herald 27, Nittaka 32, Orion 60, Opportuniste 28, Samurai 29, Pantin 20; total, 433=\$866—Eclairer, \$14.00.

8.—THE COUNTRY-BRED CHAMPION, value, yen 300; A Champion Race for all Country-breds. A forced entry for winners at the meeting; for winners of one race yen 10; of two races yen 20; and more than two races yen 40; optional to beaten ponies at an entrance fee of yen 25; weight as per scale. One Mile and a quarter.

Mr. Tatsuta's Tatsuta, 137lb. (Riki) 1
Mr. Nishimura's Hayakaze, 140lb. (Takahashi) 2
Mr. States' Idaho, 140lb. (Sugimura) 3
Mr. Worthington's Traveller, 145lb. (Mr. Kingdon) 0

Only four competitors appeared to contest the Country-bred Championship. After one false start they were got away on level terms, Idaho making the running and leading past the grand stand, with Tatsuta second and Traveller third. In topping the hill after the dip Tatsuta took the lead, with Traveller close up, and the other two seven or eight lengths in the rear. At the Trees, Tatsuta led by a length and Hayakaze lessened the distance between herself and the leader, and in the Straight came up to the front with a splendid spurt, very nearly collaring Tatsuta on the post, the latter only beating the mare by a neck. Idaho a poor third. Time, 2 mins. 25½ secs.

PARI MUTUEL, \$5 Pool.—Idaho 65, Hayakaze 30, Tatsuta, 44, Traveller 44; Total, 183=\$915—Tatsuta \$18.70. \$2 Pool.—Idaho 124, Hayakaze 109, Tatsuta 74, Traveller 80; Total, 387=\$774—Tatsuta, \$9.

9.—The CHINA SOLACE.—First prize, \$150, 2nd prize, \$50; a Consolation Race for all China Ponies that have started and not won a race at the meeting; weight as per scale. Three-quarters of a mile. Entrance fee, \$5.

Mr. Worthington's Cleeve, 144lb. (Yashu) 1
Mr. Avis' Tomit, 144lb. (Mr. Kingdon) 2
Mr. Nemo's Entry, 150lb. (Nakazumi) 3
Major Trick's Pantin, 153lb. (Hakodate) 0
Messrs. Bent & Owen's Melbourne, 150lb. (Ichi) 0
Mr. Partner's Ji-ji, 153lb. (Kobayashi) 0
Mr. News' Voltaire, 147lb. (Mayeda) 0
Mr. R. Field's Torpedo, 147lb. (Kato) 0
Mr. Ralph Paget's Tourist, 144lb. (Mr. Mottu) 0
Mr. H. M. Bevis's Troubadour, 150lb. (Riki) 0
Mr. Sphinx's Samurai, 147lb. (Miyasawa) 0
Mr. Derby's Martingale, 153lb. (Takahashi) 0
Mr. States' Colorado, 144lb. (Sugina) 0
Mr. Campredon's Pointeur, 144lb. (Baron Foy) 0

A field of fourteen turned out for this event and gave the starter plenty of trouble. Jiji opened the ball by bolting a quarter round the Course, and gave some further trouble later on. It was not till after three attempts had failed that the ponies got away to a fair start. Martingale rushed to the front at once, and passing the Stand the first time led, with Pantin in second place and the rest in a cluster. On ascending the hill from the dip Cleeve worked to the front with Colorado second. Coming down the Straight Tomit came up to the front and challenged Cleeve, but though well ridden by Mr. Kingdon just failed to collar the latter, who passed the post half a length ahead, the third horse being two or three lengths behind, and the rest straggling in. Time 1 min. 39½ secs.

PARI MUTUEL, \$5 pool.—Voltaire 6, Torpedo 7, Tourist 4, Tradesman 0, Troubadour 9, Cleeve 20, Samurai 3, Martingale 6, Pointeur 8, Pantin 24, Tomit 6, Melbourne 7, Ji-do 3, * * * 7, Colorado 25; total, 135=\$675—Cleeve, \$30.30. \$2 Pool.—Voltaire 18, Torpedo 21, Tourist 14, Troubadour 30, Cleeve 58, Samurai 20, Martingale 17, Colorado 52, Pointeur 20, Pantin 27, Tomit 30, Melbourne 35, Ji-ji 14, * * * 15; total, 371=\$742—Cleeve \$11.00.

CORRESPONDENCE.

CONSTITUTIONAL RIGHTS WITHHELD.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—How long is it to be before the people of Japan really enjoy all the rights and privileges guaranteed to them by the Constitution? Or are they indeed never to enjoy some of them? I am prompted to pen this question by two incidents which it seems to me ought to be brought to the knowledge of the public, and if possible to that also of the proper Japanese Authorities, though I do not know how the latter point could be gained.

One of these incidents occurred in the Spring, though the facts only came to my knowledge this Fall. The other occurred yesterday, and is the immediate occasion of the writing of this letter. To speak of the latter first. A school teacher of my acquaintance who has visited my house several times, called again yesterday. He is very anxious to obtain a good knowledge of English and is also somewhat interested in Christianity. He inquired whether time could be spared to teach him the English Bible. He was asked whether, if a class for studying it was started at the Christian chapel, he would attend it. His reply was that he would be very glad indeed to do so, but if he should he would lose his position as a teacher. By the Constitution under which Japan is supposed to be governed now freedom of religious belief is guaranteed to every subject. I do not know the exact wording of the article, but it seems to be in a certain measure a dead letter, or are school teachers excluded from the privileges granted in said article? For, how can any one be said to enjoy freedom of religious belief if he is not permitted to go where he can enjoy the means toward helping him to form his belief? Freedom of religious belief would seem to mean freedom of belief provided one believe such and such things and does not believe such and such other things. This is the case of one individual who feels that he dare not exercise the right which is guaranteed him as well as every one else by the Constitution, for fear that he should lose his position as a teacher in the employ of the Government. The other incident referred to is

the public action of a body of school teachers who form an association in a province not 150 miles from Kobe. The association holds meetings at stated intervals, and this action was taken at a meeting held some little time before the Summer vacation, though, as I said before, the facts have only just recently come out. At this meeting, after the routine business had been transacted, some one proposed that they should have a discussion on the subject of Education and Religion. Some one else objecting that this was too vague, it was decided to change it to Education and Christianity, this having been the real intent of the original motion, notwithstanding its broader statement. A full and free discussion then followed upon this subject. At its close it was voted that Christianity is an injury, that a belief in Christian truth on the part of school teachers interferes with the proper discharge of their duties (it being implied that if one became a Christian he would lose his place), and that they should use their influence against Christianity, by keeping the public from attending Sunday Schools and in other ways which might be open to them. The attendance at this meeting was about 40 and, with the exception of two or three Christians, whose influence was nil, this was the unanimous decision of those present. My informant, who is a Christian living in that region, said that he thought at first that the Christians ought to take some action in opposition to this association and their position, but he concluded afterwards that it might be better to do nothing. However, it seems to me that it is a matter which should be brought to public attention. I have understood for several years that it was the desire of the Educational Department that public school teachers should have nothing to do with religion. In view of these two incidents this would seem to mean Christianity, and Christianity alone, for I have never heard of any objection being made to a teacher because of his attitude towards any other religion, and now these incidents would seem to show that the Authorities have no objection to teachers having something to do with Christianity provided only it is to oppose it. Can this be the policy of the Government of this "Enlightened" era in the ninth year of the Constitution which guarantees religious freedom to every subject? Is the education and training of the coming generation in its formative period rightly entrusted to such a bigoted set of men as the school teachers of this association are by their action shown to be? Is not this a serious question which demands the attention of the authorities? I think, as a sincere well-wisher of Japan, that it is, and have felt impelled in the interests of freedom to write this letter. It is a question that may have, too, a practical bearing on the immediate future when the revised treaties come into effect, for though in the first instance a question of religion (than which, however, I would concede none to be more important) it has a broader bearing than that. These teachers are leaders of public opinion in the places where they live, and their influence is paramount over their pupils upon every subject, and in most cases opposed, not only to Christianity, as shown by the action above mentioned, but as well to the foreigner and everything he represents. Asking your indulgence for this somewhat lengthy communication, I remain, Yours truly,

S. S. W.

"OUR CITIZENSHIP."

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The revelations made in Mr. McCaleb's recent letter "Neglected something or said something: which?" strike the foundations out from under my recent letter which you were so kind as to publish.

In the light of these later revelations I feel moved to offer the following contribution to the discussion:—

Among the religious circles in the U.S.A. many condensed Biblical and other theological phrases are frequently used in senses which within those circles come to have a definite meaning not always as clear to outsiders. In the U.S.A. there exist certain religious circles numbering in all some hundreds of thousands of adherents among whom the phrase "Our citizenship is in heaven," and other similar phrases, are in frequent use as arguments against doing anything which appears to them to be contrary to that citizenship, such as taking part in the celebration of events connected with the shedding of blood, etc., etc.—that is to say, in exactly such a connection as Mr. McCaleb used the phrase in his reply to the Independence Day Committee—and that without the slightest thought of such phrases being so construed as to be a renunciation of their American citizenship. Indeed, a member of one of these groups not so very long ago sat for years in the U.S. Senate,

I am in possession of a Divinity diploma given by an American Divinity school, and offer the above as testimony, believing it to have important bearings upon the case.

Your obedient servant, B. C. FRY.
Sendai.

[We should like to know how a country would fare if every member of its population entertained a conscientious scruple against taking up arms in defence of the hearth and home. Members of religious circles should remember that they are human beings as well as propagandists of a religious creed, and that devotion to the Church does not relieve them from the misfortunes of humanity or absolve them from the duties of citizenship. All this appears to us to be a quaint commentary on the charge recently preferred in the correspondence columns of the Japan Mail that the Roman Church holds itself superior to the civil power. Is not Mr. Fry's argument an emphatic assertion that every believer in the Bible is entitled to disregard the very chief of all the claims that the civil power has to make on him?—ED. J.M.]

SOME CONCLUDING REMARKS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The Editor in his last editorial betrays excitement. Facts are stubborn things and hard to deal with, except to admit them. No doubt it would have made a much better showing for the Minister if the Editor's two long rejoinders to my brief statement had been allowed to pass unquestioned. My apology for encroaching on so much of your space is that nothing but documentary evidence has seemed to be of any avail with the Editor: this required space.

The issue now is that I "made a public statement" which, "coupled with doubts which had already arisen," compelled the Minister to take action. The "public statement" needs no further notice; but to attempt to throw suspicion on my past record as a U. S. citizen is very unkind. There is not the slightest occasion for it except to sustain a bad cause. What can be said of me in this regard can be said of (say) two-thirds of the U. S. citizens in Japan, (that I have failed to take out a U. S. passport) but since this "couples" no "doubts" with their citizenship I fail to see why it should in my case. The Editor is therefore under moral obligation to present some evidence of such a statement or else make another frank confession that he was again misled. The dispatch from Washington means no more than that I have not taken out a U. S. passport. The entire extent of their knowledge in the matter is what has been sent from the Legation in Tokyo. The stern fact therefore stares the Editor in the face, why should "doubts" be "coupled" with me for this omission and not with another single citizen dwelling in Japan for a like omission!

As to the omitted clauses referred to, the Editor asks, "Why does not Mr. McCaleb quote them?" This is in exact keeping with the spirit in which all my statements have been received till backed up by the proof. To simply say the form the Editor quotes was written out by my "own hand" is quite misleading. At his request I only copied it after the Minister had written it. It was his own document not mine. After maturer consideration it became unsatisfactory and I rejected it. The form I had suggested containing the two clauses mentioned was this:—"Further, I do hereby say that, as far as I conceive it to be in harmony with the word of God, I will defend and support the Constitution of the United States against all enemies foreign and domestic; that, so far as is in keeping with God's word, I will bear true faith and allegiance to the same; and that I take this obligation freely, without any mental reservation or purpose of evasion." The two clauses underscored are the ones the Minister would not accept, saying that "It begged the whole question." When asked what "support the Constitution" meant he said it meant to take up arms and fight, and that a man who would not do so was not worthy the country's protection. The additional reason that led me to decline all forms, either suggested by myself or the Minister, and even the passport without signing any form, was that I learned that by such I was still not to be regarded as a citizen enjoying full franchise, and that the matter had already been referred to Washington. That the "Government in Washington has given judgment against" me does not signify, since I am but an obscure citizen and was never known by name at Washington till introduced under the colouring of Minister Buck; he is the Minister Plenipotentiary Extraordinary, having full power to act for the State. It is easy to see how the Government could not go against his judgment in favour of mine; moreover, as the dispatch clearly shows, the State Department, like the Editor, was misled into believing that to grant a Japanese permit without a U. S. passport was to "furnish an exception" to the "rule," and not that I was only pleading for that

uniformly granted to the majority of others. Besides, when appeal is made to strict adherence to the law I recognize that I am placed at a disadvantage. But it is only man's law, and man has felt that he could with the utmost propriety "exercise discretionary power" in regard to it in the case of every citizen that has ever come to Japan except myself. I have repeatedly asked, but in vain, for a single case where an American citizen was compelled to take out a U.S. passport, or take the Oath of Allegiance before being granted a Japanese passport. Up to date not a single case can be produced, myself excepted. Why this discrimination? And why must appeal be made to Washington to know if McCaleb should be granted a Japanese permit without taking the oath when two-thirds of the U.S. citizens in Japan are in precisely the same condition, about which no mention is made whatever?

I fail to reconcile the spirit of "long-suffering" supposed to have been exercised toward me, with that of being slapped in the face. The truth is they have "slapped my face" from first to last. I was called up in a most peremptory way, as the correspondence will show, was told that my head was all wrong, was very foolish, could have no passport till I took the Oath of Allegiance, ought not to be in Japan, was not fit to teach Japanese children, and finally was told (I have witness to it) that my own conscience told me when I said I was discriminated against that I was telling that which "is not so," hence not only lying but knew it. And this is "long-suffering"! It may also explain somewhat why my case is hopeless in ever coming to a mutual understanding. I am not cast down, however, at being slapped in the face. Jesus was buffeted and spit upon; the disciple is not greater than his Lord and is instructed when smitten upon one cheek to turn the other also. "Blessed are ye when men shall reproach you, and persecute you, and say all manner of evil against you falsely, for my sake. Rejoice and be exceeding glad; for great is your reward in heaven; for so persecuted they the prophets which were before you." I think I have a right to be a very happy man.

Most respectfully, Yours,

J. M. McCALEB.

P.S.—Thanking the Editor for the kindness shown I shall not ask further space in regard to this matter.

Tokyo, October 25th 1897.

[The best we can do for Mr. McCaleb is to leave him the last word. It has been a painful controversy, and if Mr. McCaleb ends consolation in kissing a rod that seems to us imaginary, we shall say nothing to deprive him of his resource.—Ed. J.M.]

PROTESTANT GERMANY & TURKISH ATROCITIES.

TO THE EDITOR OF THE "JAPAN MAIL"

SIR—I have perused Doctor Christlieb's letter with much interest. My statement concerning the deplorable attitude of Germany and its pulpit toward the massacred Armenians was based mainly on the general newspaper reports, and on the assertions of many Armenian refugees whom I met in New York last year. It was from the latter I learned that during the terrible Constantinople butchery the gates of the German embassy were shut and shelter refused to the terror-stricken women and children. I knew that a tardy denial was made by the German Ambassador, but it was supplemented by opinions such that, if I were an Armenian, the choice between the Turkish sword and German hospitality would have been very hard for me to decide. It was from the semi-official German newspapers I learned that "the bones of a single Pomeranian soldier were more valuable to Germany than the whole Armenian race." It was from many other reliable sources I learned that a son of the lamented Greek scholar, Dr. Curtius, after visiting Armenia and seeing the devastation of the Christian villages, started a periodical mainly devoted to the Armenian cause, with the hope that the Protestant clergy would espouse the cause of the oppressed Christians, but his noble endeavour proved abortive and fruitless, as the clergy, out of either apathy or fear, kept silent. These instances will prove that I was not totally ignorant of the real state of the Armenian question in Germany as the doctor confesses himself to be in relation to the same question in America. Therefore, while Christian liberty has and is still suffering in Germany—as the Doctor's own letter proves—it seemed to me supremely incongruous, if not absurd, for a German clergyman to warn the Japanese nation of the impending danger to its true civil liberty from the Roman hierarchy! However, although the attitude of the German Protestant clergy towards the Armenian question is not satisfactory to Dr. Christlieb himself, the Doctor's explanation obliges me to withdraw my

statement and apologize for the acerbity of its language. This, as a Christian, I do readily and gladly.

Concerning the primary subject which led to this controversy, allow me, in way of explanation, to say, that I did not intend to attack Protestantism; I was simply stating the incontrovertible fact that during its four centuries of existence it has not developed an altogether immaculate history; and neither is its present position absolutely invulnerable. A few points, among many which I mentioned, are, in my opinion, great dangers threatening the very existence of Protestantism as a progressive organism. And as long as Christianity is faced by so many dangers, for Christians to fight to-day about their own and their ancestors' past faults appears to me childishly foolish, if not wicked.

On the other hand, I must say that I am totally bereft of all prejudice against the Roman Church. I wish God's abundant and eternal blessings upon the labours of all her godly missionaries in all foreign lands—Japan not excepted. And in my opinion the recent unprovoked attacks made upon the French Catholic Mission in Japan by several Protestant missionaries have left a terrible stain over the good name of Protestantism that tears of poignant repentance shed for years will be unable to efface.

As this note is simply an apology and an explanation, and as I do not intend to write to the *Weekly Mail* on this subject any further—resting assured that your intelligent readers can form impartial judgment about the assailed Catholic Missionaries and their Protestant detractors—I beg you to give me a little space in the columns of the *Daily Mail*.

Sincerely Yours,

ISAAC DOOMAN.

Tokyo, Oct. 26th.

(It seems only fair to publish this letter in the *Daily Mail*.—Ed. J.M.)

CHINESE RAILWAYS AND SILVER.

The following sanguine letter appears in the *Economist*:

SIR,—By mail advices just to hand from North China, it is gratifying to learn that at last railways are about to be energetically pushed on in and around Shanghai. The line from the latter port to Woosung, a distance of some twelve miles, has been already begun, whilst the line to Hangchow, a distance of 200 miles, has been surveyed, and a survey has been effected between Shanghai and Soochow. These three lines will be under the direction of Sheng, who, it is reported, has recently sold his large cotton mill to a European syndicate for 2,600,000 taels, so as to provide him the means for extending his railway enterprises. Chang-Chi-Tung, another powerful Chinese Governor, was about to commence the great line extending from Hankow—some 600 miles up the Yangtze—to Tientsin and Peking, and work was to begin towards the middle of this month.

It is difficult even to form a rough estimate as to the cost of the fore-mentioned railway lines, but the amount is likely to be at least £8,000,000, such as wages, cost of land, rails, bridges, and general railway plant, most of which will be absorbed in China, as even rails and most plant can be manufactured at Sheng's huge works, near Hankow. It is often asked if railways will pay well in China. I think we may have no doubt as to the fact that they will pay well, and that this is the main reason why the influential Chinese are so anxious to construct them. The average net earning power of the Japanese railways may be put down as 9 to 9½ per cent., but in China not only should the cost be considerably less, as the country is comparatively flat—indeed, perfectly flat from Shanghai to Hangchow, and from Shanghai to Soochow, and the lines go through by far the most densely populated portion of China, whose population may be fairly estimated at 350,000,000 and comprising about the most hard-working and industrious people in the world.

It is believed that a large portion of the £16,000,000 loan which is being negotiated at the present moment in Peking will be available for construction of railways, as the amount payable to Japan would be some £10,000,000 minus the interest which would be saved by prompt payment.

Besides the special railway lines above mentioned, the Chinese officials talk of having one from Canton, the capital of the South, to Hankow, which in time would give free access in all seasons to the Northern capital Peking, no doubt a most important object for China.

In the event of this large loan of £16,000,000 being successfully negotiated or floated, it is quite evident that the bulk of the balance, say £5,000,000, will be remitted out to China in silver in gradual

instalments as it may be wanted, because, barring locomotives and certain specifications for special bridge work, very little material will be wanted from Europe or America, as the Chinese, as already remarked, can supply everything from their huge works up the Yangtze; and, if, if right in my contention, before very long we may see a very steady effect on the silver market, as well as on Eastern exchanges. At the present low price of, say, 24d per ounce, even two millions sterling worth means a very large quantity of the metal, and I doubt very much if even half the silver mines in America can live at these rates. Whilst wages and living in Japan have increased fully 35 per cent. since the war, prices have remained comparatively stationary in China, and at the present moment the difference of exchange between China and Japan is quite 5 per cent. in favour of the former as an exporter of her produce and manufactures, and if such a state of matters continues, the cotton mills of Shanghai and elsewhere in China must have a most brilliant future before them. I remain, &c.,

ORIENT.

London, August 20, 1897.

P.S.—Last advices from Peking state that the line newly opened will easily earn and pay 10 per cent.—that is, the Tung Koi, Tientsin, and Peking Railway, and will do even better as time goes on.

LATEST TELEGRAPHIC NEWS.

(FROM THE "JAPAN TIMES.")

BIMETALLISM.

London, Oct. 22.

The *Times*' statement of the 19th inst. that the Cabinet has decided upon declining to reopen the Indian mints or to enter the proposed monetary conference, but that the Government will very likely intimate that it will be prepared to consider further or alternative proposals by the United States and France for the rehabilitation of silver, has been confirmed.

Correspondence on the silver question has been published stating that France and America are prepared to open their mints to the free coinage of silver and gold, such silver being legal tender to an unlimited amount at a ratio of fifteen and a half to one.

The Government of India has been arguing at great length and with the most exhaustive reasoning against the reopening of the Indian mints. It is believed that the present difficulties are nearly over, and that it will succeed in the near future in establishing a stable rate of exchange at sixteen pence.

The Marquis of Salisbury, having summarised the objections of the Indian Government, has declined the American proposals, and the United States Envoys have abandoned their intention of going to Germany, considering that the British decision ends the matter.

ITALY AND EGYPT.

The Italian and Egyptian Governments have arranged the details for the surrender of Kassala, and operations will be commenced in November. It is undecided yet whether Egyptian or Indian troops will garrison Kassala.

RAILWAYS IN AFRICA.

The first train over the new railway has arrived at Bulawayo.

NEW REGIMENTS IN AFRICA.

The War Office is sending 35 specially trained non-commission officers to the Gold Coast and Lagos to train new regiments now being raised to the number of 2,000 men.

SPAIN AND CUBA.

London, Oct. 25.

The Cabinet at Madrid has drafted a Note to America stating its intention of granting autonomy to Cuba, and complaining strongly of the failure of the

United States Government to arrest the filibustering expeditions fitted out in American ports.

FRIGHTFUL RAILWAY ACCIDENT.

London, Oct. 26.

An express train on the New York Central Railroad became derailed on an embankment and fell into the Hudson River, twenty-eight persons being killed.

MORE MILITARY MOVEMENTS.

Six companies of the Seaforth Highlanders and a battery of mountain guns go to Malta from Canada.

TURKEY AND GREECE.

London, Oct. 27.

The Turkish and Greek delegates have agreed upon all the articles for a definite treaty of peace, with the exception of that for compensation to private persons who sustained losses through the war and the question of Greek consular jurisdiction.

THE GOVERNOR OF CRETE.

Turkey and the Powers have agreed upon the choice of Colonel Shaeffer, of the Luxemburg Army, as the Governor of Crete. He is able and vigorous, a good linguist, and conversant with the East.

A VISIT TO OSMAN DIGNA.

The column under Colonel Hunter has left Berber, and is moving against Osman Digna, on the Atbara.

THE CHINA LOAN.

The Hooley-Jameson loan scheme turns out to be abortive, and China is now negotiating with the Hongkong and Shanghai Banking Corporation.

THE DARGAI AFFAIR.

The enemy's loss on the Dargai Heights was a thousand killed and wounded. Captain Robinson, of the Gurkhas, who was wounded in this action, is dead.

CHESS.

All Communications to be addressed to the Chess Editor.

The Yokohama Chess Club meets at 184, Creek-side.

The Tokyo Chess Club holds its meetings 3, Uchi-Saiwai-cho Itchoine (next to the Tokyo Club).

SOLUTION OF PROBLEM No. 342.

- WHITE. BLACK.
1—B to K B 6 1—P takes B
2—B takes P (K B 7), mate
2—Q to K Kt 4, mate 1—R takes Kt (or moves)
2—Kt to Kt 7, mate 1—R takes B (or moves)
2—B to Q 7, mate 1—Kt takes Kt
2—Kt takes B, mate 1—B to B 2
2—R takes P, mate 1—B any other
etc., etc.

Correct solutions were received from W.H.S., P.E.F.S., and D.D.

PROBLEM No. 344.
By A. KANSELL.

White to play and mate in three moves.

YOKOHAMA CHESS CLUB.

Owing probably to the races, the attendance at the Y.C.C. on Thursday last was very poor, in marked contradistinction to the successful gathering on Monday, when some lively skirmishes took place. The first game in the Challenge Tourney, viz., Mendelson v. Friedlander, was played and attracted the attention of many onlookers. Mr. Mendelson played remarkably well, and had he been equipped with a little more experience of the "end game," should have scored an easy victory. As it was, his opponent managed to queen a Pawn and won. The second game in this match is put down for next week. Other challenges on the notice board are:—Storck v. Hodges and Pollak v. Tennant.

An interesting event will be the consultation game, to be played next Monday at 5.50 sharp, between teams captained by the President and the Secretary. Members desirous of taking part are requested to turn up punctually. The game will be published in this column.

SINGAPORE.

The Singapore Chess Club has arranged a tournament to commence on the 4th of next month. Two prizes will be given viz., six and three months' free subscription to the *Straits Times*, offered by the proprietors; and a special prize for brilliancy offered by Dr. T. H. Stephens.

BERLIN INTERNATIONAL TOURNAMENT.

The Berlin international chess tournament is now a thing of the past. Charousek was successful in carrying off the first prize, with Walbrodt a very close second, only half a point dividing the two. Blackburne was placed third in order of merit, Janowski fourth, and Burn fifth, while Alapin, Marco and Schlechter divide the seventh and eighth prizes. The score follows:—

PLAYERS.	WON.	LOST.
Alapin	11½	7½
Albin	3	16
Bardeleben	18½	18½
Blackburne	13	6
Burn	12	7

THE NEWNES CUP CONTEST.

The circular letter, issued by the Brooklyn Chess-club and sent to the principal Chess-clubs of the United States, asking for their co-operation in reference to the cable-match of 1898, which we mentioned some time ago in this column, has not brought about that reconciliation which, doubtless, the senders of the letter desired. The following comment by Reichelm, in *The Times*, Philadelphia, indicates that the Franklin Club will not accept the invitation:—"In the beginning of 1896 the Brooklyn and British Chess-clubs framed a lot of articles to govern a so-called Anglo-American match, in which the two clubs assumed the leadership of their respective countries. Two contests of the kind were played, the Brooklyn Club winning the 1896 event and the British the 1897 match. The latter event appears to have cooled the ardour of the Marean-Elwell management of the Brooklyn Chess-club, and in consequence a less pretentious Board of Managers now rule that club. Now, while we are very glad to note this change of base, the fact still remains that the Newnes-cup cable-

contest is purely a Brooklyn Chess-club match on this side of the water, and we do not see how any other club, as a club, can take part in the same under the present rules that govern the trophy."

A LASKER BRILLIANT.

On August 16th, Lasker gave the odds of a Knight to a comparatively strong antagonist in the Kaiserhof Café, Berlin. The game had progressed until the position was as follows:—

It was Black's move and he played Q to Q sq. The end was brought about in five moves:—

- White—Lasker. Black—"Opponent."
P takes B Kt takes P
P to R 6 Q to Q R 4
Q to Q B 4 KR to K sq
Q takes K B P ch K takes Q
Kt to K 7 mate.

Johnston, Miss Fanny Wand, Mr. Geo. Copeman, Mr. R. G. E. Foster and Japanese servant, Mr. W. and Mrs. A. Treneshim, Mr. F. Stuart Jones, Mr. H. W. Minum, Mrs. Broadhurst, Miss Trew, Mr. T. Haggard, Dr. E. V. Van Tonzebuam, Mr. C. H. Nugent, Rev. J. C. Gibson, Mr. H. J. Rothwell, Mr. A. W. Bain, and Mr. G. Baumerman, in cabin.

Per Japanese steamer *Kobe Maru*, from Shanghai via ports:—Mr. and Mrs. H. Mizukami, Mrs. Y. Shibayama, Mrs. K. Nagai and 2 children, Lieut. Y. Hosoi, Mr. T. Kawamura in cabin; Mr. and Mrs. I. Komine, Mr. K. Inouye, Mr. M. Ogata, Mr. Leang Che Yaen in 2nd class; 35 in steerage.

LATEST COMMERCIAL.

IMPORTS.

No movement has yet taken place in piece goods, either shittings or faucies, and woollens are equally stagnant. A small business has been transacted in yarns, at slight reductions from quotations; but buyers are loath to place any considerable orders for arrival. A slight fall has occurred in quotations for raw cotton, American and Chinese, as good reports have been received of the crops in the United States and China; the Indian crop, however, being considerably short of the average.

COTTON PIECE GOODS.

	PER PIECE.
Grey Shittings—8½ lb., 38½ yds., 39 inches	\$2 50 to 2 80
Grey Shittings—9 lb., 38½ yds., 45 inches	2 80 to 3 35

RAW COTTON.

	PER POUND.
American Middling	\$20½ to 21
Indian Broach	20 to 21
Chinese	20 to 20½

IRON.

The improvement noted last week continues, and there is a good demand at current rates for iron, in rods, plates and pig.

	PER POUND.
Round and square 1 inch and upward	4 15 to 4 60
Iron Plates, assorted	4 20 to 4 50
Sheet Iron	5 10 to 5 30
Galvanized iron sheets	9 20 to 10 50
Wire Nails, assorted	6 00 to 6 50
Pin Plates, per box	5 90 to 6 00
Pig Iron, No. 1	2 05 to 2 20
Hoop Iron (1 to 1½ inch)	5 00 to 5 15

KIKOSKNE.

The market is steady at current rates and a fair amount of business has been done on a small scale. Arrivals and cargo afloat are fully up to requirements.

	PER POUND.
American	\$2 00 to 2 15
Russian	2 00 to 2 15
Langkat	—

SUGAR.

A steady business has been done in Brown, Manila, Chinese and Formosa at current quotations, and a fair amount of sales has been effected in White refined, at former rates.

	PER POUND.
Brown Takao	\$3 90 to 4 10
Brown Manila	4 20 to 4 90
Brown Daitong	3 20 to 3 35
Brown Canton	3 30 to 4 20
White Java and Penang	6 50 to 6 60
White Refined	7 30 to 8 90

EXPORTS.

RAW SILK.

Business has dropped off a little during the past week, but a fair number of transactions have taken place. Holders are firm and buyers not disposed to purchase largely without some concession. Stocks have been reduced and now amount to less than 5,000 piculs of all sorts. Shipments during the interval have been 632 bales for Europe per *Verona* on the 24th, and 549 bales per *Mogul* for America on the 25th.

GREY WHISKERS

EYEBROWS, &c.

GEO. COURTICE'S

Liebig

GOES FARTHEST.

Added to gravies and soups it acts like a cook's talisman; but always look for the BLUE SIGNATURE; there are imitations which do not taste so nice, and are not so carefully manufactured.

MILKMAID BRAND CONDENSED MILK

The "Milkmaid" Brand is guaranteed to contain all the cream of the original milk. In the process of manufacture nothing but water is removed, nothing but the best refined sugar added.

Avoid low-priced brands from which the cream has been abstracted, and ask for the "Milkmaid" Brand, the best for all purposes.

Trade Mark on

every Casting.

Macfarlane's Castings, PLAIN AND ORNAMENTAL, OF EVERY DESCRIPTION.

"SHARP, CLEAN, AND FULL OF CHARACTER."

ORNAMENTAL CONSTRUCTIVE WORK OF EVERY DESCRIPTION.

VERANDAH, BALCONIES, BANDSTANDS, ARCADES, KIOSKS, CONSERVATORIES, ROOFS.

THE GREATEST WONDERS OF MODERN TIME HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says:—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammation.

Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says:—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a spoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors throughout the World.

Printed and Published for the Proprietors, at 51, Main Street, Settlement, by ARTHUR BELLAMY BROWN, of "Nooklands," No. 156, Bluff, Yokohama.—SATURDAY, OCTOBER 30, 1897.

SUMMARY OF NEWS.

THE first snow of the season fell at Hakodate on the 30th ult.

THE Marine Exhibition at Kobe is to be closed on the 30th of November.

MR. JAMES I. DODGE, of Indiana, has been appointed U.S. Consul at Nagasaki.

A RUNAWAY horse a few days ago, knocked down and injured ten persons in Tokyo.

SIR RUTHERFORD ALCOCK, at one time British Minister to Japan, died in England on the 2nd instant.

NORWAY is sending out a steamer to search for M. Andree, who went in a balloon to reach the North Pole.

SINCE the great earthquake of 1891, Gifu has experienced 3,574 shocks, or tremors, and Nagoya 1,827.

THE amended draft of the Hokkaido Administrative Regulations is expected to be promulgated shortly.

THE funeral of the late Duchess of Teck was to take place at Sir George's Chapel, Windsor, on the 3rd inst.

THE Japanese iron-clad *Fuso Kan* grounded and sank near Nagahama on the 29th ult. No loss of life occurred.

GENERAL BLANCO has issued a pacifying proclamation in Cuba, promising autonomy and oblivion of the past.

H.M.S. *Redpole's* variety and minstrel company will give an entertainment in the Public Hall on Tuesday next.

LORD GEORGE HAMILTON estimates the cost of the Indian Famine to the Indian Government at ten millions sterling.

THE sealing conference between Japan, Russia and the United States have agreed upon the suspension of pelagic sealing.

THE editor of the Osaka *Mainichi* has been sentenced to 45 days' hard labour and a fine of 6 yen for libelling an army surgeon.

FROM the commencement of the Indian Frontier operations, up to Oct. 9th, the British losses have been 190 killed and 580 wounded.

THE cable-steamer *Okinawa Maru* left Yokohama for Formosa on Monday to repair the broken cable between Formosa and Foochow.

A fire occurred at 47 Minami Nakadori, native town, Yokohama, on the morning of the 3rd inst. by which one house was destroyed and five damaged.

QUOTATIONS for Japanese War and Consolidated Bonds in London, which have been standing at £99 10s. per 1,000 yen, have of late fallen to £99.

THE steamer *Iyo Maru*, 620 tons, built at the Kawasaki Yard, Kobe, to the order of the Iyo Steamship Company, was successfully launched on the 30th ult.

IT is reported that Mr. Hoshi, Japanese Minister to the United States, will leave Yokohama for the United States on the 9th of November by the steamer *Gaelic*.

A BOY employed in the book-store of Messrs. Maruya & Co. of Nihonbashi, Tokyo, who was found dead near the Yoro Bridge, Nihonbashi, on the night of the 29th ult., is proved, from the *post mortem*, to have been strangled.

The Nihonbashi Police have arrested on suspicion two jinrikisha coolies who ply for hire near the Yoro Bridge.

A SEAMAN named William Cuthbert has been committed for trial for having stabbed and killed another sailor named James Gerard, on board the British ship *Port Caledonia* at Nagasaki.

THE Russian Representative in Seoul is said to have forced the Korean Government to dismiss Mr. McLeavy Brown, Financial Adviser and Chief of the Customs, and to appoint a Russian, M. Alexieff, in his place.

MR. ARAKAWA YOSHITARO, Secretary of the Kanagawa Prefectural Office; Mr. Hara Zenzaburo of Yokohama and twelve others have been appointed to organize the proposed Kanagawa Ken Agricultural and Industrial Bank.

THE British steamer *Breconshire*, which arrived in Yokohama on the 30th ult. from New York, is reported to have gone aground near Uraga, Sagami Province, at dawn on the 30th, but floated off about 2 p.m., without sustaining any damage.

NEGOTIATIONS are going on between the Kanagawa Kencho and Mr. Takashima Kayemon, of Kanagawa, with regard to the removal of the fish-and-vegetable market at Minatocho, Yokohama, which has been established there during the past ten years.

THE Cabinet of Japan is just now passing through a political crisis, the Progressionists having severed their connection with the Government. A number of Progressionist officials have resigned or been dismissed, and Count Okuma, Foreign Minister, has tendered his resignation.

THE Emperor's Birthday, the 3rd inst., was favoured with the most delightful weather imaginable, and was taken advantage of by a very large proportion of the foreign community for a day's outing. The town was gay with bunting. There was no official celebration, the Court still being in mourning.

THE Import market remains very stagnant, nothing at all being done in cotton piece goods or woollens, and very little in yarns. The cause of the general falling off of business during the past month or two is attributed, by vernacular papers, to an anticipation on the part of Japanese dealers and merchants that after the gold metallic standard was introduced, in October, there would be a general fall in prices of commodities generally. Under these circumstances merchants withheld from buying, except for immediate wants. But it has now been discovered that the effect of the change in the monetary standard has not been as expected, and prices are still appreciating. With regard to the business in yarns, one of the principal causes of the falling off of business, is the lowering price of American raw cotton, which enables the local spinning mills to compete more successfully with imported yarns. The cause first mentioned has affected the business in metals and kerosene, which has been very slack during the past week. Another reason has been the increased rates of interest on loans demanded by the banks. Exports have also declined considerably. The silk market has been quiet and little business has been done, while transactions in tea have been reduced considerably. The stock in the market is small, and the producing districts have been almost depleted. The season is finishing earlier than usual, but has been a good one for producers and dealers. Exchange has slightly improved, in sympathy with the rise in the price of silver bullion in London and New York.

YOKOHAMA: SATURDAY, NOV. 6TH, 1897.

BIRTHS.

On the 14th Oct., at the Peak, Hongkong, the wife of HAROLD BAXTER, of a son.

At Foochow, on the 17th Oct., the wife of WILLIAM GRAHAM, of a daughter.

On the 25th Oct., at Shanghai, No. 1, Nanking Road the wife of PAUL ZURN, of a son.

At Wuhu, on the 22nd of October, the wife of Dr. EDGERTON H. HART, of a son.

MARRIAGES.

On the 28th of October, 1897, at H.B.M.'s Consulate-General, Shanghai, by Sir Nicholas J. Hennen, and afterwards at the Masonic Hall, by the Rev. Samuel Dyer, B.A., PAUL O'BRIEN EDWARD TWIGG to ALLEN ADRIAN JESSUP-CLARK.

On the 28th October, 1897, at H.B.M.'s Consulate-General, Shanghai, by Sir Nicholas J. Hennen, and afterwards at Holy Trinity Cathedral, by the Rev. H. C. Hodges, M.A., HERBERT ALFRED JOHN, second son of the Rev. W. D. MACHAY, Ducklington, Oxon, to MARGARET ANN, third daughter of the late Neil Sinclair, Esq., Glasgow.

On the 27th of October, 1897, at H.B.M.'s Consulate-General Shanghai by Sir Nicholas J. Hennen, and afterwards at Trinity Cathedral, by the Rev. H. C. Hodges, M.A., Dr. W. A. DUNCAN COOPER, eldest son of the late William Cooper, A.M.I.C.E.P. & O.S.N. Co., to JEANNIE PRENTICE LAW, eldest daughter of the late Alexander Law, Shanghai.

On the 9th October, 1897, at H.B.M. Consulate, Amoy, before C. T. Gardner, Esq., C.M.G., H.B.M. Consul, and subsequently at the Union Church, by Rev. G. R. Vallings, Chaplain to H.M.'s Forces, Hongkong, TOM GRAVENS GOWLAND, eldest son of THOMAS GOWLAND, Newtown House, Rathgar, Dublin, to CORA MIM SAUNDERS, fourth daughter of JOHN CORNISH SAUNDERS, Amoy.

SPIRIT OF THE VERNACULAR PRESS.

It may easily be supposed that the friction now prevailing in political circles occupies a large share of journalistic attention. The *Fiji Shimpō*, which recently surprised the public by abandoning its wonted attitude of neutrality and attacking the Cabinet in measured but severe terms, now urges the advisability of a compromise between the Progressionists and the Ministry. It is not to be denied that the former have much justification for the impatience they display. Numerous mistakes have to be laid to the Cabinet's discredit and the apprehensions of the Progressionists that their popularity will be forfeited if they maintain their association with the authors of such blunders, can not be called unreasonable. On the other hand, Progressionists themselves have shown a conspicuous want of tact. They have preferred demands couched in such a form that the Ministers of the Crown can not possibly concede them publicly. They have insisted, for example, that the "foreign elements" should be eliminated from the Cabinet, a demand which amounts to dictating the composition of the Ministry. They have forgotten that there are conditions by which the Government itself has to be guided, and they have failed to perceive that any Cabinet acceding to the demands which they have so peremptorily formulated, would forfeit all dignity in the eyes of the nation. This is not the time to press an inquiry as to whether the administration is to be conducted in accordance with the will of the people or in accordance with the independent resolves of the Ministry. It must be assumed that the Progressionists settled that point when they agreed to support the present Cabinet. What they have now to consider is the result of adhering to their extreme attitude. Nothing is easier for them than to sever their connexion with the Cabinet, and revert to their familiar rôle of opposition. Would there be anything gained by such a step? On the contrary, would not the issue be heavy sacrifices without any compensations? The Progressionists can not hide from themselves that they have secured a substantial part of the advantages for which they fought in former days. They have obtained a practical admission of the fact that relations of intimacy between the Cabinet and political parties are necessary to the successful conduct of administrative affairs. They have, moreover, succeeded in getting their own partisans admitted to official positions of trust where their voices are heard in the councils of State. If they abandon those achievements, in a moment of hasty resentment, will they not invest all political alliances with a distinctly deterrent aspect for the present Cabinet, or for any future Cabinet? No Ministry can twist and turn so as to catch every breeze of popular caprice. The Government, having just admitted one set of politicians into its ranks, can not push them out at a moment's notice, and replace them by a different set. Neither can it go abroad seeking new allies to serve in place of those by whom it has been so incontinently abandoned. The Progressionists must recognise that if they are to work efficiently with any Cabinet, they have to stand or fall with it. They can not take up a Ministry to-day and cast it off to-morrow. Compromise is their only course at present. The alliance of the Cabinet is just as important to them as is their support to the Cabinet. They must not drive their ally into an impossible position or force it to adopt a course that would fatally weaken it by impairing its dignity.

The *Nichi Nichi Shimbun* indulges in a little sarcasm. The world has been accustomed, it says, to seeing a Cabinet's policy traversed and its mistakes censured by the Opposition, but the Progressionists have furnished a new spectacle: They have shown us a Cabinet assailed by its own allies. The most hard-hearted observer can not but feel pained for a Ministry placed in such a predicament. As for the conduct of the Progressionists, the *Nichi Nichi* condemns it heartily. The public has been told that the representations made

by the Progressionists to the Cabinet were vague in character. On the contrary, nothing could be more explicit. They have demanded the removal of a certain group of Ministers. They have demanded that the Budget for next year should be re-considered, the plain alternative being that they will not pass it in its present form. They have demanded that the affairs of the Audit Board and of Judge Takano be properly dealt with, and they have condemned, in sweeping terms, the administration of Formosa. Nothing could be plainer than all this. But it is equally noticeable that not a word of complaint has been formulated with reference to foreign affairs, though the nation is agreed that great mistakes have been committed in that field. Of course the reason of such reticence is plain enough. The *Nichi Nichi*, after roundly denouncing the strange construction put by the Progressionists on the duty of allies, proceeds to lay bare what it regards as the real basis of the trouble, namely, dishonest tampering with members of the Diet last session. It attributes that corrupt proceeding entirely to the Satsuma Ministers, and says that having now secured the support of a number of disgraced politicians whom no sound party would be willing to readmit to its ranks, the Satsuma men are employing them as a kind of buffer against the assaults of their enemies, the Progressionists. The latter, too, are apparently so blind to the dictates of integrity that they are holding converse with the *Kodo Kai*, and seeking to secure the new party's cooperation. In short, the spirit of the *Nichi Nichi's* article is much more hostile to the Satsuma element of the Cabinet than to the Progressionists, a significant fact.

The *Mainichi* calls upon the Cabinet to adopt some definite decision. It sums up the situation thus:—On one side are Count Okuma and the Progressionists; on the other, Count Kabayama with Viscount Takashima in an attitude of rivalry; Marquis Saigō is playing the part of a mediator; Mr. Kioura, the Minister of Justice, stands between the two parties, neither specially respected nor specially disliked; Marquis Hachisuka and Viscount Nomura are almost outsiders, being regarded more or less as make-weights, and not entrusted with administrative secrets. The *Mainichi* does not assert that Count Okuma leads the Progressionists. Its representation of his relations with that Party is that, since the latter includes many political friends and fellow-thinkers of the former, it naturally results that the views advocated by Count Okuma from his seat in the Cabinet are endorsed by the Progressionists from their place outside. The relationship is, however, mistaken and misrepresented by a section of the public, who persist in thinking that Count Okuma uses the Progressionists as an instrument for forcing his own views on the Cabinet. As for the attitude of the Progressionists towards Viscount Takashima, it was never good, and of late the Viscount has come to be associated in their eyes with Counts Matsukata and Kabayama. The two latter naturally resent this unfriendliness, and the Progressionists, on their side, alleging that Count Matsukata and Kabayama have violated their engagements to the Party, openly describe them as breakers of their word (*Shokugen sha*). Viscount Takashima, also, has grown more and more distrustful of Count Okuma. In this way two opposing sections have arisen, the Progressionists and the Satsuma clique, and not only official appointments but also administrative acts are subject to their wranglings and rivalries. It is that evident the only exit from such a state of affairs is an agreement among the members of the Cabinet—an agreement to agree or an agreement to differ. They must know very well where the grounds of their dissensions lie. Let them be perfectly plain with one another. When all is said and done, the Government reflects the nation. These bickerings and squabbles, petty clouds as they are on the political horizon, can not fail to impair the national reputation. Whatever sacrifice of allies outside officialdom or of friends within may be entailed, it is necessary

that some definite line of function or cleavage should be struck out by the Ministry. If both parties can not work together, let one retire and the other put its fate to the test of practice.

The *Nippon* reviews the history of the Cabinet. It says that the foundations were essentially built with materials from Satsuma, and that no other materials would have been used for the superstructure, had that been possible. There was an absolute necessity, however, to go beyond the Satsuma politicians, and Count Okuma was accordingly invited to join. Count Okuma formulated his conditions, and they were accepted. That they provoked some opposition can not be doubted; but it was smothered, and an alliance was achieved. Then the Progressionists were taken into the combination. They, too, had their terms, and these being accepted by Count Matsukata and guaranteed by his association with Count Okuma, the Progressionists were content. At that stage a firm basis of administration seemed to have been achieved. But the stability of the situation suffered when the influence of Count Kabayama and Viscount Takashima made itself felt. Agreement between them and the Progressionists could scarcely be permanent. Then ensued another injurious step. The remaining three portfolios were given to relics of the Chōshū party. The Satsuma men may have intended that these Chōshū elements should serve as a check upon Count Okuma, but in that expectation they were disappointed. At all events, Count Okuma found himself wedged between two coteries, each more or less antagonistic to the other, and both distrustful of him, while the Progressionists found themselves in alliance with a Cabinet restrained in the performance of its pledges by the jealousy of some of the Satsuma Ministers, and weakened by the inertia of the Chōshū. The Progressionists naturally had no course to follow except to look to Counts Matsukata and Okuma for the fulfilment of their promises, and Count Okuma had only to look to Count Matsukata. But Count Matsukata was constantly drawn in another direction by his Satsuma affinities, and thus, finally, a crisis has been precipitated. Many people imagine that the solution rests with Count Matsukata. That is not the *Nippon's* opinion. It thinks that everything depends on Count Okuma. The Progressionists are not under Count Okuma's control. If he throws in his lot with them on the present occasion, they will hereafter support him. But if he abandons them, they will work without him. It is for him, then, to determine what issue the crisis will have. The *Nippon* estimates that should Count Okuma leave the Cabinet and should the Progressionists' support be thus lost to the latter, the Ministry can still get together about a hundred followers in the Diet, by means of the *Kodo-kai*, a section of the Progressionists, the *Kimishū* clique and others. But it will be perceived that the *Nippon* views the situation solely from the side of party politics and the Diet. It does not appear to recognise any other considerable potentialities.

The *Kokumin* strongly urges the Cabinet to stand firm. It maintains that the dignity of the Government is concerned, and that a ministry which allows itself to be pulled this way and that by party politicians can not hope to command the confidence of the nation. Count Matsukata promised the Diet last session that he would carry out his own policy by the time the Houses met again. Let him keep his promise resolutely. The proposed increase of taxation is an absolute necessity. The country's position demands it. The Government as well as the people have pledged themselves to a programme of military and naval expansion and productive development. They must not shrink from carrying it into practice. If the general appreciation of prices has the effect of making the programme more costly than the original estimate, that is not a sufficient reason to draw back. The Cabinet should boldly pursue the line of policy that seems to be dictated by the interests of the nation, and should appeal to the country if

embarrassing opposition is organized by a political party.

The *Shogyo Shimpō* declares that it is now too late to talk of revising next year's Budget. That revision might be undertaken with advantage if time permitted, our contemporary does not deny. On the contrary, it asserts very emphatically that the estimates include enterprises not of a pressing nature and expenditures which might properly be dispensed with. But the state of vacillation and uncertainty that exists at present is intolerable. The Government ought to go ahead, present its Budget to the Diet, and, at the same time, devote serious attention to curtailment and economy. As for increased taxation, the country is well able to support it, but if the taxes are increased for needless or ill-advised purposes, the people may justly complain. The article is not very conclusive.

HIGHER COMMERCIAL SCHOOL.

It goes without saying that national wealth and prosperity are the fruits of commerce and industry, and that to a nation whose ambition it is to play no mean part in the world's arena, commercial education is of prime importance. As one of the results of the *post-bellum* activity, commercial schools throughout the land have recently shown marked progress. That is especially true of the Higher Commercial School, where several new features have been introduced. One of these is the establishment of a School of Foreign Languages, with a faculty consisting of ten Japanese and seven foreign professors. Already the public have eagerly availed themselves of the opportunity thus offered them, more applications having been sent in than the school has room to receive. Another feature is the creation of a new course—the Professional Department—open to post-graduates—the object of which is mainly to train them for the Consular and Diplomatic services. More advanced courses of lectures are given here in Civil and Commercial Law, Political Economy, International Law, etc., besides further instruction in two foreign languages.

Much attention is paid in the school to the cultivation of a healthy moral tone and sound business principles. The students' association, organized with the hearty support and co-operation of the Director and Professors, holds its meetings occasionally to hear some prominent persons speak. At its last meeting Mr. Shimada Saburo, M.P. favoured them with an address on the necessity of commercial education and the study of foreign languages, as being the most powerful weapons in the peaceful warfare to be carried on in future both at home and abroad. The Director, Mr. Koyama, spoke on the cultivation of good manners and exemplary behaviour as the expression of refined sentiments, not incompatible, as is falsely believed, with true courage and fortitude. The speeches by the representatives of different classes were all filled with characteristic sentiments dealing with the responsibilities resting on their shoulders as the future leaders of their nationals in the field of commerce, deploring the low moral status and the ignorance of business methods and principles of the present-day merchants, etc. The meeting was entertained by the famous story-teller En-yū and the ever-favourite *Satsuma-biwa*, whose martial and historical lyrics, like the songs of rhapsodists or troubadours, seem to set the heart-strings of these sons of Yamato vibrating with all the ardour of patriotism and self-devotion. The school boasts of the most cosmopolitan set of men in the whole land. The following is the list of the names of foreign professors, except the Spanish professor, who is expected to arrive soon: English—Profs. A. Hare, E. Foxwell, R. McKerrrow; French—Profs. P. Jaconlet, F. Troubuois; Belgian—Prof. E. J. Blockhuys; German—Prof. E. Reimann; Russian—Prof. W. Fomenko; Italian—Prof. E. Binda; Chinese—Profs. K. Chin, T. Chang; Korean—Prof. S. Goh.

MONTHLY CUSTOMS RETURNS.

The following is a summary of the Customs Returns for September, showing the foreign trade of the Empire for the month:—

	1896.	1897.
	SILVER YEN.	SILVER YEN.
Exports	8,008,993.330	12,994,102.750
Imports	15,815,183.310	18,254,645.880
Total exports and imports	23,824,176.640	31,248,748.630
Excess of imports	7,806,190.280	5,260,543.130
CUSTOMS DUTIES.		
Exports	232,814.864	427,163.324
Imports	427,163.324	21,359.875
Miscellaneous	—	—
Total	660,000.000	681,338.066

TOTAL VALUE OF EXPORTS TO AND IMPORTS FROM VARIOUS FOREIGN COUNTRIES.

MR. TAKANO.

Rumours were circulated on Saturday to the effect that Mr. Takano, having persisted in maintaining his judicial position in Formosa, had been arrested by the police. Such was not the case, according to official information. It is true that Mr. Takano, in spite of the receipt of several orders to quit the Court of which he had been presiding Judge, persisted in remaining there, and that a posse of police, under the command of Mr. Isobe, Chief of the Taipei Police, finally proceeded to the Court, and intimated that unless the orders of the Governor-General were complied with, they should have to remove Mr. Takano by force. He then yielded, and quietly left the Court. The telegram adds that he will leave the island for Tokyo on the 3rd instant.

THE TREATY BETWEEN JAPAN AND PORTUGAL.

The Revised Treaty between Japan and Portugal has been published in the *Official Gazette*. It presents no novel feature, but the first article of the protocol provides that, one month after the exchange of ratifications, the General Tariff may become applicable to Portuguese goods imported into Japan, except in the case of twenty-two special products for which most-favoured-nation treatment is secured. These products are:—

TABLE B.

PRODUITS PORTUGAIS QUI JOUIRONT DU TRAITEMENT DE LA NATION LA PLUS FAVORISÉE À LEUR IMPORTATION AU JAPON.

NOTE.—Cette table s'applique non seulement aux produits de la métropole, mais également aux produits des colonies respectives, exportés de la métropole et la Macau.

Cacao en fèves et écale de cacao brut.
Café brut en fèves.
Candelles et bougies.
Chapeaux, y compris les chapeaux de feutre.
Cuirs de toute sorte.
Dentelles de toute sorte, en lin ou coton.
Fruits et baies : frais, salés, séchés, en saumure, sucrés ou préparés à l'huile ou au vinaigre, même en récipients de verre, de terre cuite, de fer blanc, ou autres hermétiquement fermés.
Huiles végétales (huiles d'olives, d'arachides, de sésame, de coco et de palme).
Huiles minérales.
Légumes non préparés ou en conserve.
Liège ouvré.
Ouvrages en métaux.
Ouvrages en tissus de coton, de laine ou de lin.
Ouvrages en cuirs.
Plomb en saumons, lingots et plaques.
Poissons marins, à l'huile, en récipients hermétiquement fermés.
Savons.
Sels de quinine.
Sucre.
Tissus de laine, de lin et de coton.
Verres à vitres.
Vins de toute espèce en fûts, barils ou bouteilles, quel que soit leur tirage alcoolique.

UNRAVELLING THE POONA TRAGEDY.

A Bombay telegram, dated 4th October says:—The man who has been arrested for the Poona murder is Damoder Chapkar, aged 28. He has had a most remarkable career, and confesses to having daubed the Queen's statue at Bombay a year ago. Concerning the Poona tragedy, he confesses that he had been seeking an opportunity to kill Mr. Rand for more than a month. On the night of the Diamond Jubilee Celebrations at Ganeshkhond, he followed Mr. Rand's carriage from Government House, accompanied by a confederate, who is still at large. When near a convenient and secluded spot he fired at Mr. Rand, while his companion shot Lieutenant Ayerst, because he happened to be near Mr. Rand's carriage and they were afraid he might intercept their flight. Their revolvers and swords were thrown into a well. The police having recovered these weapons, traced their owners. Damoder has incriminated a younger brother, who is now wanted by the police; and he is reported to have confessed that he was put up to execute the terrible deed by some wire-pullers.

THE "FUJI."

The new battle-ship *Fuji* arrived off Kannonzaki at daybreak on Sunday, and shortly after 7 a.m. anchored off the entrance to the harbour at Yokosuka. The naval port was crowded with visitors who had come from Tokyo and elsewhere overnight and filled all the hotels in the place. It had been intended that a fleet of steam launches and sampans should go outside the harbour to meet and welcome the battle-ship, but this portion of the reception had to be abandoned owing to the strong wind and heavy sea prevailing at that time. Later on, when the wind dropped a little, the *Fuji* was visited by hundreds of friends of the officers and crew, newspaper reporters, and sightseers generally.

THE POLITICAL CRISIS.

The *Yomiuri Shimbun*—which, of course, carries great weight at a time like the present—says that the Cabinet will not give any reply to the memorial of the Progressionists until the return of Marquis Saigo to the capital. It was the original intention of the Marquis to remain away until the 5th of November, but a telegram urging his speedy return has been despatched, and he is now expected to be back in a day or two. When he arrives the "Five Ministers"—Count Matsukata, Count Okuma, Count Kabayama, Marquis Saigo and Viscount Takashima—will hold a conference, and a reply will be given to the Progressionists through Baron Kusumoto. Meanwhile, it is alleged that, on the 25th instant, Marquis Ito and Counts Okuma and Matsukata met at Mr. Okura's villa at Mukojima, and discussed the situation—an incident that dispels any idea of strained relations between the leaders of the "ins" and "outs." As for the Progressionists, they are said to be split into two sections, of which one will be content to go on supporting the Cabinet if any form of compromise can be evolved, whereas the other will break away unless its demands are acceded to in full. Naturally the same rumour represents the Cabinet as seeking to turn the split to its own advantage. The *Kōdō Kai*, on their side, held a meeting on the 27th, and decided, it is alleged, to oppose the position taken by the Progressionists and to agitate for Count Okuma's retirement. The Japanese News Agency reports that, on the 26th instant, an anonymous letter reached Viscount Takashima, informing him that if Viscount Shinagawa were appointed Minister of Agriculture and Commerce, and Mr. Motoda Hajima made chief of the Legislative Bureau, the National Unionists *en masse* would support the Cabinet. Another rumour brings Baron Suyematsu upon the scene, and makes him say that the time is not ripe for anything like a union between Marquis Ito and Count Okuma. There are three periods of peril for the present Cabinet, according to the Baron; one before the Diet, one while the Diet is in session, and one afterwards. The Chōshiu statesmen intend to look on quietly until, at one of those periods, the Cabinet falls to pieces. Then they will step in and assume the reins of power.

The meeting of the Progressionists held on the 31st instant to consider the memorandum received from Count Matsukata, addressed itself first to the question whether the memorandum called for any reply, and after a brief discussion a resolution advocating a reply was adopted. There were 26 leading members of the Party present. Baron Kusumoto, who presided, read out a form of reply, but the meeting did not approve it. Considerable controversy took place, and finally a draft prepared by Mr. Inugai and amended by Mr. Otake, was adopted. It runs as follows:—

Your Excellency—We have the honour to state that we profoundly regret the fact that the points submitted by us for your Excellency's consideration on the occasion of our recent visit, found their way to public knowledge. Still, secrecy or publication in such a case is nothing more than a matter of procedure. We venture to hope that your Excellency will not in consequence of such a trifling point of procedure, mistake the responsibilities devolving on you as a Minister. We have nothing further to say and we trust that your Excellency will appreciate our meaning.

This document, which certainly does not exceed in the direction of explicitness, was forwarded to the Prime Minister the same day, and in the afternoon the Progressionists met again to consider the question of maintaining or severing their connexion with the Cabinet. There appears to have been not a little discussion, but finally it was decided, by a majority of two or three, that the connexion should be severed. A committee of five—Messrs. Ozaki Yukio, Otake Kwaichii, Nakamura Yaroku, Shiba Shiro and Inagaki Ki—was elected to draw up a manifesto in that sense, with instructions to submit it to a meeting of the head-quarters on the 2nd instant, preparatory to laying it before a general meeting of the Party on the 4th. The meeting further debated whether any members of the Party holding official positions should be required to resign before the 4th, but the majority voted in favour of leaving that point to be decided by the individuals concerned.

It does not appear to be by any means certain that the general meeting on the 4th will endorse the decisions arrived at by the head-quarters' meeting on the 31st ultimo. Indeed, there was considerable dissension at the latter with regard to the question whether the head-quarters had competence to decide between severing and preserving the connexion with the Cabinet. Mr. Haseba and eleven others maintained that the head-quarters did not possess the necessary power, but fourteen votes were recorded against them, and they are said to be endeavouring to influence the members to reverse that decision at the general meeting.

The decision adopted by the Standing Committee of the Progressionists, in the sense of immediately severing connexion with the Cabinet, is challenged by members of the Party who do not belong to the Committee. As to the number of these malcontents, we have no information, but they have addressed to their fellow-members the following circular, which appears in the *Fiji Shimpō*:—"We presume that you are aware of the principal points of the resolution adopted by the Standing Committee of the Progressionist Party on the present occasion. We consider that resolution errs greatly on the side of precipitancy, and we can not endorse it. That the Party having associated itself with the Cabinet should from time to time urge its views and objects for the latter's acceptance, is a matter of course. But that, irrespective of the important steps to be taken in the eleventh session of the Diet, the standing Committee, merely because of the receipt of a single memorandum from Count Matsukata, should hold a meeting and decide to sever the Party's relations with the Cabinet, was a most hasty proceeding, in our opinion. A question of such gravity, affecting, as it does, the most vital interests of our Party, ought to be approached with the utmost circumspection. There is no occasion to come to any sudden decision about breaking with the Cabinet, though a resolve to establish relations with it had to be taken at brief notice. Our desire is that the decision should rest with a general meeting, not with the Standing Committee. If that method be not adopted, a suspicion is suggested that some special motive for haste exists. We, therefore, who do not belong to the standing Committee, adhere to our opinion that the

Party's course should be determined at the general meeting, and we trust that you will endorse our view."

With regard to the idea that a section of the Progressionists, under the leadership of Mr. Shimada Saburo, will break away from the Party and support the Cabinet, strong doubts are now expressed. It is admitted that Mr. Shimada has not always run smoothly in his present harness, but his definite secession is another affair. Meanwhile, the National Unionists seem inclined to follow the example of the Progressionists. They held a meeting on the 2nd instant—according to their organ, the *Chuo*—and passed a resolution that they "disapproved of the proceedings of the present Cabinet, and found them contrary to Constitutional principles and unsuited to national progress." They further decided to appoint a committee of seven for the purpose of determining the Party's policy.

It is worth noting one of the effects of putting party politicians into administrative posts. The business of the Department of Agriculture and Commerce is now virtually at a stand-still owing to the resignations and removals of its controlling officials. It is without a Minister, without a Vice-Minister, without a Director of the Mining Bureau, without a Director of the Commercial Bureau, and without a Director of the Forestry Bureau.

Four of the "talents" were guilty of a slight oversight: they took part in the Progressionist meeting to denounce the conduct of the Government without previously resigning the offices they held under it. Instead of having the satisfaction of resigning of their own accord, they were consequently removed from their posts. These unlucky gentlemen were, Messrs. Ozaki, Minoura, Koizuka and Shiga: the first, a Councillor of the Foreign Office; the other three, Directors of Bureaux in the Department of Agriculture and Commerce.

THE REVISED TREATIES WITH FRANCE & AUSTRIA-HUNGARY.

The Revised Treaty with France was passed by the French Chamber of Deputies on the 28th instant, unanimously and without discussion. It appears that the Committee's report upon the Treaty was unreservedly favourable. We are therefore justified in assuming that the Senate's attitude will not differ from that of the Chamber. The delay in this matter, as we have more than once stated, was due simply to procedure. A certain routine had to be followed, and there does not appear to have been any special effort to expedite matters. But, on the other hand, there was no attempt to retard them. Last April, a rumour was circulated to the effect that the Committee charged with the duty of examining and reporting on the Treaty had raised objections with regard to the tenure of land. If such objections presented themselves to the Committee, they were never officially formulated. The French Government remained in ignorance of them; the Japanese Government never received any intimation of them either from its own Representative in Paris or from the French Authorities, and no reference was made to them when submitting the Treaty for the consideration of the Chamber of Deputies. In short, since the signing of the Treaty

no hint of a desire on France's part to modify its provisions has found official expression. We may add, here, that an agreement has been virtually reached with Austria-Hungary, and that the conclusion of the Revised Treaty in her case will probably be soon accomplished. As to its ratification, nothing can be certainly predicted, but there is a reasonable prospect of the whole business being finished by the end of the year.

Although the point is of small importance, there is a certain measure of amusement in recalling the wonderful stories that were formerly circulated in Yokohama about the French Treaty. Last April, the *Japan Gazette* published a sensational article denouncing the British negotiators and belauding the French. The former were described as "officials dressed in a little brief authority who acted with supercilious indifference to the claims of men whose future they were directing"; the latter as diplomats "whose wisdom might put Downing-street to the blush." The grounds of this crushing censure and ecstatic eulogy were clearly stated. "The Special Committee of the Senate," we were told, "did not understand why Japanese should be given the right to hold land in France if the French were not permitted to own land in Japan, and accordingly decided to have nothing to do with the Treaty unless the right were conferred. Count Okuma," the *Gazette* proceeded, "whose liberal views once nearly cost him his life, judiciously yielded the point, so that, thanks to a wise discrimination in Paris and an astute statesman in Tokyo, one of the worst drawbacks to the new Treaty was about to be removed." That was the story told by the *Japan Gazette*. The entire tale being a fiction, we denied it, but our self-confident contemporary "preferred to place credit in its informants' veracity to faith in the *Mails'* denials," and declared that time would demonstrate its accuracy. Time has played the *Japan Gazette* a scurvy trick in this instance. Indeed, the French Treaty has betrayed that journal into blunder after blunder, for in its issue of Saturday last it informed its readers, as an important item of news, that the Treaty had just been "signed," whereas the signature took place more than a year ago.

TOKYO CHIEF OF POLICE.

It is stated that the Administrative Reform Committee has decided to recommend the abolition of the office of Chief of Police in Tokyo, and to place the police under the control of the Municipality. The latter would then have a head office of police; the whole police force of the capital would be brought into one organization under the command of a superintendent general, and business of the higher police would be transferred to the Criminal Law Bureau in the Home Office. Such a change would be significant, for the relations between the Chief of the Tokyo Police and the Cabinet have always been a subject of criticism by political agitators. In the days when the Administration possessed and wielded the power of closely supervising public meetings and suspending or suppressing newspapers, the Chief of the Tokyo Police discharged important and somewhat invidious functions. But he has now been deprived of that part of his business, and might be abolished without much inconvenience.

NAGASAKI LAND QUESTION.

There appears to be considerable excitement in Nagasaki about a question of trifling importance as to its practical dimensions, but distinctly interesting as to the principle involved. Anyone acquainted with Nagasaki knows that the upper end of the harbour, the Deshima end, has long ceased to be an anchorage. It has silted up so that, at low water, there is only a bare and very unsavoury mud-bank to be seen and smelt, and even at high water, boats can not obtain access to the shore except by a river that runs down from the hill. It would be distinctly an improvement to the settlement were this mud-flat converted into dry land. When Mr. Kusaka was Governor of the place in 1886, he conceived an excellent scheme; namely, to deflect the course of the river so that it should run seaward *via* the back of Deshima, to fill in the fore-shore with the earth obtained from the cutting, and to convert the reclaimed land into a public garden. But it happens that a small portion of the settlement extends along the shore where the mud-bank has formed, and the occupiers of these lots strenuously objected to any work of reclamation that would deprive them of their sea frontage. The objection does not appear to have been very rational, for the so-called "sea front" was, as has been said, a mere mud-bank, covered with a few inches of water at high tide, and not capable of being employed at any time for purposes of maritime transport. Possibly the chief motive of the objection was to obtain compensation, but the Governor not being in a position to consider that phase of the matter, abandoned his design. Now, however, the question has again been brought upon the *tapis*. The inhabitants of Nagasaki—that is to say, the Japanese inhabitants, whose town lies entirely at the mud-bank end of the harbour—have definitely resolved to reclaim the unsightly fore-shore. But they have abandoned the idea of a public garden, and intend to use the reclaimed land for residential purposes. Thus the foreign land-renters in that part of the settlement are about to have streets and houses interposed between them and the shore, and in view of that alteration of the character of their frontage they demand compensation, which, however, the Japanese Authorities have declined to give, at least in the form of a money payment. It is officially admitted, of course, that after the projected improvements have been effected, the lots in question will cease to be frontage lots, and that, consequently, instead of being liable to a rent of 35 *yen* per 100 *tsubo*, as at present, they will be liable for the rent of rearage lots only, namely, 28 *yen*; but beyond that no compensation is to be given. The land-renters, on their side, claim that they are entitled to substantial compensation, and consider that they are very hardly used. It is difficult to see, however, that any legal claim exists. Foreign land-renters in Nagasaki are specially circumstanced. They originally acquired their holdings without making any disbursement, and subject only to the condition of paying rent. We speak of the foreigner *vis-à-vis* the Japanese. Some residents have doubtless paid substantial compensation to the previous holders of the lots they occupy, but that is a matter between foreigner and foreigner. In Nagasaki, too, such transfers have prob-

ably been inexpensive, for the trade of the place has never largely developed, and a considerable portion of the land set apart in 1860 for foreign use, remains to this day unoccupied. In connexion with that point a curious fact may be noted. The Japanese owners of the unoccupied lots, not being at liberty to employ them for their own residential or commercial purposes—since the lands lay within the limits of the settlement—and failing to find foreign tenants, were nevertheless required to pay the land tax year after year. Not until 1885 was the Central Government induced to redress this injustice. A large sum—four hundred and thirty thousand *yen*, if we remember aright—was then disbursed by the Treasury to the Japanese owners, and the lots passed finally into the possession of the State. However, that has no direct bearing on the question now agitating Nagasaki. The two points to be considered are, first, that the foreign land-holder has not purchased his holding, but simply rents it; and secondly, that the nature of its frontage is not mentioned in the body of his certificate of title. It is mentioned in the preamble, where the words "a frontage lot," "a rearage lot" or "a hill lot" occur, but such mention is held to be merely for the purpose of rent classification; it does not confer any right to a permanent sea-front, for which no consideration has been given. If the land-renters affected by the project were losing a genuine sea-front, they would certainly deserve commiseration. But as they are losing a mud-bank only their case does not seem very hard. They must regret Governor Kusaka's garden scheme, however, and so do we for their sakes as well as in Nagasaki's interests.

An article in the *Yomiuri Shimbun* with reference to the question of harbour improvement and sea-front lots in Nagasaki, is couched in terms which convey the impression that a section of the foreign residents at that port are opposing an enterprise calculated to be of general benefit. It would be regrettable that such an erroneous idea should obtain credence among the Japanese. There is not, so far as we can gather, the smallest disposition on the part of the foreign residents to obstruct the contemplated improvement. On the contrary, the *Nagasaki Press* alludes to it with satisfaction and says that foreigners wish all success to the work. But it happens very frequently that the interests of individuals and the interests of the community at large are not identical. Some of the owners of shore lots, whose holdings will lose their sea-frontage by the projected changes, may justly object to the resulting depreciation of their property, and it is plain that such persons have a right to look for compensation provided that no special circumstances invalidate their claim. Their assertion of their individual interests, in itself a perfectly proper and natural course, constitutes no index of an obstructive sentiment on the part of the community at large. The *Yomiuri Shimbun* says:—"The plan can not be changed now simply because it encounters objections on the part of foreigners." There is certainly no idea on the foreign side of pressing for a change of plan. But just as in Tokyo where water-works are now being constructed, citizens whose properties suffer invasion or other injury, have a fair title to com-

pensation although the general benefit conferred by the enterprise can not be doubted, so in Nagasaki when sea-front lots are converted into rearage lots for the sake of harbour improvement, the owners may have just ground for demanding some consideration. We do not say that they have such a right. It would be rash to pronounce any opinion about a question depending largely on details with which we are not familiar. A legal right does not exist, so far as we can see, but a moral right may exist in special cases. The certificate of title, as prescribed by the Treaty, contains no reference to the nature of the lots except in the preamble, but we are assured that in the case of some of the lots a more explicit form of title is in the possession of their holders. That fact belongs to a special class of considerations varying with each case. It appears, also, that so far as British subjects are concerned, no definite demand for compensation has yet been formulated. The point is of small moment, however, since official representations have certainly been made in the interests of the land owners at the Deshima end of the Settlement, and such representations can, of course, have only one meaning. We were mistaken, however, in saying that compensation had been refused by the Japanese. It appears that no final decision has yet been announced.

An interesting point is raised, we understand, with reference to the question of harbour improvements in Nagasaki. The Treaties contain an article providing that "the place which the subjects or citizens of the Foreign Powers shall occupy for their buildings, and the harbour regulations, shall be arranged by the Consuls and the Japanese Authorities of each place, and if they can not agree, the matter shall be referred to, and settled by, the Diplomatic Agents and the Japanese Government." It is contended that this article confers on the Foreign Consuls and Representatives not merely a voice in the original selection of sites for foreign settlements, but also a right to be consulted about any changes that may subsequently be contemplated in the topography of the sites. There is no difficulty in conceiving a situation where the application of that principle would be a practical necessity. If, for example, the owner of an estate having agreed to set aside a certain part of it for the residences of tenants, should subsequently desire to make an alteration in the facilities of communication enjoyed by the chosen locality, the duty of first consulting with the tenants would certainly devolve on him. But it must be exceedingly difficult to fix the limits within which such a principle is practically applicable. Neither, indeed, does there seem to be much occasion for examining whether the conditions of the Nagasaki case bring it within the range of the principle. The Japanese Government would very readily admit, we presume, quite independently of the Nagasaki incident, that it has no competence to arbitrarily alter the environment of a foreign settlement so as to deprive the place of any of the advantages on account of which it was originally chosen as a settlement, and an admission in that sense ought to be entirely satisfactory from the point of view of the foreigners. We can not, for our own part, perceive that grounds exist for any serious apprehension. All the actions

hitherto taken by the Japanese Authorities towards the foreign settlements has been loyal and liberal. Kobe has been supplied with wharves, Yokohama with water works, piers, and a public garden. There ought not to be any fear of acts dictated by a different spirit. The programme contemplated with regard to Nagasaki, also, is admitted to be in the nature of an improvement to the settlement in general, so that the occasion is not altogether propitious for raising the question of the Treaty's scope. Still, we do not venture to take up any hard-and-fast position in a matter so delicate. We appreciate the spirit that prompts jealous conservation of Treaty privileges, though we can not believe that they are in danger of being infringed.

SITUATION IN KOREA.

Our advices from Korea indicate that, whatever may be the sentiment in this country, the foreign residents in Söul consider themselves to be in the presence of something very like a crisis. We are always most unwilling to lend our columns for the circulation of any matter calculated to embitter international feeling, but too much reticence may prove as mischievous as exaggeration, and we shall therefore reproduce the statements of a correspondent, who writes from Söul, under date of October 26th:—"Ever since the arrival of the present Russian Representative in Söul, it has seemed to be his policy to ride rough-shod over anything that is not distinctly and declaredly Russo-philic. The Koreans have been overawed and overpowered by him. The recent extensive Cabinet changes were a direct result of his dictation: such, at any rate, is the general belief here. He has himself made a number of avowals which I am not disposed to repeat. This campaign has now drawn the English into the arena. Mr. McLeavy Brown is at the head of the Customs, and holds, also, the post of Adviser to the Finance Department. He has been most successful in both offices. There is not so much as a whisper against his official competence or his economical ability. He is the strongest bulwark of British interests in Korea, and he enjoys the confidence of the Korean nation. That he has enemies is inevitable, for one result of his drastic reforms and administrative talents is that every one desiring to "have a pull" at the Treasury is detected and defeated. His value is appreciated, for a Korean assured me, only a few days ago, that ninety out of every hundred Koreans want Mr. Brown to remain where he is. In this position, the duties of which Mr. Brown has so admirably and beneficially employed, the Russians desire, not without reason, to place one of their own people. At the request of the Korean Minister in St. Petersburg, Mr. Alexieff was invited to take the post of Financial Adviser in Söul. He arrived here at the beginning of this month, ready, of course, to go to work at once. The Russian Representative asked the Finance Department whether they were prepared to have the new Adviser enter upon his duties. The Department replied that Mr. McLeavy Brown was occupying the position of Adviser under a contract not yet expired. Thereupon the Russian Representative promptly and vigorously showed his hand. With the present incumbent of

the office, he said, he had no concern. At the request of the Korean Representative in St. Petersburg Mr. Alexieff had come out, and the engagement must be implemented. The reply of the Korean Government was that Mr. Brown acted as Adviser under royal edict, and that he could not be thrust aside. It is reported, that, on receipt of this answer, the Russian Representative demanded an audience with the King within twenty-four hours. At all events, he had an audience yesterday (October 25th), at 5 o'clock in the afternoon. Of course the public does not know exactly what passed between the Monarch and his visitor. But it is affirmed that the British Consul-General to-day received from the Korean Minister of Foreign Affairs a despatch announcing that Mr. Brown's services would no longer be required as Financial Adviser and Chief Commissioner of Customs. That is a direct blow between England's eyes. If she allows Mr. Brown to be kicked out in this unceremonious, nay brutal, fashion, *adieu* to her influence in Korea! The sentiment of the foreign community here is overwhelmingly in favour of the retention of Mr. Brown, and there is an almost universal hope that England will show fight. Great confidence is placed in the British Consul-General, Mr. Jordan, but the result is awaited with deep interest and no little anxiety. If the finance and the customs pass out of British control, and if the Russians are suffered to overpower the Koreans as they have been doing for the past month, then assuredly the next attack will be made on the pen, which is in the hands of Americans. It has, in fact, been already announced that freedom of pen will have to be denied to natives. What seems strange to many of us here is the silence of the Japanese. Apparently they do not know that anything unusual is going on. Yet, at the same time, the Government in Tokyo gets the credit of being wide-awake. Under the circumstances, it is surely not an exaggeration to conclude that the independence—the nominal independence—of Korea is in the balance, and that she will emerge from the present complications either a Russian province in fact, if not in name, or more independent than she is now. Her friends hope for the best, but it would be false to say that they are not anxious."

We suppose that all Englishmen reading the above—which, we may observe, is not written by a British subject—will feel thoroughly indignant. "By what right," they will ask, "does Russia browbeat Korea into dispensing with the services of British subjects who have proved themselves good men, and whose title to the positions they occupy rests upon established merits? Such action is entirely new in the history of Western intercourse with Eastern countries. There is not a single instance on record of a British Minister's having interfered to procure the displacement of a Russian subject, or of a German subject, or of any other non-British subject, from an office held by him under an Oriental Government in order that a British subject might be thrust into his post. We are proud to think that there are no instances of the kind, and we deem it intolerable that British subjects should be the victims of any such procedure at Russia's hands." That is doubtless what our British readers will say, and what we ourselves say. But the difficulty of being calm under the circumstances renders it all the more necessary to scrutinize them

closely. We must try to look at the situation from Russia's point of view. The Korean Representative in St. Petersburg applied officially to the Russian Government for a financial adviser, and the Russian Government sent out Mr. Alexieff. Did the Representative act on his own responsibility, or did he act under instructions from the Government in Söul? If the former, then nothing could have been simpler for the Korean Government than to disavow the Minister's action, compensate Mr. Alexieff and bow him out. But of course the Minister had his instructions from Söul, and equally of course the Government in Söul must have known long ago that Mr. Alexieff had been chosen and that he would soon be on his way to the East. Now if—as we must assume—Russia was in direct communication with the Korean Cabinet throughout the whole affair, it would certainly be most unreasonable to expect that she should consent to be thrown over at the eleventh hour; that she should tamely submit to have Mr. Alexieff's services rejected on grounds which had existed at the time when he was originally applied for, and which, therefore, did not concern Russia at all in the *finale*. Thus considered, the action taken by Mr. de Speyer after Mr. Alexieff's arrival in Söul seems to have been more or less unavoidable, and certainly Mr. de Speyer is the last man to be wittingly guilty of an international discourtesy. So then we come to the question—how was the Korean Government induced to send such instructions to its Representative in Korea? Are we to conclude that Mr. de Speyer's predecessor urged the Korean Government to displace Mr. McLeavy Brown in favour of a Russian, and that the scheme was carefully concealed from outsiders, as well as from Mr. Brown himself, until it had so far matured as to render retreat apparently impossible for Korea? If that is what happened, Englishmen have indeed a right to be angry. We do not know what to think. Russia always gets credit for clever diplomacy, and such diplomacy would be anything but clever. When it was announced that she contemplated sending out a *mission militaire* of dimensions sufficient to constitute in itself a respectable force, we ventured to doubt the rumour solely on the ground that extravagances of that kind were calculated to defeat their object, and were out of harmony with Russian diplomacy. This affair of the financial adviser seems to belong to the same category, and it will be as well for us all to keep our tempers until we are quite sure that there is cause to lose them.

FOREIGN JOURNALS IN JAPAN.

As to the fate awaiting foreign journals in Japan after the abolition of Consular Jurisdiction, we have had some very strong opinions expressed. We have been told that because a measure of purely domestic character contains a clause restricting to Japanese subjects the privilege of publishing or printing newspapers, therefore it is the evident purpose of Japanese legislators to put an end to the existence of foreign local journals so soon as ever the Revised Treaties go into operation. But instead of thus attempting to infer the future intentions of the Japanese from negative evidence of a vague and inconclusive nature, it is surely wiser to consider the

facts that we have actually before our eyes. For example, if the restrictive clause of the Japanese Press Law were aimed at prohibiting foreign journalism in Japan, what has there been to prevent the Japanese Authorities from putting the veto into force at any time during the past fifteen years? If the publication of foreign local journals is illegal, then the Japanese subjects engaged in printing them are violating the law, and the Authorities might order them all to abandon the work. There would be no redress for the foreign proprietor. According to the Treaties he is entitled to employ Japanese in lawful capacities, but if the publication of a foreign local journal be not a lawful occupation according to Japanese ordinances, then no foreigner has a right to employ Japanese subjects for such a purpose. Some may urge, perhaps, that it is for foreigners to determine the meaning and scope of the term "lawful capacity;" that, in short, "lawful" signifies, for Treaty purposes, not what Japanese law sanctions but what foreign law sanctions. Whatever may be the justice of such an argument so far as the proceedings of foreigners themselves are concerned, it has no validity in cases where the employment of Japanese subjects is in question. The Japanese Government is plainly competent to determine what occupations shall be lawful and what unlawful for its own subjects. If, then, it were intended that foreign local journals should fall within the purview of the clause which confines newspaper enterprise to Japanese subjects, the Government need not wait for the operation of the Revised Treaties, but might enforce the veto at once. Another method of achieving the same result would be to close the post-office to foreign local journals. That, too, would be quite within the competence of the Japanese Authorities. The Treaties do not require them to transport mail matter for the foreign residents. It will be understood, of course, that we are not arguing in favour of such steps. We merely refer to them as proving that if the animus attributed to Japanese legislators had any real existence, it could have been made practically operative long ago. There is no animus of the kind. We are in a position to affirm that not the smallest intention of interfering with foreign journalistic enterprise is entertained officially. Whatever measures may be necessary to legalise that enterprise will be taken. The *raison d'être* of the clause in the Press Law as it now stands is perfectly obvious. The Law was originally framed for the purpose chiefly of defining the limits within which freedom of speech might be exercised, and providing penalties for any transgression of those limits. It is plain that if foreigners, who are beyond the reach of Japanese punitive regulations, were permitted to hold the nominal posts of editors, printers and publishers of Japanese newspapers, then the penalties prescribed by the Press Law against offending publishers, printers and editors, might be evaded though the provisions of the Law were violated. Thus the insertion of a clause limiting to Japanese subjects the discharge of the responsible duties of Japanese journalism became a simple essential of effective drafting, and did not constitute the faintest evidence of an illiberal spirit on the part of the legislators. After the abolition of Consular Jurisdiction foreign local journals will have to comply with the provisions of Japanese law as to registration and so forth, but there is not the least

fear of their being unfairly discriminated against, though it must be confessed that the liberal treatment accorded to them will not be due to the giddy and unwarranted suspicions that some of them have formulated with regard to the motives of the Japanese.

THE "YEIJO MARU" AFFAIR.

Our Hakodate correspondent, writing on the 30th ult., gives the following account of the trouble recently reported on board the N.Y.K. steamer *Yei Jo Maru*:—While the steamer was at Hakodate, on the 19th Oct., trouble occurred on board which might have turned out rather serious, but fortunately ended in nothing more than a seaman being discharged, two of the European officers resigning, and the ship being delayed a day or two in getting men to replace the latter. It appears that the seaman in question was well known in the service as a troublesome man, having been dismissed from other ships. He had been surreptitiously shipped, by the purser it is said, on board the *Yei Jo Maru* at Kobe. He was dismissed by Captain Anderson when the vessel arrived at Hakodate on the 19th ult. for disobeying the orders of the second officer, to whom he used abusive language, and showed fight when the vessel was at sea. During the trouble between the second officer and the seaman, the second engineer came to the former's assistance, and the mutinous seaman got the worst of it, and on landing at Hakodate laid a charge of assault against the latter officer at the British Consulate. The case was dismissed, and the man, imagining he had a grievance, boarded the vessel the same night with some roughs he had collected, to take vengeance on the second engineer. These fellows succeeded in smashing in a port, but failed to force open the door of the second engineer's cabin. The other European officers on the ship being alarmed and not knowing what was taking place, fired shots to draw the attention of the British man-of-war *Peacock*, lying alongside, and a boat's crew was immediately sent off to their assistance. But the assailants, when they saw the man-of-war's boat alongside, cleared out, for they were nowhere to be found when the officers of the ship searched the vessel for them. Next day, the second officer and the second engineer of the *Yei Jo* sent in their resignations, deeming it unwise to go to sea again in the vessel, as no protection was afforded them on board.

ELECTRIC RAILWAYS FOR THE CAPITAL.

Two or three years ago, remarks the *Nippon*, a scheme was set afoot for supplying the Capital with electric railroads. But the fates were against the idea then, and the matter failed to reach a practical stage. Now the rumour is revived that Tokyo will soon be able to remove the stigma cast on it by Kyoto's greater enterprise, for electric trams of the latest design will shortly supplant the horrible public conveyances that now ply for hire in metropolitan streets. The Cabinet has resolved to grant permission to the schemes formulated by the Yokoyama, Okura, Mitsui, and Mitsubishi companies. Originally each firm fought for its own hand, but an amalgamation was effected between some of them, and two parties now alone hold the field. The Cabinet, it is said, has resolved to divide the capital between the two, the *Yamanote*, or hill district, and the *Shitamachi*, or lower land. The Fukuza party—Messrs. Mitsui and Mitsubishi—receive the *Shitamachi* district. The Amenomiya party—Messrs. Yokoyama and Okura—have the hill district allotted to them, and the parties were to sign the documents connected with the charters on the 14th instant. It is rumoured, however, that the Amenomiya section are urging the Government to give them the sole monopoly, and some of their agents even followed Count Kabayama to Osaka, to importune him into granting the concession.

COUNT OKUMA AND THE POLITICAL CRISIS.

Knowing that all eyes are now directed towards Count Okuma, whose retirement from the Cabinet would be a significant event in the realm of politics, a representative of the *Yiji Shimpō* waited on the Count, and the following conversation is said to have taken place:—

R.—Reporter—The Progressionists have definitely severed their connection with the Cabinet. What course does Your Excellency contemplate?

Count Okuma—The Progressionists are the Progressionists and I am Okuma. I do not regulate my tenure of office by the proceedings of the Progressionists. But if I find that I cannot discharge my responsibilities as a Minister of State, then I make up my mind to retire. There is nothing strange in such a course. Every Minister must be prepared to take it.

R.—It is reported that all the Progressionists now in office intend to resign. Will that not cause Your Excellency any inconvenience?

C.—Whether the members of the Liberal Party that took official positions had been influenced by the prospect of obtaining them, I can not say; but they certainly incurred public ridicule by remaining in office after Count Itagaki had left the Cabinet. Progressionists holding posts in the Administration are on a different footing. Their object in accepting office was to promote progress, and if they consider that a progressive policy is not pursued, it is perfectly proper that they should resign.

R.—It would seem that partly owing to the publicity given to the advice which the Progressionists submitted to Count Matsukata, partly owing to the premature publication of the memorandum sent Count Matsukata to Baron Kusumoto—at all events, owing to petty blunders of procedure, things have grown very warm. I should like to hear your opinion on that point.

C.—Under circumstances like those now existing there is no occasion to dispute about details of procedure. What we have to do if we desire to maintain our independence and reputation among the nations is to determine our main lines of policy and to pursue a course of which we need not be ashamed before the world. The trouble to-day is that our main lines of policy are not fixed. We need not talk about petty points of procedure.

R.—People say that the chief administrative difficulty of the time is the problem of increased taxation. Is that so?

C.—If funds are needed for conducting the affairs of the State, it is the duty of the people to accept the responsibility. Such a question as that of increasing or not increasing the taxes is an after problem. If the taxes ought to be increased, need we wait till *post-bellum* measures drive us to increase them? When once the national policy is settled, there ceases to be any distinction of *post-bellum* or *ante-bellum*. The important thing is to do nothing that shall discredit us internationally.

There is nothing in Count Okuma's language, as here reported, to show definitely that he has resolved to leave the Cabinet; but it must be confessed, on the other hand, that there is nothing to indicate any probability of his remaining. Indeed, a very general belief prevails that he has already sent in his resignation, and that the announcement of its acceptance by the Emperor will be made in a few days. The members of the former *Kathin-to*, Count Okuma's old Party, who through evil report and good report have stood firmly by his side, are said to be the most resolute promoters of the anti-Cabinet policy now adopted by the Progressionists in whose ranks they are enrolled. It follows, therefore, that they have been insistent with the Count in the matter of his resignation, and although he is not a man to appraise party obligations at a higher value than duty to the State, the difficulty of severing himself from his close friends could not fail to influence his decision. We can very well imagine that he is not altogether satisfied with the course pursued by the Progressionists. He must be perfectly cognisant of the fact that Count Matsukata, in his capacity of Prime Minister, could not possibly have consented to pass under the Canadian forks set up by them. It is a dangerous thing for a statesman with Count Okuma's prospects to endorse a precedent like that now established by the Progressionists. When he is himself Prime Minister—as he certainly will be, one of these days—it may prove

extremely inconvenient to have indirectly sanctioned the principle that political parties are entitled to publicly submit humiliating conditions to the Cabinet they have promised to support. There is the saving clause, indeed, that publicity in this case was accidental, not intentional, but the Progressionists have chosen to abide by the accident, and the precedent consequently stands. On the whole, however, were we invited as friends to express an opinion about Count Okuma's procedure, we should certainly advocate his retirement. He and his follow-thinkers are fighting for that development of constitutional polity known as "party government," and their sole hope of achieving it is to make every other method of government practically impossible. Our own predilection makes us hope that they will not succeed easily, but we see clearly enough that their way to succeed is to hold together and fight stoutly. The Progressionists are nothing without Count Okuma, and Count Okuma without the Progressionists would be very much less than he is at present.

The talk about Count Okuma's successor centres about Baron Nishi, who returned some time ago from St. Petersburg, and Mr. Hoshi Toru, who has just come back from Washington. It is doubtful whether the state of Baron Nishi's health is such as to permit of his undertaking such onerous duties, and we are not disposed to think that Mr. Hoshi Toru, able official as he certainly is, commands sufficient influence in administrative circles to obtain a portfolio in the present Cabinet. Viscount Enomoto's return to the Foreign Office might be a contingency more reconcilable with existing conditions. The *Hochi Shimbun*, however, predicts that Baron Nishi will be Count Okuma's successor, and adds that Count Matsukata will probably confine himself to the duties of Prime Minister, appointing Baron Tajiri to the post of Minister of Finance. Other changes foretold by the same authority are Baron Yasuba's elevation to the Department of Agriculture and Commerce, Count Kabayama's transfer to the Department, and Viscount Kawakami's appointment to the War Office.

Concerning the political following of the Cabinet after Count Okuma's retirement and the Progressionists' estrangement, the *Yiji Shimpō* thinks that the Ministry will have the support of the whole Liberal Party, with the exception of the Tosa section; also that a large part of the National Unionists will be with it, and that a considerable section of the Progressionists, under the leadership of Mr. Shimada Saburo, will secede from that Party and throw in its lot with the Satsuma statesman. If to these we add the *Kodo-kai*, the Cabinet will be found to have a majority ample for all parliamentary purposes. How far the *Yiji's* estimate may be relied on, we do not venture to say, but such an authority must not be lightly set aside.

We reported in a recent issue that the Progressionists had decided not to adopt any party resolution with regard to the retirement of their members from official positions, but to leave the matter in the hands of the individuals concerned. Our readers are aware that one of the pledges given by the present Cabinet on assuming office was that "men of talent" should be selected from among the people for administrative posts, and that the pledge was fulfilled by the appointment of a number of Progressionists to be provincial governors, heads of Bureau, Departmental Councillors and so on. It was expected that these would await the resolution of their Party's general meeting before resigning, but several of them have acted with unlooked-for celerity, and the resignations of the following were placed in the Government's hands on the 2nd and 3rd instant:—Mr. Oishi (Vice-Minister of Agriculture and Commerce); Mr. Ozaki, Councillor of the Foreign Office; Mr. Taketomi, Councillor of the Finance Department; Mr. Takata, Head of the Commercial Bureau in the Foreign Office; Mr. Minoura, Head of the Commercial Bureau in the Department of Agriculture and Commerce; Mr. Koizuka, Head

of the Bureau of Mines in the same Department; Mr. Shiga, Head of the Bureau of Forests in the same; and Messrs. Hayakawa and Oishi, Secretaries in the same.

As for the Progressionists, over forty of them now in the capital, assembled on the first inst. to determine the preparations necessary for the general meeting on the 4th. There was some difference of opinion, Mr. Haseba Junko contending that to sever relations with the Cabinet would be premature, but that if the general sense of the Party favoured severance, the proper course to pursue would be a vote of want of confidence. After a discussion lasting until four o'clock in the afternoon, Mr. Haseba's motion was rejected, and it was resolved that severance must take place, and that a committee of five should be elected to draw up a manifesto for submitting to the general meeting on the 4th instant, the manifesto to be approved at a preliminary meeting of the headquarters on the 2nd instant. When the latter meeting was held, an argument took place with reference to the procedure on the previous day, one of the points brought up being that a majority of two only was reported to have decided against Mr. Haseba's motion, whereas, in truth, he alone had supported it. Without coming to any decision on this or other minor objections, the meeting proceeded to consider the draft manifesto prepared by the special committee. It ran as follows:—

Our Party, being convinced by the evidence of the past that the present Cabinet has no real intention of carrying out the promises made in its manifesto, severs relations with it for the time being.

This document led to much discussion. Mr. Haseba proposed an amendment in precisely the opposite sense, and was vehemently opposed by Mr. Inugai, a politician always remarkable for his extreme views. Mr. Koizuka finally reminded the disputants that the meeting had no power to make a radical change in the sense of the manifesto, but must confine itself to verbal alterations. The general import of the document having been already decided by vote, Mr. Haseba and his supporters, Messrs. Maruyama and Asaka—recognised the justice of the objection, and the manifesto was adopted in the above form for presentation to the general meeting on the 4th instant. Messrs. Haseba and Maruyama have always possessed influence among the Progressionists and if they maintain the present attitude at the general meeting, they will probably find several followers.

The *Yomiuri Shimbun* attributes to Count Okuma the following statement:—"My hope has been to achieve the reality of constitutional government. I have striven hard for that end. But nothing went right. It has been pretty much a case of a disciple of Western medicine entering a company of Chinese physicians: the healing of the patient was out of the question. Just when things seemed to be moving in a constitutional groove, they would suddenly go all awry. If a man should spend two or three months toiling to carry a load weighing a ton to the top of a mountain, and should find himself thrown back to the bottom of the valley all in a single day, his case would be as mine has been. There is no help but to give up."

There is a ring of despair in the explanation, but we do not imagine that despair has much place in Count Okuma's mind. Time and the rising tide are on his side, as Mr. Gladstone said on a celebrated occasion, and he can afford to wait. The *Yomiuri* alleges that he will not send in his resignation until the 6th, and that the garden party on the 5th will be in the nature of a farewell to his friends. It is certainly a novel fashion of going out of office, to entertain a thousand guests on the day before the catastrophe.

The general opinion is that Baron Nishi will have the portfolio of Foreign Affairs. It is now stated that his health is quite sufficiently restored to allow him to take office. Three other names also are mentioned—Mr. Hoshi Toru, Viscount Enomoto, and Viscount Aoki.

THE POLITICAL SITUATION.

THE Cabinet seems to have finally decided to go its way without regard to the interference of the Progressionists. The last phase of the affair has been of a somewhat unexpected character. It appears that when the deputation of Progressionists visited Count MATSUKATA on the 21st ultimo, carrying with them a copy of the resolutions adopted by the Party on the preceding day, the Premier inquired explicitly whether his visitors came to publicly prefer demands as the representatives of a political party, or whether they came as friends of the Government to tender advice. Baron KUSUMOTO's reply was that they came as friends of the Government to talk over matters which appeared to be of national importance. Count MATSUKATA then consented to hear what they had to say, and it was mutually agreed that the whole affair should be kept strictly private. Next day, however, the interview was described in the organs of the Progressionists as a public discussion, the points formulated by the deputation were accurately stated in the guise of demands, and it was added that the Premier had been pressed for an answer. Thus the whole complexion of the incident was changed, and Count MATSUKATA'S promise, made out of good-will and in reliance on the engagements offered by his visitors, assumed a character which had never been contemplated by him. Under the circumstances, his Excellency saw himself obliged to take a new attitude, and, on the 29th ultimo, he despatched a private secretary carrying the following reply to Baron KUSUMOTO and his colleagues:—

MEMORANDUM.

GENTLEMEN—On the occasion of your visit to me as representatives of the Progressionist Party, I inquired the motive of your coming, and having received your assurance that you visited me as political friends with the object of holding a friendly colloquy, and that the strictest secrecy would be observed with regard to what passed between us, I approved your kind intentions, listened to what you had to say, and replied that it should receive my careful consideration. I acted thus out of regard for what was due to political friends. But I greatly regret to find that the points which you then submitted to me in a friendly manner were subsequently published in the newspapers under the guise of a public conference, all the details being made known and a complexion very far from moderate being imparted to the affair. Since, Gentlemen, the fact is thus established that your deputation was of a public character, and that you seek a reply from me, my official duty requires that I should make a definite statement. While conscious of my small capacity, I can not forget that I have received His Majesty's commission to assist in the Administration, and that a grave responsibility thus devolves on me. The appointment and retirement of Ministers of the Crown and the conduct of the administration are matters concerning which the interference of outsiders can not be admitted. It is the first duty imposed on me by the responsibilities of my office to guard the prerogatives of the administration. I solicit your clear comprehension of these points.

It is difficult to see what other course the Government could have pursued. Up to the publication of Count MATSUKATA'S reply, the general body of the public remained in doubt as to whether the proposals sub-

mitted to the Cabinet by the Progressionists were truly set forth in the newspapers. There was every appearance of veracity about the journalistic accounts, and writer after writer discussed them as though no uncertainty whatever existed. Yet all moderate observers found it well nigh impossible to believe that the Progressionists could have deliberately forced the Cabinet into a dilemma admitting of only a heroic solution. We have already remarked that in the present transition stage of Japanese politics any attempt to gage a particular situation by foreign standards may result in egregiously false deductions. England's contemporary history furnishes many instances of deputations from this or that body, commercial, religious, civic, or what not, waiting upon the Prime Minister, for the purpose of bringing some abuse to his notice or protesting against some legislative measure on which he is engaged. But the freest flight of imagination can not conceive such a situation as that a body of men, invested with the title of representatives of the Conservative Party, for example, should wait upon Lord SALISBURY and demand the weeding out of certain elements from the Cabinet, the revision of the Budget, the abandonment of a financial programme already adopted by the Ministry, the punishment of certain officials for acts which the Cabinet had endorsed, and a general pledge of respect for the Constitution on the part of the Ministers of the CROWN. No Premier receiving a representation of that kind, would remain in office a day longer, or would ever think of resuming office unless a most unequivocal national mandate came to reassert his dignity. If, then, even in England, where the system of party cabinets is in full force, no such incident is conceivable, what are we to say of it in Japan where, both theoretically and practically, the system of party cabinets is still tabooed? Simply this, as it seems to us—the Progressionist leaders lost their heads. By quietly cementing their relations with the Ministry, and privately urging upon it the adoption of their views as a condition of parliamentary support, they could have virtually absorbed into their ranks several of the leading statesmen of the era, after which the consummation of the system they seek to establish could not have been long deferred. But in a moment of vertigo, they publicly challenged the Ministers of the CROWN to stand forth, *coram populo*, and submit to the operation of having the dictates of a political party thrust wholesale down their throats; dictates involving the immediate removal of certain members of the Cabinet. Had the Ministry bowed its head to such a yoke, it would have endorsed the principle underlying the action of the Progressionists, namely that the SOVEREIGN'S Constitutional preroga-

tive of choosing his own advisers is a mere farce. Of course the Ministry could not do anything of the kind, and the marvel is that the Progressionist leaders could have dreamed for one instant of carrying their point. To us it seems that they have put back the hands on the dial of political progress—that is to say, progress according to their notions—for they have imparted an intolerable aspect to all alliances between Cabinets and parties, and have shown that they themselves have no just conception of the obligations imposed by such alliances. We are not at all surprised to hear that this access of dementia has been followed by a convulsion rending the Progressionists into three sections: a section which advocates opposition to the Cabinet at all hazards; a section which is willing to accept any concession as the price of continued alliance; and a section which advocates adhesion to the Cabinet with or without concession. The first section is said to number not more than six or seven members; the second, to be largely composed of men who talk of concession to "save their face," but at heart are content to fall into line with the third section at any moment. The fact is that in the troubled sea of Japanese politics one rock and one rock only survives the shock of all waves. It is composed of the *Meiji* statesmen; the men that have made modern Japan. It appears to be a rock endowed with disintegrating force even more effectively than with resisting power, for while parties often retain some semblance of cohesion after dashing against it, they dissolve incontinently when they attempt to embrace it. The Liberals fell to pieces as soon as they put their arms round the ITO Cabinet, and the Progressionists have fared similarly when they allied themselves with the MATSUKATA Ministry. There is plenty of material here for a political homily.

As for the Cabinet's financial policy, which is the chief point of interest, the decision is evidently in favour of carrying out the programme of increased taxation. The Government will submit its Budget to the Diet, and should the latter refuse to pass it, there will be an appeal to the country. It would be a novel incident in political history that a Ministry should go to the constituencies for a mandate to increase their taxes despite the opposition of their representatives; but Japan has furnished so many novelties already that an addition to the list can never be unexpected.

FOREIGN NEWSPAPERS IN JAPAN.

IN its last session the Japanese Diet succeeded in effecting a legislative reform for which politicians outside the Government had long been contending. The main purpose of the reform was to deprive the Administration of competence

to suspend or suppress a newspaper without recourse to a Court of law, and without even indicating the matter on account of which the punishment was inflicted. We do not suppose that any foreigner in Japan can possibly be ignorant of the contest that had raged about the question year after year, or of the fact that, session after session, the Government, aided by the House of Peers, had attempted to effect a compromise with the House of Representatives. Thus, when the objectionable power was finally taken from the Administration in the spring of this year, the advocates of free speech naturally congratulated themselves on having won the victory for which they had fought so persistently. The memorable event attracted foreign attention also, and incidentally directed it to the text of the Press Law, translations of which were published in the amended form. One result of the scrutiny was a discovery that the Law contained a provision limiting to Japanese subjects the privilege of editing, owning, or publishing newspapers in Japan. We say a "discovery," but the fact is that the provision had existed in the Press Law for ten years, namely, since the date of its original enactment in 1887. Indeed, the presence of such a provision was inevitable, as a moment's consideration will show. For since the original object of the Law was to set limits to the privilege of free speech, it necessarily prescribed penalties for violations of those limits, and since Japanese punitive regulations were not applicable to foreigners, it is obvious that if foreigners had been permitted to assume the post of editor, proprietor, or publisher of Japanese journals, the Law might easily have been evaded. Any Japanese subject might have started a vernacular newspaper under nominal foreign editorship and ownership, and, thus protected, might have snapped his fingers at the limitations fixed by the Press Law. Ignorant, however, of the original text of the Law, and too careless to refer to it, certain foreign critics "discovered" the limiting clause in the amended Law, and assumed that it had been inserted for the ultimate purpose of putting an end to the existence of the foreign local journals simultaneously with the abolition of Consular Jurisdiction. At present, said these critics, since foreigners do not come within the purview of Japanese law, they are able to edit and publish newspapers in their own languages for circulation among their own nationals, but it is evident that the Japanese intend to deprive them of that privilege so soon as the Revised Treaties go into force, since the Diet has passed a law limiting newspaper enterprise of all kinds to Japanese subjects. The fallacy of such reasoning was fully exposed at the time. It was shown that the limiting provision had formed a part of the Law for ten years; that it must necessarily

have formed a part of it; that its retention in the amended Law had no more significance than its insertion in the original, and that to construe it as anti-foreign was entirely unjustifiable. The editor of the *Japan Gazette* took a prominent part in the controversy that grew out of the incident, and ought to have been fully conversant with all the facts we have mentioned. Yet, several months afterwards, he addressed to the London *Times* a letter intended to show that foreign journalistic enterprise in Japan was threatened with extinction, and in order to prove his case, he alleged that the revision of the Press Law which resulted in the retention of the limiting clause, had been undertaken "for the purpose of meeting the new conditions which Treaty Revision would introduce." Of course, if that were true, the animus of the Japanese legislators would have been quite evident. Did Mr. TENNANT believe it to be true? That is what puzzles us. If he did, he must have been ignorant of the whole story of newspaper progress in Japan during the past ten years; ignorant of the campaign perpetually conducted in the press and on the platform in favour of free speech; ignorant of the conflicts that had taken place between the Upper and the Lower Houses during nine sessions in connexion with the revision of the Press Law, and ignorant of all that had appeared in the columns of his own newspaper on these important topics since he became editor of it. He asks us now to charitably conclude that he did actually labour under that enormous weight of ignorance, and that the Press Law revision of last spring, which marked an epoch in the career of Japanese journalism and concluded a ten years' struggle between political parties and the Government, was supposed by him to have been undertaken "for the purpose of meeting the new conditions which Treaty Revision would introduce." Well, we must accept Mr. TENNANT'S account of his own deplorable condition. We should not have supposed it possible that any one living in Japan and making the public discussion of her affairs his daily business, could be so phenomenally ill-informed, but the fault doubtless lies in the weakness of our imagination.

What, then, is the actual situation? It is this. The law of Japan, as it now stands, restricts newspaper enterprise in Japan to Japanese subjects, and the Revised Treaties do not secure national treatment for foreigners in the matter of occupations such as journalism. Unless, therefore, some change can be effected in the law, or some addition made to the Revised Treaties, the field of journalism in Japan will be closed to foreigners in the capacity of editors, proprietors or publishers. That, of course, is a consummation which all persons connected with journalism are anxious to avert. We do not believe, however, that there is any cause for apprehension. Neither Japanese officials

not Japanese legislators are disposed to discriminate against foreign journals published in this country. If they were so disposed, they might long ago have made newspaper enterprise virtually impossible for foreigners. They might have forbidden Japanese subjects to serve as compositors or press-men in the offices of foreign journals, and they might have denied postal facilities to foreign local newspapers. They have refrained from doing anything of the kind, even when they had just reason to be incensed against several of the foreign local journals, which made it their unique *metier* to blacken Japanese reputation and to convince the world that Japan was totally unfit to exercise the rights of a Sovereign State. It is not of the slightest avail to pretend now that the foreign local journals "have never attempted to interfere with domestic politics or to create disaffection between the rulers and the governed." It is not of the slightest avail to fall back upon the hackneyed cant of "frank and free criticism," or to invoke the hypocritical pretext that Japan has been lashed for her own good. The plain fact is that the writings of a section of the local foreign press have been permeated by strong anti-Japanese prejudice, and that they have made themselves eminently odious in Japanese eyes. With the reluctance of the foreign residents to be deprived of the privilege of their own jurisdiction, every one must sympathise, and that their reluctance should make their censure severe and their applause scant where Japanese doings were concerned, was perfectly natural. But there is an immense interval between that justifiable mood and the methods of the journalists who have pandered to it, disgracing it by their excesses and discrediting it by their misrepresentations. If, through all that evil time, the Japanese sat quiet, may we not fairly repose some trust in the permanence of a liberality that supported so severe a test? National treatment will doubtless be accorded to foreign journalists, as well as to foreign merchants and manufacturers. More than that can not be asked. The *Japan Gazette*, indeed, asks for a great deal more, but is apparently unconscious of asking for it. "What we are contending for," it writes, "is that an Englishman in Japan shall have the same right to conduct a newspaper as a Japanese would have in England." Precisely. That is national treatment. That means that whatever privileges and immunities the laws of Japan grant to Japanese journalists, shall be extended to foreign journalists also. But the *Japan Gazette*, in the very next clause, interprets its own language quite differently. "That is to say," it explains, "that he (the Englishman) shall not be dependent on the caprice of any Government, which may happen to be in power, or of a Diet which may at any moment be virulently anti-foreign. We want that made per-

factly clear." Does the *Japan Gazette* imagine, then, that a Japanese conducting a newspaper in England would be independent of the British Government and the British Parliament? And does it seriously suppose that Japan, or any other Power in the world, would pledge itself to allow aliens to publish within its borders journals which should be entirely independent of the administrative and legislative control that it exercises over its own newspaper press? Here, again, we must in charity conclude that the *Japan Gazette* does not know what it is talking about. If our diplomats can get us placed on the same footing as Japanese subjects for purposes of journalistic enterprise in Japan, that is all we can possibly expect. We may be permitted here to recall one fact. Formerly the complaint of the foreign local journals used to be that their freedom of speech would be intolerably curtailed if Consular Jurisdiction were abolished, since they would then come under the operation of the Japanese Press Law, which gave to the Administration arbitrary power to suspend or suppress a journal. The *Japan Gazette* was a prominent formulator of the complaint, thus showing that it understood the necessity of submitting to the laws from which it is now agitating to secure exemption. Whenever the complaint was uttered, we took it upon ourselves to re-assure our contemporaries by predicting that revision of the Press Law would surely precede revision of the Treaties. Our prediction has been fulfilled. Well, we venture now to re-assure them by predicting that their enterprises are quite safe, and that national treatment will be extended to them.

YOKOHAMA RACES.

The records of the autumn meeting of the Nippon Race Club show that an owner has again been allowed to enter one of his horses under an offensive name. We are aware that a difference of opinion exists with respect to the word. There are people who affirm that it has so far lost its original significance as to be no longer indelicate. Such an excuse doubtless had some validity last spring. But so soon as it was known that a section of the community—large or small—regarded the word as indecorous, its persistent use betrays singular indifference to the scruples of the Club's supporters. If there was the slightest doubt about its propriety it ought to have been expunged from the list of names, and, indeed, we should not have imagined that any person in Yokohama would have obstinately adhered to the public use of a word which he knew to be considered equivocal. Not the smallest trouble or inconvenience was involved in changing the name of the horse, and even if there had been a very great deal of trouble and a very great deal of inconvenience, the obligation to make the change was none the less imperative. Our readers need scarcely be assured that our protest last spring was not penned in any capricious spirit and that an editor's natural reluctance to advance such a criticism could not be overcome without strong evidence of its necessity. We regret very much to have to approach the subject again, but the circumstances leave us no choice.

SAN FRANCISCO AND JAPAN.

San Francisco is not very far from Japan, but its ideas about Japanese affairs are such as we should expect to find in the back-woods. The *Examiner* of the 9th instant tells its readers that "the relations between Russia and Japan are becoming more and more strained in regard to Korea;" that war may result; that if Mr. Hatoyama does not go as Representative to Washington in place of Mr. Hoshi, a determined effort will be made to elect Mr. Shimada Saburo to the post of President of the Lower House in Mr. Hatoyama's stead, and so on—items of intelligence decidedly novel to folk in Japan.

With reference to the Behring Sea Conference, we read in a San Francisco paper of the 9th instant:—

On the steamer *Chsna*, which arrived yesterday from the Orient, were the two delegates selected by Count Okuma, Minister of Foreign Affairs of Japan, to represent that country, at the invitation of President McKinley, at the forthcoming seal fisheries' convention at Washington. Shiro Fujita and Professor Kakichi Mitsukuri are the names of the officials. The former is the director of the Bureau of Agriculture and Fisheries.

Professor Mitsukuri is at the head of the Department of Zoology in the Imperial University at Tokio.

Charles S. Hamlin of Boston accompanies the two distinguished Japanese. Mr. Hamlin was Assistant Secretary of the Treasury during Cleveland's last administration, and last summer was sent by President McKinley to invite Japan to be represented at the Washington conference. He is greatly pleased with the character and standing of the representatives and speaks in high praise of the reception accorded him in that country by Count Okuma and influential Japanese in general. He was greatly surprised to learn yesterday that Lord Salisbury had declined to have Great Britain represented at the conference, and so were the two gentlemen from Japan, but they, as well as Mr. Hamlin, said that the situation was entirely too delicate for them to be publicly interviewed about it.

Mr. Fujita, in speaking on behalf of Professor Mitsukuri and himself, said:—

"The prompt acceptance on the part of Japan of the invitation from the United States to participate in the Washington conference about protecting the seal herds, is but another sign of the cordial relations and strong feeling of friendship existing between the two nations. Such has been the case ever since the visit of Commodore Perry, and we believe these relations will exist forever."

The party will leave for the East to-morrow.

THE DISABLED "MOYUNE."

While the church bells were tolling on the 10th October, writes the Kudat correspondent of the *Straits Times*, the attention of all in Kudat was directed to a two-masted lifeboat which was sailing in towards Kudat Pier. The occupants, Messrs. R. G. Strickland, T. M. Moore, R. Plum, and Kiniburgh, officers, engineer, and quartermaster of the steamer *Moyune*, landed and stated the following:—That on the 2nd ultimo, at 8.20 a.m., the steamer, when passing through the Sulu seas and about 84 miles distant to the eastward of Balabac, suddenly grounded on an uncharted reef. A fresh head wind blowing did not help matters, but the engines being stopped and the steamer backed, she was able to resume her way. Both hand and steam pumps were rigged, and, at about 1 p.m., the anchor was dropped outside Balabac Island. The approximate position of the reef is stated to be Lat. 8° 6' N. and Long. 118° 6' 30" E. The next morning, it was found imprudent to resume the journey to Singapore, owing to the ship's condition, and she was taken to Kalindorang Bay, on the east coast of Balabac, where a Spanish Settlement is situated.

After consultation with the Spanish authorities, it was found preferable to call for volunteers to man a lifeboat, and to endeavour to effect communication with Singapore. The above-named officers pluckily volunteered, in spite of the harrowing stories of pirates furnished by the good people of Balabac; and having provisioned and armed a lifeboat, a start was made on the 8th instant at 7.30 p.m. Up to the afternoon of the 9th, fair weather was experienced, but a heavy rainstorm deluged all their clothing in the evening. The next day was dry, and, after pulling from Balambangan half-way towards Marudu Bay, a fair wind brought the party to Kudat after a voyage of 44 hours.

NIPPON BICYCLE CLUB.

The Nippon Bicycle Club of Yokohama celebrated the Emperor's Birthday on Wednesday by a very enjoyable outing to Tokyo, where they were most hospitably entertained by their brother wheelmen of the Sorin Bicycle Club. Forty-two members of the Nippon Club left Yokohama by the 8.47 train for Tokyo, and were met at Shimbashi by about 60 members of the Sorin Club. A start was then made for Ueno, via Maruno-uchi, which was reached at 11 a.m. Most of the bicycles were decorated with flags and chrysanthemums and the turnout made a very pretty show. At Ueno a short stay was made at a very pretty villa belonging to one of the members of the Sorin Club, where refreshments were partaken of.

After about half an hour's rest there the riders set out for the Komatsu Garden, on the bank of the Sumida river. This was reached, after a very enjoyable ride, at about 12 o'clock. Again ample refreshments were provided and photographs of the party were taken by Mr. Ogawa. A display of trick riding by one of the members of the Nippon Bicycle Club added to the amusement. The garden is very picturesque and contains a large pond on which were quite a number of wild duck and teal, who seemed quite at home. At about half-past 1, the ride was continued along the Mukojima sado of the Sumida river, past Asakusa, to the Seiyoken at Ueno. Here over 100 cyclists sat down to an excellent tiffin, which was served in the large room on the second storey. Mr. Akiyama spoke on behalf of the Sorin Club, thanking the Nippon Bicycle Club for their hospitality to them on the occasion of their visit to Yokohama on the Queen's Jubilee, and expressing the wish that foreigners and Japanese would by such social gatherings become more intimate and friendly with one another. Mr. Eylon, senior, returned thanks on behalf of the Nippon Bicycle Club for the hospitality and friendship displayed by their hosts, and said that one of the principal motives for the formation of the Club was to encourage good fellowship between the youths of Japan and foreigners, and he was happy to say it had been eminently successful, as the present meeting amply demonstrated. He trusted the day's run was only the forerunner of many to follow. All the Sorin Club members were invited to join the Nippon's in a trip to Kamakura at an early date. A band was in attendance and played during tiffin. On leaving Ueno the members of the Sorin Club accompanied their Yokohama visitors to Shimbashi, where after many *Banzais* they separated, and thus ended one of the most pleasant outings ever spent together by foreign and Japanese wheelmen.

FIRE IN YOKOHAMA.

About 3.35 on Wednesday morning an alarm of fire was received at the Central Fire Station and Superintendent Morgan, with a party of the Brigade men, with hose reel and stand pipe, promptly turned out. On reaching the scene it was found that a confectioner's shop, kept by Mr. Shinkine, at No. 47, Minami Nakadori, native town, was on fire. Much valuable time was lost in finding the nearest hydrant in the street, it having been covered up with shingle and earth, while there were no marks on the neighbouring buildings to indicate its position. After water was once found the fire was soon brought under control by the Yokohama and Police Brigades. The house in which it originated was totally destroyed and five others were damaged. The origin of the fire has not been discovered, but is believed to have been from the oven furnace.

With regard to the refusal of permission to 17 Japanese emigrants to land at San Francisco, the Kishu Kosei Emigration Company in Kobe is now negotiating with the United States Authorities through the Japanese Government.

MONTHLY SUMMARY OF THE RELIGIOUS PRESS.

The probable religious consequences of mixed residence are being discussed in the various monthly organs with increasing earnestness. The *十善寶窟 fūsen hōkutsu* (a Buddhist magazine) quotes from a speech delivered by Mr. Kōno Hironaka on the subject, in which he is represented as saying that missionaries are the only foreigners who will largely avail themselves of the privilege of residing in the interior, and that the competition between them and Buddhist and Shintō priests is likely to be very keen. Foreigners have more money to spend than Japanese, and foreign missionaries are in the habit of supplementing their religious labours with numerous benevolent works, such as the establishment of hospitals, asylums, and the like. It does not require keen eyes to see that a very large number of fish will be attracted by foreign bait: for all this Buddhists must be prepared. Count Okuma is represented by the organ we are quoting to have expressed satisfaction at the near approach of the conflict of creeds. The result of this will be, says the Count, a process of natural selection, a survival of the fittest. Truth and error will then appear in their real colours.

The Kyōto Hongwanji temples have appointed a Committee to superintend the necessary preparations for the new situation. Members of the Committee will visit all the temples of the sect throughout the empire, to confer with the priests in charge as to the measures to be adopted. The comments of most of the Buddhist journals on this subject show, as the *Nihon Shūkyō* remarks, a state of alarm that is to a great extent founded on ignorance.

The *Kyōrin* (Shintō) still continues to advocate the separation of Shintō from other religions, and the creation of a special government bureau for its control. This organ is of opinion that Shintō cannot possibly dispense with government aid and control.

Dr. Inoue Enryō, writing in the *Taiyō* on the same subject, says that the functions of religions generally, and of Buddhism in particular, may be said to be three in number. (1) The encouragement of learning. (2) The spreading of religious doctrines. (3) Benevolent works. To the man of the world the first two functions will appear to be egoistic. Buddhism benefits herself by means of them. The third alone is decidedly altruistic. In order to have more money for charity, Dr. Inoue proposes that Buddhists should abolish their secular schools and allow boys to be educated in Government schools. The only effective preparation for mixed residence that can be made, says Dr. Inoue, is the adoption of measures for enabling Buddhism to multiply a hundred-fold her works of charity. Mere envy of other creeds and a desire to hinder their progress are altogether unworthy motives for urging preparation upon Buddhist converts.

A small copper image of considerable interest has been secreted in a temple called the Seirinji, situated in the district of Fuwa, Gifu, for many centuries. Having now become the property of Mr. Takase Heizaburō, he has furnished the *Seikai no Nihon* with an account of its history and allowed it to be photographed. It is about 3 inches in length and on the back it bears the words:—NONSU REXIT MAJOR.* It is said that this image was found on the person of the famous Konishi Yukinaga when he was killed at Shijōgawara in A.D. 1600. A Roman Catholic missionary, to whom a photograph of the image was shown, is said to be of opinion that it is intended to represent John the Baptist.

The controversy on the present management of the Dōshisha still continues. It is stated that steps are being taken to import teachers from America whose views on religious subjects are of a broader type than those of the Ame-

rican Board missionaries hitherto employed by the institution. Mr. Kashiwagi Giyen, whose opinion we gave last month, has published in the *Fukui Shimpō* another long protest against the views held by President Yokoi. The *Kokumin-no-Tomo* says that Mr. Yokoi can only be regarded as friendly to Christianity, and not as a real Christian, and adds that the changes being introduced into the Dōshisha will cause no small stir in the Christian Church when their significance is fully realised. As the Director of a Unitarian School (the Senshin-gakūin), and editor of the *Rikugō Zasshi*, Mr. Yokoi was far less to be feared than as President of an institution that has hitherto been considered a bulwark of Christianity.

The advocates of the entire separation of the native churches from foreign control and influence have started a magazine called the *Nihon-bōhan Kirisuto Kyōkai* (Japanese Standard Christian Church). Messrs. Yebina Danjō, Iwamoto Zenji, Yokoi Tokiwo and Oshikawa Masayoshi (of Sendai) are said to be the chief writers who have promised to contribute to the new organ.

In the pages of the *Nihon Shūkyō* a writer signing himself Rakka Tanjin reviews at some length the present state of Christianity in Japan. The essay is only one among a number that appear month after month. The tone of the writer is not that of an enemy to the Christian cause, but rather that of an earnest friend who is sick at heart at the non-realisation of long cherished hopes. In the choice of material for these summaries it is our constant aim to represent all classes of thinkers and thus furnish readers with data for forming an adequate idea of the real state of religious opinion in Japan. Midway between the views of the optimists and those of the pessimists the truth probably lies, but in order to locate this central spot it is necessary to know to what limits the two extremes extend. The writings of those who habitually paint the progress of Christianity in rosy hues have repeatedly been reproduced in these columns. We now give an opposite view. For years past, says the writer we are quoting, the falling away of Christians from orthodox belief has been going on, but in late years degeneration has been much more marked. Among Christians belonging to the Itchi, Kumi-ai, and Methodist Churches public worship is neglected, resulting in a corresponding decline in Christian zeal. Perhaps the most discouraging feature of all is the tendency shown by Japanese Christians to follow the lead of men of the world, to succumb to the spirit of the age. As long as the pro-foreign fever lasted, Japanese Christians were all in favour of working hand in hand with the missionaries, receiving foreign money and guidance. But no sooner did a reaction in the outside world take place in favour of nationalism than leading Christians began to clamour for the expurgation of foreign influence in the Christian Church.

"They prate and preach about what others prove, As if the world and they were hand and glove." What has taken place connected with the Dōshisha accords with what is going on all over the country. However great may have been the influence of the late Mr. Neejima, it is undeniable that the Dōshisha in the main owed its existence and prosperity to foreign help, and that, instead of fulfilling their obligations to foreigners, the Japanese Christians should have broken loose is a subject for regret. The way in which many Japanese Christians place all the responsibility of the failure of missionary work on foreign shoulders cannot be too strongly condemned. It is very easy to blame others for failure and take the credit of success to ourselves. But this theory will not wash. If their connection with foreign workers was the only obstacle to success with Japanese evangelists, how is it that results are so poor with those who have been working without foreign aid for some years? Having no foreign missionaries to blame, they now spend their time in finding fault with each other. Some writers are never

tired of holding up the divisions of politicians to ridicule, or saying how ugly the whole thing looks. But in no respect does the Japanese Christian world differ from the political world as regards factiousness and disintegration. How short-lived are all the agitations which cause so much stir while they prevail! Last year there was a strong movement in favour of union with non-Christian sects, and the steps that were taken toward bringing about a better understanding among earnest religious men of various creeds seemed to indicate the opening of a new era in religious history. But the whole thing passed away, or rather the voices of those in favour of the measure were drowned by the cries of the "no compromise" party, who shouted to all passers-by, "Show your colours. Let us have something definite in the way of a creed." Sunday after Sunday the few faithful Christians who habitually attended churches were treated to discourses on the necessity of outspokenness, orthodoxy, &c., *ad nauseam*. Now the question is being asked what new excitement can be got up? The whole thing is lamentable. It sometimes seems as though Christianity could not survive. We who are true believers can only possess our souls in patience and wait for light.

As is doubtless known to many of our readers, Mr. Tokutomi Ichirō lately returned from his European tour. Being asked who of all the eminent men that he met in Europe made the deepest impression on him, Mr. Tokutomi replied, Count Tolstoi and Sir Henry Acland. The *Kirisutokyō Shimbun* publishes an account of Mr. Tokutomi's interviews with these two noted men, from which we take the following. What struck me most connected with Count Tolstoi, says Mr. Tokutomi, was the marvellous simplicity and sincerity of his character. His mind was evidently made up on all the questions of the day, and his answers to my questions were so direct and lucid that I was left in no doubt as to his meaning. His openness and honesty made one feel that it was impossible to conceal anything from him. Notwithstanding the extreme age and feebleness of the Regius Professor of Medicine at the Oxford University, Sir Henry Acland, I succeeded in obtaining an interview with him. Sir Henry Acland being an earnest Christian, I was asked what was my religious belief. I replied that I considered it most derogatory to follow the custom of many Japanese residing in Europe and America and, for the sake of convenience, act the hypocrite and declare myself a Christian. To speak the truth, I neither believed in a god or a divinity, but in reason alone. This answer evidently surprised Sir Henry very much and led to the following rejoinder:—"That a man who figures as a newspaper writer, who aims at guiding men's thoughts, at furnishing a standard for others to follow, should make a confession such as you have made is very surprising. There is something wrong about it." Then, taking me into an adjoining room, he pointed to the pictures of Gladstone, Ruskin, and others, and observed, "Here are men who, though eminent as statesmen or scholars, realise the need of belief in God. How is it possible for you to fulfil your duty to your country while you refuse to bow to any authority but that of reason?" On this and a subsequent occasion he tried his very best to convert me. I felt very much touched by his earnestness and sincerity.

The *Kirisutokyō Shimbun* contains a notice of Mr. Buckle's labours in Formosa, which furnishes details not given in our last summary. Asked what were the chief difficulties connected with missionary work, Mr. Buckle is stated to have given the following reply:—(1) There is a very strong anti-foreign spirit among the natives and they are in the habit of alluding to our religion in terms of reproach. (2) Ancestral worship is held in high regard and it not infrequently happens that Christianity is considered to be subversive of filial piety. (3) Opium smoking is a great obstacle to progress. Asked what were the feelings of the Formosans towards their new rulers, Mr. Buckle said that the Japanese residing in Korea had been guilty

* The inscription is doubtless intended to be a quotation from scripture. "There hath not arisen a greater" (than John the Baptist), and should read, *Non surrexit major*.

of many outrages and that their lawless conduct had enraged the natives. There was a difference, however, between the North and South. In the North the feeling against the Japanese was much stronger than in the South. Robbery in open daylight had existed so long among the natives that they were quite accustomed to it. The robbers are principally Chinese. Not long ago in one day a gang of thieves carried off \$3,600 from one village whose inhabitants had been intimidated. Mr. Buckle said that in his work he usually tried to influence the heads of villages and towns first and to reach the mass of the people through them. The language spoken was the Amoy dialect. The Bibles in circulation are the same as those used by the Amoy Protestant missionaries. Great reliance was placed on the Roman letters and many were taught to read by this means.

* * *
The *Bukkyō* supplies some interesting facts bearing on the travels and exploration of Mr. Iwamoto Chitsuna, whose tour through Siam, Laos and Anam was alluded to in the last Literary Summary which appeared in these columns: Mr. Iwamoto was originally a Captain in the Army. He was ordained to the priesthood in Siam and purposes devoting himself to Buddhist studies and investigations in future. One of the principal objects of Mr. Iwamoto's journey was to discover the grave of Shinnyo, the Japanese Crown-prince who, in ancient times, renounced his title and his rank, became a disciple of Kōbō-daishi, and subsequently went to Siam, where he was killed by a tiger. As might be expected, Mr. Iwamoto's search was fruitless. His companion, Mr. Yamamoto, fell a victim to disease, and Mr. Iwamoto himself was forced by illness to return to Japan without completing his explorations. He is about to start for Siam again, furnished with letters from the Japanese Foreign Office asking for the assistance of the Siamese Government in the search for the missing tomb. One of Mr. Iwamoto's reasons for becoming a priest was to enable him to pass through the country without endangering his life. So great is the respect felt for priests in Siam that no highway robber thinks of molesting them, and among the people they are treated as gods. Mr. Iwamoto says that the priests of Siam, though inferior to those of Japan in point of learning, only two or three out of every ten being able to read, are superior in the matter of conduct. In many parts of Siam, according to Mr. Iwamoto, the people wear no clothing whatever. Japanese Buddhists purpose establishing a Mission in Siam, in order to raise the native priests to a higher educational level.

* * *
Mr. Uchimura Kanzō's opinion in reference to the teaching of Christianity in Japan is given in several journals, which may be summarised as follows. The success of Christianity depends on its not being subjected to any such modifications as are proposed by the Unitarians. The distinctive doctrines of Christianity are:— (1) The existence of a personal God who protects and blesses mankind. (2) The sinfulness of mankind. (3) The atonement of Christ. (4) The forgiveness of sins and the resurrection of Christ. (5) The existence and influence of the Holy Spirit. (6) The reality of miracles and the power of prayer. (7) The hope of eternal life.

* * *
The Roman Catholic organ the *Koye* and the *Shūkyō* give accounts of the dedication ceremony held at Nagasaki on September 8th connected with the opening of a new Cathedral, which was attended by some 3,000 Roman Catholic converts. The ceremony was performed by Archbishop Osof. The ground on which the building stands measures 1,325 *tsudo*; the building is 102 feet high, 78 ft. in breadth, and 150 in length. The amount of carving displayed in various parts of the building is large and the effect very grand. An imposing memorial ceremony in honour of the martyrs who perished not far from the spot which now serves as a site for the Cathedral, and of other departed saints, was held in the new building.

The attendance of local officials and newspaper writers was large.

* * *
Mr. Fukuzawa's "Hundred Short Essays," in book form, has already reached the 4th edition and the sale is still as brisk as ever. In the *Sekai-no-Nippon* is published a concise account of the views on religion and ethics expressed in the essays, which we reproduce here. (1) Whether what we are in the habit of calling *Tendō* (Heaven's Way) refers ultimately to a person or to principles; while the future of the world is full of hope, to do nothing but mourn over the existing state of things is extremely foolish. (2) The creation of the world as it exists is full of mystery. The assumption of a personal creator does not help us out of the difficulty, as we must ask who created this Creator? Far back as we may go we never reach finality. (3) Among human affairs there is no such thing as absolute perfection (*Yinji ni settai no bi nashi*). The world may be regarded as a playground for a number of children. We cannot but realise that we are but children engaged in amusing ourselves. What absolute standard of right and wrong, virtue and vice, is there to fall back on? To attain perfection is out of the question. All we can do is to select, each one for himself, the kind of life that most commends itself to the mind. (4) As regards the comfort to be derived from a study of the existing state of things, from one point of view there is none. The contemplation of the eternity of matter, the multiplicity of worlds and existences, the hoary ages of the past and the vast stretch of the future makes us feel how utterly insignificant in the great universe is the life of any one individual. Speaking comparatively, we are but worms, born to-day to perish to-morrow. But on the other hand there is a place which each one of us can and ought to fill, however small and insignificant that place may be; and to fulfil our destiny, whatever that may be, ought to be our chief desire. (5) Man's lot is very varied. But this variety is to be traced to natural causes. To say that Providence has so ordered it, is ignorance. Inequality is the result of the working of natural causes, of the progress of mankind generally, and of the constitution of society. (6) The bestowal of alms is not good for those who are recipients. "It is more blessed to give than to receive." The donors derive satisfaction from the exercise of charity, and this is its chief use. This being so, there is no need to publish the names of donors. Secret almsgiving is the highest form. (7) Every man has his own standard of right and wrong. To each man to do what he conceives to be right is far easier than to do what he thinks to be wrong. It is our nature to follow the easy path unless prevented by something unusual. Hence what each man thinks to be the path of virtue will in the majority of cases be followed naturally. Vice is usually the result of ignorance, the want of power to estimate the unpleasant consequences of an evil course, rather than a lack of respect for virtue. Men's wrong acts should be called *muchi* (stupidity) rather than *futoku* (virtuelessness). (8) Though I have affirmed that in the affairs of men there is no attaining perfection, this does not apply to the distant future. There is no saying that hundreds of years hence men may not reach a state that is not far off perfection. Knowledge goes on increasing from century to century, and just as our knowledge of the properties and laws of physical objects has in many cases become next to exhaustive, so the time may come when the knowledge of mental states and phenomena shall have reached such an advanced stage that under all circumstances the choice of the path to be followed will be an easy task. Other theories advocated by Mr. Fukuzawa in the essays are that the rich are by no means usually happy; that parents should not expect much from their children; that children should not rely on the property they expect to have left to them by their parents; that monogamy is in every way superior to polygamy; and that second marriages among women are to be encouraged, love being a necessity to a woman.

The *Sekai-no-Nihon* and the *Fukui-Shimpō* object to many of the views advocated by Mr. Fukuzawa. In addition to the above, the *Tetsugaku-Zasshi* points out that Mr. Fukuzawa advocates the elevation of woman by increasing legal rights, and by forbidding the disposal of her for pecuniary ends in the way that is sanctioned by the law as it now stands. Mr. Fukuzawa's views may be best described, says the *Tetsugaku-Zasshi* as favouring "optimistic evolution."

* * *
In the columns of the *Kirisutokyo Shimbun* and the *Fukui-Shimpō*, over the signatures of three Niigata Christian ministers, a letter appears which charges the Director of the Niigata Normal School with gross partiality in the management of the school. A short time ago a student, who, after an examination, had been selected for his learning and good conduct to be sent to the Higher Normal School, was disqualified by the Director on the sole ground of his Christianity, the Director declaring that it was impossible for a Christian to obey the Imperial Rescript on education. The pastors representing respectively the Methodist, the Kumiai, and the Kirisutokyo-Kai Churches appeal to all earnest men throughout the empire against the Director's action.

No. 39 of the Shinjō organ *Yuitsu*, in an article entitled "Impartiality," addresses words of wisdom to religious believers generally, of which the following is the gist. That men should choose their own religion, and, having chosen it, should observe its commands, defend it against attacks from all quarters, and endeavour to induce others to accept it, is all very proper. But when difference of religion is allowed to destroy friendship, to divide households, to create discord where otherwise concord would reign, then we are persuaded that something is wrong. To refuse to acknowledge the merits and the virtues of those whose creed differs from our own is blind prejudice that calls for strong condemnation. The tendency to carry religious zeal too far constantly shows itself in our midst. Want of respect for the rights, the feelings, and the beliefs of others is only too common. Unless the inconsiderate action of certain zealots is checked, religion will become a disturber of the peace and harmony of society generally, instead of a promoter of friendliness of feeling. The near approach of mixed residence, concludes the *Yuitsu*, renders it most desirable that we should take these considerations to heart.

* * *
In an article on the "Maintenance of Churches and Missions," which appears in the *Dendō-geppō* (Monthly Evangelist), it is affirmed that the Seikōkai (Episcopalian), and the Methodist Churches are among Protestants the most dependent on foreign aid. This remark is qualified later on by the observation that the Southern Methodists have aimed at independence from the first and that many of the pastors of this church are struggling along on poor pay in a most heroic fashion. The Kumiai and the Nihon-Kirisutokyo Churches, continues the *Dendō-geppō*, taken in their corporate capacity, are partly dependent and partly independent. Attached to these bodies, however, are individual churches that have been quite independent for more than ten years. There are institutions, too, like the Nihon-dendōkaisha and the Nihon Kirisutokyo-dendōkyoku, that are entirely worked by Japanese and supported by Japanese money. Though no doubt the churches which now receive substantial help from foreigners are desirous of becoming independent eventually, it is a subject for regret that these bodies should have acquired the habit of constant dependence on foreign money. As the work of these churches extends, the amount of foreign money spent on them increases, and thus this class of Christians sinks deeper and deeper into the mire of obligation to foreigners.

Writing on the same subject, the Episcopalian Hokkaidō organ, the *Hokkai-no-Eihari*, says it has never been the intention of the English Church Missionary Society to grant pecuniary support to native churches to all time. The help given has had only one object, the eventual

entire independence of the churches. Hitherto great difficulty has been found in collecting sufficient money to pay native pastors. In order to meet this difficulty to some extent, a society has been formed called the *Hokkaidō Bokushi Hōkyū Kaisha* (The Hokkaidō Pastors' Remuneration Society), to whose funds all those interested in the mission are asked to subscribe. In the disbursement of the money collected precedence will be given to the pastor whose congregation subscribes more towards his support than other congregations. Thus gradually, it is hoped, the churches will, one after the other, be rendered entirely self-supporting.

No. 48 of Dr. Katō Hiroyuki's "Hundred Essays" is entitled "Loyalty (to the Emperor), Filial Piety, Benevolence, Justice, Humanity, and Compassion are all to be regarded as egoistic in origin and end. Some little time ago Dr. Katō was accused by the *Kokumin-no-tomo* of sowing the seeds of materialism among the professors and students of the Imperial University during the time of his presidency. To this Dr. Katō replies in the *Taiyō* that too much importance is attached to his influence by the *Kokumin-no-tomo*. It is not difficult to account for the attraction that physical science and kindred subjects possess for ordinary Japanese minds. The search for something solid and capable of being proved was a natural reaction from the vague theorising with which scholars had been amusing themselves for ages.

The efforts of Mr. Vebina Danjō towards amalgamating Christianity and Shintō are pronounced by the *Taiyō* to be quite fruitless, seeing that the two creeds contain elements that can never be made to blend.

The *Nihon Shugi* requests all Japanese Christians to give plain answers to the following questions. (1) Can the worship of His Sacred Majesty the Emperor, which every loyal Japanese performs, be reconciled with the worship of God and Christ by Christians? (2) Can the existence of authorities that are quite independent of the Japanese state, such as that of God, Christ, the Bible, the Pope, the Head of the Greek Church (the Czar), be regarded as harmless? (3) Can the Japanese who is the faithful servant of Christ be regarded at the same time as the faithful servant of the Emperor and a true friend of His Majesty's faithful subjects? Or, to put it another way, Is our Emperor to follow in the wake of Western Emperors and to pray, "Son of God have mercy on me"? (4) Can the Christian convert answer the above questions in a manner that will satisfy our reason?

Of these queries the *Saikyō Shimpō* and other organs write in scornful tones, contending that the loud professions of intense loyalty to the throne of the *Nihon Shugi* is nothing more than a device to hide the weakness of the cause it espouses; and there are those who say that its pretended patriotic zeal does far more harm than good; as patriotism carried to excess invites ridicule.

The *Rikugō Zasshi* contains a lengthy and carefully prepared criticism of the views advocated by Dr. Hozumi in his recent work entitled *Aikokuron* (Patriotism). The line taken by Dr. Hozumi corresponds with that of the ultra-conservatives of the Shintō persuasion. It will no doubt be somewhat of a surprise to many readers to find that a man who is well versed in Western learning should hold the view that consanguinity is the best foundation for morality, for that is what Dr. Hozumi's theory amounts to, when simply stated. He contends that both in the case of the Imperial Dynasty and of the Japanese people as a nation there has been no mixture of blood or race and that this unity of origin is the strongest of all ethical bonds. The *Rikugō Zasshi* first calls into question the facts on which Dr. Hozumi's theory is said to rest. What accurate historian is there, asks the *Rikugō Zasshi*, that would venture to assert that the Japanese of to-day are derived from one source? What becomes of Dr. Hozumi's superstructure when the foundation

of the whole, the assertion that we all sprang originally from the same family, is shown to be baseless? How can this theory of Dr. Hozumi's be reconciled to the principle of which we hear so much nowadays, the extension of the Japanese empire? How can we unite to us a people of alien lineage like the Formosans? What does Dr. Hozumi mean by our all having the same ancestors? There is no interpretation of the term *Dōso* (same ancestors) consistent with history that will support the ethical system which he is anxious to establish. What do we know, after all, about the genealogy of the ancients who lived centuries before written records were kept? Dr. Hozumi, in conjunction with others, has, it is said, succeeded in preserving in the New Civil Code many of the elements of Japanese family life, but when what has been preserved is compared with what has been eliminated the magnitude of the changes which year by year are taking place becomes very manifest? Will anything save the remainder? Do men any longer feel towards their ancestors as they used to feel? Do they believe that their spirits exist in a disembodied state? Do children actually think that they are objects of care to their deceased grand-parents? It would be interesting to know, says the *Rikugō Zasshi*, what Dr. Hozumi himself in his heart of hearts thinks on these points? A man's real belief does not always correspond to the theories which he advocates. But even supposing that the existence of the spirits of ancestors and their readiness to help could be proved, the worship of these spirits would still appear to the philosophical to be a purely selfish affair carried on for the sake of the benefits to be received, and in the majority of cases to be in no way based on any superior moral qualities possessed by the objects of worship.

FORTIFICATION OF HONGKONG.

The *Hongkong Daily Press* says:—

The report that the south side of the island is to be provided with defensive works sufficient to prevent any attempted landing by an enemy will be received with general satisfaction. With the powerful batteries protecting the harbour no enemy, it is believed, would attempt to force either the eastern or western entrance, and the city may therefore be deemed safe from attack from that direction, unless, indeed, the enemy managed to come over the Kowloon hills and establish himself in force on the peninsula. That is a danger which has been recognised and is one of the chief reasons for desiring a rectification of the frontier, in order that it may be guarded against. A more immediate danger, however, was the unprotected condition of the south side of the island, where an enemy might make a sudden landing in force and occupy important positions before the defending troops could be brought up to oppose him. Under the new scheme we understand all the available landing places will be covered by guns, so that the way will no longer be left open to the enemy to attack us from the rear. To provide for the working of the guns there will, of course, have to be a proportionate increase to the garrison.

The danger of an attack by way of Mirs Bay and the Kowloon hill passes will still remain, but further representations as to the importance of a rectification of the frontier are being made by the local authorities to the Imperial Government. It is to be hoped that success may attend those representations, for the rectification is urgently required not only for defensive purposes but also to allow of the industrial expansion of the colony.

LOSS OF THE "FUSO-KAN."

According to the *Tokyo Asahi Shimbun*, the Japanese man-of-war *Fuso* ran on a rock near Nagahama in the Kita Division of Iyo province, and sank, at 6 p.m. on the 29th ultimo. The *Fuso* used to enjoy the distinction of being Japan's only iron-clad. She was built in 1877, has a belt of 7 inches and 9 inches over her battery, is of 3,777 tons displacement and carries twelve guns, of which the largest are four 15-ton Krupps. There were no casualties to life or limb, and it is expected that the ship can be raised without much difficulty. Nagahama is a port on the Iyo Nada, which washes the south-western shore of Shikoku. We have never heard that the place presents any special perils to navigation.

The city of Berlin has closed its annual accounts with a surplus of over \$2,000,000. This money has been saved by the different departments, most of which spent far less than had been granted to them.

JAPANESE FACTS AND COMMENTS.

According to the *Shogyō* silver *yen* pieces exchanged for gold up to the 20th inst. amounted to 45,571,817 *yen*, of which 54,186,610 *yen* were delivered to the Bank of Japan and the remainder, 1,385,207 *yen*, to the public.

The *Official Gazette* states that earth, gravel, stone, etc., required for the construction of railways in Formosa, are to be delivered free of charge to the promoters of railway schemes, if procured from land under the supervision of the Governor-General's Office.

The *Kokumin* quotes as follow from a Russian journal:—"The principal causes of trouble to Russia in Korea are the control by the English over the Finance Department and the Customs, and the policy pursued by Japan of stationing troops in various places on the plea of protecting her own interests. Any relaxation of precautions on the part of Russia will enable the two Powers—Japan and England—to obtain complete control over Korea at no distant date.

Of the amount of War Bonds sold by Government, amounting to 43 million *yen*, 27,950,000 *yens*' worth were received in London at the end of September. A telegram received by the Government on the 29th ult. announces the receipt of the remaining 15,050,000 *yen* on the 28th ult. Of these some 30 millions were to be remitted to the Government through exchange, and it is now reported that similar arrangements are also being made for the rest of the money.

Various opinions, or conjectures, have been expressed with regard to the intentions of Mr. Hoshi, Minister to America. He is now reported to have determined to return to America again. He proceeded to the Palace on the 29th inst., and having acquainted the Emperor with various diplomatic matters connected with the country to which he is accredited, paid visits to each of the Ministers of State as is customary on such occasions. He intends to leave Japan by the steamer *Gaelic*, leaving Yokohama on the 9th proximo.

A scheme is on foot to reconstruct the harbour of Wakamatsu in Chikuzen at a cost of two million *yen*, which it was proposed should be raised by a joint stock corporation. As it is considered improbable that such a corporation could be successfully formed at the present time, an arrangement has been made, according to the *Shogyō*, to obtain a subsidy of 500,000 *yen* from the Government Iron Foundry, 300,000 *yen* from the Mitsubishi Company, and other sums from the Mitsui Bussan Kaisha and certain coal mining companies.

The Educational Department is reported by the *Mainichi* to have approved a representation made by Mr. Toyama at the High Education Council with regard to the establishment of an Educational Statistics Bureau. Mr. Toyama considers that in determining the system of education suited to the Japanese, it is necessary to investigate, for a period of years, the physical and mental faculties developed by children, in relation to school instruction and discipline, and that for this purpose the educationists throughout the empire should be required to collate all statistics available for the formulation of a standard.

According to the *Hochi*, the projectors of the electric tramways in the capital were summoned to the *Tokyo Fuchō* on the 29th ult., and were required to comply with the following provisions:—(1) The locomotive power shall be exclusively supplied by electricity, the use for motive purposes of men or horses being strictly prohibited. (2) The system of storage shall be followed, no electric posts being used. (3) The construction of electric tramways shall be limited to thoroughfares of more than 8 *ken* in width, in the districts of Nihonbashi and Kyo-bashi, but in the Hill district the width of road may be over 6 *ken*. In sections where lines are

to be doubled for electric locomotives the road must be 2 *zen* wider than the limits above specified.

Reports from various prefectures received by the Government as to the rice crop throughout the empire show the total production for this year to be 36,289,056 *koku*. These figures indicate a decrease of about 10 per cent. as compared with ordinary years, but an increase of 0.4 per cent. over last year. Full statistics have not yet been obtained of the actual crop in some districts, but it is believed that this year has been more successful than last, though it is rather less than previous years. The clamour of rice speculators as to scarcity of grain must therefore be considered as misleading. Experience shows that the actual crop has always exceeded the estimates, and it may confidently be expected that the harvest this year will not be less by five per cent. than any of the previous years. So says the *Yorossu*.

The *Yorossu* states that the New Taxation Investigation Committee of Tokyo Fu decided, at a conference held on the 28th instant, to reject the scheme of levying taxes on companies' but came to no conclusion as to an alternative source of revenue. It is conjectured that the Committee will resort to the following measures at another conference to be held on the 4th proximo:—Taxation of banks at the rate of 18% on profits above 5 per cent. and below 10 per cent; 18% on profits over 10 per cent. and 18% on profits exceeding 20 per cent. Taxes on exchanges, 18% on profits above 5 per cent. and below 10 per cent.; 18% on profits of more than 10 per cent.; 18% on profits above 20 per cent.; 18% being increased for every 10 per cent. of profits above the last named limit. Tithes to be levied on the sale or purchase of land, buildings, and other immovable property. Taxes on *jinrikisha* will be 2 *yen* for single vehicles and 4 *yen* on double, while bicycles are to be taxed 3 *yen*. The taxes on carriages for domestic use, on hackney carriages, omnibuses, trucks, and ox-carts, are to be levied under the general head of "Carriage tax." Carriages drawn by horses will be taxed 20 *yen* for one horse and 30 *yen* for two horses, and horse-carts are to be required to pay 6 *yen* instead of 5 as heretofore.

The appointment of Mr. Ume Kenjiro, L.L.D., to the Presidency of the Legislative Bureau, was gazetted on the 29th instant. He was formerly known as an advocate of the independence of the judiciary in Formosa, but whether he will still hold true to his avowed principles after his new appointment is a question which the public, the *Tokyo Asahi* says, are eager to ascertain. The views he has expressed on the subject of the Formosan judiciary may be epitomised as follows:—The provisions of the Constitution which constitute the safeguard of the independence of judicial functionaries must be applied within the limits of the Constitution. The so-called Law-court Organization Law has no relation whatever to the Imperial Diet or to the Law of Election. It is, in fact, a by-law, and independent of it judicial independence is properly secured by the constitutional provisions referred to. The judiciary in Formosa are likewise entitled to maintain their independence according to the Constitution in spite of the non-existence of judicial Regulations or a Court Organisation Law. There is no room for doubt on this point. The adverse criticisms on the subject, which have been expressed by certain circles of the public are incomprehensible to the distinguished lawyer. Such are the opinions formerly entertained by Dr. Ume. The post of President of the Legislative Bureau does not afford the holder the authority of a political commissioner, the duties being simply to act as Law Councillor of the Cabinet, the authority of which cannot be impugned. What course will Dr. Ume pursue at the present juncture?

The *Kokumin*, commenting on the present situation of the Cabinet, ridicules and denies that there is any foundation for the popular outcry of

"want of unity," in the Cabinet. At the time of the organization of the present Ministry both Count Kabayama and Viscount Takashima eagerly desired the co-operation of Count Okuma, who, by his simple and straightforward character, ability, and judgment had earned their admiration and respect. The confidence and friendship between the three statesmen, says the *Kokumin*, still remains unaltered, and not a shadow of ill-feeling exists between them.

The *Fiji* publishes the following statistics of casualties to life and limb on the Railways of Japan from the 23rd to the 29th year of Meiji (1890 to 1897):—

Year.	Mileage of lines open.	Persons killed.	Persons injured.
23rd	1,698.....	232.....	1,804
24th	1,750.....	243.....	148
25th	1,879.....	271.....	165
26th	2,039.....	318.....	233
27th	2,118.....	365.....	345
28th	2,290.....	461.....	446
29th	2,446.....	458.....	354
Total		2,348	1,804
Average per year ... 2,031.....		335.....	257

The *Yomiuri* states that the Relief Station established at Shimonoseki under the supervision of the Imperial Marine Disaster Relief Association, is to be opened on the 3rd November, arrangements having lately been completed. The relief to be administered by the Station is to extend over the whole bay, boats being kept in readiness in convenient places, such as Tanokubi, Deshimachi, Fukura, and Nambudomari, to render aid to vessels in distress. All the business will be conducted at the Water Police Office for the time being, while watch towers are to be erected on Ganryujima island and communication with the various stations will be secured by a submarine cable specially laid for the purpose.

In order to enlarge the scope of technical education, a sum of 150,000 *yen* was disbursed last year to the various cities and prefectures throughout the empire. The results having proved extremely successful, the Department of Education has now resolved, the *Nichi Nichi* asserts, to double the amount of the subsidy. It is hardly necessary to say that the number of local technical schools has increased considerably of late, their usefulness being fully appreciated. The late High Education Council also approved the extension scheme.

A telegram from Formosa, dated the 28th instant, reports that Mr. Kawada Tozaburo, Chief Judge of the Taipei Court, together with seven clerks, have tendered their resignations. Of the twelve clerks serving in the Taipei Court, more than half have therefore resolved to share the fate of their former chief, Mr. Takano.

The Home Department, alleges the *Meiji Shimbun*, has long devoted its energies to the improvement of jails. A few years ago, Commissioner Ogawa was despatched to the West with instructions to investigate the general regulations as well as the systems of prisons in Europe and America. The time for enforcing the revised treaties being at hand, improvement in the constitution and construction of prisons has now become a most indispensable enterprise. Count Kabayama made a declaration in that sense at the recent meeting of prison Superintendents from the various prefectures. The scheme requires an enormous outlay, and its execution was consequently deferred. The Prison Bureau, however, has resolved to commence the work at no distant date, and arrangements are being made for the purpose.

The *Kodo-kai* (Public Unionists) are reported by the *Osaka Asahi* to have submitted the following memorial to the Premier for acceptance.—(1) The Cabinet shall carry out the scheme of increased taxation, and discontinue the temporising policy of reducing departmental expenditures. (2) When the increased taxation scheme is carried into operation, prison expenditures shall be defrayed from the Treasury,

and the respective expenditures for public works payable by the Treasury and from local taxes shall be clearly specified. (3) The unity of the Cabinet shall be secured, and steps taken to adjust or reform administrative affairs. (4) Count Okuma shall be relieved of the portfolio of Agriculture and Commerce.

The Progressionists appear to have altogether forgotten, says the *Chuo*, that the notice of dismissal sent to Mr. Takano placing him on a retired list was signed by the Premier and Count Okuma and other Ministers. They have placed the responsibility for the affair exclusively upon Mr. Kiyoura, Minister of Justice, and urged the Government to withdraw the notice to Mr. Takano and to remove Mr. Kiyoura from his post. Count Oki has begun a hostile movement against the Cabinet, and has communicated privately with Mr. Mizuno, appointed to succeed Mr. Takano, with a view to delaying his departure for his new post. The Cabinet, the *Chuo* says, is now in a state of great perplexity about the matter, but we (*Japan Mail*) have discovered no evidences of any perplexity.

Investigations made by the Finance Department and published in the *Fiji* show that the coinage in circulation in Japan at the end of last month amounted to 85,397,415 *yen*, showing an increase of 668,349 *yen* as compared with the previous month, and of 11,851,303 *yen* over the corresponding period of last year. The following are the details:—

	At the end of September, Yen.	Compared with previous month, Yen.	Compared with the corresponding period of last year, Yen.
Gold	5,622,354	194,432	143,141
One yen silver and trade dollars ...	37,525,036	347,434	7,555,299
50 <i>sen</i> silver coins and under ...	26,272,993	127,808	3,634,710
Nickel	6,626,078	—225	554,663
Copper	9,350,952	—100	—36,510
Total	85,397,415	668,349	11,851,303

The amount of Government and bank paper circulating at the end of last month was, according to the *Fiji*, 14,100,989 *yen*, showing a decrease of 190,802 *yen* in Government paper and of 469,368 *yen* in bank notes.

THE LATE SIR RUTHERFORD ALCOCK.

The news of the death of Sir Rutherford Alcock will awake many old memories among the earlier residents in Japan, for he represented Her Majesty at the "Capital of the Tycoon" in very stirring times. We have only space for a short notice of his career this morning, which we extract from *Men and Women of the Time*:—Sir Rutherford, who was the son of Mr. Thomas Alcock, was born in 1809, and educated for the medical profession. He was on the medical staff of the British Auxiliary Forces in Portugal in 1832 in support of Maria II. against the Miguelists, and in Spain in 1835 in support of Isabella II., against the Carlists, and for his services in the Peninsula received honours and decorations from the Spanish and the Portuguese Governments. Subsequently he was Consul at Foochow (1844); at Shanghai (1846); and at Canton (1858). Thence he was transferred to the diplomatic service, and became Envoy Extraordinary, Minister Plenipotentiary, and Consul-General in Japan. Sir Rutherford Alcock was created K.C.B. in 1862; and in 1865 was transferred to Peking as Envoy and Plenipotentiary and Chief Superintendent of Trade in China, and remained there till 1870. He is the author of "Notes on the Medical History of the British Legation of Spain," 1838; "Elements of Japanese Grammar," 1861; "The Capital of the Tycoon," 1863; and "Familiar Dialogues in Japanese," 1878; and a work on Japanese Art and Industries. In 1876 he was President of the Royal Geographical Society, and in 1882 presided over the Health Department of the Social Congress.

KOREAN NEWS.

The coronation of the ruler of Korea under his new title of "Emperor" took place on the 12th of October at three o'clock in the morning. The *Independent* gives the following account of the affair:—

The place where the ceremony occurred may not be equal in splendour to the marble palaces and jewelled thrones of European courts, but its address and simplicity command admiration. The Imperial Round Hill, or the Sacred Altar, inside of old Nambekung, is a circular platform divided into three terraces, each attaining a height of four feet of granite embankment. The lowest terrace is about one hundred and forty-four feet in diameter and surrounded by a low granite wall. The second terrace is seventy-two feet in diameter while the third or highest platform is thirty-six feet across. The floor of each is covered with rectangular tiles. Around the upper platform a circular awning of yellow was neatly hung, and over it all a huge square awning protected the platforms from the hot rays of the sun during the day and from the dew at night. There are four entrances through the circular granite wall on the lower terrace, one on each side of the compass. The gates are constructed after the fashion of Japanese *tori* and painted with the Imperial colour of yellow.

His Majesty, the Emperor, left the Kyengwon Palace at half-past two on Monday afternoon, and, with great splendour of pageantry of both Oriental and Occidental fashions, with several regiments of soldiers, carriers of flags, wooden hammers, gilded stirrups, silvery wooden swords, together with numerous dignified strutting of officials, went to the Sacred Altar. His Majesty inspected the various arrangements in connection with the ceremony in person with His Imperial Highness the Crown Prince. His Majesty wore the yellow robe upon which the sun, moon, stars and various animals were embroidered in gold. His hat was the jewelled crown after the fashion of the Ming dynasty. The Crown Prince wore a similarly fashioned robe except that the color was red instead of yellow. The Emperor and Prince each rode in a yellow chair which was richly gilded and each was carried on the shoulders of fifty or more men.

The entire length of the route from the Palace to the Sacred Altar was lined with soldiers and police and either side of the street was temporarily fenced off by awnings. Many private and public buildings were decorated with flags and thousands of people watched the procession from high places about the city. Every one was orderly and the details of the programme were admirably carried out.

His Majesty and the Crown Prince stayed in the Sacred Altar until four o'clock and returned to the Palace. About two o'clock Tuesday morning (12th Oct.) the Imperial party went again to the Altar and performed the coronation rituals. On the upper platform several tables were placed and upon them the usual sacrificial food was arranged and the Round Hill was brilliantly lighted. His Majesty rose and reverently bowed to Heaven, and a high dignitary—Grand Master of Ceremonies—read loudly the prayer which was composed for the occasion. The gist of the prayer was that through Heaven's blessing His Majesty takes upon himself the title of Great Emperor of Great Chosun, which was done in accordance with the will of Heaven and man. Heaven may bestow upon the Emperor continual blessings and guide him in directing the affairs of the Empire. After the completion of the prayer and offering of various sacrificial animals His Majesty and the Crown Prince again bowed. Then the Emperor took a seat and received the congratulations of the Ministers of State and other civil and military officials, who arranged themselves on the different terraces according to their rank and bowed to the Emperor nine times.

The only unfortunate occurrence during the ceremony was the downpouring rain which soaked through the awnings, causing great inconvenience and discomfort to the Imperial party as well as to the thousands of other followers. Some of the lights were blown out by the wind and the torches were extinguished by the rain. Every body was shivering with cold and their silky robes and gilded hats presented the most dilapidated appearance on account of the drenching rain. About five o'clock in the morning the procession was again formed and in the midst of rain and wind the Imperial party safely returned to the Palace. We join the loyal Korean citizens in shouting *vive l'Empereur*.

The Japanese-Korean newspaper of Söul—the *Kanijo Shimpö*—has become a daily, in-

stead of tri-weekly, publication. It appears on one day in pure Korean script, and on the next in mixed Korean and Japanese.

The *Söul Government Gazette* announces the appointment of six secretaries of Legation to the six European capitals.

Five Korean Imperial Princes are expected to be soon nominated, namely the Tai-won Kun and his son (the Emperor's brother); the Emperor's second son (Eniwha); the Emperor's first cousin (Ye Chaiwan), and one other.

Korea was visited by a great storm of wind and rain on the 23rd and 24th of September. In Sungchon fifty-nine lives were lost, and in South Kyensang, fourteen.

A Mr. Ye Junkie reports to the *Independent* that the newly appointed Magistrate of Onyang in Chunchong province having been continually drunk from the time of his arrival at his post, the leading inhabitants of the district finally marched to his office, tied him on horseback, and transported him across the frontier. The Magistrate took it good-naturedly and made no remonstrance.

It is stated that Mr. Greathouse will no longer be employed by the Korean Law Department, but will give his services entirely to the Foreign Office.

The *Söul Independent*, moralizing on the fact that Korea has become an empire without any exercise of energy on her own part, or any of the sacrifices that usually precede such an achievement, adds:—

The Shimonoseki treaty of 1895 secured Korea the indisputable title of independence, but very few Koreans realized the position in which their country was placed. They gained the independence but not a drop of blood was shed for obtaining it on the part of the Koreans. It was a most unusual way for a vassal State to be an independent sovereign Power, as the independence was actually forced upon her by another country.

The Russian Legation in Söul is in process of being re-roofed, corrugated iron being substituted for Japanese tiles; not a change for the better, we should think.

"Dai-han" is the new name of Korea, according to Korean pronunciation. The Japanese read the same ideographs "*Dai-kan*."

The French Government is said to have declined to receive Mr. Min Yungik as Korean Representative. The objection is based upon two grounds: first, that Mr. Min has been away from Korea for ten years and that he is not to return thither before proceeding to Europe; secondly, that he was connected indirectly with the fraud in Hongkong some years ago, when a sum of forty thousand dollars was improperly obtained from the Hongkong and Shanghai Bank. Korea was sending Mr. Min as her representative to the six great capitals of Europe, but France's objection will, of course, put an end to his mission.

The degraded status of Buddhists in Korea is recalled by intelligence that the Söul police have been ordered to examine every Buddhist priest entering the city, for the purpose of ascertaining his business and destination. Before the war, Buddhist priests were not allowed to enter Söul under any circumstances. That veto was removed in 1895, and it appears that the priests have been abusing their new privilege.

YUKON MINING COMPANY.

The *New York Journal*, writing on October 2nd, says:—"The mining market was very dull yesterday, with the single exception of Yukon, which rose to 27½ on fairly active trading. Considerable blocks of this stock have been taken by Canadians, in addition to the stock taken by Englishmen in Japan. Sales were to-day:—Yukon, 11,300; 27½ high; 26½, low; close, 27½."

We understand that the Agent of the Company in Yokohama, has sold 35,000 shares at 10 cents, gold, a piece.

ENGLISH CYCLING NOTES.

(FROM A CORRESPONDENT.)

Police charges for furious riding still continue to occupy considerable space in the cycling publications in England and the agitation against the miscarriage of justice, more especially in the case of the Magistrates on the Reigate Bench, is now extending to the London daily press. There can be no doubt that much prejudice is carried in these decisions of the various Magistrates, for it is a very rare occurrence for any of the public to be injured by the wilfulness or carelessness of cyclists. It is a positive fact that to ride down the Brighton road any Sunday between the hours of nine and nine lays one open to a summons and a 20/- fine. The policeman uses no discretion as to the speed of the rider, and the Magistrates use no discretion as to the evidence brought forward when convicting a cyclist, one and all are fined the 20/- and costs. Two men recently hired a tandem, started to ride down a rather steep hill in Kent, and did not notice that the machine was brakeless. They had not proceeded far before the machine became uncontrollable and dashed down the hill; they fell over, one receiving a fractured skull and the other a broken arm; yet the police and magistrates classed this as "wilfully riding a bicycle to the common danger of the public," and fined both the maximum penalty of 40/-.

The Scottish amateur racing season was brought to a close on Saturday, September 11th, when a 30-mile championship for Scotland was decided on the Dumfries track. The magnificent weather induced a large crowd to assemble to witness this event. The meeting, however, was marred by a series of accidents. Although the competitors were sent away without a mishap, it was apparent from the crowded appearance of the track that a disaster would occur sooner or later unless the field spread out. Scarcely a mile had been covered before 5 of the competitors came down in a heap, one breaking his collar-bone in two places, while another received damage to his left shoulder. At 18 miles Ramsey's tyre burst, and in his fall he brought down another rider which left only 4 men on the track. At 20 miles one of the competitors gave up, at 28 another, leaving only W. Johnston, of Lockerbie, and H. T. Crossbie, of Helensburg, to fight out the championship, the winner eventually turning up in the former man in the slow time of 2 hours 15 minutes.

W. J. Neason, of the Anfield B.C., has again been successful in reducing the time for the London to Brighton and back record. This has undoubtedly been the favourite place-to-place record of the present season. Scarcely a fortnight passes without someone attempting or achieving an improvement on the existing times. W. J. Neason, it will be remembered, early in May secured this record by covering the 104 miles in 5 hrs. 10 minutes and 54 seconds. He held the record for the space of a month. He has now re-gained it, covering the distance in 5 hrs. 6 minutes and 42 seconds, a really grand ride considering the numerous hills that have to be traversed. Subsequently, Montague A. Holbein started to re-gain his world's record for 24 hours on the road. The weather and pacing arrangements were perfect for achieving this object, and it is therefore all the more to be regretted that at about 30 miles from the start the famous road racer unfortunately touched his pacing motor and being unable to re-gain himself, fell. A tandem which was riding behind him had not time to escape riding over him, and in doing so fractured his hip. He had to be removed to the White Hart Hotel, Wisbech, where medical attendance was secured.

I was surprised to hear of one of our old amateurs, E. H. Ainsworth, joining the ranks of the Professionals the day before he left England for Australia. He is travelling with J. J. Platt-Betts per P. & O. *China*. C. F. Barden and T. J. Gascoyne will shortly be following.

AMENDED ORGANIZATION OF THE HOKKAIDO ADMINISTRATION.

The changes effected in the organization of the Hokkaido Administration have no particular interest for foreign readers. Three new bureaux are created—colonization, railways and engineering; five special business officials are to be appointed, and instead of Headmen of districts, there are to be Headmen of Branch Administrations. The alterations are to go into force from the 5th inst. ant.

NEWS OF THE WEEK.

Mr. James I. Dodge, of Indiana, has been appointed U.S. Consul at Nagasaki.

Lord George Hamilton estimates the cost of the Indian Famine to the Indian Government at ten millions sterling.

From the commencement of the Indian Frontier operations, up to Oct. 9th, the British losses have been 190 killed and 580 wounded.

The foreign community of Bangkok intend to present an address to H.M. the King of Siam on his return from his European tour.

A native Volunteer Corps is being formed in certain provinces of the Philippines, under a decree issued by the Governor-General dated the 16th October.

The charge of *lese majeste* brought against the *Frankfurter Zeitung* for criticising the alleged erratic course of Emperor William has been dismissed.

Telegraphing at 7.30 p.m. on Saturday our Hakodate correspondent informed us that the first snow this season was then falling in the northern treaty port.

The approaching rice harvest in Tonkin promises to be a very good one, says a Hongkong payer. Satisfactory reports are being received from all parts of the country.

Since the great earthquake of 1891, Gifu has experienced 3,574 shocks or tremors and Nagoya 1,827. The number registered each year has decreased as the months have elapsed, remarks the *Higo News*.

H.M.S. *Plique* and *Rainbow* will not, says the *China Mail*, recommission on this station. On the completion of their present commission, about March or April next year, they will proceed to England.

The recovery of one of General Gordon's uniform cases is an interesting incident of the Sudan advance, and prophetic, let us hope, of the complete success of the expedition in recovering all that Egypt and England lost when Gordon died.

Two foreign banks of Yokohama—the H. & S. Banking Corporation, and the Chart-red Bank of I. A. & C.—are advertising an increase in their rates of interest: 12 months' deposits now receive 5 per cent.; 6 months' 4 per cent.; and 3 months' 3 per cent.

The China Mutual Steam Navigation Co.'s steamer *Moyune*, it seems, struck on an unknown rock near Palawan Island, at a place marked 200 fathoms on the chart. It is just probable that the rock has been thrown to the surface in the recent seismic disturbances.

In one of our Southern Courts the other day, remarks a Madras contemporary, a profound limb of the law was doing his level best to establish the soundness of an impossible proposition. "The Court is not with you," said the Judge. "Then," replied the Barrister grandiloquently, "I have in vain studied law for the last twenty years." "The Court is with you in that," was the smiling retort.

The steamer *Iyo Maru*, built at the Kawasaki Yard, Kobe, to the order of the Iyo Steamship Company, was successfully launched at 9.30 a.m. on Friday, says the *Kobe Chronicle*. There were present about 370 gentlemen, amongst whom were seen Baron Suzuki, the

Vice-Minister for Communications, Governor Omori, Judge Chiba, President of the Kobe District Court, and others. The *Iyo Maru* is a steel steamer, 180 feet long, 26½ feet wide, 20½ feet deep, of 620 tons and 90 horse-power. Her speed is intended to be 15 knots an hour, and she is designed to meet the requirements of the Steam Navigation Encouragement Law.

The St. Andrew's Society at Shanghai devotes a portion of its funds to provide bursaries for children of Scotch parentage in attendance at the Shanghai Public School. The bursaries voted last year were awarded to Winnie Lamond (\$100) and Master Willie Anderson (\$50).

It has been decided to hold a St. Andrew's Ball in Bangkok. A proposal is on foot to make it a fancy ball. If they be favourable, all Scotsmen are to be asked to appear in Scotch characters. This reminds us, that the Yokohama community will not lose their St. Andrew's Ball this year, though it will be on more business-like and manageable lines than formerly.

The preliminary examination by H.M. Consul, Mr. Longford, into the cause of the death of James Gerard, who was fatally stabbed on the 19th ult. at Nagasaki, on board the British ship *Port Caledonia*, has resulted in the accused, William Cuthbert, being committed for trial on the capital charge. The trial will take place at Yokohama, says our Nagasaki contemporary, but the date of the assize is not yet known.

The Agent of the Rosland and Yukon Gold-Mining Company states that latest quotation for Yukon shares on the Consolidated Stock Exchange of New York was 27½ cents. (Gold) on fairly active trading. A few shares of the stock can yet be obtained at the Agency but preference will be given to present stockholders. Applications for same must be made not later than Thursday morning next, for C. P. R. Mail.

The other day a cardboard box merchant in Birmingham delivered sixty cases, price 7s 6d. to the Birmingham branch of the Bank of England. The goods were accompanied by a delivery note with the following intimation:—

It is usual with a first transaction to have one or two references. However, to save time, I have sent the boxes on. Fancy trusting the Bank of England for 7s. 6d. without one or two references! Let us hope, says *Truth*, that the worthy man will not find that his confidence has been misplaced.

The *Undaunted's* on October 21st, says the *Hongkong Telegraph*, turned over from the *Tamar* to their own ship, where it is to be hoped fever will not be so rife amongst them as has been the case during their stay on board the hulk. A deal of work still remains to be done to complete the overhaul of the *Undaunted*, so it is unlikely that she will be ready for sea for some weeks. No date has yet been fixed for the transferring of the Commodore's broad pennant from the *Victor* to the *Tamar* as the alterations to the latter hulk are far from completed.

The Goorkha, with his catlike facility for taking cover—aided by his small size—and his sleuth-hound persistence in following an evasive foe, says the *Globe*, has always been an annoyance to the stalwart Pathan. On one occasion two Goorkha scouts were told off to drive away two Afghans who, from a neighbouring summit, were "sniping" at a passing column. The column reached its camp after midnight, and when roll was called the two Goorkhas were missing. Their comrades mourned them for a few hours, but at daybreak the two turned up, very hungry, and very thirsty, but radiant. "We got them both!" they said. Few men but Goorkhas would have enjoyed the sport of stalking enemies in their own country until they "got them both."

Sir William Robinson, Governor of Hongkong, in the course of a recent address to the Legislative Council, expressed the hope that a surplus in the Colony's accounts of \$3,686 would be found at the end of the new financial

year. Incidentally, he remarked that \$98,000 dollars had been subscribed by the residents of the Colony for a new Victoria Road, Victoria Hospital, and Nursing Institute, which are intended to commemorate the completion of the sixtieth year of Her Majesty's reign. The Government intends subscribing a like amount, the fund thus standing at \$196,000—a truly handsome sum.

Says the *Kobe Chronicle* of Monday, November 1st:—We greatly regret to announce the death of Mr. R. N. Gray, which occurred yesterday morning at the comparatively early age of 38, of consumption. Mr. Gray has only been in Japan some five or six years, having come to this country in the hope of arresting the disease from which he was suffering, and only this year he made a trip to Honolulu with a similar object, but without experiencing any benefit. He was at first connected with the firm of Messrs. C. P. Low & Co., and afterwards joined the China and Japan Trading Co., with whom he remained to the last, his conscientious and painstaking methods being much appreciated by his employers. Though perhaps not known to a very wide circle, Mr. Gray had many close friends in Kobe, who will deeply regret that a life exhibiting such sterling qualities should have been prematurely cut short by death.

On Monday evening the police effected a smart capture of a bicycle thief. It appears that a member of the Chess Club left his machine at the foot of the stairway leading up to the Club rooms on Creekside and upon coming down found the bicycle missing. He at once proceeded to the police-box at the Yato-bashi and the telephone bells were set ringing. Within half-an-hour the report came in that the missing bicycle had been found in the possession of a Japanese, who was caught as he passed the temple at the far end of Motomachi. The police are to be commended on their celerity and the bicycle-owner offered a piece of advice—not to leave his machine in an exposed position again.

A correspondent writes:—"Some time ago there was a discussion about the Japanese raspberry. The following extract from the London *Mail* may, therefore, be of interest. The description it contains answers to the *ickigo*, plentiful at Karuizawa and elsewhere, which is made (by foreigners) into jam:—

Observations made at the Rhode Island experiment station indicate that the Loganberry can be most successfully, though only slowly, propagated from its prostrate stems or stolons. The newer types of small fruits that have been gradually introduced into American gardens during the last ten years include the Crandall currant, the dwarf Juneberry, the Japan wineberry, the Japan Mayberry, the strawberry-raspberry, and the Loganberry. Of these the Crandall currant is a modification of the flowering or Missouri currant, formerly grown only as an ornamental plant. The dwarf Juneberry is a variety of the shadblow, *Amelanchier Canadensis*, and has not yet attained any commercial value. The Japan wineberry *Rubus phanicolasius*, is a variety of raspberry, in which the hull or calyx incloses the berry in the earlier stages of its growth, opening out at about the time when the fruit begins to colour, and leaving it fully exposed when ripe. The berries are vivid scarlet, but not highly flavoured.

It is rumoured that Sir Claude Macdonald will not remain very much longer at Peking, but will be promoted to a post which is expected to become vacant in the coming winter. His place in China will, according to the *Manchester Guardian*, fall to another man outside regular ranks of diplomacy, who, like Sir Claude, has been fortunate enough to earn Lord Salisbury's good opinion—Sir H. H. Johnson. Sir Harry has, however, only just been appointed British Consul at Tunis, and the *Guardian's* information is probably inaccurate on this point. That Sir Claude Macdonald will be promoted within a short time is very likely. He has been exceptionally fortunate in his diplomacy in China. The experiment of transferring a military officer with experience in Africa from the Oil Rivers to the charge of our relations with a vast Asiatic empire was a bold experiment. It has been crowned with success, and Sir Claude Macdonald is, therefore, the man of the hour in

the Foreign Office; as was Sir Nicholas O'Connor a few years ago and Sir Gerald Portal at the time of his death. Sir Claude's management of affairs has given great satisfaction to his countrymen in the East, who are notoriously more difficult to satisfy than the Foreign Office.

Upon the *Gräston*'s arrival at Singapore, the *Iphigenia* will leave, the *Free Press* says, within forty-eight hours for Hongkong via Manila.

A violent storm, accompanied by an extraordinarily high tide, caused considerable damage along the Tonkin coast on the morning of the 16th October.

A commerce-destroyer is being designed for the French navy. The vessel is to have a speed of 23 knots, the triple-screw engines to work up to 17,400 horse-power. The dimensions are:—Length, 440 feet; beam, 49 feet 3 inches, and a draft of 20 feet 3 inches, displacing 5,685 tons. The normal coal supply will be 600 tons, but the bunkers will hold 900, on which it is calculated the ship can steam 1,330 knots at full speed and 9,300 knots at 10 knots. Everything has been sacrificed for speed, hence the armament is light, and consists of eight 5-inch rapid-fire guns, ten 6 pounders, and six 3-pounders. She is to be named *Jules Gravier*, after a distinguished French admiral and naval historian. The designer is decidedly ambitious, (says an American exchange, as it is intended to eclipse the United States cruisers *Columbia* and *Minneapolis* of 7,375 tons, which made 22.8 knots and 23.073 knots respectively at their trials. As the French ship is 37 feet longer and of 9 feet less beam and 2½ inches less draught than the *Columbia*, lines of extraordinary sharpness may be looked for, and the ship will be simply a torpedo-boat of large dimensions so far as the hull is concerned, the coefficient of fineness of displacement being 43 against 49 of the *Columbia* and *Minneapolis*).

A shocking tragedy was enacted in the barracks at Colombo on the night of the 10th Oct., a little before midnight, while a dance was proceeding at the L. N. L. R. Officer's Mess. Lieut. Frederick Rudolph Rothwell Greene, attached to "H" Company of the Regiment, who, by reason of his not having subscribed to the dance, had been debarred participation in it, shot himself on the ramparts behind the Officer's Mess, just before the hour arrived for breaking up the party. He shot himself through the heart, but the report of the shot attracted no attention at the Mess. Just as the guests had gone away, however, Captain Knight, the Adjutant, received a note from Mr. Greene, and at the same time Mr. Greene's servant said his master had gone on the ramparts with a revolver; this caused Captain Knight and Sgt. Ennis to set out for the ramparts in search of him. They found him lying dead near a 64-pounder gun with a revolver at his side, the whole circumstances pointing to suicide. The police were sent for; and Colonel Tidy and Surgeon-Major Manders, of the A.M.S., were summoned, but Lieut. Greene was beyond all human aid. His body was removed to his room in the officers' quarters next morning, and at 8 a.m. Mr. W. H. Moor, Police Magistrate, held an inquiry into the affair. At this inquiry it was mentioned that deceased had brought himself to a very low condition in training for the Sky Meet, which finished the previous day. Every day he had ridden far and fast on a bicycle in the heat of the day, and then he had returned to his bed and kept between thick blankets, all to get flesh off. As a result, he was very much less in weight than his usual register, and, therefore, not in sound health, and the comparatively trivial matter connected with his being denied participation in the dance preyed on him in a way that would not have happened had he been in full vigour. He was also peculiarly embarrassed, and his relations were about to relieve him; while, as showing that his relations with his brother-officers were all right, it may be mentioned that he had dined the preceding evening with Col. Tidy, the Commanding Officer. The deceased officer was a son of Mr. H. R. Greene, of Combmarine, St. John's, Woking, and he was only 23 years of age.—*Exchange*.

CONVENTIONAL TARIFF.

We hereby sanction the Ordinance for certifying the original place of production or manufacture of imported goods for which it is desired to receive the benefits of the Conventional Tariff, and order the same to be promulgated.

(Imperial Sign Manual and Seal.)

October 27th of the 30th year of Meiji.

(Counter-signed.)

COUNT MATSUKATA MASAYOSHI,
Minister of Finance.

IMPERIAL ORDINANCE No. 385.

Art. I.—Whenever it is desired that any articles imported into the empire of Japan should enjoy the benefits of the Conventional Tariff in accordance with the provisions of the Treaties, the articles in question must be accompanied at the time of the import with a certificate showing the original place of their production.

Art. II.—The certificate as to the "original place of production" must state the marks, number, name, amount or quantity of articles imported, the name of the place of production or manufacture, and the name of the port, and date of shipment, and must be issued from the Imperial Japanese Consulate or Commercial Commissioners' Office of the territory in which the shipments were effected, (or from the Custom House or other competent authority in places where no Consulate or Commissioner's Office exists).

The period of validity for a certificate so issued shall be one year from the date of issue.

Art. III.—When no certificate is appended or when, if appended, the items mentioned therein are found imperfect or wrongly described the goods in question shall be liable to be taxed according to the Customs Tariff.

Note.—In case a proper certificate is presented for the goods so taxed within six months after the import of the same, a reduction shall be made, in accordance with the Conventional Tariff, from the amount of duty collected thereon.

APPENDIX.

Art. IV.—The date of the enforcement of these Regulations shall be specially determined.

THE GOVERNOR-GENERAL'S OFFICE IN FORMOSA.

We hereby sanction the Ordinance for the Organization of the Governor-General's Office in Formosa and order the same to be promulgated.

(Sign Manual and Seal.)

October 13th of the 30th year of Meiji.

(Counter-

signed)

COUNT MATSUKATA MASAYOSHI,
Minister of Cabinet.
MARQUIS SAIGO YORIMICHI,
Minister of State for the Navy.
VISCOUNT TAKASHIMA TOMOYOSUKA,
Minister of State for War.

IMPERIAL ORDINANCE No. 362.

ORGANISATION OF THE GOVERNOR-GENERAL'S OFFICE IN FORMOSA.

Art. I.—In the Formosan Government Office a Governor-General shall be appointed having complete authority over Formosa proper and the Pescadores.

Art. II.—The Governor-General shall be of *shinnin* grade (directly nominated by the Emperor), and be appointed from among Generals or Lieutenant-Generals of the Army or Admirals or Vice-Admirals of the Navy.

Art. III.—The Governor-General shall preside over the military and naval forces within the sphere of control assigned to him, and superintend all political affairs, under the direction of the Minister President of State.

Art. IV.—The Governor-General shall, in regard to military administration and the personal affairs of combatants and non-combatants of the Army and Navy, carry out the instructions of the Ministers of War and the Navy respectively; in offensive and defensive measures and in the mobilization of forces he shall place himself under the direction of the Chief of the Central Staff or the Chief of the Naval Board of Command, and in the training of military troops shall submit to the direction of the Inspector-General of the Army.

Art. V.—The Governor-General may, in the exercise of the power vested in him, or in accordance with special commission, issue ordinances in the name of the Governor-General's Office, appending thereto rules for the imposition of penalties not exceeding a period of one year's imprisonment or a fine of 200 yen.

Art. VI.—The Governor-General shall take charge of the defence of all districts in his jurisdiction.

Art. VI.—The Governor-General may, if he deems it necessary, have recourse to military force for the maintenance of peace and order in the places under his jurisdiction. In such case, however, the fact must immediately be reported to the Minister President of State, Ministers of War and of the Navy, Chief of the Central Staff, and Chief of the Naval Board of Command.

Art. VIII.—Any application for Imperial sanction, as specified in Article II. or Article IV. of Law No. 63 of the 29th year of Meiji, shall be made through the Minister President of State.

Art. IX.—The Governor-General may instruct the Commandant of a garrison or other resident military officer to take charge of civil affairs in districts in which such procedure is deemed indispensable.

Art. X.—Whenever it is deemed that the orders or proceedings of a local Governor or of a Director of any District Office are contrary to established rules or detrimental to public welfare, or are in excess of the powers conferred, the Governor-General may suspend or withdraw such orders or proceedings.

Art. XI.—The Governor-General shall have entire control of his subordinate officers, with the proviso that civil officers of *Sonin* grade shall be appointed or dismissed only with the Imperial sanction, through the Minister President of State; those of the *Hannin* grade being dealt with exclusively at his own discretion.

Art. XII.—The Governor-General may apply for Imperial sanction, through the Minister President of State, for the bestowal of honorary ranks and decorations upon officers under his control.

Art. XIII.—The Governor-General may enforce disciplinary rules against civil officers under his charge, but the dismissal of officers of *Chokunin* and *Sonin* rank must receive the Imperial sanction through the Minister President of State; other officials being dealt with at his discretion.

Art. XIV.—In the Governor-General's Office a Secretariat shall be established consisting of two Aides-de-Camp and two private Secretaries, exclusively appointed to the post, for the management of confidential affairs and correspondence. Aides-de-Camp shall be chosen, one from military officers ranking between Colonels and Lieutenants, the other from naval officers between Captains and Lieutenants. The Private Secretaries shall be of *Sonin* grade.

Art. XV.—In the Governor-General's Office shall be established the Military Staff, the Naval Staff, the Civil Administration Bureau, and the Finance Bureau. Military and Naval Staff Regulations shall be specially organised.

Art. XVI.—The Civil Administration Bureau shall superintend all civil and judicial affairs.

Art. XVII.—The Finance Bureau shall deal with all financial matters.

Art. XVIII.—Sections of each Bureau shall be determined by the Governor-General.

Art. XIX.—The following officials shall be appointed in the Governor-General's Office:—Director of the Civil Administration Bureau, Director of the Finance Bureau, Commissioners, Councillors, Technical Experts, Interpreters, Clerks, Assistant experts and Assistant Interpreters.

Art. XX.—The Directors of the Civil Administration and Finance Bureaux shall each be of *Chokunin* rank, and shall superintend affairs of their respective Bureaux under the direction of the Governor-General.

Art. XXI.—Commissioners, eighteen in number, appointed exclusively to the post, shall be either of *Chokunin* or *Sonin* grade, and attached to the Civil Administration Bureau or Finance Bureau, shall manage the affairs of the respective Sections according to the instructions of the Governor-General or the Directors of the Bureaux.

Art. XXII.—There shall be two Councillors of either *Chokunin* or *Sonin* grade exclusively appointed to the post. Subject to the Governor-General or the Director of the Civil Administration Bureau they shall advise and assist in the management of sectional affairs whenever any special orders are issued to that effect.

Art. XXIII.—Technical Experts shall be twenty in number, of *Sonin* grade, and shall superintend technical business under the direction of their superiors.

Art. XXIV.—Interpreters shall be two in number, of *Sonin* grade, exclusively appointed to the post. Subject to the direction of their superiors they shall undertake the translation of official documents and the work of interpretation.

Art. XXV.—Clerks, Assistant Experts, and Assistant Interpreters shall number 300 in all and be of *Hannin* rank. They shall be employed, under the direction of their superiors, in technical work, interpretation, and in the conduct of other miscellaneous business.

APPENDIX.

Art. XXVI.—These Regulations shall be en-

forced from November 1st of the 30th year of Meiji.

Art. XXVII.—The Formosa Governor-General's Office Regulations embodied in Imperial Ordinance No. 88, of the 29th year of Meiji, the Civil Administration Bureau Organization Regulations promulgated by Imperial Ordinance No. 90 of the same year, the Regulations for the organisation of the Military Affairs Bureau in the Formosa Governor-General's Office, issued by Imperial Ordinance No. 169, and also the Regulations in regard to the Section of Special Public Works in the Civil Administration Bureau, promulgated by Imperial Ordinance No. 169, shall be null and void from the day of the enforcement of the present Regulations.

THE NEW FORMOSA ADMINISTRATIVE REGULATIONS.

NAVAL STAFF.

We hereby sanction the Naval Staff Regulations for the Governor-General's Office in Formosa and order the same to be promulgated.

(Imperial Sign Mammal and Great Seal)

October 18th of the 30th year of Meiji.

(Countersigned) Marquis Saigō JUDŌ,
Minister of the Navy.

IMPERIAL ORDINANCE No. 364.

Naval Staff Regulations for the Governor-General's Office in Formosa.

Art. I.—The Naval Staff in the Governor-General's Office in Formosa shall superintend all naval affairs within the jurisdiction of the Governor-General of Formosa.

Art. II.—The Naval Staff in the Governor-General's Office in Formosa shall consist of the following officials:—A Chief Councillor, Councillors, Adjutants, a Chief Engineer, Chief Surgeon and Paymaster.

In addition to the above officers, naval ship-building engineers, accountants, and interpreters shall be nominated.

Art. III.—The Chief Councillor shall assist the Governor-General in the management of affairs relating to naval matters, and shall superintend all matters connected with the Staff.

Art. IV.—Councillors shall, under the direction of their Chief, conduct affairs concerning the preparations for expeditions, offensive and defensive, operations for coast protection, manoeuvres, inspection, and intelligence.

Art. V.—The Adjutant shall transact affairs relating to personnel and other miscellaneous matters, under the direction of the Chief Councillor.

Art. VI.—The Chief Engineer shall take charge of all machinery and arms, under the direction of the Chief Councillor.

Art. VII.—The Chief Surgeon supervises medical and Sanitary affairs, subject to the orders of the Chief Councillor.

Art. VIII.—The Paymaster shall conduct all financial affairs and assist the Adjutant in the discharge of his functions.

Art. IX.—Shipbuilding engineers, accountants, and interpreters are required to carry out their duties according to the instructions of the Chief Councillor.

Art. X.—Some naval non-commissioned officers, together with civil officers of the Hannin grade, shall be attached to the Naval Staff in the Governor-General's Office, and perform their duties in accordance with instructions from their superiors.

Art. XI.—These Regulations shall be enforced from November 1st of the 30th year of Meiji.

CORRESPONDENCE.

A COMPLAINT.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I wish, through the columns of your paper, to call the attention of the officials of the Shimbashi-Yokohama railway line, and of the travelling public, to a circumstance which seems to me unjust to travellers.

Last Monday, wishing to go to Yokohama, I determined to take the 9 a.m. train from Shimbashi. Just as I stepped into the Station, the bell was rung and the ticket-wickets closed. It was two minutes before nine. I rapped at the wicket. No use. I went to the gate keeper and asked to pass. No use. The train stood on the track, plenty of time to get aboard, and I stood at the other side of the gate vainly expostulating. Finding I made no headway, I went into an office nearby and stated my case, and a gentleman came out

and asked the keepers to let me through—no use. "The gates close 2 minutes before the train leaves." The next train leaves at 9.45." And I was obliged to give up, and wait 45 minutes longer, though the train still stood on the track as I went to the waiting-room, in a not very comfortable frame of mind. This regulation, (if there is such a regulation) seems to me very unjust. It is not, so far as my knowledge goes, publicly and constantly advertised, and people looking at the time-table, and having a narrow margin of time as I had, may be seriously inconvenienced. The ticket-office should not be closed, nor passage through the gates refused, until the time advertised in the time-tables has fully expired—that is the humble opinion of

Yours truly,

OCASIONAL TRAVELLER.

Tokyo Oct. 29th, 1897.

[We fear that Japan is not yet ready to be in such a hurry as our correspondent recommends.—Ed. J.W.M.]

THE NIPPON RACE CLUB.

OFF-DAY, SATURDAY, OCT. 30TH.

The sport afforded on the off-day of the Autumn meeting, on Saturday, was considerably better than is usually the case on such occasions, and though the Stand and Enclosure were not crowded, there was a good attendance during the afternoon. Though there was not a large number of speculators to make the Pari Mutuel hum pleasantly, the sweeps were well patronised by a number of punters who saw in this the last chance of recovering (or adding to) their losses of the previous days of the meeting. A great deal of interest was taken in the match between the trio: Eclairer, Usugumo and Orion. They were all "in it" and it was Mr. Nicholson's fine riding alone that brought Orion past first. The last event of the day, the Betto's Race, was the most amusing. From the moment the saddling bell rang, when the bettos were to be seen rushing about the paddock, proud as peacocks in their silks—worn as sacks over their ordinary black tights—till the weighing in after the race, plenty of fun was provided for spectators and formed a fitting conclusion to a very successful and enjoyable meeting. The events of the day were as follows:—

RACE 1.—THE ECLAIRER CUP (Presented); value yen 100; 2nd pony, Entrance Fees. For all China Ponies that have started and not won a race at the Meeting; weight as per scale. 5lb. allowance for unplaced ponies. Distance, from the top of the hill. Entrance fee, yen 5.

Mr. Nemo's * * * 156lb. (Nakajima) 1
Mr. Yodo's Suma, 150lb. (Hakodate) 2
Mr. Derby's Martingale, 153lb. (Takahashi) 3
Mr. News' Voltaire, 142lb. (Sugima) 0
Mr. Avis' Tomtit, 144lb. (Mr. Kingdon) 0
Mr. Worthington's Mulberry, 148lb. (Yasu) 0
Mr. Tatsuta's Maidzum, 139lb. (Riki) 0
Mr. Partner's J-j-i, 148lb. (Mr. Kobayashi) 0

After a fair start Jiji and Maidzum ran to the front, with Mr. Nemo's entry in third place. The same order was maintained till after passing the Shakespeare when Mr. Nemo's pony took the lead and Jiji dropped behind. At the entrance to the Straight Suma came up with a rush and challenged the leader, but failed to collar him, Mr. Nemo's pony winning by a length, with Martingale third, about half a length behind Suma. Time, 1m. 22½secs.

PARI MUTUEL, \$2 Pool.—Voltaire 13, * * * 26, Tomtit 40, Martingale 14, Mulberry 10, Maidzum 33, J-j-i 13, Suma 37; total, 186=372—* * * 12 80.

RACE 2.—Pantin and Samurai Match, for 100 yen; weight as per scale. Distance, one mile and three quarters.

Major Trick's Pantin, 153lb. (Mr. Mottu) 1
Mr. Splinx's Samurai, 147lb. (Takahashi) 2

At the start, Samurai went off with a slight lead, but within a quarter of a mile Pantin passed him and led by a length, going easily. Passing the Stand, Pantin led by a couple of lengths, keeping about the same distance ahead till passing the Shakespeare when Samurai slightly reduced the distance. Coming down the Straight Samurai made a try but failed to collar his opponent, who finished a length ahead. Time, 4m. 11½secs.

PARI MUTUEL, \$2 Pool.—Samurai 77, Pantin 99; total, 176=353—Pantin 33.20.

RACE 3.—THE WORTHINGTON CUP (Presented); value, yen 100; 2nd pony, Entrance Fees;

for all China Subscription Ponies (Autumn 1897) that have started and not won a race at the Meeting; weight as per scale. 5lb. allowance for unplaced ponies. One mile and a distance. Entrance fee, yen 5.

Mr. Campredon's Pointeur, 144lb. (Mr. Kingdon) 1
Mr. States' Colorado, 144lb. (Sugima) 2
Mr. R. Field's Torpedo, 147lb. (Mr. Longin) 3
Mr. News' Voltaire, 142lb. (Minagawa) 0
Messrs. Tippitt and Clifford's Jubilee, 142lb.

(Yasu) 0

Five started out of seven entries. Some little difficulty was experienced in getting the ponies off. After a good start, Jubilee took the lead, but lost it to Pointeur before passing the Stand, where Colorado took second place. In this order they ran to the half mile post, when Colorado pulled up to the leader and the two ran neck and neck, with the others several lengths behind, to the Trees, where Voltaire ran into third place. Down the Straight a fine race ensued between Pointeur and Colorado, the former passing the post only about three-quarters of a length ahead of Colorado, with Torpedo, who had come down the Straight very strong, a good third. Time, 2m. 38½secs.

PARI MUTUEL, \$2 Pool.—Voltaire 24, Colorado 83, Jubilee 42, Torpedo 40, Pointeur 69; total, 258=516—Pointeur \$6.60.

RACE 4.—THE PHILOMEL CUP (Presented); value yen 100; 2nd pony, Entrance Fees; a Handicap for all Country-breds that have started and not won a race at the Meeting (starters for the Championship excluded). One mile. Entrance fee yen 5.

Mr. Nemo's Sasha, 150lb. (Nakazumi) 1
Mr. Durand's Hermine, 135lb. (Kobayashi) 2
Mr. Worthington's Idler, 125lb. (Sugima) 3

Sasha was troublesome at the start and made a bolt of a quarter of a mile. On the second attempt a good start was effected, Idler getting away with the lead, Sasha going to the front at the half mile and a little later Hermine ran into second place. In the Straight Sasha increased his lead, winning easily by half a dozen lengths from Hermine, with about the same distance between the latter and Idler. Time, 2min. 14sec.

PARI MUTUEL, \$2 Pool.—Sasha 152, Hermine 92, Idler 59; total, 303=606—Sasha \$350.

RACE 5.—Eclairer, Usugumo and Orion Match, for 450 yen; weight as per scale. One mile.

Mr. Worthington's Orion, 149lb. (Mr. Nicholson) 1
Mr. News' Eclairer, 150lb. (Mr. Kingdon) 2
Mr. Tatsuta's Usugumo, 150lb. (Riki) 3

After a splendidly level start Orion obtained a slight lead, but in going up the hill all three ponies were neck and neck. At the half mile Orion dropped a length behind. Before reaching the Trees, however, the latter pulled up to the front again and the three ran on very level terms till half way down the Straight, where Orion, capably ridden, succeeded in passing the post a neck ahead of Eclairer, with Usugumo about a length behind, in third place. Time, 2m. 14½sec.

PARI MUTUEL, \$2 Pool.—Eclairer 115, Orion 117, Usugumo 105; total, 337=674—Orion \$5.10.

RACE 6.—A 20 yen SWEEPSTAKE, with 50 yen added. For all China Ponies that have started and not won a race at the Meeting; weight as per scale. 5lb. allowance for unplaced ponies. Once round.

Mr. Derby's Martingale, 153lb. (Takahashi) 1
Mr. Avis' Tomtit, 141lb. (Mr. Kingdon) 2
Mr. Four-in-Hand's Remus, 142lb. (Goto) 3

After a good start Martingale took up the running, with Tomtit in second place and Remus last. At the half mile Tomtit drew up to Martingale's quarters, and the same position was maintained till entering the Straight, when Martingale succeeded in getting clear of Tomtit, and won by a length, with Remus, a bad third, four or five lengths behind. Time, 2m. 16½secs.

PARI MUTUEL, \$2 Pool.—Remus 52, Tomtit 79, Martingale 62; total, 195=390—Martingale \$5.60.

RACE 7.—BETTO'S RACE. Entrance Fees and 20 yen added money, to be divided between first three ponies (70 per cent.—20 per cent.—10 per cent.) for all China Ponies; to be ridden by bona fide unlicensed Bettos without whip or spur; weight, 130lb. One Mile. Entrance fee, yen 2.

Major Trick's Minet, 1
Major Trick's Pantin, 2
Mr. Tatsuta's Maidzum, 3
Mr. Four-in-Hand's Remus, 0
Mr. States' Colorado, 0
Messrs. Tippitt & Clifford's Jubilee, 0
Mr. Worthington's Mulberry, 0

Mr. Partner's Jido..... 0
Mr. News' Voltaire..... 0
Mr. Avis's Tomtit, (20lb. over)..... 0

Ten ponies started after many difficulties. Mulberry elected to take a preliminary canter round the Course, while at other attempts it was found that one or two ponies were quietly contemplating Fuji-san when the "are you ready" fell from the starter's lips. At last, however, a fairly good start was effected, and the ponies ran in a bunch till nearing the half mile when they began to string out, the leaders being, as far as could be made out, Jubilee, Minet, Maidzuru, and Tomtit. On entering the Straight Jubilee lost the lead and dropped to the rear, Minet winning by a length or so from Pantin, who had come away in the distance, and Maidzuru a good third. Time, 2m. 15½s.

PARI MUTUEL, \$2 Pool.—Remus 7, Minet 68, Colorado 32, Jubilee 8, Mulberry, 5, Maidzuru 24, Jido 21, Pantin 28, Voltaire 5, Tomtit 7; total, 215=\$430—Minet \$5 60.

CRICKET.

A match was played on Wednesday, the 3rd instant, between an eleven from H.M.S. *Redpole* and *Daphne*, and the Y.C. and A.C. The naval team went in first and made a very fair showing, scoring a total of 87, towards which Mr. Hardcastle contributed 34. The local team, however, proved very much too strong for the visitors, the bowling of the latter being completely colared by several of the batsmen of the home eleven—E. B. S. Edwards compiling the fine score of 131, and White and Lias contributing 69 and 43 respectively. White again distinguished himself in the bowling by "taking the hat," with three successive wickets in one over. Edwards was also very successful with the ball, taking three wickets for no runs. The naval team tried no less than six bowlers, the most successful being Real, who took five wickets. The scores were as follows:—

H.M.S. "REDPOLE" AND "DAPHNE."	
Mr. Shipside, c. Heap, b. White...	15
Mr. Tri t, c. Edwards, b. White...	24
Mr. Church, b. White...	3

	206

TRADE OF TAMSUI AND KELUNG IN 1896.

Mr. Henry A. C. Bonar, Her Britannic Majesty's Consul at Tamsui, sends the following report on the trade of Tamsui and Kelung for the year 1896 to the Foreign Office:—

TRADE OF THE YEAR.

The trade of the year under review presents no features worthy of note excepting that there has been a marked increase in the value of import trade, particularly attributable to a more settled state of affairs than prevailed during 1895.

The gross value of the trade in 1896 was £1,402,729; as compared with £1,355,108 in 1895, an increase of £47,621; the import trade showing an improvement of over 7 per cent., and the export trade rather more than 1 per cent.

Table showing Comparative Value of Imports and Exports during the Years 1895-96.

	1895.	Value. 1896.	Increase.
Imports	515,877	553,601	37,724
Exports	839,231	849,128	9,897
Total	1,355,108	1,402,729	47,621

Annex I gives the chief articles of import into Tamsui and Kelung in 1895-96. It has been usual to give the joint values of the trade of the two ports, but it is worthy of note that the import trade for the two ports the proportion for Kelung is only 4 per cent. of the value.

PROPORTION OF BRITISH IMPORTS.

Of the total value of imports Great Britain's and the colonies' share is 25 per cent., China 50 per cent., United States of America 7½ per cent., Germany 2½ per cent., France and colonies 9 per cent., and other countries 6 per cent. The increase is mostly in produce from China, though British trade shows a slight increase according to the following table, which gives the totals of opium, cotton goods, woollens, and metals. The import of opium ceased in February.

Articles.	Value.		Increase or Decrease.
	1895.	1896.	
Opium	£82,007	£60,821	-£21,186
Cotton goods	35,681	45,606	+ 9,925
Woollens	4,848	8,425	+ 3,577
Metals	10,266	11,480	+ 1,214

OPIMUM.

The prohibition of the import of this drug was notified in February, 1896, and its effect was to send prices up considerably, but owing to extensive smuggling, prices again dropped and remained stationary, holders of legitimate stocks finding great difficulty in disposing of their holdings on account of the competition with the smuggled drug. Henceforward the drug will no longer appear in the trade return. It was not till early this year that the Japanese Government made final arrangements to take over the small stocks still held by a few foreign merchants.

COTTON PICKER GOODS.

Imports show an increase over 1895 of £9,925, owing, not to an improvement in business, but to the check which trade generally experienced during 1895.

GREY AND WHITE SHIRTINGS.

English manufactures have about held their position both for grey and white shirtings of best and medium qualities, but have suffered in the lower qualities by the competition of Japanese manufactures and native cloths, T-cloths being more affected by the latter than grey shirtings. Prices realised have not shown more than the usual fluctuations, being ruled, as always, by the Hongkong market. The amount imported by foreign merchants is very small, the trade being almost entirely in the hands of the Chinese.

WOOLLENS.

Woollens show an increase of £3,577, due simply to this small trade having resumed its former dimensions.

METALS: LEAD.

About 12,000 to 14,000 packages of lead are now annually imported to make linings for tea and camphor boxes. Of these from 8,000 to 10,000 packages were last year imported by foreign firms.

If the large item of close on £100,000 for munitions of war which figured in last year's import list be excluded, the import trade in sundries shows a very large increase indeed.

BEER.

Taking the articles alphabetically, the import of beer has quadrupled itself, and is a large item at £9,507. Nearly all of it is German beer. Japan-brewed beers find no favour in this climate, and the light beers of German manufacture evidently are quite harmless.

CEMENT.

The importation of cement is likely to become very considerable in the near future, if all the improvements in the way of harbour works at Kelung, projected by the Japanese Government, are carried out. "Green Island" cement should then take a leading place.

FLOUR.

American flour shows an increase of 50 per cent. over last year's import.

OIL: KEROSENE—AMERICAN, RUSSIAN.

The import of all kinds is returned at about 1,350,000 gallons, valued at £21,386, as against £19,751 in 1895. Of the quantity imported, 1,150,000 gallons American oil represent a value of £18,105. Of the remainder, 150,000 gallons are Russian oil, and the rest "Langkat," together valued at £3,281. The American "Comet" oil is considered the best imported here, though Russian case oil sells for practically the same figure. "Langkat" oil so far has not made much headway. Kerosene oil is distributed locally by cargo boats and coolies, and the country districts depend for their supplies on shipments down the coast in junks. In another part of the report, the import into one of the "special ports" on the west coast of the island is noted.

RICE.

Rice shows a value of £80,883, an increase of over £70,000 on last year's import, £43,636 worth

came from Annam and other parts of French India, £30,157 from China, the rest from other countries.

MISCELLANEOUS.

Provisions of all sorts show a considerable increase. Cattle fish, shrimps and prawns, lungus, beans and peas make up £28,819 of the very large total of £254,399 for miscellaneous.

It may be interesting to know that during last year 40,000 hogs, representing a value of £17,000, were imported into Tamsui and Kelung. Silk piece-goods from China, to the value of £11,845, figure in this year's returns. Also tobacco—prepared—to the extent of £15,215, nearly all from China, 11 per cent. being of British manufacture. As in the case of imports, the share of export trade claimed by Kelung is only an infinitesimal fraction of the total export trade, being only £1,607 of a total of £849,128.

CAMPBOR.

Of the exports, camphor alone shows an increase in value over last year's export, of £95,346, or 95 per cent., though the quantity exported was only 13,553 cwt., or 60 per cent. more than in 1895. The great difference in price of camphor last year is due entirely to speculation, as it was thought that owing to the restrictions imposed by the Japanese authorities, and the unsettled state of affairs in the camphor districts, the supplies would be considerably short.

COAL.

Coal has practically ceased to be an article of export. The mines are not being worked, and even if work should be resumed, it is very doubtful whether any of the coal will find its way out of the island.

TEA.

In tea it is noticeable that though the quantity exported was larger in 1896 than in the previous year by 820,031 lbs. Oolong and 210,204 lbs. Pouchong, the value decreased for both kinds of tea by £84,083, or 9 per cent. Expressed in half-chests, the export was 453,647 half-chests, an increase of some 10,000 half-chests over the previous year's export. The 1896 export was the second highest on record, having only been exceeded by the 1893 export.

The season opened later than usual but with a good tone, and buying soon became general. Fine grades were in small supply and met with keen competition at high prices. The spring crop was indifferent. Second crop showed a marked improvement and met with good prices, buyers paying extreme prices for choice parcels.

First autumn teas were the worst crop of the season, but later autumn teas were up to the average. In October a strong demand arose for tea for price which had the effect of making producers bring all they could possibly produce to market, a quantity being of very low grade. This increased the estimated total supply.

Prices ranged as follows:—

Per.icul.	Per.icul.									
	Pail.	Co. d.	Good to Superior.	Superior	Superior to Fine.	Fine.	Finest.	Choice.	Choicest.	
Op. nung	\$ 27	\$ 30	\$ 35	\$ 40	\$ —	\$ —	\$ —	\$ —	\$ —	
June	27	30	35	40	45	50	55	60	65	
July	25	28	33	38	43	48	53	58	63	
August	25	28	33	37	42	47	52	57	62	
September	25	28	33	37	42	47	52	57	62	
October	25-31	29-33	33-38	37-44	42-53	—	—	—	—	

SPECIAL PORTS OF NORTH FORMOSA.

Late in 1895 Luikong (or Rokko), 117 miles south of Tamsui on the west coast, was opened as a special port of import and export; and in March, 1896, Kiukong (or Kinko), 36 miles south of Tamsui, was opened in a similar manner to trade for Japanese-owned vessels. Both are within this Consular district and under the Tamsui custom-house. The subjoined table gives the particulars of the foreign trade at both ports during 1896. Camphor to the extent of 4,416 was exported from Luikong, and kerosene imported to the amount of 3,244. The other items hardly deserve mention. The total trade for both ports amounted to 189,684.

EXPORTS.	VALUE.	
	Luikong.	Kiukong.
Camphur	£ 4,416	£ —
Sundries	88,809	14,980
IMPORTS.		
Kerosene oil	5,244	—
Sundries	57,806	18,429
Total	156,275	33,409

SHIPPING.

Though the number of British ships entered and cleared at Tamsui and Kelung in 1869 is less by 24 than in 1895 the tonnage has remained the same.

German shipping shows a marked decrease both in ships and tonnage.

Chinese steamers have practically disappeared from the list of shipping.

In this year's list the number of ships under the Japanese flag has been included. With the exception of one steamer, which cleared direct for a foreign port, all the other is Japanese shipping between the ports of Japan proper and Formosa, and has been included for the sake of reference; if the Japanese companies are at any time to run successfully between the ports of Formosa and of China, a trade at present almost entirely absorbed by British steamers, it will be necessary for them not only to increase the number of ships already visiting this island, but to build steamers suitable for the bar of the Tamsui river; so far the better class of Japanese steamers must confine themselves to Kelung.

It is worthy the consideration of British ship-owners whether steamers could not be run with profit between Tamsui and Shanghai via Nagasaki.

COMMUNICATION BETWEEN JAPAN PORTS AND FORMOSA.

The Nippon Yusen and Osaka Shosen companies' steamers visit all the ports of importance between Kelung and Kobe, and according to the route taken occupy from 3½ to 9 days on the journey from Kelung to Kobe.

Chinese junks, which figure last year to the number of 2,932, with a tonnage of 35,037 tons, bring over large quantities of various Chinese produce, mostly pigs, poles, and paper from Foochow, Wenchow, and Chang-Chin.

The junks under the Japanese flag, mentioned in the list are those owned by Formosan natives and registered in Formosa.

HARBOUR IMPROVEMENTS.

While improvements on a large scale for the harbour of Kelung have been contemplated, and are in progress, nothing whatever has been planned or done to improve the harbour of Tamsui. At a comparatively slight cost the latter could be made a suitable and safe anchorage for much larger vessels that visit it at present, and its position and proximity to the city, from which it is only eight miles distant by water, ought soon to make it a favourite resort for Japanese traders, but strangely enough Kelung, distant 15 miles from the capital, with only a wretched railway to connect it with the latter, seems to attract the lower class Japanese trader, probably because the steamer lands him there and is ready to take him away again when he finds to his surprise that he cannot make a fortune in a few days.

KELUNG NAVAL PORT.

Everything points out to Kelung as the naval station for Formosa. But it is extremely doubtful whether its small harbour will provide accommodation both for admiralty and commercial purposes. It is intended apparently that sooner or later ocean steamers are to call there, but no improvements, however great, in the harbour will outweigh the advantage that Tamsui has by its water communication with the business centre of Twatutia; and probably merchant steamers would be so hampered as to anchorages and other conditions prevailing in a naval port, that the experiment of a naval and commercial port is not likely to prove a success.

GENERAL REMARKS.

The statistics of trade for 1896 show plainly enough that British trade has held its own. Nor does it appear that British trade and the export trade in the hands of the British firms is likely to diminish in the near future by the advent of Japanese merchants of experience and standing. Such have, so far, hardly ventured on commercial enterprise in this island on any large scale, if we except one or two firms who act as agents for the Japanese Government. The trade in the hands of the Japanese does not extend further than the dealing in articles of Japanese and foreign origin, wines, and beers, &c., which the residents of Taipei can no longer do without.

Many of these articles are brought from Japan at enormous rates of transport. There is no reason whatever why the foreign merchant should not supply many of these goods to the Japanese dealers of Taipei, or why he should not himself establish a large foreign store, well supplied with goods imported direct from Europe or Hongkong. The establishment of one such foreign store at least should prove a successful venture and would lead to more extended business with the commercial community, which could certainly

be supplied more cheaply from Hongkong even than from Japan.

CURRENCY.

It is extraordinary that such a disgraceful coin as the Tamsui dollar should be able to continue a happy existence side by side with the convenient paper or clean silver yen. All commodities purchased in this district are paid for in this defaced currency, which assumes the value of a paper or silver yen in the customs returns. But no steps are being taken to enforce the circulation of the proper Japanese currency. The ever-varying value of this Tamsui dollar affords plenty of opportunity for speculation, and while the Japanese paper yen is worth 2 per cent. more than the Tamsui dollar, it is for some unaccountable reason itself worth from 1 to 2 per cent. less than the silver yen.

POPULATION.

A note on the Japanese population of North Formosa may be of interest.

	Japanese.	Natives.
City of Taipei, now the capital of the Island.....	2,779	1,036
Twatutia*.....	653	22,673
Banka.....	966	18,740
Kelung*.....	1,483	13,921
Tamsui.....	368	5,976
Total.....	6,249	62,351

* Are now the Mixed Settlements, where Chinese and other foreigners can reside and trade.

The total Japanese population of the northern part of the island is thus considerably under 7,000 souls.

FOREIGN RESIDENTS.

Exclusive of Chinese the foreign population of Twatutia, Kelung, and Tamsui is under 40, nor is the British mercantile community likely to increase so long as Amoy remains the head-quarters of the tea trade. As in the past, the more important Amoy firms content themselves with branch establishments at Tamsui and Twatutia, but it is evident that British trade would not suffer by these establishments being made independent of Amoy, the local conditions having now changed entirely.

RAILWAYS.

The present line between Kelung, Taipei, and Shinciliku—its terminus—remains in the same neglected condition. Charters for an extensive railway scheme to the south have been granted to private companies, and the Government appears to have guaranteed 6 per cent. interest, but so far there are no signs of railway construction. What with the material required, bridges to be built, &c., contracts must sooner or later be made; but the head-quarters of the company being in Osaka and Tokyo, probably no share of them will fall to Formosa merchants.

The present railway system is considerably inferior to what existed in Japan 25 years ago. Tamsui is to be joined to the capital by rail some time in the future.

ROAD CONSTRUCTION.

Between these two places a capital road has been constructed, but as the town of Tamsui or Hobé with its impossible tunnelled streets will hardly allow of a horse passing through, much less any sort of vehicle (no vehicle of any kind is to be found in the neighbourhood), the road stops short outside of the town, and is therefore useless.

POSTAL ARRANGEMENTS.

Postal arrangements remain in a primitive condition, and special messengers are the only reliable means of communication between the capital and the leading port of North Formosa.

LABOUR.

Formosa offers every inducement to the Japanese labourer. The coolie is paid from 1s. 8d. per day upwards; the carpenter from 2s. 2d. to 2s. 6d., no kind of Japanese servant is paid less than 30s. per month; and Japanese cooks command from 2l. upwards; native labour is 50 to 75 per cent. more than before the Japanese occupation.

RUSSIANS AND JAPANESE IN KOREA.

(FROM "THE TIMES" CORRESPONDENT.)

Tokyo, Aug. 5.

The statement made on July 19th, by the Under-Secretary of State for Foreign Affairs in the House of Commons, to the effect that the annexation of Korea by Russia was opposed to British interests would have caused much excitement in Japan a few months ago. But the feeling of uneasiness that distressed the Japanese nation up to the spring of this year seems to have grown less acute. It is seen that Russia has had her opportunity, and has failed to grasp it. Several

English journalists have of late accustomed themselves and their readers to think not only that Russia is absolute mistress of the situation in Korea, but also that Japan, finding herself in the presence of accomplished facts, has folded her hands and bowed her head to the inevitable. Now, as to the position that Russia has won in the peninsula there may be wide differences of opinion; but with regard to the attitude of the Japanese people, resignation is of all epithets the least applicable. If the heart of Japan could be laid bare "Korea" would be found indelibly stamped there.

Observers whose attention has been directed to the subject only within the past ten or fifteen years read Japan's doings solely by the light of modern statecraft. According to their view, as soon as her newly-gained experience of international intercourse had roused her to a sense of international dangers, and opened her eyes for the first time to the significance of having a great and aggressive Power looking at her across a narrow belt of water, she undertook the task of securing to the Koreans themselves the undisturbed possession of their little kingdom. That is certainly true, but it is only part of the truth. The Korean peninsula is a great deal more to Japan than a possible basis of dangerous attacks. It is, as it were, a common to which, by long centuries of frequently asserted supremacy, she has gained a traditional right of access. In very early times such dealings as she had with her little neighbour pointed only to the latter's vassalage or absorption, and if in these *fin de siècle* days she is content to play the part of her neighbour's protector, her deep-laying resolution nevertheless is that the peninsula must never be closed to her people, nor its people compelled to obey any foreign dictates. That is not a merely conjectural interpretation of her mood. It is a rendering traced plainly in the pages of her history. We can look back to the time when the writing began some 16 centuries ago, and we can follow it to the inditing of the last words at Shimonoseki in the spring of 1895.

If we put aside picturesque myths like the semi-miraculous voyage of the Empress Jingo, there is still ample evidence that, partly by military prowess, partly by amicable intercourse, the Japanese established themselves virtually as rulers in the south-western section of Korea not later than 500 A.D., and from that *piet à terre* made frequent incursions into the south-eastern divisions. Korea was the first foreign field where they practised the art of war; the cradle of their spirit of foreign conquest. When, owing to defective precautions, they were driven from the peninsula in the middle of the sixth century, the dying words of their Emperor were that the lost dominion must be recovered. Two armies of invasion despatched from Japan during the next hundred years failed to carry out that behest; not because of Korea's strength, but because China, under the great Tang dynasty, lent its aid to the people of the peninsula. China presented to Japan then exactly the same attitude—with one important difference—that she presented from 1881, when the first of the modern *éménés* occurred in Seoul, until 1894, when the first shot was fired at Pung-do. She sat always upon a pedestal of haughty superiority, condescending every display of neighbourly courtesy as a confession of vassalage, and throwing her shadow fitfully over Korea without making it feel the substance of her authority. But she was the unquestioned leader of civilization and learning and the embodiment of military capacity in the Orient, whereas in modern times she has forfeited all such titles to respect.

Bitter regrets were bequeathed by the Emperor Tenchi to posterity when, seeing his forces driven back by the combined forces of China and Korea and his offensive strength crippled by feuds at home, he definitely embraced the policy of leaving Korea alone, and if Japan could have obtained a sufficient respite from her internecine quarrels during the next nine centuries it is beyond question that she would have made another vigorous effort to recover her footing in the peninsula. History shows her to us through all that weary era of unnatural struggles standing alone in the East as the one Power that resented China's assertions of suzerainty, while at the same time drawing freely from the fountain of Chinese civilization. Later on, when employment began to be scarce at home for the many swords that the fights of her feudal magnates had whetted, we see the coasts of Korea become an arena for her freebooters. Then follows Kublai Khan's great attempt to force the Chinese yoke upon this one contumacious little neighbour of the celestial Colossus, and then ensue a series of events not the least singular in the annals of the world, when a handful of Japanese adventurers, not backed by any reserve of national strength, raided the littoral provinces of China and Korea simultaneously and defied the armies

of both Powers during a long term of years. Not until the times of the *Taiko*, that is to say, the close of the sixteenth century, were Japan's domestic differences composed sufficiently to allow her to look abroad, and then the immediate use to which she put her liberated strength was to invade Korea, where, once more, she crossed lances with China and was once more compelled to retire in the face of the same union of forces that had driven back Tenchi's troops.

Thereafter, the policy of seclusion, deliberately chosen and rigidly maintained by the Tokugawa regents, kept this chapter of extra-territorial doings closed for nearly three centuries, but no sooner had Japan emerged upon the international stage in recent times than she found herself again face to face with the perennial problem—China perched upon a pedestal of pretensions less tangible and more unendurable than ever, and Korea under the old semblance of her tutelage without the reality of her protection. Japanese veterans who have seen the drama of the Restoration played from the rising of the curtain 40 years ago do not attempt to conceal, in their franker moments, that to humble China's arrogance and repay the favours received at her armed hands in Korea was the dream of the men who aimed at knitting the nation's feudal fragments into an efficient entity. It was because some of them halted in the pursuit of that aim that the first great split took place in the ranks of the Restoration leaders, with the result that the people turned against each other's throats in the Satsuma rebellion the swords that Saigo and his fellow-thinkers would have pointed at China and Korea. But the project for which the Satsuma *samurai* laid down their lives in 1877 was only postponed. The nation could not have abandoned it without losing its own self-respect.

Had China stepped down from her imaginary eminence and joined hands with Japan in a practical policy of frontier protection, things might have turned out differently. But China remained always unapproachable, always in the clouds, and Japan found her traditional legacy of self-assertion reinforced by the fact that she now stood forth as the champion of liberal civilization against the representative of conservative prejudice. Great prominence has been given by some political analysts to that moral differentiation of the two Empires, a consequence of foreign intercourse, but, even if it had helped to estrange them, their collision in Korea would have been inevitable. History forced them into the arena. European strategists wondered when they saw the Japanese generals deliberately open an avenue of escape, for the remnants of the Chinese army at Ping-yang, but it is conceivable that the Japanese, with grim humour, set themselves to reproduce, on a modern stage, the converse of the drama, 301 years previously acted, when the victorious Chinese left a similar route of escape for Konishi's defeated troops across the ice of the Ta-dong. The Chinese are close students of their own annals. They probably understood the significance of that somewhat theatrical reversal of positions, though Occidental eyes were not likely to detect it. As for Japan, if, after 16 centuries of more or less persistent effort, she found her position at length assumed *vis-à-vis* her two neighbours, was it likely that she would incontinently step down at the nod of an outside Power whose approach she had new and vital reasons for opposing? Yet it is certain that during her period of exhaustion after the war with China, and after the crippling of her diplomatic capacity by Viscount Miura's savage *coup*, she might have been thrust so far out of the Korean arena that to obtain a footing there again would have cost a huge, perhaps an impossible, effort. That was Russia's opportunity, and while it remained within her reach the Japanese held their breath. But the opportunity is past. Russia, too—even supposing her to be deliberately aggressive, which is probably very far from the truth—is not always ready to reap the full harvest of circumstances. She has her own convenience to consult, and in the meanwhile the Korean season has slipped by.

There are many indications that Japan now views the situation with comparative equanimity, but none that her traditional instinct about the peninsula has been affected by the substitution of the Russian for the Chinese shadow. Hence Mr. Curzon's statement in the House, while it attracted great interest, did not produce any excitement. Its synchronism with Marquis Ito's visit to London led one or two journalists to infer an Anglo-Japanese alliance negotiated by the Marquis. But others promptly pointed out that until Japan was in a position to be a practically useful ally any idea of an alliance with an eminently practical Power like England must be abandoned.

Commenting editorially on the above, *The Times* says:—

The intervention of Japan in Korea which led to the war with China has been ascribed to many more or less recondite causes most of which may or may not have contributed to it. We were told that it was due to the awakening of a young and civilized Power to the hard realities of European statecraft and to the imperative necessity of securing her own position before it was too late. Commercial motives, according to another theory, were what really determined the course of Japanese action. A third view was that a powerful Japanese party sought relief from troublesome Parliamentary developments by a spirited foreign policy, while a fourth represented Japan as having embarked in a kind of crusade for the material and moral regeneration of Korea out of a disinterested detestation of misgovernment and oppression and from a chivalrous zeal for progress and enlightenment. It is possible that all of these opinions, together with several others equally plausible, may have had some sort of foundation in fact. The causes of great international events are usually very complex, and it is seldom that all of them can be discerned and measured for a generation or two after the deaths of the principal actors in them. But a perusal of the interesting letter from our Tokyo Correspondent, which we publish to-day, presents another phase of the Korean question and offers yet one more explanation of Japanese intervention. Our Correspondent acknowledges that the first of the theories enumerated above is true so far as it goes. Japan took an active concern in the affairs of Korea, because she was afraid that, if she neglected to do so, that exceedingly effete kingdom would fall into the hands of a great and aggressive European State. But, he declares, although this theory is true, it certainly is only a part of the truth. There is, he intimates, another and a simpler reason why Japan should intermeddle in Korea. It is that she has always done so whenever her domestic differences left her strong enough for the purpose. She regards Korea as a kind of traditional common, to which, by long centuries of frequently asserted supremacy, she has gained a perpetual right of access. That may seem a rather crude interpretation to place upon a movement which has been the subject of so much ingenious and instructive analysis. But it has the merit of being sufficient and of being supported by a great body of undeniable historic fact. Our Correspondent does not insist upon the authenticity of the voyage of the Japanese Empress who bore the appropriate name of "Jingo" to Korea in legendary days, but he shows that from a period when the Cæars still ruled at Rome until after the Reformation the soldiers and sailors of Japan, repeatedly invaded Korea, without the least pretension to altruistic motives. Then for three hundred years her rulers deliberately elected to live in isolation and to have no foreign policy. But as soon as they abandoned this position they reverted to their ancestral traditions in relation to Korea. Traditions are very strong in the East, and are quite capable of surviving even the adoption of a new civilization.

When the Japanese once more turned their eyes towards Sôul they doubtless found the state of the Hermit Kingdom exactly what it was when they had averted their gaze three centuries before. It may be surmised that all the antiquated institutions, which were the only institutions that existed, had sunk a little deeper into the mud. In other respects they were the same. China still claimed to exercise the shadowy supremacy over Korea which she had vindicated in arms against Japan under her earlier Emperors. The Korean nobles still cheerfully acquiesced in the pretensions of China, partly because of the ingrained affinity of two systems equally corrupt, and partly because they were so foolish as to credit their great neighbour with the military power she had possessed in Middle Ages. The Japanese knew better, and, almost as soon as they had time to look about them after they had carried out their domestic revolution, they resumed the old struggle in Korea where they had left off at the close of the sixteenth century. It is interesting to learn from our Correspondent that the design to humble China's arrogance and to wipe out the defeats suffered at her hands in Korea hundreds of years before was the inspiring move of some of the authors of the Japanese revolution, and that the execution of the project was postponed by the Satsuma rebellion. In fact, according to this explanation, the wholesale adoption of European civilization by Japan was due, at all events indirectly, to a characteristically Oriental desire to resume a blood feud with a neighbouring people suspended for three hundred years. The suggestion is decidedly piquant, even if it requires to be accepted with a certain reserve. Of course, when the Japanese reopened the controversy, they were careful to make use

of the advantages they derived from their recent education in European methods. They did not raid Korea without warning, and avow that they meant to hold it, in spite of China and everybody besides for their own benefit. All things were done decently and in order. There were despatches and negotiations, protocols and treaties. Japan let it be known that she had no selfish aspiration in Korea. She merely desired to assert the independence of that kingdom and to introduce its inhabitants to the blessings of reforms she had found so precious in her own case. All this, of course, meant war, as the Chinese themselves began to understand a good many years ago. History, as our Correspondent says, forced the two nations into the arena, and in due course they fought the quarrel out, with the results we know.

In the moment when China seemed prostrate at the feet of her rival there was another intervention—an intervention the likelihood of which had not been considered sufficiently by Japanese politicians. Russia, under the able guidance of Prince Lobanof, induced France and Germany to co-operate with her to deprive Japan of the full fruits of her victories. Not content with this result, she sought very skillfully to reap as large a harvest as possible for herself from the successes of the Mikado's armies. In Korea she endeavoured to attain this end substantially by stepping into the shoes vacated by China under Japanese compulsion. She gave Japan to understand that she, too, only wished for the independence and prosperity of the peninsula, but that she was so deeply interested in these objects that she must insist on sharing with Japan the honour and the duty of promoting them. Upon this, as upon other points, Japan had to give way, and for a time all seemed to smile on the labours of M. Waeber, the very adroit agent of Russia at Sôul. The Japanese had made frightful mistakes in Korea, and it seemed easy for the Russians to profit by them. Even Count Inouye, one of the most intelligent and capable of Japanese administrators, seems to have ignored what was really the cardinal fact in the whole situation—the fact, namely, that the ruling classes in Korea did not want to be reformed at all, and that the masses of the population were supremely indifferent upon the subject. To the Korean noble reform meant the loss of recognized opportunities for the corruption and extortion which are the salt of life to him. His one desire was to be let alone and to be suffered to plunder his weaker neighbours as his fathers had done before him, until he too should be despatched suddenly to join them, as the result of a Court intrigue skillfully conducted by his rivals. The Chinese had appreciated and sympathized with this temper, and, therefore, the Koreans had loved them and sent them embassies and presents and bribes from immemorial time. The Japanese attempted to introduce a system quite incompatible with it, and they persevered in their attempts with a harshness and a contempt for native opinion and native habits which peoples less conservative than the Koreans would have resented. The advantage thus offered to the Russians was palpable. They had but to follow the example of the Chinese and to avoid the example of the Japanese. But our Tokyo Correspondent tells us that in Japan at least, it is thought that they have missed their opportunity. They could not refrain—perhaps no civilized Power could refrain—from interfering with the ways of the Korean nobility to an extent which that influential class bitterly resented. They sent a military mission to Korea, and it seems the military mission did not make itself popular. Even the Russian newspapers have been complaining that mistakes have been made. In these circumstances it is of interest to be reminded that the Japanese have not by any means acquiesced in the ultimate supremacy of Russia in Korea. The historic tradition which impelled them to dispute the claims of China in that peninsula urges them, we are given to understand, with at least equal force to challenge the pretensions of any other Power to domination there. They still turn their eyes to the "common" over which they have so often ranged, and they hope apparently to make good in the future, as in the past, their right of access to it.

THE ORIENTAL HOTEL.

The annual general meeting of shareholders of the Oriental Hotel Company, Ltd. was held at the Municipal Hall, Kobe on the 29th ult., Mr. C. N. Crosie in the chair. In submitting the report and accounts, the Chairman explained the reasons for the dividend declared being less than the previous year's, in spite of the fact that the receipts for the past twelve months amounted to \$106,484 against \$91,097 for the previous year. These reasons were,

first, the increase in the cost of commodities generally, and the want of a market in Kobe; then the increased cost of fire insurance—the Company now having to pay from \$1,500 to \$2,000, or three per cent. on the capital, more than it did—, and the falling off in the number of visitors owing to the port having been declared infected with small-pox, first by the American Consul, and later on by the Japanese authorities. A great many visitors to the port were passengers on the American mail-steamers, and in consequence of the alarm raised in their minds by the port being declared infected with small-pox they were debarred from landing. At any rate they did not land, and consequently the Hotel, they might presume, lost a certain amount, and also assuredly the community generally lost a good deal. In connection with this matter the Chairman commented on the action being taken without any decision that such a course was necessary, by any proper Board of Health.

It was afterwards explained by Dr. Moore Graham that the American Consul had taken action in the matter by direct orders from Washington, and that both he, himself, and Dr. Throncraft had been consulted before the port was declared infected. Kobe was in the same Consular district as Osaka, where the disease was rife, and though he believed small-pox was worse in Nagasaki and Tokyo than in Kobe, the latter port had to suffer for its connection with Osaka. Under the quarantine laws of the United States once the port was declared infected it must remain so for thirty days after any reported case. The Consul had no discretion, but he certainly declared it clear again so soon as he saw any diminution.

The report and accounts were unanimously adopted. Mr. Hellyer was re-elected to the Board of Directors, and a sum of \$500 was voted as remuneration to the Directors; Messrs. Rothwell and Macdonald were re-elected auditors, and a sum of \$100 voted them as remuneration for their services, while \$300 was voted as a bonus to the Manager.

HAWAIIAN REGISTRY FOR THE "CHINA."

A dispatch to the American papers from Honolulu states that the Supreme Court of Hawaii in a unanimous opinion handed down on the 28th ult. upheld the decision of Circuit Judge Perry in issuing a writ of mandamus compelling the Collector-General to issue to the steamship *China* a Hawaiian register. The writ was signed by Judge Perry, Sept. 29th, and Colonel George R. Macfarlane secured the *China's* register on the strength of it late in the afternoon, so that when the big steamship left on Oct. 1st it was with the Hawaiian flag flying victoriously from her mizzen. Within the next two months the *Baracouta*, now in Central American waters, and perhaps two more Pacific mail steamships will be brought to Honolulu registered under the Hawaiian flag. In announcing its opinion the Supreme Court decided two very important questions arising out of the case. The less important was the denial of the right of the Minister of Finance, in determining the value of the vessel to be registered, to go deeper than the figures named in the bill of sale presented by the flag owner. The consideration named in the bill of sale by which Colonel Macfarlane became flag owner of the *China* was five shillings, upon which a stamp duty of only \$1 could be levied. The Minister of Finance, however, fixed the value of the vessel at \$200,000, and attempted to levy a stamp duty of \$2,000. It has been the practice in past years to pursue this course, and many thousands of dollars have been paid into the Government coffers that the Government may now be called upon to refund to owners of vessels that have secured Hawaiian registers. A decision of far more importance, however, was the finding of the Court that a person born of foreign parents while domiciled on Hawaiian soil becomes a Hawaiian citizen, and may secure his full rights as one by taking the oath of allegiance to the republic. This question was brought before the Court on the attack upon Colonel Macfarlane's citizenship by Minister of Foreign Affairs Cooper, who represented the Government in the hearing of the *China* cases.

This means, says the *Kobe Chronicle*, that every Chinese and Japanese born on Hawaiian soil is entitled to the full rights of citizenship. But our contemporary is apparently unaware that no decision of the Supreme Court was required to establish that fact.

GERMAN NOTES.

In discussing the alleged alliance between Russia and France, the German papers express the opinion that it is an additional pledge that the peace of the world will be maintained, and that Germany's rôle should now be to consolidate her strength at home and abroad, so that her friendship may be sought and her enmity feared. They see no reason to be dissatisfied with the friendship between France and Russia. "The alliance," says the *Kreuz Zeitung*, "is in the first place defensive. Neither France nor Russia trusts the powerful combination of Central Europe, and they have combined their forces because they know that singly they are no match for Germany and her allies."

An editorial in the Russian paper *Novosti*, which has caused considerable stir in the Fatherland, comments on the recent ministerial changes in Germany, which have been regarded as a tendency to return to the Bismarckian policy. The *Novosti* does not believe that the Emperor will tolerate any "personal" rule other than his own, and Bismarck's rule under Emperor William I. was distinctly personal. This being the case, the new era in Germany represents an unknown quantity. Whatever happens, however, it is certain that Germany will remain the leading member of the Triple Alliance and Germany's present policy is decidedly adverse to war. It is no secret that in late years Emperor William has spared no efforts to bring about an understanding with France.

The *Reichsbote* has published an editorial on the significance of the German Emperor's visit to Pest, Hungary, where the two Emperors met, which has attracted considerable attention. The meeting of the Emperor and the Czar, in St. Petersburg, says the *Reichsbote*, was shortly followed by that of the Emperor and the King of Italy, and directly after came the meeting of the two Kaisers—not in Vienna, but in Pest. At all the meetings the peaceful intentions of each ruler and their respective governments were not only loudly proclaimed but the solidity of the alliance was emphasized, and one has no right to doubt the honesty of these assurances. Each ruler wants peace and endeavours to maintain it in order to check all disturbing elements in his own country. This presupposes the existence of such elements, and if one should ask where they are to be found, the present jubilant demonstrations of the French over the Russian alliance will serve as answer. For the cause of all the fuss is their long cherished desire for revenge, as is openly stated by themselves. This was the original cause of the formation of the "Dreibund" and is consequently the strongest factor in maintaining it. Germany naturally has the strongest interest in maintaining the alliance. In Austria the Czechs hate it and evince a friendship for France, believing that so soon as Austria is freed from the bond the Slavs would get the upper hand and Austria become a Slavonic State. For this reason the Hungarians cling all the more firmly to the triple alliance. The Magyars and Slavonians are irreconcilable enemies, and although the former are no particular friends of the Germans, they will always stand by them and support them rather than have the Slav to rule over them. This explains the reason for the magnificent reception the Hungarians gave the German Emperor in Pest and the remarkable enthusiasm with which the Magyars cheered him wherever he made his appearance. They felt themselves honoured by his visit and proudly emphasized their connection with the "Dreibund." The meeting of the two emperors in the capital of Hungary, as well as the popular demonstration of that people is, therefore, very suggestive.

LATEST TELEGRAPHIC NEWS.

(FROM THE "JAPAN TIMES.")

DEATH OF THE DUCHESS OF TECK.

London, Oct. 28.

The Duchess of Teck has died from exhaustion following an operation for strangulated hernia.

[The Duchess of Teck was born in 1831, and was the youngest daughter of the late Duke of Cambridge, Her Majesty's uncle, and sister of the present Duke. The Princess Mary Adelaide was married to the Duke of Teck in 1865, and has one daughter, Victoria Mary, married to the Duke of York in 1893, and three sons, Adolphus who in 1894 married Lady Margaret Grosvenor, daughter of the Duke of Westminster; Francis born in 1870, and Alexander George, born in 1874.]

The funeral service for the late Duchess

of Teck will take place in St. George's Chapel, Windsor, on Wednesday.

THE INDIAN MINTS.

The *Times* states that the only chance of securing a stable rate of exchange between England and India is to establish a common standard, which, in the circumstances, can only be the gold sovereign.

Sir Michael Hicks-Beach, Chancellor of the Exchequer, speaking at Bristol, said that he entirely concurred in the decision for the rejection of the proposal to reopen the Indian Mints, the Government being pledged to maintain the gold standard.

ENGLAND AND FRANCE IN AFRICA.

London, Oct. 29.

The *Temps* apprehends that a serious crisis is imminent in West Africa unless restraining orders are given immediately to the armed forces of England and France. It is stated in Paris that, owing to complications in the Lagos Hinterland, French reinforcements are being sent to Dahomey from Senegambia.

The *Times*, in a leading article on the Hinterland question in Africa, warns the colonial party in France that England's patience is exhausted and refuses to continue any longer the series of compromises whereof France reaps all the advantages.

THE AFGHAN FRONTIER.

London, Oct. 30.

General Sir William Lockhart has captured the Samragha Pass with but few casualties.

London, Nov. 1.

General Sir William Lockhart has captured the Arhanga Pass with trifling loss, and is now descending into the Afridi country at Turah.

DEATH OF LORD ROSMEAD.

The Right Hon. Lord Rosmead, G.C. M.G.—Sir Hercules Robinson—late Governor, High Commissioner and Commander-in-Chief, of Cape Colony, is dead.

A SEARCH FOR M. ANDREE.

Norway is sending a steamer to the Arctic seas to search for M. Andree, who left in a balloon to attempt reaching the North Pole.

THE OCCUPATION OF KASSALA.

The occupation of Kassala by the Egyptians has been definitely decided upon after evacuation by the Italians.

THE WEST AFRICA COMMISSION.

The Anglo-French West Africa Commission at Paris has held its first regular sitting.

THE SEAL CONFERENCE.

The Seal Conference between Japan, Russia, and the United States has agreed upon the suspension, or material limitation, of all pelagic sealing.

CRICKET IN AUSTRALIA.

In the first innings, England v. Australia, played at Adelaide, the Australians made 409, of which Hill scored 200, and the English team made 475, Prince Ranjitsinghi scoring 189.

DESTRUCTIVE CYCLONE.

Nov. 2.

A terrible cyclone has occurred at Chittagong, which caused a thousand deaths and rendered a million persons houseless.

THE PLAGUE IN INDIA.

The plague is on the increase in the interior of India.

THE TRIPLE ALLIANCE.

Count A. Goluchowski, Austrian Minister of Foreign Affairs, will visit King Humbert, at Monza, on the 6th instant. The Marquis di Rudini, Premier and Minister of the Interior, and the Marquis Visconti-Venosta, Minister of Foreign Affairs, are also invited to meet the Austrian Minister. It is understood that the object of the meeting is to dispel any doubts as to the stability of the triple alliance.

London, Nov. 3.

RUSSIA IN KOREA.

The Times publishes a telegram from Soul which states that the Russian Minister has forced the Korean Government to dismiss its English Financial Adviser and Chief of the Customs, and replace him by a Russian official.

PATENTS AND TRADE MARKS.

The Marquis of Salisbury and the Japanese Minister to London signed a Protocol on the 20th of October enforcing forthwith Article XVII. of the treaty of 1894 regarding the protection of patents and trade-marks.

OBITUARY.

Sir Rutherford Alcock and Captain Chard (of Rorke's Drift) are dead.

GLEITION IN NEW YORK.

The greatest interest is being displayed in the election of Mayor for New York.

SPAIN AND CUBA.

To-day General Blanco issued a pacifying proclamation to the Cubans, promising autonomy and oblivion for the past.

CRICKET IN AUSTRALIA.

The match at Adelaide, after four days' play, remained unfinished and ended in a draw.

(FROM "LE COURRIER D'HAIPHONG.")

PRESIDENT FAURE ON COLONIAL EXPANSION.

Paris, Oct. 15.

M. Felix Faure, on his return from Russia, has been entertained at a banquet by the merchants of Paris. The President said that the results obtained in Russia, which had given so much satisfaction in France, were due to the wisdom of the two countries.

M. Faure also spoke in favour of colonial expansion, and urged the conquest of new markets.

TERRIBLE MARITIME DISASTER.

Paris, Oct. 17.

From Havana it is reported that the coasting steamer *Trilon* has been lost to the north of Pinor del Rio. It is feared that 230 passengers and the crew have perished.

THE POPE IN FRENCH POLITICS.

Paris, October 18

In the course of a recent speech, M. Bourgeois accused the Cabinet of making war upon the old Republicans. He protested against the interference of the Vatican in French affairs, and demanded the application of a general income tax.

CHOLERA IN INDIA.

Paris, October 19.

About forty English soldiers belonging to the garrison at Sitapur have succumbed to cholera.

(FROM THE JAPANESE PRESS.)

THE "FUSO KAN" ASHORE.

Matsuyama, Iyo, Oct. 30.

The war-vessel *Fuso* ran aground upon a shoal near Nagahama harbour last night. The *Matsushima* and four other ships are engaged in getting her off.

Matsuyama, Oct. 31.

The stranded vessel *Fuso* is scarcely visible above water at high tide. Most of the crew have been landed. It is expected that the

vessel may be floated a few days, unless bad weather occurs.

Matsuyama, Oct. 31.

Details of the stranding of the *Fuso Kan* are to hand. It seems that while the Standing Squadron was manœuvring near Nagahama about 4 p.m. on the 29th October the stern of the *Fuso* collided with the bow of the *Matsushima* owing to a strong current, and damaged her propeller, whereupon she was run aground on a shoal to avoid sinking in deep water. The steamer *Kure Maru*, which came from Kure to render assistance, also went ashore in the strong wind, and damaged her bottom. The *Fuso* sank this morning (31st), but can probably be raised, though not easily. Happily no casualty happened to life or limb.

Matsuyama, Nov. 1.

The *Fuso Kan* is reported to be a total loss, as there is no prospect of raising the vessel.

FIRE AT NIIGATA.

Niigata, Oct. 31.

Last night a conflagration occurred at Nagasaki-machi and over 350 houses were reduced to ashes.

GENERAL KODAMA IN CHINA.

Shanghai, Nov. 2.

Lieut.-General Kodama, Vice-Minister of War, and suite arrived here to-day en route to Wei-hai-wei.

MINISTERIAL CHANGES IN KOREA.

Soul, Nov. 2.

Min Yong-kwi has been appointed Minister for Agriculture, Commerce, and Public Works, and Chong Pak-yong Minister for Home Affairs. Min Chihong-mok, Minister for Foreign Affairs, has resigned and Yu Kwi kwan been appointed Acting Minister *ad interim*.

FATALITY ON A RAILWAY.

Otsu, Nov. 3.

Mr. Yamazaki, ex Member of the Lower House, was run over and killed by a train the night before last near Baba station.

THE "YASHIMA."

Colombo, Nov. 2.

The battle-ship *Yashima* left here for Singapore to-day.

THE NEW FORMOSAN JUDGE.

Bakan, Nov. 4.

Mr Mizuno, the new President of the Formosa High Court, arrived here this morning en route for Formosa.

THE MANŒUVRES.

Moji, Nov. 4.

Lieut.-General Yamaguchi, Commander of the Fifth Army Division, and some Korean officers have started to Nakatsu to inspect the manœuvres.

NEW RAILWAY.

Mito, Nov. 4.

The section between Mito and Kujigawa on the Ota Railway has been completed and will shortly be opened for traffic.

RAILWAY COMPANY DISSOLVED.

Aomori, Nov. 4.

The Tsugaru Railway Company will convene a special meeting on the 20th inst. when the Company is to be dissolved.

The Women's medical school in St. Petersburg has opened with a class of one hundred and sixty students; nearly an equal number of applicants were refused admission for want of room. It was determined that only orthodox Christians should be admitted to the school, but a recent ukase had modified this to the extent that women other than Christians may be received, provided the number of them shall not exceed five per cent of the total. So many applied that the full number allowed by law was admitted. They are obliged to pursue the same course of studies as their orthodox sisters, and this includes the study for six months of dogmatic theology. The other subjects for the first year are anatomy, histology, physiology, botany, and chemistry.

PROBLEM No. 345.

By P. F. BLAKE.

White mates in two moves.

ANSWERS TO CORRESPONDENTS.

Problem No. 340—Only one solution of Mrs. Baird's difficult problem has been sent in, and this, owing to a slight flaw, fails to be correct. The problem has proved a very hard nut indeed.

A valued correspondent writes suggesting that we should publish two problems every Saturday, as was our custom until recently. But, gratified though we feel at this exhibition of interest in problem-solving, we reluctantly find ourselves unable to fall in with the idea. So many tastes have to be consulted, so little space is at our disposal, that for the present, at any rate, only one problem a week can be given.

P.E.F.S.—Many thanks, will publish.
D.J.—Have corrected and returned.

"JAPAN MAIL" CORRESPONDENCE TOURNEY.

As predicted, Pakeha has carried off the prize in this Tourney. Mr. Fardel early this week resigned Game 4 and the score therefore is as follows:—

PLAYER.	WON.	LOST.
Pakeha	4	—
Olymp	1	3 1/2
Shepherd	1	3
Nemo	2	1
Fardel	1 1/2	1 1/2

It will be seen that one game is still unfinished, viz., Nemo v. Fardel and although the issue of the Tourney is now decided this game is still being continued by correspondence. Below we publish the score of Game 4:—

GAME No. 4.

KING'S BISHOP'S GAMBIT.

WHITE—Fardel.	BLACK—Pakeha.
1 P K4	15 Kt x B
2 P K B4	16 Kt x Kt's P
3 B B4	17 Kt x BP
4 B x P	18 K B sq*
5 Kt KB3	19 R K2
6 P x Kt	20 Kt x R
7 Castles	21 Q x P
8 Kt B3	22 K B2
9 Q K2 ch	23 B x Q
10 P Q4	24 R K sq
11 Kt K4	25 R x R ch
12 Q KB2	26 P B3
13 R K sq	27 Resigns
14 Kt (B3)	

* This move loses White the game. One way, if not indeed the only one, to get out of this dilemma seems to be..... 18—Q to Kt 3, in which case the game might have continued as follows:—

- 19—B takes Q
20—K takes P
21—Kt takes R
22—R to K B sq
23—R takes Kt
- 18—P takes Q
19—P takes P ch
20—Kt takes P
21—B x Kt
22—Kt to B 6 ch
23—B takes R

leaving White with but a Pawn minus and a fair chance for a draw.

STEINITZ TESTIMONIAL.

The Metropolitan Chess-club, of New York city, has published the following announcement:—"As previously announced, the Metropolitan Chess-Club has decided to take the initiative toward creating a 'Steinitz Testimonial Fund,' which later, it is hoped, will assume ample proportions, so as to be of material benefit to the grand old master in his declining years.

"In furtherance of this idea, a reception and entertainment has been arranged to take place on October 16, at the Central Opera-House.

"We hope and trust that the Chess world at large, and more especially all Chess-players of New York and its vicinity, will gladly and generously respond, and thereby prove that devotees of the noble game are not unthankful, as has occasionally been claimed, but, on the contrary, are only too glad to get an opportunity to show their appreciation of real merit, their gratitude toward the foremost master, the great teacher of our noble game.

"Tickets are now ready for distribution. Their sale should be almost unlimited, appealing, as they do, not merely to those who intend to be present at the occasion, but to all those, whose number is legion, that are willing and glad to swell the Steinitz fund. These are others, not Chess-players, with whom the name of Steinitz has a sterling ring, those who are willing to admit the civilizing influence of Chess. To those we appeal as well, to make our enterprise a grand success.

"There is no other parallel movement on foot which involves the co-operation of the other and larger clubs contemplating the assistance of our entire broad country. However, the project is still in its infancy, and nothing definite ready for publication has been as yet arranged.

"All communications and requests for tickets should be addressed to Metropolitan Chess-Club, Central Opera House, Sixty-Seventh Street and Third Avenue, New York city."

William Steinitz, at sixty-one years of age, is one of the greatest Chess-masters in the world. He has a record which has never been equalled in the history of Chess: for twenty-six years he was the Champion of the World. Besides this fact, Mr. Steinitz is one of the most distinguished Chess-analysts of the age, and has done as much, possibly more, than any other man to further the interest in the Royal Game.

NOTES FROM ABROAD.

We have heard the rumour that Chess is to be the rage among women this coming winter, says an American Journal. Whist parties and euchre sociables are to give way to the Royal Game. We hope that it is true, and that Chess will become not only the rage, but rather a serious study among the educated women of America. They may not get as much fun out of it, as out of some other game, but they will get solid enjoyment, and intellectual pleasure.

Reichelm, in the Philadelphia Times, divides the Chess-players of the present age into two classes: "Grubbers and Faculty men." The Grubbers are those who "grub" after Pawns, and have always in view an end game in which an extra Pawn is of so much value. The Faculty-men are on the qui vive after brilliancy. Sacrificing pieces gives them infinite delight. We saw a Faculty-man, recently give an R for a P. It wasn't sound and he lost; but this expression:—"If it hadn't been for that other R, what a beautiful thing it would have been!" revealed the pleasure he experienced in coming somewhere near a win by a display of Chess pyrotechnics. Moral:—Be sure you're right before you "brill."

RAW COTTON.

	PER PICUL.
American Middling	\$19.75 —
Indian Broach	21.00 —
Chinese	20 to 20 1/2

METALS.

A small business only has been transacted, dealers restricting their purchases on account of the increasing tightness of the money market and the rise in rates of interest.

	PER PICUL.
Round and square 1/2 inch. and upward	4.15 to 4.60
Iron Plates, assorted	4.10 to 4.50
Sheet Iron	5.10 to 5.30
Galvanized iron sheets	9.20 to 10.50
Wire Nails, assorted	6.00 to 6.50
Pin Plates, per box	5.90 to 6.00
Pig Iron, No. 1	2.05 to 2.20
Hoop Iron (1/2 to 1 1/2 inch)	3.00 to 3.25

RUBBER.

The market is weaker and prices have fallen 2 sen per case for American and Russian oil.

	PER PICUL.
American	\$2.00 to 2.15
Russian	2.00 to 2.15
Langkat	—

SUGAR.

A fair demand exists for Brown, and transactions have been considerable, at rising prices, quotations having improved 10 to 20 cents per picul. Since the 19th Oct. sales of Manila amount to 43,354 piculs, of China 11,242 piculs, of Formosa 10,716 piculs; arrivals during the same period are, Manila 26,764 piculs, and China 15,019 piculs. White refined is in fair request at firm rates.

	PER PICUL.
Brown Takao	\$3.90 to 4.10
Brown Manila	4.10 to 4.90
Brown Daitong	3.80 to 3.85
Brown Canton	3.30 to 4.20
White Java and Penang	6.50 to 6.60
White refined	7.30 to 8.90

EXPORTS.

RAW SILK.

The market has been much quieter in tone during the past week and at the close very little is doing. There are no offers for fine sized filatures, owing to the high prices asked, but it is believed that slight concessions would now be made to intending buyers. Shipments in the interval have been small, and stocks amount to only 7,050 piculs, against 19,545 piculs at same date last year. Quotations are nominal.

GREY WHISKERS

EYEBROWS, &c.

GEO. COURTICE'S

CONCENTRATED

EXTRACT OF NUT GALLS

Has been thoroughly tested and approved in all parts of the world for over a quarter of a Century.

It is NOT A DYE, but the colouring principle of the Nut Gall in a concentrated form, perfectly harmless, and will positively restore the colour true to nature in two months.

THE GREATEST WONDERS OF MODERN TIME HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. COOPER, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowls, butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining stock."

Sold by all Chemists and Medicine Vendors throughout the World.

Printed and Published for the Proprietor, at 51, Main Street, Settlement, by ARTHUR HELLAM BROWN, of "Nooklands," No. 156, Bluff, Yokohama.—SATURDAY, NOVEMBER 6, 1897.

YOKOHAMA: SATURDAY, NOV. 13TH, 1897.

MARRIAGE.

BIRNIE-DANNATT.—On the 6th inst., at Christ Church, Yokohama, by the Rev. E. Champneys Irwine, M.A. Cyril Montague, son of the late DAVID BIRNIE, Melbourne, Australia, to Margaret Mary, younger daughter of the Rev. J. H. DANNATT, Barton-on-Humber, Yorks., and cousin of the Rt. Rev. Henry Evington, Bishop of Kinshiu, Japan.

SUMMARY OF NEWS.

MR. VAN WYCK, the Tammany candidate, has been elected Mayor of New York.

THE sealing conference at Washington rose on the 6th inst. after signing a convention.

THE cruiser *Akashi*, of 2,800 tons displacement, was launched at Yokosuka on the 8th inst.

A JAPANESE Consulate was opened at Chinnampo, Korea, on the 30th of October last.

MR. ALEXIEFF, the new Russian financial adviser to Korea, has taken up his post in Seoul.

A MYSTERIOUS tragedy has occurred in Paris, M. Dreyfus, a cousin of Capt. Dreyfus who was sentenced to life imprisonment for selling mili-

tary secrets, having committed suicide together with his wife and three children.

A TRAIN was derailed between Uyeno and Utsunomiya on the 4th inst. No lives were lost.

THE Ryusaki station on the Hokuyetsu Railway was wrecked by a dynamite explosion on the 11th inst.

TWO men were killed and ten injured by the derailing of a ballast train on the Nankai railway on the 5th inst.

THE naval manoeuvres at Yokosuka, which had been going on since the 22nd ult., concluded on the 2nd inst.

HIS MAJESTY THE EMPEROR, who has been suffering from a cold since the 5th inst., has now quite recovered.

BARON NISHI, the new Minister for Foreign Affairs, on the afternoon of the 8th instant had audience of the Emperor.

MR. HAMAO, the new Minister for Education, on the 8th instant took over charge from Marquis Hachisuka, the ex-Minister.

PRINCE TOKUGAWA KEIKI, the last Shogun, who has been residing at Shizuoka since the Restoration, has taken up his abode in the capital.

SEVERAL Japanese astronomers will leave Japan on the 16th inst. for India, where the total eclipse of the sun in January next will be visible.

MR. HOSHI, Minister to the United States, who was believed to be a candidate for office, is leaving Japan on the 21st inst. to resume his post.

A PASSENGER train was derailed near Sano on the Nankai Railway line on the morning of the 5th and six passengers were injured more or less.

REAR-ADMIRAL FITZGERALD has been appointed to succeed Admiral Oxley as second in command of the British squadron on the China station.

A COLLISION occurred on the 8th inst. between the steamers *Tatsuta Maru* and *Hiroshima Maru* off Nimo-shima. Both vessels were slightly damaged.

AN attempt has been made upon the life of the President of Brazil, and the Minister of War, in defending the President, was killed by the assassin, who was arrested.

THE vessels of the Nippon Yusen Kaisha, as the result of negotiations with the Communications Department, will hereafter carry mails from Yokohama to Seattle.

MR. TOYAMA SHICHI, Professor in the Imperial University, has been selected as President of the University; and Professor Kikuchi, also of the University, as Vice-Minister for Education.

A BONIN islander named Gonzales, who assaulted a man known as Hatoba Charlie at Hakodate a week or two ago, hung himself upon hearing of the death of the man he had injured.

THE telegraph cable between Formosa and Foochow, China, which has been broken since September last, is expected to be restored to working order during the course of this month.

THE members of the Yokohama Japanese Chamber of Commerce held a special general meeting on the 4th inst. for the election of half the members of the Chamber, when Mr. Oiani Kahei was returned as President.

HIS MAJESTY THE EMPEROR will not, it is said,

attend the opening of the Diet, which will take place on the 24th December next, on account of the Court being still in mourning for the late Empress Dowager.

It is stated that many of the local Governors appointed from the Progressionist Party have tendered their resignations, but the Authorities at the Home Department are in favour of retaining their services.

To obtain funds for the improvement of Nagasaki harbour it has been decided by the Nagasaki Town Council to issue Harbour Construction Bonds to the amount of yen 90,000, and the subscription list was opened on the 5th inst.

On the evening of the 6th inst., the agents of various Armies of Great Britain, France and Germany were entertained at the Kaikosha, Kudan, Tokyo, in connection with the supply of quick-firing guns and other fire-arms to the Military Authorities.

COUNT OKUMA having resigned the post of Foreign Minister, Baron Nishi has been appointed in his place. Dr. Hamao Arata has been appointed Minister for Education, and Baron Yamada, Minister of Agriculture and Commerce.

THE Kawasaki Shipbuilding Yard at Kobe recently received an order from the Osaka Shosen Kaisha for the construction of a steel steamer of over 1,500 tons, which is to be placed on the river line between Hankow and Ichang, China.

THE father of the young servant girl, Hana, who was killed by an electric shock when grasping the cord of an electric light at a shop in Kanda, Tokyo, on the 5th of October last, is instituting a claim for yen 5,000 against the Tokyo Electric Light Co., as compensation for the death of the girl.

THE Import market during the past week has shown little vitality, the recent rise in interest by the Banks, and general tightness of the money market militating against any speculative business. Cotton piece-goods of all kinds appear to be a drug in the market, and the business in yarns, which was fairly brisk a few weeks since, has dropped to almost nothing, while the local spinners are in difficulties owing to the want of a market for their surplus production. This used to go to China, but as that country is now beginning to turn out her own yarns, and exchange is against Japan since the introduction of the gold monetary system, it no longer pays Japanese spinners to send their products there, in spite of the fact that they are buying their raw cotton cheaper from America. Very little is doing in metals; the only two staple imports showing any vitality being kerosene and sugar. In the former, a brisk business has been done at slightly reduced quotations, as stocks are large. Transactions in brown sugar have been satisfactory at former quotations, and white refined has also shown a fair demand. Among exports, the silk market has been very dull, buyers being disinclined now that their principal orders have been filled, to pay the prices demanded by dealers. The latter are quite content to wait until they can obtain their prices, as the season so far has been most satisfactory to them. Purchases of tea are gradually decreasing as the season closes, and stocks are diminishing, with very little more, if any, to arrive from the producing districts. There is no export of rice, prices being too high, while foreign grain is being imported to supply the wants of the poorer classes. The output and export of coal has fallen off considerably, prices having risen some fifty per cent. since the same time last year. Exchange closes steady.

SPIRIT OF THE VERNACULAR PRESS.

The *Fiji Shimpō* considers that the Progressionists have acted with unwise precipitancy in bringing about the present crisis. It is impossible for a body of statesmen to give effect to any political programme in the short space of a few months. The Matsukata Cabinet came into office in September of last year. They could not be reasonably expected to have achieved any signal administrative or financial results by this time. The Progressionists should have remembered that point. If their hasty procedure is to become a precedent, there will be no such thing as rest and stability in Japanese politics. The Government had taken one significant step: it had admitted a number of outsiders to the ranks of the administration. It had given earnest of an intention to effect a radical change in the face of officialdom. But almost before the new policy had emerged from the stage of inception, the whole scheme has been overthrown. The Progressionists formulated five demands and threw them into the shape of an ultimatum. Was it possible for the Cabinet to bow its head? Is it conceivable that no method of compromise could be evolved? On the one hand, we have the petulant haste of party politicians; on the other the paltry declaration that because publicity had been given to the ultimatum, it must be rejected. Such doings would become children better than they become grown-up men. It is perfectly plain that there are two dominant principles in the political field at present: the principle of personal government and the principle of party government. A strong cabinet can be formed only by uniting the two principles. If they are to remain antagonistic, the harmonious working of the Administration cannot be hoped for. But their successful union demands a mutual exercise of patience and forbearance. That plain fact seems to have escaped the observation of the Progressionists. It has to be remembered, however, that the politics of the country are in a state of transition. The experience now gained may help to bring about the consummation so strongly to be desired in the national interests, namely, the *Meiji* statesmen's recognition of the necessity of working in unison with political parties, and the political parties' recognition of the necessity of working in unison with the *Meiji* statesmen. If the two are to come together only to fall out, the affairs of the nation must suffer intolerably.

The *Nichi Nichi Shimbun* devotes itself to dissuading Count Matsukata from following Count Okuma into retirement. The gist of its article is that the pressure now brought to bear on the Prime Minister with the object of inducing him to resign, has for its real purpose his enrollment in the ranks of the Progressionists, who, by their extreme action, would thus gain the advantage of attracting to their banner a prominent statesman. What a Minister of the Crown has to consider is his competence to discharge the duties of adviser to the Sovereign and to command the confidence of the people. Count Okuma has concluded that he does not at present possess that competence or confidence, and he consequently retires. But Count Matsukata is differently situated. It can not be supposed that he is under any private engagement to follow Count Okuma's example. Such an engagement would be disrespectful to the Emperor by whose mandate he holds office. If, on the other hand, he thinks of retiring because the Administration has made mistakes, then not he alone but the whole Cabinet should go out of office, for all are equally responsible. Finally, he has himself declared, in his memorandum to the Progressionists, that his first duty as Prime Minister is to guard the Imperial Prerogative against such a violation as would be involved in allowing outsiders to dictate the removal of Cabinet Ministers. Hence, were he to quit office because the Progressionists have severed their connexion with the Administration, he would be acting contrary to his own solemnly avowed principles. He must recognise that the efforts made to bring about his resignation are nothing

more than devices to contrive his final association with the Progressionist Party.

It may well be supposed that Viscount Takashima does not escape attack at this juncture. The *Mainichi Shimbun* is especially severe on him. Marquis Ito, it says, created the Colonization Department and gave the portfolio to Viscount Takashima without any regard to the latter's competence, but merely for the sake of strengthening the Cabinet by the introduction of the Satsuma element. It was to Viscount Takashima, however, that the Ito Cabinet owed its fall. The financial demands made by him in connexion with Formosa led to the retirement of Viscount Watanabe, and brought about the economical difficulty that overthrew the Ministry. It was because of that achievement that he obtained a place in the present Cabinet, and was allowed to sit at the council board with his elders in years and his superiors in intellect, Count Okuma, Count Matsukata and Marquis Saigo. He ought to have been distrusted rather than rewarded for what he had done. It ought to have been perceived that he would work the ruin of the new Cabinet also, as has actually occurred. For he it is that gathered together a coterie of corrupt politicians, mere office-seekers, to be the rivals of the Progressionists. At every point friction occurred and jealousies were provoked between the men whom Viscount Takashima and Count Kabayama had organized into the *Kodo-kai*. It was impossible for politicians actuated by such different motives to agree in supporting any Cabinet, and their quarrels are the real cause of the Progressionists' loss of confidence in the Ministry and of the split that has now occurred. Viscount Takashima is a Cabinet-destroyer, and his own followers have as much reason as his enemies to condemn his conduct. This crisis has been brought about, not by any real desire on the part of the Progressionists to promote the cause of reform, but simply through the machinations of a section of the Party who think that they see their account in the overthrow of the Matsukata Cabinet. That interpretation becomes quite plain if the declarations of these agitators are examined. On the one hand, they condemn any increase of taxation; on the other, they clamour for the adjustment of the finances. How can the finances be adjusted without increased taxation? There is a deficit of some twenty-six millions on the side of the revenues for next year. It is not a deficit due to administrative extravagance. It is due to expenditures approved by the Progressionists themselves in the last session of the Diet. The expenditures can not be reduced now: the country is pledged to them. What, then, do the Progressionists propose by way of substitute for increased taxes? Do they advocate a foreign loan; or the use of the remaining part of the Indemnity at once; or the laying of violent hands on the reserves for the new currency, or postponement of the redemptions of the national debt; or the cessation of any payment of interest on account of the debt? Any one of these measures would fatally impair the country's credit. What, then, is their plan? They stand in the position of having submitted to the Ministry a programme impossible of adoption, the alternative of not adopting it being severance of relations. Such procedure is simply destructive. Count Matsukata is to be complimented for having declined to bow to an ultimatum which would have brought the administration to a stand-still, and he is to be congratulated on his separation from a Party so unreasonable in its methods. He has now to stand firm. Efforts are being made to induce him and Marquis Saigo to quit office, but there is no ground for supposing that any success will attend such schemes. As for the Progressionists, the advantage that they have gained, or that they hope to gain, by their destructive policy is difficult to detect. These are the sentiments of the *Kokumin Shimbun*.

The *Nippon* takes a view diametrically opposed to that of the *Kokumin*. It contends that Count Matsukata is morally and politically

bound to share Count Okuma's retirement. Briefly tracing the history of the present catastrophe, the *Nippon* compares it to the out-flow of a pent-up current. The public at large speak as though the ultimatum presented to the Cabinet by the Progressionists were the sole cause of the trouble, but the truth is that the resignations of Messrs. Takahashi and Komuchi were the beginning of the crisis. Then followed the submitting of certain proposals by Count Okuma to the Cabinet. They were, in fact, a modified form of the Progressionists' proposals. The Cabinet rejected them, and after that a split was inevitable. It matters little to inquire now whether the formation of the *Kodo-kai* was responsible for the friction, or whether the Progressionists had grown weary of the alliance. "Spilt water will not return to the dish." But it is certain that the Cabinet owed its existence to an alliance between a popular party and a coterie of Satsuma statesmen. On the strength of that alliance it came into power. How can Count Matsukata attempt to keep the Satsuma coterie in office after the alliance has been severed? Does he mean to establish the principle that men may be allies in prosperity and indifferent to each other in adversity? Such a course would be unjust to Count Okuma and unjust to the public. The example set by Marquis Ito is the only proper precedent. When Count Itagaki declared his determination to resign, Marquis Ito refused to remain in office. Yet the Ito Cabinet's relations with the Liberals had not been by any means as intimate as those of the Matsukata Cabinet with the Progressionists.

The *Yoroku Chōhō* preaches a sermon to the Progressionists on the text that they ought never to have joined forces with the present Cabinet. They ought to have known, they must have known, that their policy was not in harmony with such a Cabinet, but the fact is that they grew weary of waiting out in the cold, and thus, under the influence of impatience, took a step which they doubtless regret now, and which can not tend to enhance their reputation. For the public does not fail to see that whatever may be their political integrity, however proof they may be against the seductions of place or power, they are not gifted with the important faculty of estimating times and seasons. It is nothing that they have served relations with the Ministry, for to maintain the connection would have been to link themselves with the plainly moribund cause of clan government. The veriest tyro in politics can perceive the unwisdom of such a course. Little credit, therefore, belongs to the Progressionists for their eleventh-hour discretion, whereas, on the other side of the account, has to be set a feeling of public uneasiness that their once-committed error of judgment may be twice committed. That is practically the gist of the article before us. It is not unfriendly to the Progressionists, but it abounds with the wisdom that follows the event.

The political crisis having ended with the resignation of Count Okuma, and the Cabinet having settled down to work again, the question now is, says the *Shōgyō Shimpō*, whether the public may feel easy. So far as foreign affairs are concerned, they will probably be quite safe in the hands of Baron Nishi, who, although he has not yet given evidence of any remarkable political capacity, has great experience of the Occident and of the workings of diplomacy. But in the field of finance there is much cause for anxiety. The times are distinctly troubled. Men are experiencing difficulty in paying up the calls on the shares to which they have subscribed in various enterprises; companies find themselves obliged to suspend their operations; the banks are nearly at the limit of their capacity of grant accommodation; the currency of merchants' paper is suffering; the prices of commodities continue to rise steadily, and the prospects of the rice harvest are not good. It is by no means a reassuring situation, and to crown all, the Cabinet finds itself obliged to have recourse to increased taxation. On general grounds the *Shōgyō* has no objection

maintained that such a step was perfectly feasible and reasonable. But it does entertain some doubt whether the Cabinet is approaching the measure with sufficient seriousness. Official financiers seem to have no qualms whatever about the success of their scheme. They have shaken off the Progressionists as though no outside support were of any importance, and they are going steadily ahead. In the main, doubtless, they are right, but have they an earnest sense of the difficulties of the problem? Do they perceive that most careful investigations are necessary in order not to perpetuate or repeat injustices long complained of, and do they understand that, when they put their hand to the work of increasing taxation in one direction, the responsibility of decreasing it in another may possibly devolve on them, so as to maintain the equal incidence of burdens? The *Shogyo* merely propounds these questions. It does not attempt to answer them.

MEETING OF PROGRESSIONISTS.

The much-talked-of meeting of the Progressionists was held on the 4th instant, and was attended by 59 members of the House of Representatives and 7 representatives of the Party's branches. Baron Kusumoto having been voted to the chair, Mr. Shiba Shiro, on behalf of the business committee, offered an apology to the meeting for the fact that matters had reached such a crisis. He seems to have made no attempt to extenuate the committee's part in the result, but merely stated that they regretted their failure to discharge their responsibilities. This brought the celebrated Mr. Tanaka Shozo to his feet. He thundered at the committee but failed to impart any of his own caloric to the meeting. The business committee then presented a report which has much interest as showing the kind of relations that existed between the Party and the Government. We translate from the *Fiji Shimpō*—

It is unnecessary to explain the reasons that led the Party to establish relations with the Cabinet. You are all aware of them. After the prorogation of the Diet, your committee frequently conferred with the Ministers of State and advised them on the subjects of financial and administrative management, in order that effect might be given to the pledges of the Cabinet itself and to the declarations put forward in our Party's manifesto. The Cabinet had solemnly engaged to manage things as desired, but we, believing that the engagement could not be made good with the then organization of the Government, conceived that no course offered except to get our fellow-thinkers drafted into the ranks of officialdom, and to that end we opened negotiations in the sense of having our people appointed to the post of local governor. We failed to obtain full success, but were able to obtain three or four nominations. It being still evident that unless our partisans were admitted to the Central Government, the desired end could not be attained, we adopted measures for that purpose, but not, on this occasion, by direct negotiation with the Cabinet. Certain Ministers holding political views similar to our own, were instrumental in the appointment of our people to offices in the Departments of Foreign Affairs and of Agriculture and Commerce. Mr. Taketomi's transfer to the Department of Finance was in lieu of an additional nomination to the Department of Agriculture and Commerce. These things amount to a very petty achievement, but we had some ulterior aims; and subsequently, when the Administrative Reform Committee was reorganized, four of our Party, including Mr. Taketomi, were appointed to draft the scheme of reform. We found, however, that the results arrived at by private consultation could not be adopted, and we therefore decided to approach the question from the more feasible points first. On those lines

we prepared a draft which was submitted to the Committee and passed by it, so that these secured a prospect of our ends being achieved. But the Cabinet rejected the draft. With reference, again, to the problem of finance, when the Government approached the consideration of the general estimates in May, we urged the postponement of all new enterprises, the reduction of the "fixed expenditures" as far as possible, and abstention from all new measures of taxation. The Government accepted our suggestions and, at a Cabinet council held on the 4th of June, resolved to put off the proposed increase of taxation. Nevertheless, when the demands of the various Departments came to be considered, a large deficit, amounting to 26 or 27 million yen, was found in the Revenue. Further, when the affairs of Formosa and the matter of the Board of Audit were taken into account, there appeared to be no hope whatever, and our relations with the Cabinet have consequently been severed.

The acceptance of above report having been proposed by Mr. Akasaka, Mr. Hasebo Junko opposed it. His full speech is not given, but the gist of it is said to have been:—

Unquestionably this is not the time for the Progressionists to sever their connexion with the Cabinet. We have still reason to hope that the Government will carry out the propositions formulated in the Party's manifesto. On the 19th of last month Mr. Inugai said to me that there was no use attempting to go on with the present Cabinet; that Counts Matsukata and Okuma ought to be urged to retire, so that the Cabinet might be wholly reconstructed; that if the two Counts retired, the Cabinet must fall; that even if it did not fall, the remaining Cabinet must be a mere makeshift, and that, consequently, we should urge the two Counts to resign. I opposed him, and recommended, as a better course, that we should press the Cabinet to give effect to the points set forth in our manifesto. Mr. Inugai agreed, and it was arranged that we should wait upon Marquis Saigo, Count Matsukata and Viscount Takashima. On the 20th, at a meeting with Mr. Ozaki, the latter intimated that the Standing Committee should be called together on the 23rd, but as we found that the Cabinet was to hold an important discussion on that day, I suggested we should await the result, and have the standing committee's meeting on the 23rd. My efforts proved unavailing, however, and on the 23rd the manifesto now in your hands was drawn up. I fail to comprehend such precipitancy. When Mr. Inugai held a conference with Mr. Oishi and Baron Ito Miyoji, I pointed out to him that, under existing circumstances, meetings with the Ito party were not advisable. He replied that there had been such a meeting, but that it related to commercial affairs and that no political discussion had taken place. I subsequently learned that there had been four such meetings, and under the circumstances it appears to me that the Progressionists can not escape the reproach of being led into mistakes by a section of schemers.

Mr. Inugai's reply to the above is reported as follows:—

Mr. Haseba has greatly misunderstood the nature of my remarks with reference to the resignations of Counts Matsukata and Okuma. What I said was that the two Counts should be urged to carry out the proposed administrative and financial reforms, and that if they were unable to do so, they ought to resign. I added that, in presenting their proposals to the Cabinet, they should carry their resignations with them, since, no lesser degree of determination would be of any avail. As for the other affairs, I was invited in the summer to Mr. Kondo's villa, where I met a number of the Nippon Yusen Kaisha people whom I knew. Mr. Oishi and Baron Ito Miyoji were also present, but I have not the pleasure of Baron Ito's acquaintance. Subsequently, when Mr. Haseba spoke to me on the subject, I said to Mr. Oishi that if the Govern-

ment was so nervous, he too had better not meet Baron Ito any more, and I understand that Mr. Oishi, on the following day, told Count Kabayama that with such a disorderly following it did not matter whom the Count met, and that he, Mr. Oishi, had had a meeting with Mr. Matsuda Seikin.

After these unedifying recriminations, and a brief debate, the Standing Committee's action was approved by a vote of 56 to 3, the "noes" being Messrs. Haseba, Orita and Arimura. Practically therefore, the Party may be said to have unanimously agreed to sever its connexion with the Government. The opposition that the *Fiji Shimpō* predicted on the part of Mr. Shimada Saburo and his followers—an event which we described in our last issue as very improbable—did not come off.

CHRYSANTHEMUMS AT WASEDA.

On the 8th and 9th instant great numbers of persons, Japanese and foreign, availed themselves of the three-times-renewed invitation of Count and Countess Okuma to visit the garden of their Excellencies' residence at Waseda and view the chrysanthemums. The weather was sufficiently beautiful to atone for all its previous misdeeds—a day of exquisite sunshine and soft, hazy air; the "little spring" of early autumn in Japan. We need scarcely say that the garden looked lovely; tended with infinite care and bursting into the early fire of autumnal tints. The house was also thrown open, presenting an attractive picture of a Japanese interior, restful, artistic, sober-tinted, and not without a glow of rich gold screens, magnificent lacquer, and gems of *cladon* and jade. Count Okuma's well known predilection for potted shrubs was evidenced by a wonderful collection of beauties and curiosities in that line, representing a sum of human labour and patience that would probably be very startling if reduced to figures. But, of course, the great object of attraction was the chrysanthemums. Of these there was really a noble display—eight hundred and fifty varieties, the culms of over four thousand plants. The shrub of twelve hundred blossoms was there in all its glory, a grand sight, marvellous in the luxuriance of its vigour and the lavishness of the care that must have been bestowed on it. The "specialties," however, were still more interesting. They showed extraordinary notes of colour, and a bewildering multiplicity of forms many of which were not to be reconciled with any reasonable conception of a chrysanthemum's shape. Visitors familiar with the achievements of London and New York horticulturists were obliged to admit that Count Okuma's collection contained a large number of unimagined novelties.

ANOTHER SHIPPING AFFRAY.

The *Ten Shin Maru*, says the *Hiogo News* of Friday, is at present lying alongside the western, or Railway, Pier. One of the quartermasters, a man named Miyata, was discharged therefrom yesterday morning for good and sufficient reasons. Following well-established precedents he proceeded to make himself objectionable. Having "primed up" ashore he proceeded on board during the afternoon and made his way to the Chief Officer's cabin. He behaved most insolently, and when Mr. Franklin sought to eject him he brought several coolies to his aid. The officer was struck over the head with a heavy spanner, a scalp wound about an inch long being inflicted. The Second Officer came to the rescue and was savagely bitten in the arm by one of the assailants. The Water-Police have the case in hand, and although the guilty parties got clear of the ship their arrest is not likely to be long delayed. Truly the Japanese commercial marine is at this time a thing of great beauty.

CONVOCAATION OF THE DIET.

An Imperial Rescript convening the Diet for the 21st of December has just been issued. It is dated the 10th instant, so that the interval allowed between its issue and the day of convention is exactly the prescribed forty days. A short time ago people were looking forward to this session of the Diet with but languid interest. The general idea was that the Cabinet would find at its back at least as large a following as it had last session. But now no one knows what to think. For the moment, the Ministry's parliamentary prospects look gloomy enough. Even the business men seem disposed to join the Opposition, if we may judge from the tone of a meeting of the united chambers of commerce, held in the rooms of the Tokyo Chamber on the 7th instant. Mr. Shibusawa Eiichi was in the chair, and the epitome of his speech published by the vernacular press indicates that he connected Count Okuma's resignation with the Government's failure to reduce the administrative expenditures to a point consistent with the national resources, and that he was disposed to endorse the views of the retiring statesman. Briefly stated, Mr. Shibusawa's policy is to abolish the Business Tax and other vexatious imposts and to derive the whole revenue—having first adjusted its dimensions in accordance with the national strength—from three or four taxes only. The representatives of the various chambers approved his suggestions, and a committee was appointed to submit them to the Government. But it is manifestly out of the question that any such radical change of policy can be effected during the brief interval between the present time and the meeting of the Diet. We have to remember, however, that the Chamber of Commerce protested vehemently against the Business Tax last year, and that, despite the Cabinet's indifference to their protest, the business men were subsequently found voting with the Ministry. The *Kokumin Shimbun*, which has always been a staunch supporter of the present Cabinet, declares that Count Matsukata and his colleagues will not give themselves any manner of concern about political parties next session. A Cabinet that declined to modify its programme for the sake of retaining the alliance of a powerful body like the Progressionists, is not likely to bow its head for the sake of securing the co-operation of comparatively petty coteries like the Public Unionists and the National Unionists. It appears to us that all the opinions now enunciated are purely conjectural. Probably none of the political parties except the Progressionists has definitely made up its mind what side it will take.

We have already stated that the eleventh session of the Diet is to commence on the 21st of December. The official opening will be on the 24th, and the Houses will doubtless rise on that day until the tenth of January, having appointed Committees to consider and report upon the principal Bills submitted by the Government, including, of course, the Budget. Among such Bills three, emanating from the Finance Department, will probably be given the first place. They are, a measure for changing the rate of the *Sake* Tax, a measure for changing the rate of the Land Tax, and a measure for changing the redemption period of the silver *yen*. The two first of

these Bills will precipitate a collision between the Cabinet and the Lower House. The silver-*yen* amendment will doubtless be passed almost immediately, the Government making it an urgency measure. But it is with reference to increased taxation that the Progressionists have broken away from the Cabinet, and they will of course oppose the *Sake* Bill and the Land Taxation Bill. What are the Government's chances of succeeding with these measures? We recently re-produced from the columns of the *Yû Shimpô* an estimate of the probable distribution of political parties in the next session of the Diet. It gave to the Cabinet a substantial majority. But it was based on a supposition which has since proved erroneous—the supposition that a section of the Progressionists, under the leadership of Mr. Shimada Saburo, would break away from that Party and support the Government. There appears to be no probability of any such event. Mr. Shimada was from the first opposed to the coalition between the Progressionists and the Matsukata Cabinet, and the severance of that relation removes any cause of friction between him and the Party. It is pretty certain—so far as present indications may be trusted—that the whole of the Progressionists, with insignificant exceptions, will oppose the Cabinet. There has been much talk of the Party's disintegration; talk emanating from generally well-informed sources. As yet, however, no signs of cleavage are openly visible. We may assume, therefore, that the votes commanded by the Party—some eighty in all—will be cast solely against the Bills for increased taxation. The National Unionists, also, have declared themselves hostile to the Cabinet. But are they really hostile? They came into existence as a party for the purpose of supporting the Cabinet over which Count Matsukata presided in 1892. It may almost be said that they owe their existence to the influence exerted by the Government in their favour during the general elections consequent on the dissolution of the first House of Representatives. They were organized under the leadership of Marquis Saigo and Viscount Shinagawa. It is not easy to see why they should array themselves against the present Cabinet except on the principle that the company of a failing cause is disagreeable. At all events they are now a comparatively insignificant factor. Taking into account the malady of shrinkage that has constantly afflicted them, and the secessions their ranks suffered last session, we doubt whether they aggregate more than twenty at present. Let us count them at twenty-five. Then the Progressionists and National Unionists muster a total of 105. On the other side, we have the Public Unionists (*Kodo kai*) and the Liberals. The latter now number about 60; the former, about 40. If they combined to support the Cabinet they would virtually balance the Progressionists and the National Unionists. The question is, however, will the Liberals support the Matsukata Cabinet. They would have supported it last session had it not included Count Okuma. If they oppose it this session, they will find themselves in company with their enemies, the Progressionists, and the irksomeness of the association will not be softened by the community of absorbing purpose that once knit together the normally discordant sections of the Opposition. We might, indeed, count pretty confidently on seeing

the Liberals uphold the Cabinet were any problem other than increased taxation at stake. But to vote for increased taxation on the eve of a general election will be a bitter test of loyalty. The members of the *Kodo-kai* have little at stake. Whichever side they espouse, their prospects in the approaching elections must be small. But for the Liberals the result of the next struggle at the polls is vital. They were once the great party *par excellence*. They are now a bad second to the Progressionists. If they are to recover their pride of place—and there is no reason why they should not—next June will be their time. Is it probable that they will present themselves to the constituencies as advocates of increased taxation? Is it probable that they will help their rivals to pose as the champions of the tax-payer? On the other hand, the Government has been fully cognisant of these difficulties from the outset, and there are some indications that in rejecting the Progressionists' ultimatum Count Matsukata had Marquis Ito's advice. In the years before the war with China, a failure to pass the Budget did not necessarily involve serious inconvenience: the Budget of the preceding year was repeated according to the Constitution, and the expenditures did not change so much, from year to year, that each Budget's appropriations could not be conveniently taken as a model for the next. But the Constitutional power to repeat a Budget applies to the ordinary expenditures only, whereas, during the *post-bellum* period of naval, military and industrial expansion, the extraordinary expenditures constitute the more important side of the estimates. We are not quite sure about the facts in this context. It is possible that in passing the general programme of expansion, the Diet may have invested the Cabinet with competence to make certain extraordinary annual disbursements by way of continuing expenditures. That can not be true, however, with regard to appropriations from the Indemnity, or yearly installments of the Industrial Undertakings Loan. Moreover, looking at the Budgets for the past two years, it appears that the finance of the present era requires special adjustments from year to year, and that without such adjustments there would be considerable dislocation. On the whole, therefore, we conclude that to be tied down in 1898-9 to the Budget of 1897-8 would mean a serious disturbance of the *post-bellum* programme. It is true that the resource of urgency ordinances always remains available. With that reserve of power the Cabinet can avert any inconvenience of the kind in question. But no Cabinet would be disposed to shoulder such an onerous responsibility as that of asserting financial independence of the Diet under the circumstances of the time. We thus perceive that to sacrifice its assured majority in the Lower House must have cost the Government many qualms, and we are further led to speculate whether, to use a homely phrase, the stale water has been thrown away before the fresh was drawn. Another point to be noted is that dissolution will have no terror for the next House of Representatives: it would scarcely hasten the election inevitable under any circumstances. Altogether the situation is most interesting. We must wait a little before attempting to forecast the issue.

NEXT SESSION'S BILLS.

In addition to Bills for increasing the Land and *Sake* Taxes and shortening the period of exchange for the silver *yen*, it is said that the Government will introduce in the next session of the Diet measures relating to the reform of local Government; to the portions of the Civil and Commercial Codes which, in their revised form, have not yet been passed; to the operation of the Civil Code and of the Commercial Code; to the amendment of the Registration law; and to the amendment of the Navigation Encouragement Law. There is a point worth nothing. Should the Diet be dissolved—a not improbable contingency—that event will probably occur about the 20th of January. The new Diet could not possibly meet before April, and is very unlikely to meet before May. The limits of time in such a case are fixed by two provisions of the Constitution. One requires that the notice convening the Houses must be issued at least forty days before the date of convention; the other, that after a dissolution, a new Diet must be convoked within five months from the day of dissolution. Hence, supposing the Diet to be dissolved on January 20th, its successor need not meet until June 20th. But it might meet in April. Thirty days notice has to be given before an extraordinary election after a dissolution. Therefore the election could not take place before the last week in February, and the Rescript convoking the Diet could scarcely be issued before the 10th of March. That would bring the Houses together on the 20th of April. Such expedition, however, would be unusual. May is the more probable time. In the event of a dissolution then, the remaining portions of the Civil and Commercial Code would not pass both Houses and be promulgated before June. That is running things very close, considering that the Codes have to be in force for a full year before July, 1899, unless the operation of the Revised Treaties be postponed. A great many important issues are involved in the disruption of the connexion between the Progressionists and the Cabinet.

NEW CABINET MINISTERS,
AND OTHERS.

The *Official Gazette* of the 7th instant announces the retirement of Count Okuma from the position of Minister of State for Foreign Affairs and acting Minister of State for Agriculture and Commerce, and directs that, as a special measure, he shall continue to receive the treatment due to a Minister of State. Baron Nishi Tokujiro is appointed from the position of Privy Councillor to succeed Count Okuma at the Foreign Office. Another important change announced by the same gazette is the transfer of Marquis Hachisuka from the Department of Education to the Privy Council, and the appointment of Mr. Hamao Arata, hitherto President of the Imperial University, to be Minister of State for Education. It is confidently alleged that the post of Minister of Agriculture and Commerce, vacant by the retirement of Count Okuma, will be given to Baron Kitagaki Kunimichi, formerly Vice-Minister of Colonization, and that Mr. Okuda Yoshitomo will succeed Mr. Oishi Masami as Vice-Minister of the former Department.

The Governors of Yamagata, Ehime and Fukui Prefectures, who were selected from the "political talents," have resigned, but their successors are not yet appointed, neither does there seem to be any certainty with regard to posts of *Chokunin* Councillors from which other "talents" have retired.

Baron Nishi Tokujiro is a native of Kagoshima (Satsuma). He was born in July 1847, and is consequently in his fifty-first year. The first mention made of him in public records is that he was attached to the Legation in Paris, in the capacity of a student interpreter, in 1878, and that he became a Secretary of the Legation in St. Petersburg in 1880. We are disposed to doubt the accuracy of these assertions, however, for as Baron Nishi received his education in St. Petersburg and graduated from the University there, it is scarcely possible that he can have been serving in Paris at the age of twenty-one. However, the chief point of interest about his early career is his Russian education, a consequence of which is that he speaks and writes the Russian language fluently. In 1883, when only 26 years of age, he was appointed Chief Secretary of the *Dajo-kan*—the then Cabinet—and, at the same time, Acting Chief Secretary of the Imperial Household Department. After four years in those posts, he was nominated Minister Plenipotentiary, and in January, 1887, he proceeded, as his country's Representative, to St. Petersburg. During the war with China, he was able to render signal service from his place in Europe, and the Emperor rewarded him by raising him to the peerage, with the title of Baron, in August, 1895, bestowing upon him at the same time the First-class Order of the Sacred Treasure and the relative rank of *shinnin*. Doubtless his services in connexion with the revision of the Russo-Japanese Treaty contributed to the high reputation that he bears. During the past two years his name has been frequently mentioned in connexion with the portfolio of Foreign Affairs. He returned to Japan at the beginning of the present year, and was appointed a Privy Councillor last March.

Dr. Hamao Arata, the new Minister of Education, has been connected with educational affairs throughout the whole of his career. He was originally a *samurai* of the *Toyouke* clan, and as early as 1872, he held the post of manager in the *Dai-gaku Nanko*, or southern college of the university—the Imperial University had not yet been established. That year, he was sent to America, to conduct investigations into educational matters; and in 1874, he was appointed Manager of the *Kaisei-gakko*, the forerunner of the present University. He remained in that position until 1880, when he became Secretary, and finally Chief Secretary, of the Department of Education. In 1885, being appointed Vice-President of the Imperial University, he paid another visit to the Occident, returning in 1887, and becoming a Councillor of the Department of Education, which post he quickly exchanged for that of Chief of the Educational Bureau in the same Department. In 1887, he received the honorary degree of *Doctor of Law* from *Cambridge University* (England), and was appointed Chief of the Bureau of Technical Education, the appointment being changed to that of Senator in 1889, and life member of the House of Peers in

1890. Finally, in 1894, he became President of the Imperial University, which post he now vacates to take the portfolio of Education. He enjoys the confidence of educationalists and is doubtless thoroughly conversant with the affairs of the Department now placed under his charge.

The Cabinet is now veritably *Satsuma* in its composition, as the following table will show:

Minister President and	
Minister of Finance...	Count Matsukata. Satsuma.
Minister of Foreign	
Affairs	Baron Nishi
Minister of Home	
Affairs	Count Kabayama. Satsuma.
Minister of War ...	Viscount Takashima. Satsuma.
Minister of the Navy...	Marquis Saigo ...
Minister of Education...	Dr. Hamao
Minister of Communi-	
cations	Viscount Nomura. Choshu.
Minister of Justice ...	Mr. Kioura Keigo. Higo.

Thus, out of eight portfolio-holders—the Department of Agriculture and Commerce being without a chief—five are men of Satsuma extraction. Most students of Japan's modern history will wish success to a Ministry thus organized, for, after all is said and done, it is to these men and the Choshu leaders that Japan chiefly owes her prosperity and reputation. Count Matsukata is said not to be in the least dismayed by the secession of the Progressionists. He is not going, he says, to desert his post even though he be left standing alone at it. What the country wants at present is administration, not political squabbles, and Count Matsukata intends to administer it to the best of his ability and strength. He has no intention of surrendering the premiership and confining himself to financial duties. Whoever goes, he remains.

The most conflicting estimates are published about the Cabinet's prospects in the next session of the Diet. The *Chuo*, for example, which used to be an organ of the National Unionists but is now understood to represent the Conservative section headed by Viscount Tani, predicts that the Cabinet will find itself opposed by the following:—

Progressionists	80
Liberals	60
National Unionists	25
Business Men's Party	20
Economical Reformists	6
Total	191

That would indeed be a forlorn state of affairs, considering that the House of Representatives aggregates at present only 298 members. But the list includes one obviously inexplicable element—the Business Men's Party. These have always been understood to be supporters of Count Matsukata, and it is hard to see why they should change their flag because Count Okuma has left the Cabinet. The *Tokyo Asahi*, on the other hand, which speaking generally, commands much better sources of information than the *Chuo* does, estimates the Government's supporters thus:—

Seceders from the Liberals and Pro-	
gressionists	50
Public Unionists (<i>Kodo-kai</i>)	50
Business Men, Independents &c. ...	60
Total	160

It is difficult to know where the truth lies, but we have to remark that forecasts hitherto formed of the action of political parties in the Diet have usually been falsified by events.

CAPTURE OF THE THIEF WHO ROBBED DR. DIVERS.

During the night of June 24th, a thief entered the residence of Dr. Edward Divers, Kaga Yashiki, Tokyo, and stole a sum of 620 *yen* in bank notes, eight thousand *yen* worth of War Loan Bonds, together with a large quantity of deposit receipts of the Mitsui Bank and the Hongkong and Shanghai Bank. We do not vouch for the accuracy of these figures, but merely reproduce them from vernacular newspapers. The loss was promptly reported to the police, and as the numbers of the Bonds were known, the chances of tracing them seemed very good. But, of course, their recovery by Dr. Divers, even if traced, did not necessarily follow, for it was possible that before the coupons were presented for payment of interest, the Bonds might have changed hands several times. The matter was at once taken up keenly by detectives. So far as outward appearances went, a ladder had been erected to give access to a window in the second story, the glass had been broken, the sash opened, and a saw and a kitchen knife were found within the room. All this pointed to an entry effected from without by a regular burglar. But there were circumstances that militated against such a theory. The bonds' presence in the house on that particular night was a fortuitous incident of which outsiders could not have had any cognisance, and the consequent inference that some person in the household was implicated seems to have been strengthened by other considerations. Suspicion pointed to the cook, Murayama Bukichi, who was known to have fallen into habits of gambling, but the greatest caution had to be observed in watching him lest he should take alarm and destroy the bonds. The police finally succeeded in finding the shop at which the saw had been bought, and were able to have the cook secretly identified as the purchaser. They accordingly arrested him on the morning of the 5th. Brought before the magistrate, and confronted with various proofs, he finally made confession to the effect that a portion of the bonds and deposit receipts were still concealed under the floor of his room, but that he had spent the money, with the exception of a hundred *yen*, on gambling and dissipation. Search was accordingly made, with the result that a box was found containing the deposit receipts and other documents in a greatly mutilated condition, but of the eleven Bonds only three were forthcoming. The thief alleges that he destroyed the remainder, but it is of course impossible to rely on his statements. According to the account given by the police, presumably on the strength of Bukichi's confession, the box was originally hid in a drain, whence the man took it quite recently, having been afraid to keep it in his possession until suspicion seemed to have been lulled. It seems strange that the police were not able to act more promptly, seeing that from the outset suspicion pointed strongly to the cook. The man is said to have been a dissipated character from his youth. His father was a gentleman in a good position—factor (*Karo*) of the Shibata fief in Echigo, of which the present representative is Count Mizuoguchi. Bukichi showed gambling propensities when a mere lad, and gradually went from bad to

worse, until finally he had to support himself by menial service. Unfortunately foreign residents are always exposed to the danger of getting such persons into their employment. As a rule, they have no means of inquiring into the antecedents of Japanese offering themselves in the capacity of servants, and they thus engage waifs and strays who would never be admitted into a Japanese household.

THE TOKYO CLUB AND FOREIGN MEMBERS.

An interesting article, which we reproduce elsewhere, appears in *The Engineer*, whose special correspondent has contributed a series of excellent essays to that journal on Modern Japan. Doubtless the writer is correct in most of his statements, but one point that he makes calls for comment. He declares it to be "almost a foregone conclusion that a Yokohama man, however good he may be, will be blackballed at the Tokyo Club," and he leads the public to infer that this differentiation is due to a prejudice against the treaty-port foreigner. "To be a treaty-port foreigner," he says, is a stigma in the eyes of the Japanese, and they will not deal with him if they can possibly avoid it." That is by no means the reason of the blackballing. The reason is that many Japanese members of the Tokyo Club are incensed because one of the most prominent Japanese of the time, the former President of the Yokohama Specie Bank, was blackballed at the Yokohama Club. There appears to be a determination to resent that insult, more especially as the gentleman in question is universally and deservedly popular. Why the blackballing took place at the Yokohama Club, we are not altogether clear. It certainly was not due to personal considerations, nor do we think that racial prejudice was responsible. Probably the true explanation is that many of the members of the Yokohama Club, having regard to the limited resources of the place, deem it injudicious to admit Japanese. The number of foreigners eligible for a club in such a settlement is a pretty constant quantity, and can be gauged with sufficient accuracy. But the number of Japanese is virtually illimitable, and if one were admitted, two or three hundred might seek admittance. It is, of course, conceivable that a few of the younger members of the Club are influenced by considerations of a nature by no means so respectable; but if such men exist, they may be set down as exceptions. The guiding principle of the majority, we think, is simply that there is not room for Japanese, and that the latter are quite numerous enough to have a club of their own and too numerous to be taken into the little foreign club. It is a great pity that such obstacles should present themselves, but it would be a still greater pity if they were misconstrued so as to accentuate the division which so many attempts have been otherwise made to remove. The prime object of the founder of the Tokyo Club, Count Inouye, was to promote intercourse between the Japanese and resident foreigners. It was one of those far-seeing and liberal schemes for which that too little appreciated statesman was remarkable. During many years a large portion of the handsome building known as the Rokumeikan was given, rent free, by the Japanese

Government for the use of the Club, and when unavoidable circumstances necessitated the transfer of the edifice to other hands, the Imperial Household Department presented to the members a sum of fifteen thousand *yen* towards the cost of providing themselves with new quarters. A bare statement of the facts suffices to show the singular generosity with which the Japanese Government has treated the question throughout. Fate seems, therefore, to be particularly ironical when she perverts the Club into a means of widening the very gulf which the Japanese Authorities have endeavoured so earnestly to bridge, and we count it a duty to offer this explanation, since, if we may judge from the impression that has been conveyed to the Special Correspondent of *The Engineer*, the true facts are very imperfectly understood. Prior to the blackballing of the President of the Specie Bank at the Yokohama Club, residents of Yokohama were heartily welcomed as members of the Tokyo Club, and the names of many are borne on the roll. But since that incident, a spirit of retaliation has grown up. If the true reason of the Yokohama blackballing were understood, we are persuaded that the Japanese members of the Tokyo Club would change their attitude, and refrain from defeating one of the prime objects of the Club's establishment. Indeed, there is cause to think that they have already changed it, for a Yokohama resident gained admittance to the Club quite recently.

The subject can not be dismissed without some reference to the statement that "to be a treaty-port foreigner is a stigma in the eyes of the Japanese, and they will not deal with him if they can possibly avoid it." Here, again, the special correspondent has been somewhat misled, we think. There is certainly a feeling among the better classes of Japanese that the treaty-port foreigner knows very little about Japan, does not care to know more, and is disposed to take a harsh view of the nation and its doings. The feeling has its origin in the mistatements that constantly find their way into the columns of local foreign journals, and in the vein of strong anti-Japanese prejudice that runs through much of their writing. But during many years of tolerably close intercourse with the Japanese in Tokyo, we have never discovered any evidence warranting an inference so sweeping as that of the special correspondent of *The Engineer*—or, it would doubtless be juster to say, that of the person from whom he obtained his information. The intelligence and discernment of the Japanese would have to be ranked very low if they did not appreciate the fact that communities like those of Yokohama and Kobe, for example, include a much larger proportion of clever, competent, and highly educated men than could be found in a corresponding section of European or American population. It is in the nature of things that such should be the case, for the enterprise that sends Occidentals to a far-Eastern country to seek their fortune is alone sufficient to differentiate them morally from the bulk of their nationals. The Japanese understand that point: at least we think that they understand it; all our experience of them convinces us that they do, and we can lay claim to long experience. There is a strong ambition to get the foreign trade of the country out of the hands of the treaty-port communities—a natural ambition,

which, however, is likely to cost the Japanese very dear, for if they could take off their patriotic spectacles they would perceive that a better agent than the resident foreigner could not possibly be found. Still, they are actuated by that ambition, and it does not help to make them view the treaty-port foreigner with favour. But if any of them do not want to deal with him, it is simply because their national sentiment girds at his presence in their trade, not because a stigma attaches to him for his own sake. He it is that has built up for them a commerce which is proving a veritable river of Pactolus to their country, and though they may be jealous of his position, and of the profits that accrue to him—profits which they greatly over-estimate—it would be strange indeed if, while envying him, they also despised him.

Concerning the letter addressed to us by the Special Commissioner of *The Engineer* in Japan and published in our correspondence columns, it is scarcely necessary to say that, in common with all close readers of his communications to that journal, we recognise that he merely records facts collected by careful inquiry, and that his fairness in the manner of recording, and industry in collecting, them are conspicuous. It will be observed that he maintains the correctness of his original assertion as to a stigma attaching to the treaty-port foreigner in the eyes of the Japanese, and that he constructively indicates Japanese informants as the source from which he gathered the impression. It is scarcely possible to discuss such a matter intelligently, opinion being alone in question. We ourselves should not have been disposed to go so far as to speak of a "stigma," nor do we conceive that the causes of the treaty-port foreigner's unpopularity are of a kind to warrant that description of their consequence. Passing from that point, however, we desire to apply two corrections to our previous comments. The first has reference to the attitude of the Tokyo Club towards Yokohama. *The Engineer's* Special Commissioner writes as though any number of the Yokohama community now seeking admission to the Tokyo Club would be blackballed, and we, on our side, may be supposed to have tacitly endorsed the statement since we failed to contradict it. The fact is that, not residents of Yokohama, but members of the Yokohama Club are discriminated against. The difference is important, for, as we have already explained, the unwillingness to admit members of the Yokohama Club is due to their having blackballed the former President of the Specie Bank. Against Yokohama men as such there does not appear to be any manner of feeling on the part of Japanese members of the Tokyo Club. The second correction has to be applied to our suggestion that the blackballing of the President of the Specie Bank was probably due merely to an apprehension lest the admission of one Japanese member might be followed by an inconveniently large influx of others. That explanation will not hold, we find, for there are actually two Japanese members of the Yokohama Club. The blackballing consequently remains a mystery, but it is generally believed, we understand, to have been prompted by considerations which ought to be wholly excluded from such affairs. Of course it was the act of a small clique,

and we are justified in assuming that the great majority of the members would not have approved it for a moment. Still, with the fuller information gained since we last wrote on the subject, we can not maintain the justice of the extenuation then suggested.

THE BUDGET.

The Cabinet having decided to obtain an increase of revenue from the Land Tax, is understood to be proceeding on the principle of taking the average price of rice for the past five years as a basis of calculation. The resulting figure is over 7 yen per *koku*. The figure at the time of fixing the Land Tax in 1873, was, we believe, 4 yen per *koku*. Speaking roughly, the tax collected from the rural lands at present is 35 million yen. If the rate—2½ per cent. of the assessed value of the land remained unaltered, the new price of the *koku* would mean an increase of tax amounting to 26 million yen. But it is not contemplated to obtain more than 14 or 15 millions from this source. Hence, if the *koku* be assessed at 7 yen, the rate of the tax may be reduced to 1½. These points are understood to be now under consideration. To us it seems that the wiser plan would be to assess the *koku* at a lower figure and leave the rate as it is; or, at any rate, not reduce it below 2 per cent. Meanwhile, we hear nothing about the tax on urban lands. It has been shown in these columns that if the sum paid per head of the urban population, in the form of land tax, were equal to the sum paid by the rural population, the Treasury would receive 4½ million yen annually from town lands instead of eight hundred thousand yen. It has been shown, also, that the assessment of the urban lands for purposes of taxation averages only 17 sen per *tsubo*. Is nothing to be done about these manifestly unjust figures, we wonder.

DEPARTMENT OF EDUCATION.

In appointing Professor Toyama to be President of the Imperial University the Government has selected a man whose figure has occupied a very prominent place in the vista of public observation during the past ten years. Professor Toyama is gifted with a singularly active brain. His literary accomplishments go without saying, seeing that he presides over the College of Literature in the University. But there are greatly varying degrees of literary knowledge, and Prof. Toyama's degree is remarkably high, whether Occidental literature or Oriental be in question. As a writer of prose he has a powerful, nervous style, representing the best tendencies of the new Japanese school, and as a poet he has earned considerable distinction on account of both the quality and the novelty of his work. In the field of practical education, too, he has shown much force of thought and effort, as well as industry that bespeaks genuine enthusiasm. Indeed, he seems to find a special aptitude for everything to which he directs his attention. His ideas about art show much originality and discriminative appreciation, and when he turns even to such a subject as politics, it is easy to conceive him playing the rôle of a party leader with thoroughness and success, for some of the speeches delivered by him in the House of Peers—of which the Em-

peror nominated him a life member in consideration of his distinction as a scholar—have startled that sedate assembly by their uncompromising diction and keenly caustic tone. Whether Professor Toyama is endowed with the organizing faculty, there has not yet been any opportunity to judge, so far we know, but his very practical manner of dealing with questions in general suggests that he will not be found wanting in that respect. It is interesting to see men of his type rising to high places in the world of officialdom. They may be said to represent the young generation; the generation whose advent to power has been looked for with so much interest and curiosity. Professor Kikuchi, who becomes Vice-Minister of Education, belongs to the same school. He is a graduate of Cambridge, where he distinguished himself highly in mathematics, of which subject he has been Professor in the Imperial University for several years. But unlike the great majority of men who devote themselves to that abstruse study, he is keenly practical and full of secular earnestness. We should say that he will be a thorough success in the Department of Education. The public will observe with curiosity what effect these various new appointments will have upon the attitude of the House of Representatives towards the Department of Education. The tendency of the House hitherto has been to regard the Department with the utmost disapproval. The celebrated Mr. Tanaka Shozo once went so far as to call it "a den of monsters" (*bakemono-yashiki*), and violent attacks upon it were always received with more or less approval. With Dr. Hamao as Minister and Professor Kikuchi as Vice-Minister of Education, and with Professor Toyama presiding over the Imperial University, this section of state affairs ought to enjoy public confidence.

THE FOREIGN PRESS IN JAPAN.

With all the good-will in the world we are totally unable to comprehend the position assumed by the *Japan Gazette* towards the question of the foreign press in Japan after the abolition of Consular Jurisdiction. Indeed, we very much doubt whether our worthy contemporary itself knows what it means or what it desires. "We want it understood," writes the *Gazette*, "that as long as we obey the Japanese laws we shall not be subject to the caprice of the Diet or of a Cabinet." Now what on earth does that signify? Suppose a man were to say:—"I want it understood that so long as I obey the laws of Great Britain I shall not be subject to the caprice of the British Parliament or of a British Cabinet," would not his hearers be justified in greeting the assertion with laughter? The British Parliament makes the laws by which British subjects are governed. To talk of obeying British laws while claiming exemption from the acts of British legislators, is mere silliness. No Japanese journalist is safe against what the *Japan Gazette* is pleased to call "the caprice of the Japanese Diet." If the Diet passed a law to-morrow interdicting the publication of newspapers throughout the length and breadth of the land, every Japanese proprietor, and publisher of a newspaper would have to obey it. If the British Parliament passed a similar law, British subjects would have to obey it throughout the United Kingdom. Men can not

be subservient to the law and independent of the legislator. No Japanese in Japan is independent of the legislative authority vested in the Government and the Diet. To ask that foreigners in Japan shall enjoy such independence, is to ask that they shall enjoy greater privileges than the Japanese themselves enjoy in their own country.

But in the very next clause the same journal writes:—"We desire it to be made clear that there can be no special laws curtailing the foreign press which are not also applicable to the Japanese press; * * * that as long as we do not offend against the Press Laws, we have as much right to carry on a printing and publishing business as any Japanese." That is clear enough. It is simply an elaboration of the proposition that foreign journalists shall enjoy national treatment in Japan: in other words, that they shall be placed on the same footing as Japanese journalists. If, however, they are on the same footing as Japanese journalists, they must submit to the "caprices" of the Diet.

On the whole, the trouble with the *Japan Gazette* seems to be that having thoughtlessly blundered into faulty language, it clings to its errors, for the sake of consistency, in one clause, and tries to erase them, for the sake of justice, in the next. Again, the editor informed *The Times* that the Japanese Press Law had been revised for the purposes of the abolition of Consular Jurisdiction. That was a gross misstatement. It represented the Japanese Diet and the Japanese Cabinet as having deliberately legislated with the object of putting an end to foreign journalism in Japan, whereas their legislation was simply and solely for the purpose of relieving Japanese journalists from irksome restrictions. We pointed out the error and commented on the marvel of such ignorance, whereupon our contemporary replies:—"The *Japan Mail* reiterates its assertion that the clause debarring foreigners was not intended to be permanent." What is to be done with such wretched prevarication? We never asserted anything of the kind. We never hinted at anything of the kind. The permanence or impermanence of the clause was never in question. The motive of the law's enactment was the point, the only point. If the *Gazette*, having asserted that a man had been murdered, was shown to be in error since he had died a natural death, it might just as well shuffle out of its error by saying, "Oh! I really thought that he was permanently dead?"

Presumably what our contemporary means is that it wants foreign journalists to be placed on the same footing as Japanese journalists in Japan, and to be thus guaranteed against legislation injuriously discriminating against them. Now that is precisely what we all want—national treatment. It is not of the smallest avail for the *Japan Gazette* to pretend that it is "fighting the question without the support of any other newspaper." It is not "fighting" the question alone. It has not even the credit of having inaugurated the "fight." The *Japan Herald* took up the matter long ago, and the *Japan Mail*, in the clearest possible language, has asked for national treatment. It is not of the smallest avail for the *Japan Gazette* to pretend that while it "contends for independence" the *Mail* would be content with "dependence."

No false pretences, no cheap clap-trap, of that kind will hold water. The *Mail* asks that foreign journalists in Japan shall be placed on the same footing as Japanese journalists in Japan after the abolition of Consular Jurisdiction. It is impossible to make a clearer declaration. If within the limits of such a statement, already made by us and now repeated, the *Japan Gazette* continues to find room for prevarication, there can no longer be any doubt about the character of its writing. Our own definition of the difference between the *Japan Gazette* and ourselves is that, whereas the *Gazette* has grossly misrepresented the Japanese Government and the Japanese Diet, attributing to them an illiberal attitude of which they have given no indication; whereas by blundering language it has obscured the legitimate claim of the foreign journals and exaggerated the dimensions of the claim so as to render them unreasonable, thereby damaging the cause which we are all interested in promoting; and whereas it has written as though a campaign had to be waged in order to bring the Japanese Government to a sense of liberality and justice, thus prejudicing foreign journalists in the eyes of those to whom they are looking for concessions, we, on our side, have stated the plain facts and set forth the foreign claim in its moderate and true dimensions, showing that there has been no anti-foreign legislation, that foreigners ask for nothing more than the privileges enjoyed by Japanese subjects, and that the Japanese Authorities are understood to be prepared, of their own accord and without any "fight" or pressure, to place the foreign journalist on the same footing as the foreign merchant. Which course is the more likely to conduce to the interests of the foreign journalist, there can not, we think, be much difficulty in deciding.

Discussions with certain journalists in this settlement have a monotonous habit of reaching the same finale: our courteous opponents end by calling us names. It appears now that our "hatred of the foreigner" prevents us from discerning the *Japan Gazette's* point. Truly we are quite sorry not to be able to pay our contemporary the compliment of hating it. But we could not manufacture the sentiment out of such trifling materials. Besides, we like the *Gazette*; we have quite a considerable affection for it. It is so diverting and so benevolent. In this matter of the privileges of foreign journals in Japan, it "has set certain machinery to work" for the protection of its contemporaries *en masse*. There is not to be any soliciting of favours. The British Government, under the pressure of the *Japan Gazette's* machinery, is going to "insist that the foreign journalist must be placed on the same footing as the foreign merchant." There is to be no question of "the Japanese Government's granting the privilege or not at its option." What a fine power the *Japan Gazette* wields, and how nobly it rises superior to the trammels of reason. A short time ago, it was denouncing the incompetence and carelessness of the British negotiators for not having inserted in the Revised Treaty any clause securing to foreigners the privilege of carrying on journalistic enterprise in Japan. Now, it denounces the *Japan Mail* for asserting that "the right of a foreigner under the new Treaties to carry on a newspaper business does not

exist." To us, blinded as we are by hatred of the foreigner, it is horribly perplexing to be told that the drafters of the Treaty failed to provide for the journalistic privilege, and yet that the existence of the privilege under the Treaty is undeniable. Besides, we don't quite see by what principle of international law a State can be compelled to permit the publication of foreign journals by foreigners within its borders, and we are disposed to think that such defiant assertions will not tend to smoothe the situation. But the *Japan Gazette's* machinery will doubtless remove all difficulties. It is so nice to be splendidly championed.

The *Kobe Chronicle* also discusses the subject of newspapers and endeavours to prove that the Revised Treaty, as it stands, confers on foreigners the privilege of engaging in journalistic enterprise in Japan. We observe, *en passant*, that the *Kobe* journal considers it necessary to run a tilt at the *Japan Mail*, but to that we have no manner of objection. The fact is that the two evening journals of Yokohama cried out about the Treaty's defect in this matter before the *Mail* made any comment, but the *Chronicle* probably intends to show its discrimination by ignoring them and confining its criticisms to the *Mail*. We should be glad to see our *Kobe* contemporary prove its case, but its success, thus far, is very meagre. In the first place, it misstates our view. We do not say, and have never said, that unless a business is specifically mentioned in the Treaty, foreigners have not a Treaty right to engage in it. What we say is that the Treaty mentions "trade" only, and that the profession of journalism is not included in the catalogue of trades. The words of the Treaty are "trade by wholesale or retail in all kinds of produce, manufactures and merchandise of lawful commerce." It appears to us quite impossible to contend that journalistic enterprise was contemplated by the drafters of such words. Our contemporary instances banking, and asks whether we consider that "all foreign banks must close their doors when the new Treaties go into operation." We answer, certainly not. If there be any doubt about the propriety of calling banking a "trade," there can be no manner of doubt that it is an essential part of the machinery of trade. The principles of international law do not seem to be involved in the discussion. It seems to be a simple question of interpreting a simple English sentence. If there be any persons who can honestly persuade themselves that the profession of journalism is included in the words "trade by wholesale or retail in all kinds of produce, manufactures and merchandise of lawful commerce," we confess ourselves quite unable to share their view. It is unnecessary to follow the *Kobe Chronicle's* arguments any farther. They have their root solely in the rendering of the words quoted above. We may note, however, that our contemporary charges us with "supplying specious but fallacious arguments to the factious critics" who are likely to bring anti-foreign pressure on the Government. It is very amusing. At one moment we are accused of writing to order of the Government; at another, of supplying arguments to its critics. Would it not be wiser to take less thought about the source or destination of our arguments, and more about their intrinsic value? We repeat what we have

stated more than once, namely, that there are no grounds for apprehension as to the action of the Japanese Government about foreign local newspapers, and the present discussion is consequently academical.

AN INTERVIEW WITH COUNT OKUMA.

A representative of this journal waited upon Count Okuma on the morning of the 8th inst., and found him in apparently robust health and radiant spirits. The conversation naturally commenced with a reference to the inclement weather which had necessitated the abandonment of the Count's garden party on the fifth and sixth instant:—

Count Okuma—Yes, it was very unfortunate. The fine weather had been so continuous and looked so settled that I did not feel at all concerned on that score. But I hope that my friends will visit the garden during three days, from to-day, for I am sure that they will enjoy the chrysanthemums. We have been particularly successful this year. The quality of the flowers is splendid, and their profusion unprecedented. I have one plant with twelve hundred blossoms. That beats anything yet achieved.

Q.—That is wonderful. It represents a Japanese specialty. In England the cultivator's attention is directed entirely to the flower itself. If one plant bears one really magnificent flower, that is thought quite enough.

Count Okuma—We hold the same idea in Japan, but we do not confine ourselves to it. Many of my chrysanthemums are treated in the manner you describe, but with some the aim is profusion of bloom. I shall have plenty of spare time now that I have gone out of office, and I intend to devote myself to gardening and education. Those are my two hobbies. They are practically cognate pursuits—delightful in themselves and interesting as well as useful in their results.

Q.—I doubt whether your Excellency will be allowed to devote much time to gardening. But since you speak of going out of office, would it be indiscreet to ask what are the real causes of the present complication. The public knows that there has been much talk of opposition to increased taxation and much outcry for administrative reform, but we do not clearly understand whether these are the true reasons of your Excellency's retirement.

Count Okuma—As to increased taxation, that is certainly not a reason. Opinions on such a subject can be easily adjusted. The question of administrative reform is more difficult, but it takes me to ground where I am not at liberty to speak quite freely. So far as I am myself concerned, I may say that there are certain principles of government for which I have always contended, and which I had hoped to put into operation, but failing in that expectation, I think it better to retire. The explanation is somewhat vague, but I do not know that I can be more explicit without betraying confidences that are not my own.

Q.—Does it not appear to your Excellency that the working of the administrative machine is inconveniently impeded by the actions of political parties; that the public interests will suffer if the Cabinet is always liable to be convulsed by the proceedings of a body of outsiders who are not yet competent themselves to assume the responsibilities of administration?

Count Okuma—Yes and no; yes, theoretically, but no so far as the actual facts are concerned. Do not imagine that changes like that which has just taken place disturb the conduct of State affairs. The public business is managed without any jar or dislocation. These incidents are mere eddies in the great stream of progress. Even if they were more, even if they caused serious inconvenience, we must endure them. We have to work our way into smooth water. We have introduced constitutional institutions and we must follow them to their logical issue. There is a model before us—England. England is the mother of constitutional government. It

has been longest with her and she has reduced it to a thoroughly useful and convenient system. We hope to be equally successful. We may reach the goal by a different route but we shall get there. The examples that are before our eyes are not lost on us. We see that Europe rules the world. European civilization, European intelligence, European strength—by these the whole world is controlled. Look at India; look at China; look at Africa; look at Central Asia. When then we struggle to enter the comity of Western nations, we are really struggling to pass from the ranks of the ruled to the ranks of the rulers. Japan labours under no misapprehension upon that score. Her goal is clearly before her eyes and she will not rest until she has attained it. These political struggles are part of the day's work. They have their own uses; very substantial uses. They are not merely symptoms of the intellectual activity that is stirring all classes of the people; they are also factors in the education of that activity. Just as competition develops business faculties and promotes all kinds of commercial and industrial enterprises, so opposition in the field of politics and administration acts as a spur to energy and a corrector of abuses. Look at what France achieved under the influence of opposition. Would she ever have showed that marvellous access of vigour, that wonderful strength of recuperative energy, had not a victorious rival faced her in the lists? It may appear to you that such and such conduct on the part of a political party is wrong; that this or that procedure on the part of a Cabinet is regrettable. You may be right, but it is necessary to ask yourself whether it can be said of any human achievement that the path to it was free from blunders and miscalculations. The greatest statesmen err. Gladstone has erred, Disraeli has erred; Bismarck has erred. The wisest Cabinets err. That is nothing. The only really baleful condition is that of a nation or a community where public scrutiny sleeps, and where the path to better things is not lit by the fire of conflicting intellects. If you want to have a good government, you must have a stout opposition. That is what we hope for in Japan, that is what we are striving for, and we are getting it.

Q.—So indeed it seemed to us onlookers, also, until the present year, but the impression produced by the events of the past ten months is that the political parties thus far formed have no cohesion. Among all the parties hitherto organized the Liberals appeared the most powerful and the best consolidated, but they have fallen to pieces, and the latest episode in the political field is the appearance of a party without any clearly appreciable *raison d'être*. It is plain enough that party government is the end for which politicians are fighting, but how long will it be before the preparations for party government are complete?

Count Okuma.—That is indeed a difficult question. You would scarcely ask a meteorologist to tell you what the weather is to be a month hence, and I don't think that the science of political meteorology is at a very advanced stage in Japan. Remember that we are only emerging from our childhood in this matter of constitutional institutions. It is true that parties have not thus far shown much cohesion, but they can scarcely be said to have changed as much as the circumstances among which they find themselves. In my opinion there has been distinct progress. We are not at all discouraged.

Q.—One of the difficulties that suggests itself to onlookers is the absence of any dividing line of principles. We can not see how parties are to be differentiated. Each of the parties hitherto formed has published a platform, but truly it seems to us that a free interchange of platforms might be effected without doing any violence to their compilers' ideas. On what lines will party cleavage take place ultimately, in your Excellency's opinion?

Count Okuma.—Simply on the lines of pro-government and anti-government. I am not altogether surprised at your difficulty. It arises from the obvious fact that liberalism is absolutely

supreme in Japan to-day. It permeates the whole nation. We have emerged from a long night of seclusion into the noon-day of a very wonderful civilization, and the business of one and all of us is to assimilate the good things set before us. There are practically no conservatives. From time to time one or two have shown their heads, but the tide of progress has swept over them. No, we need not look forward to conservatism as a differentiating factor in politics. Neither is the spectre of socialism in sight. I see no evidences of it, nor does the genius of the nation appear suited to such a philosophy. Religious squabbles, too, are happily absent. The disposition of the people in religious questions is essentially tolerant. We have not been without a display of what history calls religious intolerance, but, as you well know, it sprang chiefly from causes independent of religion. But questions will crop up to create divisions. Do not the political annals of Europe and America suggest similar difficulties? Even in England, a country conspicuous for the absence of side issues sufficiently powerful to cause disaffection in the two great camps, you have to admit that your Conservatives and Liberals have from time to time exchanged platforms, and you could scarcely venture to affirm that their original differentiation was one of principles. It appears to me that one of the greatest figures among the Conservative leaders to-day is Mr. Joseph Chamberlain. The work that he has done towards knitting together the parts of the British empire, will go down with him through all the pages of history. Yet, a few years ago, he was a Liberal of Liberals; a Radical, indeed. One serious question like that of Ireland sufficed to break down the old party lines in England. So I anticipate that questions will crop up in Japan to mark out party lines. As soon as a flag is hoisted, there will be men anxious to pull it down as well as men anxious to keep it up. It may take a long time; how long I can not venture to predict. But that it will come sooner or later, and that it will come without any particular trouble or confusion, I am firmly convinced.

Q.—Your Excellency sees, of course, how perplexing these Japanese questions must be to foreigners, who have no experiences that seem applicable. For example, the object of the struggle now going on, so far as we can see, is a desire on one side to introduce party government, and a wish, on the other, to postpone that consummation. In England the same battle was fought. But whereas in England it was a fight of King against people, here in Japan it is a fight between a body of men who have proved themselves good administrators, and a body of men who have never given evidence of any administrative competence. The statesmen that have made modern Japan, the statesmen that have led the nation along a very remarkable path of progress, and managed its affairs wisely under circumstances of great difficulty, seem to be pitted against a mob of politicians who have never borne any responsibility or shown themselves fit to bear any. The natural tendency of the onlooker is to wonder whether there is any fitness in such a struggle, and to conclude that for the sake of the country victory ought to rest with the statesmen of established ability.

Count Okuma—Yes, that is natural. There is in Japan much that differs essentially from what you find in Europe, and if you apply your European standards to Japanese affairs, your calculations are apt to go far astray. The Emperor in Japan occupies a unique position. The people regard him as a father who, from generation to generation has always treated them as his children; who has been uniformly solicitous for their welfare; who rules by divine right and who has never preferred his own convenience or advantage to the interests and comfort of his subjects. It would be impossible for a Japanese to conceive such an idea as that the Emperor should abuse his prerogatives. If it appeared that the prerogatives of the Crown were taken improper advantage of, the immediate conclusion would be that evil Ministers stood between the Throne and the people. In fact the Emperor does not appear for an instant in this process of political evolution. A

word from him would arrest or conclude the movement. That is one of the reasons for my assurance that the end will be reached quietly and peacefully. As for the other part of your query—the apparent incongruity of a struggle for governing power between men who have actually governed with success and men who have never governed at all—does it not seem that the same difficulty presents itself at the very threshold of constitutional institutions? When the people are first given a voice in the government, there can be no previous proof of their fitness to make themselves heard. And you are faced by that anomaly at every stage of progress from unlimited monarchy to parliamentary supremacy and universal suffrage. The possibility and the advantage of each step must be assumed before you take it. If that truth be recognised, as it is recognised, by the men whom you call the makers of modern Japan, they can not be justly described as inveterate opponents of the change for which the political parties are contending. It would be more correct to speak of them as endeavouring to direct the change along safe lines, and to hold it in check until the elements necessary for its safe consummation are fully prepared and consolidated. All these movements which, superficially viewed, look like dangerous unrest and embarrassing agitation, contribute to the satisfactory solution of the problem. Each of them brings the end so much nearer. Meanwhile the country is steadily advancing in wealth and intelligence. Of the fact that its wealth is growing, I need not offer any illustrations. No one can entertain the slightest doubt on the subject. With regard to intelligence, the rapid development of literature is a striking evidence, and even more convincing is the spread of education. Take the Technical College (*Semmon Gakko*) at Waseda, which, as you know, was founded by me. It has already sent out seventeen hundred graduates, all of whom are occupying good positions in the worlds of commerce, of industry, of technical professions, and so on. We have a thousand pupils at the college now, and we circulate seven thousand copies of our magazine. That is the record of only one educational institution. What it is doing, many and many another is doing also. I do not feel afraid for a country where such conditions exist. We shall go right along, taking everything as it presents itself in the day's work. I am not yet sixty, and long before I reach Gladstone's age—if such a span of years is before me—I expect to see all these problems comfortably and satisfactorily solved in Japan, without any violence or disturbance.

Q.—There is one more point that I should like to have some information about. The public understands that a deficit of some twenty-six million *yen* appears in next year's revenue, as compared with the proposed expenditure. May I inquire how the deficit is caused, and how it can be met if increased taxation be not resorted to?

Count Okuma—The deficiency of available revenue is not the result of any sudden addition to the outlays of the State or any sudden shrinkage of income. In the main it may be said to have been visible for a long time. There is first, the proposal to spend some thirteen million *yen* on Formosa. No provision had been made for that in the programme of *post-bellum* finance. Then there is an almost inevitable growth of administrative expenditures in general. This item—probably aggregating some five millions—is due to the general appreciation of prices and to the natural expansion of business. On the other hand, certain sources of income have ceased to be productive, or are proving less productive than was anticipated. Among the former I may mention official contributions to the ship-building fund. These, as you know, represented ten per cent. of the pay of officials, together with a grant of three hundred thousand *yen* annually from the Privy Purse. The discontinuance of the payments signifies a loss of about 2½ million *yen* on the side of revenue. Then again, the scope of the Registration Tax was narrowed by a vote

of the Diet last session. Birth rates, death rates, marriage rates, and so on were repealed. The House judged rightly that such charges would bear too hardly on the lower orders. That means a loss of nearly 1½ millions of revenue. The Tobacco Tax, also, and the Business Tax are not yielding the amounts originally estimated. There are, besides, several outlays essential in the interests of progress. All these figures, added together, make a difference larger than you have named. But, on the other hand, the revenue from ordinary sources shows development—very marked development. We come now to the question of how to meet the deficit. There is the *Sake* Tax; that can easily be increased so as to yield an additional twelve or thirteen millions. It is a legitimate source of income, and the burden is not generally onerous. The Land Tax, however, involves other and special considerations. On the whole, it may be said that an available margin of revenue is distinctly visible there; but the time does not seem to be appropriate. In some regions the rice crop is excellent, and the farmers could bear an additional impost without any inconvenience. But in others exactly the opposite state of affairs prevails. Remember that there have been three tempests or inundations this year; that the weather has been emphatically unseasonable, and that great ravages have been caused by insects. There is no doubt that in some parts of the country the crop is almost, if not altogether, a failure, and that in one or two places something like famine may be looked for. It is out of the question to expect that the agriculturists in those provinces should pay an increased tax. It is doubtful whether they will be able to discharge their liabilities even as now assessed. Under the circumstances, the wiser policy would be to refrain from any increase of the Land Tax; to defer it, at all events. Turning to the expenditures, the grant which the Central Government is asked to make on account of Formosa appears scarcely reasonable. I am all in favour of an enterprising policy for purposes of productive development, but I do not believe in undue sacrifices. We need not look for any better model than England where the management and expansion of colonies are concerned. Now I can not find that England makes any sacrifices of that kind for the development of her newly acquired territories. I do not find that she devoted large sums on account of Ceylon, or of Hongkong, or of Jamaica, or of Burmah; certainly no sums that would represent so large a fraction of her annual income as thirteen million *yen* represent of ours. I think we may advantageously move a little more slowly in that direction; cut off, say, five millions of the proposed outlay. There is another feature of our finance which appears to me most anomalous. I have never heard of any other country which contracted debts with one hand while discharging them with the other. If you are borrowing money at a cheap rate of interest for the purpose of paying off obligations that carry a high rate, the proceeding becomes intelligent and financially sound. But to keep on contracting a five-per-cent debt to A while you are discharging a five-per-cent debt to B represents a kind of transaction that outrages reason. Were you bound to pay back, at a fixed time, the money you owe to B, the affair would assume a different complexion. Japan, however, is under no such obligation with regard to her domestic debt. She has, indeed, pledged herself to pay off her bonds within fifty years from the time when they first become liable to redemption, but she has, at the same time, explicitly reserved to herself discretion to regulate the yearly payments according to her own convenience. Why, then, should she keep on contracting new debts simultaneously with the discharge of the old? It appears to me that the proper and rational time for a State to pay off its debts—of course within the limits of its legitimate discretion—is when it has surplus funds available for the purpose. It happens that surplus funds are not available at the moment without increased taxation, and it happens that increased taxation

is inconvenient at the moment. I am for putting an end to that financial anomaly. The sum thus released would be eight million *yen*, which, together with the increased *Sake* Tax, the reduction in the Formosan grant, and the additional income that will accrue under the new Tariff, would make a total sufficient for the purposes of next year's Budget.

A FOREIGN LOAN.

We read in the *Chuo*, that the idea of a foreign loan is beginning to be seriously mooted in official quarters. According to the *post-bellum* programme, certain sums have to be raised yearly by public loan, partly for railway construction and partly for other industrial undertakings. Of the loans that ought to have been floated in the fiscal year ended March 31st, 1897, twelve millions remain unplaced, and of the loans included in this year's Budget, sixty-four millions have still to be put on the market. Even supposing that the bonds sold last June—42 millions in amount—be turned over to this account which, after all, would be a kind of robbing Peter to pay Paul, there would be a residue of 34 millions to be raised. Unless the money can be found, the *post-bellum* programme will have to be interrupted, and as to obtaining it in the home market where such tightness prevails, the thing is out of the question. The *Chuo* says that Count Matsukata is accordingly divesting himself of his old prejudice against a foreign loan, and is thinking of offering fifty million *yen* on the London market at 5 per cent. We never knew that Count Matsukata had any special prejudice against a foreign loan. Pending the consummation of Treaty Revision there was always a reluctance on the part of Japanese statesmen to saddle the country with any pecuniary obligations to foreign nations, but that is past now, and so also is the silver difficulty. Japan is terribly in need of foreign capital. She has turned over her own small stock again and again, and she can not make it go any farther. But if she is going to apply to London, she had better ask for ten millions sterling, not five. The latter is too small a sum for her credit.

THE STATUTORY TARIFF.

As there has been so much misunderstanding about the Statutory Tariff and the date of its operation, the following note, which appears in the columns of the *Yomiuri Shimbun*, is worth attention:—"Our Statutory Tariff is to go into operation six months after the exchange of ratifications of the Revised Treaties with sixteen foreign Powers has been concluded. That has been done with fourteen Powers, and there remain only France and Austria-Hungary. The Austro-Hungarian Treaty will probably be signed in a few days and the French Treaty has already passed the Chamber of Deputies and will soon pass the Senate. It may reasonably be expected, therefore, that in the case of these two treaties also everything will be finished before the end of the year. Should that forecast prove correct, the new Tariffs, Conventional and Statutory, will go into operation from July next, and the revenue will receive an addition of some eight million *yen*."

NORTH-EASTERN LIBERALS.

At a meeting of the North-Eastern Liberals, held in Yamagata on the 4th instant, it was decided, says the *Yomiuri Shimbun*, that the Party would oppose the Government's scheme for increased taxation; also that the Cabinet should be called to account next session for its mistakes of policy in domestic, foreign and financial affairs. Considering the source of this information it can not be accepted with absolute confidence, neither does it follow that the Liberals, as a whole, will follow that policy mapped out by the North-Eastern Section.

THE BEHRING SEA QUESTION.

INTELLIGENCE carried to a later date than the advices available when we last wrote on the above subject, shows that the Washington Government was not without some slight warrant for its expectation that Great Britain would join an international conference including Japan and Russia. Our readers doubtless remember that, on July 28th, Lord SALISBURY, in reply to Mr. SHERMAN'S desire for a conference of the interested Powers, wrote a despatch intimating England's consent to a meeting of British, Canadian and American experts, for the purpose of considering the habits and conditions of the Pribiloff Islands seals. That was the last of the series of despatches included in the Blue Book whose contents have hitherto constituted the sole basis of comment. But it now appears that, on receipt of the above despatch, Mr. HAY immediately (July 29th) informed Lord SALISBURY in writing that the President expected, as had been from time to time intimated by the American Ambassador, that Russian and Japanese representatives would be present at the conference. Lord SALISBURY returned no answer until the 24th of September, when he informed the United States Ambassador in London that Great Britain objected to Russia and Japan taking part in the meeting since they had no *locus standi*. Hence it appears that from the 29th of July to the 24th of September, an interval of nearly two months, the Government in Washington was left without any intimation that Great Britain objected to a conference comprising Japan and Russia, and that Lord SALISBURY'S final refusal was not formulated until the representatives of those two States were well on their way to the place of conference. A claim is therefore advanced that England did not behave in a thoroughly straightforward manner, and that her silence at a time when it was a matter of common knowledge that arrangements for the conference were in active progress, might have been justly construed as tacit assent. We can not deny that there is some justice in the claim. Indeed, there appears to have been a disposition on the part of the British Government to accede to America's wishes, and the delay in returning an answer to Mr. HAY'S despatch of July 29th, was caused by endeavours to bring Canada into line with the Washington proposals. The effort having failed, nothing remained for Lord SALISBURY but to make a communication in that sense to the American Ambassador, and it is plain that if the latter had no knowledge of what was passing between London and Canada he might have been betrayed into misinterpreting Lord SALISBURY'S silence. Whatever misapprehension may have been caused by her tardiness in reiterating her refusal is

doubtless regretted by England as much as it is complained of by America. But when the questions are asked, did the Washington Government proceed with sufficient circumspection, and was there sufficient warrant to assume England's acquiescence, there seems to be no possibility of answering in the affirmative. It is to be observed, in the first place, that although a conference of national representatives and a conference of experts may appear to differ in name rather than in fact, they are in truth radically different. To assemble plenipotentiaries, as proposed by America, meant the convening of a new international tribunal to reopen questions which had been already settled by the Paris Arbitration. To bring together a number of experts, as agreed by England, signified nothing more than the organization of a committee to consider the result of recent scientific investigations, with the object of determining what (if any) revision of the regulations enacted by the Paris Arbitrators was desirable. Great Britain had never showed any unwillingness to ascertain the real conditions of the problem, but she had always shown emphatic unwillingness to deal lightly with the results of a solemn arbitration, and, above all, to admit outside Powers to have a voice in the changing of those results. It is to be observed, in the second place, that, in 1895, Lord SALISBURY "informed the United States Government that her Majesty's Government could not recognise that Russia and Japan had any interest in the seal fishery on the American side of the North Pacific, and that Great Britain could not, therefore, take part in any inquiry on the Pribiloff Islands in which Japan and Russia were associated"—which official declaration was never officially modified. And it is to be observed, in the third place, that America's efforts to secure, not a mere meeting of experts but an international conference, had been going on for nearly three years when they elicited Lord SALISBURY'S declaration of July last that England would agree to a meeting of experts only. In the face of all these significant facts, can it be reasonably claimed that a mere delay on Great Britain's part to re-iterate a refusal just formulated, to reverse a decision just announced, justified an inference that she had abandoned the position steadily maintained by her during three years? Mr. SHERMAN'S notorious despatch, clamouring for an international conference, was handed to Lord SALISBURY in May. The British Government did not reply to it until the end of July, and the reply intimated agreement to a meeting of experts only. Mr. HAY'S despatch, repeating the desire for an international conference, was sent in on July 29th, and England's failure to reply until September 24th was interpreted to mean tacit consent. We are unable to perceive that such an interpretation was justified, or

that Great Britain can be fairly accused of the slightest want of integrity. Lord SALISBURY might, indeed, have exercised greater despatch, or, at any rate, it seems that he might; but even on that point judgment must be reserved until we know how the delay was caused. Meanwhile it is satisfactory to know that the refusal to admit Japan and Russia to the conference was not, as some have suggested, a species of reprisal for Mr. SHERMAN'S singular despatch, nor yet an act of unfriendly exclusiveness, but simply a re-affirmation of the position assumed by England in 1895, and never subsequently abandoned.

SILVER-EARNERS.

The companies that carry passengers up and down the Yangtze have announced a rise of fares, the alleged reason being appreciation of prices all round, especially the price of coal, which used to be procurable from Japan at Tls. 3½ per ton but now costs Tls. 9. We observe that the leading Shanghai journal complains of this action on the part of the companies, and says that, unfortunately, the salaries and earnings from trade do not increase in proportion to these enhanced charges. The statement seems to require modification. The gross earnings from trade do undoubtedly increase with rising prices. It is true that the net profits remain little altered under circumstances such as those now existing. When manufacturers or producers have to pay enhanced prices for labour, raw materials, and so forth, the correspondingly enhanced figures at which they sell their goods leave the same margin of profit as before. There is consequently no ground for complaint on the side of tradesmen, manufacturers, or producers. In their case it has been admitted from time immemorial that a rising market means prosperity, a falling, adversity. Very different, however, is the lot of the receiver of a salary. His income remains unaltered though its purchasing power diminishes steadily. It is a somewhat remarkable fact that while nearly all wage-earners have managed, either by appeals to the justice of their employers or by strikes, to preserve a fair ratio between their emoluments and the cost of living, a large class of salaried persons, comprising merchants' clerks, book-keepers, officials, school-teachers, and so forth, have never attained that level of self-assertion, but have always reconciled themselves to be left behind in the general expansion. This difference is very marked in Japan's case. The price commanded in the open market not by labour alone but also by moral attainments has largely increased of late. A few years ago, an offer of seventy or eighty yen per month for an erudite translator—to take one example—would have brought a host of competitors into the field: to-day, scarcely a single applicant presents himself. Yet official salaries and the emoluments paid to persons engaged in education remain exactly as they were. It is certainly one of the injustices of the age.

MANSLAUGHTER AND SUICIDE IN HAKODATE.

A fortnight or so since a quarrel occurred at Hakodate between a native of the Bonin Islands named Francis Gonzalez and a man locally known as Hatoba Charlie, a loafer of doubtful nationality. In the course of the affray the latter was knocked down with a chair by Gonzalez, and carried insensible to the hospital. Gonzalez was accordingly arrested and locked up by the Japanese police. A few days later the injured man died in hospital, and upon learning of his death, Gonzalez, terrified apparently by the probable consequences to himself of his act, hung himself in his cell.

JAPANESE FACTS AND COMMENTS.

It is reported that the collation prepared for Count Okuma's guests on the 5th and 6th inst., was presented to the students of the Waseda College.

The *Yorosu* states that the Korean Government resolved on the 30th ultimo to repay one million yen of its loan from Japan, with the approval of the Emperor. Of the total three millions of the loan, one million has already been paid.

The income tax question has brought about a split in the councils of the United Chambers of Commerce, and as a consequence each party will draft a bill for presentation to the Diet next session. One side advocates the entire annulment of the tax: the other urges revision and reduction.

The *Shogyo* announces that the business men of Japan are gradually coming round to a condition of opposition to the national armament expansion schemes. They urge that in Japan's present economical condition, the plans are too extensive to carry out without seriously crippling trade.

The Specie Bank recently raised its rate of interest on loans by one *rin* per diem, the interest on deposits remaining the same. This example is expected to be followed by other banks, and the Bank of Japan will also probably decide upon a further increase of its rates.

The rise in the price of coal in Japan has reached its climax, asserts the *Tokyo Shimbun*. First class Kiushiu coal is now quoted at a little less than 10 yen, and many manufactories are experiencing serious embarrassment. Electric light companies in particular seem to be great sufferers.

Judge Hamasaki, of the Formosan Law Court, who protested against the removal of Mr. Takano from the chief justiceship in Formosa, then tendered his resignation and forwarded a lengthy document expressing his views, was dismissed from the service on the 4th instant, and was also stripped of his honorary rank.

The Bank of Japan's issue of convertible notes above the legal limit amounted, at the end of last month, says the *Yorosu*, to 25 million yen. The Finance Department therefore increased the tax of six per cent. to seven per cent. The rate of interest in the loan market being over ten per cent. the Bank is not likely to suffer.

According to latest investigations completed by the Government and published in the *Tokyo Asahi*, the number of agricultural families throughout the empire totals 5,518,040, of whom 3,121,775 represent owners of land, and 2,397,965 tenants; while the area of land cultivated by the former is 2,795,707 *cho* and that by the latter 1,813,465 *cho*.

The *Tokyo Shimbun* announces that telegraphic communication between Japan and Formosa has been interrupted since the 3rd instant, the line between Nafu and Kelung having been damaged by a severe storm. It is expected, however, that the line will be in working order again in a few days.

The director, chief-editor and three other members of the staff of the *Kwantu Shimbun*, in Tochi prefecture, were arrested some time ago on a charge of blackmailing. The present editor, Mr. Sato, and the sub-editor, Mr. Shibuya, were also arrested, according to the *Yorosu*, on the 6th inst. on a similar charge.

According to the *Hochi* the number and classification of houses supplied with the electric light in Yokohama are as follows:—In the native town, workshops, 1; eating houses, 94; inns, hotels, and clubs, 18; banks and companies, 35; government offices, 12; shops, 417; dwellings, 117; hospitals, churches, and machine shops, 8; tea houses and houses of entertainment, 69; restaurants, 6; theatres and places

of amusement, 8. In the foreign settlement the number of buildings illuminated by electricity is 207.

The recent extravagant rise in the price of rice has considerably increased the distress of the poorer people, and the number of criminal offences is steadily increasing in consequence. According to investigations made by the authorities in Osaka, prisoners in that city on the 25th ultimo totalled 4,073, showing an increase of 100 over the figures for the corresponding period of last year.

The Nagasaki Harbour Improvement Loan is being managed by the 18th National Bank in Nagasaki; the 1st National Bank in Tokyo, and its branches in Yokohama, Osaka, and Kobe; the 9th National Bank in Kumamoto; 17th in Fukuoka; and 106th in Saga. An amount of 90,000 yen will first be put upon the market, at the minimum rate of 95 yen per 100 yen bond, the interest being 6 per cent. The period of subscription is from the 5th to 15th November.

The Osaka Clock and Watch Manufacturing Company began business with a capital of 300,000 yen. But the greater portion of the capital having been appropriated to the purchase of land, machinery, and buildings, the working funds were found insufficient and the Company has now decided, the *Osaka Asahi* says, to increase the capital by 150,000 yen in shares of 75 yen each—instead of 50 yen as heretofore—25 yen being added to each share.

The trade in cotton yarns at Osaka has declined since the beginning of October. The fall in the London exchange and the rise on Shanghai, together with the diminution in domestic demand, were the chief factors in the falling-off in this valuable trade. The Three Staples Exchange find prices constantly falling, and buyers have incurred considerable losses in recent transactions. At the end of October the average quotation did not exceed 89.10 yen.

Investigations made by the Coal Mining and Railway Company of Hokkaido show that the amount of coal transported to other places, and the traffic receipts during October this year amounted to 60,106 tons and 125,197 yen respectively, while the total output of coal exceeded 97,447 tons. The excess of traffic receipts over the estimates amounted to 4,488 yen in July, 6,745 yen in August, and 22,245 yen in September, making a total of 43,273 yen during the four months.

Eighteen students of the Navigation class in the School of Mathematics at Kanda rowed over to Yokosuka early on the morning of the 3rd inst., in two boats, to inspect the war-vessel *Fuji*. On their return trip, the following day, at about 11 a.m. they encountered a heavy storm off the coast of Daishigawara, and drifted seawards. One of the boats succeeded with great difficulty in reaching its destination at 5 p.m. on the 5th, but the other boat is still missing and steps are now being taken to search for it.

Since the Takano affair became known in Formosa, the Consuls of various nationalities have begun to clamour against the blundering of the Government. It is supposed, says the *Yorosu*, that some unexpected trouble may occur if the Government persists in carrying out its present intention. Does it not yet recognise the importance of securing the independence of the judicature? We (*Japan Mail*) desire to ask the *Yorosu* what on earth foreign consuls have to do with such a question.

We predicted, says the *Yorosu*, that the amount of transactions in the Tokyo Bill Exchange would reach 500 million yen in value within the current year. The figures recorded at the end of last month amounted to 440,464,498 yen, of which 50,120,000 yen represent exchanges effected during last month only. It may reasonably be expected that at the end of this month the amount will exceed 480 millions, and by the close of the year it will certainly amount to 500 millions. If this may

be regarded as the result of the development of commercial credit, the financial world is to be congratulated; but if it is to be regarded as the result of unsound speculation, which are constantly increasing at present, bankers must be warned to exercise a greater amount of discretion in their transactions.

The *Kokumin* reports that the number of companies throughout the empire at the end of October totalled 2,115, the aggregate capital amounting to 311,263,192 yen. These figures show an increase of 40 companies and 5,486,020 yen in capital over those for the previous month. The companies may be classified as follow:—Commercial, 1,027, capital, 140,688,125 yen; industrial, 997, capital, 168,232 yen; agricultural, 90, capital, 2,342,070 yen; total number of companies, 2,114 and amount of capital 311,263,192 yen.

The *Official Gazette* of the 8th instant states that the following personages have been appointed as a Committee for the organization of the Formosan Bank:—Mr. Nomura Seimei, Superintendent of the Formosan Affairs Bureau; Mr. Soyeda Juichi, Director of the Superintendent Bureau of the Finance Department; Baron Kawaguchi Takesada, Messrs. Shibusawa Eiichi, Hara Rokuro, Takahashi Korekiyo, Okura Kihachiro, Yasuda Zenjiro, Tsuruhara Sadakichi, Ikeda Kenzo, Hamaoka Kotetsu, Nishimura Shintaro, Otani Kabei, and Kihara Chiubei.

Mr. Nishimura of the Kodo-kai recently called upon Mr. Hoshi, says the *Yorosu*, and suggested that he should become Foreign Minister, to display his abilities in diplomacy. "I am not unwilling to occupy the post you speak of," replied Mr. Hoshi; "but I suppose that for the present Count Matsukata is not able to remove Count Okuma. Should you devote all your energies to bringing about Count Okuma's resignation, I will be glad to accept the post." This is another *Yorosu* fable. Apparently our contemporary has started a mill for manufacturing political canards.

The following have been appointed, according to the *Nippon*, as a committee for the construction of railways in Formosa:—Messrs. Ikeda Kenzo, Kanematsu Fusajiro, Hara Zenzaburo, Hamaoka Kotetsu, Shibusawa Eiichi, Masuda Ko, Okura Kihachiro, Hara Rokuro, Nomura Masaaki, Tsuruhara Sadakichi, Kawaguchi Takesada. But as no Chairman has yet been nominated, no practical steps have been taken. The Office of the Committee is to be established within the precincts of the Finance Department, and a general meeting is to be held after the nomination of the President.

The *Yiji* states that loans issued by the Bank of Japan to private individuals amount to 83 or 84 million yen. These figures show a decrease of 5 million yen as compared with those for the beginning of February, and an increase of an equal amount over the corresponding period of last year. November is always regarded as a quiet month in business circles. December, however, is a month in which great pressure is put upon the circulation, and loans from the Bank will probably exceed 90 million yen, the issue of convertible notes amounting to 200 millions, while the notes above the legal limit will be no less than 40 millions.

In feudal days it was not uncommon for a Japanese woman to expostulate with her brother or husband upon his debauchery, and if her protests were unheeded to commit suicide, but instances of the kind have rarely occurred since the Restoration. The *Yomiuri*, however, reports an instance which lately happened in Kanazawa. Mr. Yamamori, a member of the Municipal Council, has been leading a dissolute life during the past few years, and recently had a child born of a singing girl. This he took home and acknowledged as his heir, but his wife, who, both in beauty and accomplishments, was long regarded as a perfect type of womanhood, asked him to desist on the ground that his family line

would be impaired. Her request being refused by the husband, who menaced her with divorce, she killed herself by cutting her throat with a dagger, in front of the family altar.

According to the *Hochi*, the amount of revenue and expenditures for the 29th fiscal year, as appearing in the accounts of the Treasury, are 189,990,000 *yen* and 168,850,000 *yen* respectively, showing a surplus of 18,141,989 *yen*, of which 10,810,000 *yen* has been included in the estimates of revenue for the 30th year. The actual unappropriated surplus does not therefore exceed eight million *yen*.

The coal exported from the port of Moji during the past ten months amounted, according to the *Osaka Asahi*, to 807,929 tons, showing a decrease of 100,407 tons as compared with the corresponding period of last year. During the current year, February and May alone show an increase in export, all other months marking a decrease. The price realized this year, however, was higher than last, the receipts amounting to 4,467,191 *yen*, against 3,291,958 *yen* last year. The average price per ton last year was 3.62 *yen*, which rose to 5.52 *yen* this year.

Coal and petroleum mining are the most profitable industries at present carried on in Japan. Petroleum has been found in Hokkaido and also in Formosa, but the best and most workable deposits are in the provinces of Yechigo, Koshiu, Shinshiu, and Akita. In the 27th year of *Meiji*, asserts the *Mainichi*, the production of petroleum throughout the empire totalled 130,000 *koku*, and in the 28th year, 140,000 *koku*, but by the 29th the total output had increased to 200,000 *koku*. Although no accurate statistics have yet been compiled for the present year, it may fairly be conjectured that the production from January to September will not fall short of 300,000 *koku*. These figures deal chiefly with Yechigo.

The sale of winter stock at the Mitsui Dry Goods Store during the first three days of this month amounted, says the *Fiji*, to 85,000 *yen* in value, showing an increase of 29 per cent. over the figures for the corresponding period of last year. The number of customers totalled 45,000, each purchasing on an average 2.44 *yen*'s worth of goods. It seems that this year sales are made in small quantities, buyers having come from the country by train. The latter fact alone is sufficient to prove the presence of local, or provincial, prosperity in spite of the extravagant rise in the price of rice. The Shirokiya Store is also reported to have secured an increase of 30 per cent. over the previous year.

The tea trade, says the *Nippon*, still remains stagnant, only an insignificant number of sales being effected of late. The producing districts are already exhausted and the want of arrivals in the market tends to decrease the stock day by day. Quotations do not show any serious downward tendency, but on the whole prices may be said to have fallen by one or two dollars. Arrivals during the past month amounted to 568,500 catties, and sales to 927,900 catties, the remaining stock being not more than 157,500 catties. Comparative figures from the opening of the tea season to October 31st for the last two years are as follows:—Arrivals for the 30th year, 21,176,900 catties; for the 29th year, 21,300,200 catties; sales for the 30th year, 21,019,400 catties; for the 29th year, 21,047,000 catties; stock for the 30th year, 157,500 catties; for the 29th year, 253,200 catties.

On the evening of the 2nd instant, three members of the Kodo-kai, Messrs. Shigeno, Minamino, and Hirose, repaired to the official residence of the Premier, and requested him to give them a positive reply to the suggestion they lately made as to the removal of Count Okuma from the Cabinet. To this the Premier is reported by the *Yoroku* to have answered as follows:—"You need not trouble yourselves so much, the Cabinet has already resolved to remove the Count from his present post, while the Count himself has complied with the decision taken. In

a few days he will tender his resignation but his retirement will in no way affect the existence of the present Cabinet, which pledged itself to carry out the programme originally contemplated." Being thus informed of the intentions of the Premier, the three visitors retired perfectly satisfied. We (*Japan Mail*) need scarcely tell our readers that Count Matsukata never used such language.

The Government, the *Mainichi* alleges, has definitely resolved to increase the land and *sake* taxes in order to make up the deficit in the revenue for the 31st fiscal year. With reference to the method of levying the land tax, it is reported that an assessment will be effected on the basis of the average value of rice during the last five years, and that the land so assessed being supposed to amount to 470 million *yen* in value, $\frac{1}{1000}$ will be levied as tax. If this be the case, the total land tax will not fall short of 59 million *yen*, which shows an increase of 21,500,000 *yen* over the receipts realized at present. The *sake* tax is to be raised to ten *yen* per *koku*, and the total receipts from this source being estimated at 45 million *yen*, there will be an increase of 13,500,000 *yen* over the sum hitherto realized by that tax. Whether the nation will accede to the scheme of increased taxation or not is one of the principal questions now occupying public attention.

Since the revision of the Coinage System various canseas have combined, says the *Mainichi*, to bring serious embarrassment upon the spinning industry. The most prominent of these is over-manufacture. In 1890, the number of spindles did not exceed 300,000, and with these domestic needs alone were supplied. This department of the industry has since increased rapidly, the number of spindles having by this year reached 800,000, while a new factory just started will bring the number up to 1,000,000. The total output being now considerably in excess of domestic demands, the balance must be exported. The chief market was formerly China, but the extraordinary rise in exchange in consequence of the revision of the coinage system has crippled that trade. Now that Japan finds she has lost her most important customer in the spinning industry, she must consider the best means of obtaining another market or of reducing her output.

According to the *Tokyo Shimbun*, the Japan Female Volunteers' Association held a meeting on the 6th instant at the Ryukwayen, Tsukiji, to discuss the nomination of a president and the publication of a magazine. The Association is composed of distinguished ladies, both private and official, with a view to rendering services in times of war or emergency. Its programme is as follows:—(1) Giving lessons in physical culture suitable to women for the purpose of securing perfection of physical constitution. (2) Establishing Relief Stations for the benefit of wounded patients so as to render assistance to the Red Cross Society. (3) Instruction to be given as to the most important points in midwifery. (4) The teaching of the process of examining the body as to diseases of various joints arising from bruises or wounds. (5) Organising clubs in the various parts of the empire and conducting matters relating to the relief of soldiers. Among the Directors of the Association, the most prominent are Doctor Matsumoto Aiko, Countess Iia Kinuko, and Mrs. Hoshi, wife of the late Minister to America.

Investigations completed by the Bank of Japan show that the prices of commodities in September this year had risen 63 per cent. on an average over those in the beginning of the 20th year. A still more astonishing appreciation was shown by October, the rate indicating an increase of 73 per cent. Last month was the first in which gold monometallism was enforced, and yet an increase of 10 per cent. in the cost of commodities took place within one month. The anomaly is probably not attributable to the introduction of the gold system, but it must be admitted that the object of the enforcement of

gold monometallism has been to a certain extent frustrated, the results produced being contrary to expectation. The extravagant appreciation of commodities in the past month seems to have been caused chiefly by the over-issue of convertible notes to the amount of 30 million *yen*. So far as the present conditions indicate, the issue of notes above the legal limit is still to be resorted to on an increased scale, and further appreciation of commodities must certainly be expected. These are the opinions of a Tokyo contemporary.

The centre of the petroleum industry in Japan is Nagaoka, where the trade has been greatly developed within the past twelve months. It is only two or three years since the Japan Kerosene Oil Company introduced machinery at its wells, but now every petroleum company in Japan can boast of an installation of machinery possessing the latest mechanical devices. The development of the industry has fostered a speculative spirit among the folks of Echigo, every man and woman of the Province investing their scanty savings in one or other of the oil companies. The mania grew so intense that 6 *yen* shares were at one time fetching 300 *yen*, but the period of inflation has passed, though every share is at present quoted at 50 or 60 per cent. over its issue value. There are altogether about 30 companies in the neighbourhood of Nagaoka, with an aggregate capital of 400,000 *yen*. The companies expect this year to obtain 300,000 *koku* of oil, which they ought to be able to sell at 3 *yen* per *koku*, or 900,000 *yen*. Some of the companies, working on this estimate, are already boasting of declaring dividends of 100 to 150 per cent. for the year.

According to the *Fiji*, a meeting of persons engaged in the fishing and agricultural industries of the Kwanto districts is to be held in Yokohama on the 16th inst. and two following days, to discuss subjects connected with their respective industries. Among the questions to be considered by the fishermen are means for the protection of, and assistance to, fishing boats in stormy weather; the protection of marine products; rapid transport of marine products; and the prohibition of the use of nets known as *gorota* in fishing. The cattle dealers will discuss the best means of obtaining stud bulls to breed good dairy cattle. The sericulturists will propose measures for the purchase of silk-worm eggs by the co-operation of rearers, and means for securing uniformity in the method of preserving the chrysalis; also the establishment of a station where the packing of silk shall be conducted under the control of the producers. The agriculturists will propose the amendment of the ordinances of the Department of Agriculture relating to the precautions against, and the destruction of, noxious insects.

The *Yomiuri* publishes the following information received from its special correspondent in Seoul, under date of the 28th ultimo:—"On the 11th October, Mr. Hiki, Secretary of the Japanese Legation, was stopped by a number of Korean troops at Tonghyon while he was proceeding on a visit to the American Minister. He gave them his name and presented his card, but was still refused passage. Thereupon he turned to the South Gate and attempted to reach the American Legation through So-chongton, only to be similarly treated. While standing at the latter place he saw two or three foreigners as well as Chinese and Koreans passing through without interruption. This caused him to seek an interview with the Commander of the Guards, from whom he demanded an explanation of the stoppage of Japanese, and Japanese alone. The Commander made no reply, and gave fresh orders to his men to prevent the passage of Japanese. Seeing remonstrance to be of no avail, the Secretary returned. A protest was formally drawn up at the Japanese Legation, and sent in to the Korean Government, and this was passed on by the Foreign Department to the War Department. On the 26th, the Minister of War, Te chang kon, sent a reply to the Foreign Department stating that "as the troops had acted in accord-

ance with instructions, no disciplinary measures could be taken against them." A copy of this answer was transmitted by the Minister of Foreign Affairs to the Japanese Legation. A still stronger representation will be made by the Japanese Legation in a few days.

Comparing the volume of currency in circulation at the end of each month from May, 1894, to September, 1897, it will be found, says the *Yiji Shimpō*, that although there were changes in the figures for the respective months, according to the condition of the money market, yet on the whole they have shown a steady increase. The amount of money in circulation in May 1894 was 199,400,000 yen. If this figure is taken as representing 100, then the volume of currency in August this year would be 150 and that in September 148, thus showing an increase of 50 and 48 per cent. respectively over May, 1894. From a merely financial point of view it may be alleged that the volume of currency has considerably increased, and that this augmentation is considered by the public to have seriously enhanced the prices of commodities. The appreciation of commodities, however, is not to be attributed solely to the increase in the amount of currency, inasmuch as it is hardly possible to decide whether the amount of paper and coins in circulation really exceed the requirements of the day. Yet it is a strange coincidence that along with the increase of currency by fifty per cent. over that in May 1894, the cost of commodities has also risen about forty per cent.

All recent reports from Korea, the *Hochi* remarks, refer in some way or other to a Russian gentleman, Mr. Alexieff. One relates the resignation of the Minister of Finance, Pak chong-yang; another announces the engagement of Mr. Alexieff; a third asserts that the Minister for Foreign Affairs, Cho Pyong Sik, has determined to discontinue the engagement of any foreigners except Russians, and that the intimacy between Koreans and Russians increases day by day. The latest information received by the *Mainichi* from its special correspondent seems to imply that Mr. Brown is daily attending to his duties in a room formerly occupied by the Japanese Councillor, Mr. Nio, and that the Finance Department is now under the control of two Heads. Mr. Brown's pertinacity in retaining his post has, it is said, secured the earnest approval of the British Consul, who has strongly protested against his removal. The Korean Government is now in a position of serious embarrassment, and further ministerial changes appear imminent. A suggestion has been made that both Mr. Brown and Mr. Alexieff should be employed as advisers of equal rank. It is rumored that Min, Minister for Foreign Affairs, having drawn upon himself the censure of the two Powers, is disposed to resign his post.

NEW REAR-ADMIRAL FOR THE CHINA STATION.

Rear-Admiral Fitzgerald will leave England in November in the *Edgar*, to relieve Admiral Oxley (at present on leave), says the *China Mail*. The new Rear-Admiral will hoist his flag on the *Grafton*. The *Edgar* brings out new crews for the *Archer*, *Linnel*, and *Tweed*, besides reliefs for the China station.

Rear-Admiral Fitzgerald's war record is as follows.—Mid. of *Colossus* in the Baltic during the Russian war (Baltic Medal); present in *Retribution* at the bombardment of Nankin, November, 1858 (China Medal); Flag Captain to Sir Francis Sullivan in the *Inconstant*, during the Egyptian Campaign, 1882, mentioned in despatches (Egyptian Medal, Khedive's Bronze Star, Medjidie 3rd class); Saxo Ernestine Order of the 2nd class. Author of a work called "Hints on Boat Sailing and Racing;" Captain of R. N. College, Greenwich, 1883-85; Aide-de-Camp to the Queen, 5th April, 1892, to 20th February, 1895; Author of a work "Modern Naval Tactics," 1896.

CHINESE NOTES.

"As an instance," says the *N. C. Daily News* "of the immense concourse of Court, metropolitan and provincial officials of all grades who will assemble at Eho Park to congratulate the Empress Dowager, and partake of the Imperial hospitality on the sixty-third anniversary of Her Majesty's birthday, falling on the 4th instant, it may be mentioned that, in addition to the Palace *chef de cuisine* and his full staff of 220 assistants, the Comptroller-General of the Imperial Household Department engaged recently some sixty first class and ninety second class cooks from the various restaurants, etc., in the city, to assist the Palace staff in providing meals for Her Majesty's guests during the festivities. These will last seven days, that is to say, three days before and three days after the 4th instant. The present *chef de cuisine* of the Palace wears the military brevet light blue or third rank button, which was bestowed upon him by the Empress Dowager a few years ago. His duty is to taste first all the dishes placed before the Emperor at meals for fear of any attempts at poisoning."

"On the 10th of October," writes a Vladivostok correspondent of the above journal, "before a large and brilliant assembly of naval and military officials and officers of the civil department, the Governor-General of the Amoor, General Dukoffski, laid the first of the ten-ton concrete blocks of the new harbour frontage to the railway depôt, at the present terminus of the Siberian railway. After an imposing religious ceremony and the block had been solemnly blessed by Right Rev. M. Smirnoff, General Dukoffski cemented up in a recess of the stone a number of current coins. A powerful steam floating crane, by Appleby & Co. of London, which has been specially imported for the work, then picked up the block, and in a few minutes deposited it in its bed twenty feet under water. This important undertaking, when finished, will be a great improvement to the railway depôt, and it will increase the facilities of the commercial port immensely by the addition of a deep water frontage a third of a mile long, at which the largest steamers afloat can load and discharge. It will be furnished with every appliance for despatch; electric cranes and lights, fresh water, coal shoots, and warehouses."

Wu Ta-cheng, the ex-governor of Hunan, whose proclamation inviting the Japanese army to surrender during the Manchurian campaign was quickly followed by his own crushing defeat at Tienchwangtai, has now emerged from a seclusion of two years in Soochow, and is about to preach and expound the "Sacred Edicts" nine times a month to the scholars and people of Soochow. That means that he will try to recover his official position by preaching a crusade against foreign religions. We may therefore hear of anti-missionary troubles in Kiangsu.

It is reported that the Japanese ships of war *Oshima* and *Tsukushi*, which were lying in the Shanghai river on November 4th, when the birthday of the Empress Dowager was celebrated, differentiated themselves from all the other men-of-war in harbour by not dressing ship.

We take this from the Shanghai morning paper:—

"We are glad to be able to state that the agreement for the establishment of a College for Western Sciences at Shanghai has been signed. The College will be styled the Kiangnan Kung-hsui. Its location has not finally been decided upon, but it will probably be built in the neighbourhood of Sicauei. The President will be the Rev. J. C. Ferguson, who for many years has been in charge of the Nanking University, and it would be difficult to select a more competent and experienced Principal. A full staff of foreign teachers will be shortly engaged, and work will be commenced on the buildings of the College without delay. Mr. Ferguson left for Nanking by the *Kiangkwan* last night, and expects to return to Shanghai in about two weeks time."

LADIES IMPEDIMENTA.

The autumn season, says the *Globe*, is always one of lassitude, and that is why, perhaps, we hear signs of grumbling at the enormous size of the trunks which ladies take away with them on their holidays. Every one must have noticed, at railway stations and at hotels, these enormous boxes, if they have not been personally responsible for the safe-conduct of one of them from place to place. No one thinks of saying a word against them, however, in the summer time when everyone is joyfully rushing off somewhere or other full of good spirits and tips. Then the porters swing them about with a will, and cheerfully pile the biggest trunk on the smallest hat box they can find. But when all the world is coming home again, these trunks seem to have grown to mountainous proportions, and to contain the best part of the shingle of the south coast for weight. This, perhaps, will account for the moan which has lately been made as to the unfair strain put upon porters and house-servants by the thoughtless owners of these monstrosities. The only limit to the growing size of the trunk seems to be the size of the luggage van, for if a porter cannot move them, a crane or lift can do so, and it is evident that modern hotels have been specially built with a view to admitting the dress-carrier of the day. It is said that a New York Custom House officer found a bicycle concealed at the very bottom of the trunk of an English actress a week or two ago, and it is quite conceivable that the report is true. The next thing will be to have the trunk fitted up as a villa, in which all the family can travel, and then the height of comfort by road and rail will have been reached.

DEPARTMENT OF AGRICULTURE AND COMMERCE.

Contrary to public expectation, Baron Kitagaki has not been appointed to the vacant portfolio of Agriculture and Commerce. Baron Yamada Nobumichi, now Governor of Kyoto, is gazetted. Baron Yamada is a native of Hiogo province. He has hitherto served chiefly in local Governments, and his name has consequently been little before the nation. From having been Governor of Tottori Prefecture he passed to the Governorship of Fukushima, and from thence was transferred, in 1892, to Osaka, finally becoming Governor of Kyoto in 1895. His elevation to the peerage took place in June, 1896. The Cabinet is now complete, and the rapidity with which the changes have been effected shows the crisis did not much disturb Count Matsukata and his colleagues.

MR. KURIL ALEXIEFF.

The *Sōul Independent* of October 30th says:

In our issue of October 4th, we noted the arrival of Mr. Kuril Alexieff in Sōul, who was sent by the Finance Department of the Imperial Russian Government at the request, it is said, of the Korean ex-ambassador Min Yungwhan, to assume control of Korean finance. Mr. de Speyer immediately announced the arrival of Mr. Alexieff to the Korean Foreign Office and requested them to fix a day for him to enter upon his duties. The Korean Government replied by informing Mr. Speyer that it was already supplied with the services of Mr. J. McLeavy Brown, whose contract had several years yet before ceasing. To this Mr. Speyer responded that the contracts of other foreigners with the Government was no concern of his. Mr. Alexieff had been sent at the request of the Korean ambassador at St. Petersburg and a day must be fixed upon which he could enter upon his duties. The matter was finally referred to the Korean Foreign Office for settlement and the Foreign Minister has sent a dispatch to Mr. Jordan that the Korean Government will dispense with the services of Mr. Brown as financial adviser and chief commissioner of customs. This communication we understand, Mr. Jordan has refused to receive. In a former issue we expressed our appreciation of the valuable services of Mr. Brown to Korea. We are sorry to see him so ungratefully treated by the Korean Government.

NEWS OF THE WEEK.

The Rev. Samuel Bickersteth, vicar of Lewisham, has undertaken to write a memoir of his brother, the late Bishop of South Tokyo.

The very Rev. Charles John Vaughan, D.D., who was appointed Dean of Llandaff in 1879, died on October 15th, in the 82nd year of his age.

Mr. W. G. Bayne, we understand, has acquired by purchase the acting rights in Japan of "The Passport" which is to be given at the Public Hall on Nov. 17.

Richard Reynolds, A.B. of the British ship *Claverdon*, charged with stabbing a shipmate named McGrath on the 6th inst., at Kobe, has been further remanded by Mr. Playfair, H.M. Acting Judge, for a week.

The *Kobe Herald* learns that the Canadian Pacific Railway Co. is about to open an Agency at that port. Mr. F. S. Morse, we understand, will represent the Company at Kobe. Offices have been secured at No. 14, Concession.

The members of the Tokyo and Yokohama Water Police forces will hold a regatta at Shinagawa, in the space between the No. 1 and No. 3 Forts, on the 11th and 12th inst. In addition to boat races some other marine or aquatic sports will be engaged in.

The police of Yokohama appear to be very slow in following up the clues with regard to the perpetrator of the murder of the seaman Thomas Kennedy, who was clubbed to death in Isezakicho on the 17th Sept. last. Eight suspects are still undergoing preliminary examination at the Local Court.

Mr. Crawford's latest novel in his Saracinesca sequence will soon be brought out by the Macmillan Company, in two volumes. "Corleone" deals largely with the adventures of Don Orsino and his cousin, San Giacinto, among the mountains of Sicily, where they encounter the Mafia among other perils.

Mr. George Pullman, the Palace-car magnate, died at his residence in Chicago on Oct. 19. He was 64 years of age and succumbed to angina pectoris. Mr. Pullman's wealth is variously estimated at from \$12,000,000 to \$30,000,000.

Early on Friday morning, a seaman named McGrath was stabbed on board the British ship *Clarendon*, then lying in Kobe harbour. Her Majesty's Consul, J. Carry Hall, Esq., held an enquiry into the circumstances the same day, and a man named R. Reynolds is now in custody under remand, he being alleged to be the assailant.

Mr. Timothy Healy, who has just returned from a cycling tour in Ireland, announces, "Potatoes generally are bad; but all the crops have been saved where farmers had sense or money to spray them. No doubt there will be keen distress in south-western and western counties during the coming winter and spring. In some places it may approach starvation."

Dr. Richard S. Storrs, who has resigned the presidency of the American Board of Foreign Missions, after a service of ten years in that position, says:—"My reason for resigning is that I think it is time that I was relieved. I am now 76 years old, an age when a man thinks he is entitled to take things more easily."

On Saturday, Mr. A. C. Sim was elected a member of the Hyogo Municipal Council, being the only person nominated. His nominators were Mr. A. H. Groom and Mr. F. S. Goodison, and the paper was also signed by the following gentlemen as approving the nomination—namely, Messrs. J. W. Crowe, R. Home Cook, Mark Baggallay, T. F. McGrath, Th. de Berigny and H. O. Delacamp.

Admiral John L. Worden, U.S.N., who commanded the famous *Monitor* in her duel with the Confederate ram *Merrimac*, in Hampton Roads, on March 9th, 1862, died in Washing-

ton on October 18th, from pneumonia. For nearly two-thirds of a century he was a naval officer, having been appointed a midshipman from Fishkill, Dutchess county, N.Y., on Jan. 20th, 1834.

Mr. William F. Sands, late Second Secretary of the U.S. Legation in Tokyo, has been appointed Secretary of the U.S. Legation in Seoul. He comes from the District of Columbia.

Dr. Colman, of Peking, writing to *The Church at Home and Abroad*, reports that making a professional visit recently to Li Hung-chang, he found the venerable statesman intently reading a Chinese New Testament, which had been given him by an English missionary. So engrossed was he in his reading that he did not notice the presence of his physician for some minutes.

According to the American press, the marriage of Sir Edwin Arnold to a Japanese lady took place on Saturday, October 16th, at St. Matthias Church, Earls Court, London, in the presence of Sir Edwin's brother, Sir Arthur Arnold, late chairman of the London County Council, the Japanese Minister, and their wives. Sir Edwin and Lady Arnold will reside at Bolton Gardens, London.

There is a rumour afloat, according to the *Foochow Echo*, that the wreckers in the locality of the wreck of the steamer *Namoa* procured a considerable quantity of gunpowder with the idea of blowing up the wreck, but by some mischance the powder exploded before it could be applied to the purpose proposed, and killed six men besides wounding several others.

A strong agitation is arising among foreign and Japanese shipmasters for a further improvement of Yokohama harbour on account of their vessels' being exposed to the danger of grounding in the harbour. Vessels which could anchor near the shore last year are now obliged to keep far off owing to the accumulation of mud within the port. It is a matter for regret that vessels having a draft exceeding 15 feet can scarcely enter Yokohama dock, the channel leading to the dock being only 15 feet deep at ebb tide and barely 17 feet at high tide.

The *Emanuelo Filiberto*, battle-ship, building at Castellamare, is to be launched during the present month. She is a sister ship to the *Ammiraglio di St. Base*, recently launched at Venice, and is of 9,800 tons displacement, calculated to steam eighteen knots. The side armour is only of 9½ inch maximum thickness, and the turrets are of the same thickness. The main armament consists of four 10 inch, eight 6 inch quick-firing guns and 47 rapid-fire guns.

The *Kobe Chronicle* understands that an action for damages is to be instituted against the owner of the steamer *Yedo Maru*, which ran into the D.D.R. steamer *Gerda* at Moji recently. The *Gerda* is now at Hongkong, and the repairs necessary to her as a result of the collision are estimated to cost about twenty thousand dollars. At the time of the collision, the *Yedo Maru*, we understand, was coming in to Moji. The *Gerda* had just shifted her anchorage closer to the shore and had one anchor out when the Japanese steamer ran into her. The captain of the *Gerda* and the pilot are stated to have shouted to the captain of the *Yedo* to reverse his engines when a collision seemed likely, but the Japanese captain is reported to have said afterwards that his engine would not answer.

Hankow has lost its oldest resident by the death of Mr. M. A. Jenkins, who expired at that port on the 20th of October. Mr. Jenkins had been Interpreter at the United States Consulate for thirty-one years, and was besides engaged in mercantile business, having agencies at Ichang and Chungkiang. The father of Mr. M. A. Jenkins was a well-known missionary in the very early days of that port, where he established a printing press, and the son, who was born in South Carolina, came out with his father and studied Chinese at Shanghai, but took advan-

age of Hankow being opened in 1861 to establish himself in business there, and that port has been his constant place of residence ever since. The remains were interred in the cemetery at Hankow, a large number of the late Mr. Jenkins' friends being present on the occasion.

According to the *Kölnische Zeitung*, the labours of Professor Schaininsfeld, the director of the Bremen Museum for Natural Science, Ethnology, and Commerce, who has recently returned after a fourteen months' voyage in the Pacific, have been richly rewarded. The Professor lived for a considerable time on the little island of Laysan, where he had splendid opportunities of observing the habits of the birds, and managed to secure specimens of the endemic species in all stages of development. Professor Schaininsfeld appears to have done very good work. Among his acquisitions are a skeleton of a native belonging to a tribe which will soon be extinct, and a curious kind of lizard.

The memoirs of Rubinstein, just issued in Russia and Germany, contain the following remarks:—"I am a Christian in the eyes of the Jews, a Jew in the eyes of Christians; Russians regard me as a German, the Germans say that I am a Russian. Those who believe in classic music claim that I compose music for the future; the Wagnerites call me a renegade. Consequently I am neither flesh nor fowl—a nondescript individual." "An artist giving a concert should not demand an entrance fee, but should ask the public to pay, just before leaving, as much as they like. From the sum taken he would be able to judge what the public think of him, and we would have less concerts, anyhow."

The death of Sergeant W. Rogers at Bideford recalls an interesting incident which occurred during the Crimean War. The deceased soldier belonged to the 1st Battalion Royal Scots Fusiliers, and served under Lieutenant-General Boldero at Sebastopol and Inkerman. In one engagement this officer and his subalterns were wounded, and the command of the company then devolved upon Rogers, who found himself in sore straits as the ammunition of the Fusiliers gave out. There was nothing for it but to empty the pouches of the wounded Russians. Thus the enemy were peppered with their own bullets. Sergeant Rogers, it may be added, was attached to the Queen's service for 40 years.

The *Hongkong Daily Press* of the 29th ult. heard that ex-Inspector Witchell, who was serving a sentence of six months' imprisonment for receiving bribes from a gambling house keeper, has gone out of his mind and was confined in a padded cell. The same paper said next day:—"We hear that although ex-Inspector Witchell has been very low in health and spirits of late he has not been pronounced to be actually suffering from any mental disease. In consequence of his illness he now occupies a roomy cell and is not called upon to perform the customary gaol labour. A petition has been forwarded to His Excellency the Governor praying for the prisoner's release." The *China Mail* flatly contradicts the story.

Mr. Geo. Sutherland, Agent for the C. Mutual S.N. Co., of Shanghai, has received the following telegram:—"The damage to the *Moyune* in chiefly confined to the fore-hold. The ballast-tank repairs are progressing satisfactorily. The temporary repairs, now being effected, will probably detain the ship a further seven days at Kalindorang Bay. Two hundred and ten bales of hemp have been jettisoned, and the steamer *Libelle* is now alongside the *Moyune*, loading a full cargo, ex the latter vessel, which will be conveyed to Singapore."

The Captain of the steamer *Clam*, which arrived at Colombo from Singapore on the 6th ult., reported that on the voyage, when about 15 miles from land, two Chinese firemen were suddenly found missing. It is believed that they attempted to reach land by using the hatches of the ship as a raft, as three of the hatches were found missing at the same time. In the

Captain's opinion it was certain they must have failed in the attempt, as it was an utter impossibility that, without oars or sails, the men could have reached land.

A Tokyo paper reports that legal proceedings have been instituted by Mr. E. Whittall, of Yokohama, in the Tokyo Local Court, against Mr. Matsuyama Ichimatsu, now living at Shinagawa, for the recovery of yen 30,000 alleged to be due to Mr. Whittall.

We learn that the return of the Belgian Minister and Madame la Baronne d'Anethan to Tokyo may be expected on the 13th of December. The Baron's health is completely restored, a fact which his numerous friends will learn with great pleasure.

It is rumoured that Viscount Fincastle has been recommended for the Victoria Cross for bravery in connection with the attempted rescue of Lieutenant Greaves. If it is conferred he will, when he succeeds his father in the Peerage, be the first and only Duke with the Bronze Cross for valour.

The Singapore *Free Press* hears a rather good thing about Mat Salleh's band of outlaws in North Borneo. They are said to be drilled and instructed in musketry by a former Sergeant of the Singapore Sikh Police. *Apropos* of that it is interesting to know that columns of Afriids have been heard to move by the usual English words of command in the drill-book.

The *Straits Times* of Monday, 25th October, contains the following paragraph:—In Saturday's *Government Gazette* it was announced that Mr. K. Kijima is recognised as in charge of the Japanese Consulate at Singapore, pending the arrival of the new Consul for Japan. On Sunday morning, Mr. Kijima was arrested in Malay Street for being drunk and disorderly! The case was disposed of this morning by Mr. Wolferstan, who said that a man in the position of the accused ought to be ashamed of himself, and fined him ten dollars.

A writer in *Harper's Weekly* says:—While the English language is spreading over the face of the globe where-ever liberty is possible, it is sad to mark the apparent incapacity of the noble German tongue to conquer new territory or even to maintain itself within its own legal limits. In Bohemia it is rapidly disappearing. In Hungary it has been exterminated within the last fifty years. The eastern provinces of Prussia have been in German hands more than a hundred years, yet the people there are as little Prussian to-day as when Kosciusko laid down his life for personal liberty. The Danish provinces were conquered more than thirty years ago, yet the new generation speaks Danish and hates the very name of Prussia. In Alsace-Lorraine, men who were babies in 1870 have served their time in the German army, and are nominally German subjects; yet the German language finds there a resistance insurmountable, even with the aid of a vast army of spies, gendarmes, officials, and 60,000 troops. Nor is the German language faring better in the German colonies, for the simple reason that German emigrants prefer almost any colonial flag to their own.

How possible it is for two writers to deal independently, yet synchronously, with the same theme, each unconscious of the other, has just been shown by the author of "Liza of Lambeth," a remarkable little study of the life of the poor in London, which we recently reviewed. One review in an English paper, dismissed the book very hurriedly and contemptuously as an imitation of Mr. Morrison—author of those depressing "Tales of Mean Streets." Mr. Maugham, the author of "Liza of Lambeth," at once replied, saying that he has not yet read Mr. Morrison's books. Indeed, there is no reason why he should. If two literary men come to "mean streets" with open eyes and open minds, intent upon getting something of them upon paper, the results must be similar. To tax the second of

the two with plagiarism is unfair; rather should the critic rejoice that an addition has been made to the ranks of honest, if saddening, writers. As a matter of fact, Mr. Maugham has no inclination to imitate anyone—he has worked in Lambeth too long as a doctor to need to borrow facts, and his aim in writing this book was not to please by his literary skill, but to show certain things as they are.

A very favourable report has been handed in by the Board under Captain Harrington appointed to examine the pneumatic system on board the U.S. monitor *Terror*. The points on which it is found superior to other systems are as follow:—Air-pressure may always be obtained greater than the greatest available steam pressure. If steam engines between decks, &c., were replaced by air engines the exhaust could be used for ventilation purposes, and the temperature would not be made uncomfortably high as it is by steam. Air leaks and burst pipes do no harm, and the former are quickly located. The points of advantage over hydraulic motors are, the immunity from freezing pipes, the non-necessity of exhaust pipes, and the possibility of starting or stopping suddenly. The report concludes with the following:—"Whilst the Board is pleased with the pneumatic machinery on board the *Terror*, it recognises the fact that it is an experimental design. The Board is of the opinion that a new design would produce results even more satisfactory than those on board the *Terror*."

A thoroughly trustworthy correspondent writes to the *Hongkong Telegraph* from Manila, under date of the 20th ult., as follows:—"A terrible disaster has happened in the South of these islands. A tidal wave, about ten feet high, broke over the coasts of Leyte and Samar. It is reported that 20,000 lives have been lost and the densely populated town of Tacloban completely wrecked, and that the forts of Gulan and Boregan have been swept off the face of the earth. As usual on such occasions, there are all sorts of exaggerated rumours flying about, but it is beyond question that something extremely serious has happened. Several million dollars worth of property (crops, etc.,) have been lost, and in addition there has been great loss of life, and the destruction of both public and private buildings is enormous. The great damage done by the wave is said to be due to the great mass of water forced into the Straits of San Juanico. These straits are very narrow and the wave was driven in as in a funnel, and broke with so much the greater violence over the neighbouring coasts of Leyte and Samar."

The *Engineer* remarks—We regret that on two or three occasions we have felt it our duty to reprimand English merchants for exporting indifferent goods to foreign countries. Under the careful tuition of the British Consuls we are gradually awakening to our error. The English manufacturer, we are beginning to find, is altogether too good for this world, or at any rate for a very large portion of it. He is too good and not nearly showy enough, and he has a perfectly absurd confidence that the purchaser will find in the long run that the best, although the dearest, is the most economical. The purchaser, when he happens to be a poor unenlightened Bulgarian or a Mexican, or a Fiji islander, is not vastly affected by such observation. He probably has an uneasy feeling that before he has had time to wear out his purchase his body may be "punched full of cruel holes," and even to ourselves, under the circumstances, the expenditure of an extra half-crown for the quality of endurance would be twice considered. It does not, however, very much concern us what the considerations which influence him may be. The fact is that the foreigner, particularly the ubiquitous one, exports gaudy, attractive, and cheap shoddy, which is greedily bought, whilst our valuable goods, warranted to wear for ever, testify to their own endurance by remaining eternally in the shop windows and merchants' warehouses.

THE CABINET.

Count Okuma took leave of his colleagues at the official residence of Count Matsukata on the 4th instant, and is understood to have sent in his resignation yesterday. It is alleged that Marquis Saigo, though he returned to Tokyo on the night of the 3rd, absented himself from the Cabinet meeting on the 4th, and that, in view of Count Okuma's resignation and of the obvious impossibility of carrying out the policy with which the Cabinet was organized, the Marquis has made up his mind that the time is not propitious for any attempt on the part of the Satsuma statesmen to undertake the administration. If such be indeed Marquis Saigo's sentiments, Count Matsukata is not likely to remain at the head of a forlorn hope, and the complete reconstruction of the Cabinet may be inevitable.

DEMAND FOR GOLD.

The total demand for gold at the Bank of Japan and its agencies throughout Japan, from the 1st of October, when the new monometallic system went into operation, until the 5th of November, was 5,186,286 yen, but during the same period 171,489 yen in gold was paid into the Bank of Japan on various accounts, so that the actual diminution of the gold reserves was 5,014,797 yen.

OFFICIAL APPOINTMENTS.

Mr Uchida Kosai, hitherto Minister *en disponibilité* and Secretary of the Foreign Office, is gazetted to the post of chief of the Commercial Bureau in that Department, and Messrs. Omae Taizo and Nishimura Shizuo are gazetted Secretaries.

CORRESPONDENCE.

THE GOTEMBA LEPER HOSPITAL.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—The Gotemba leper hospital is always full of patients. They number now 83. They are all content and happy in the asylum which charity had opened for them. They lead a life of prayer and work, following gladly a lenient rule, which assures good order and peace.

The number of deaths, during this year, has been 12. Their places did not remain long vacant, as demands for admission are frequent. We should like to enlarge our establishment; the women's department has become insufficient; but our resources do not match our aspirations.

That question of resources is always our most engrossing one. It requires being at the head of a community of nearly a hundred souls, to understand well how much its working costs.

Our patients are all very poor, with but one or two exceptions. They are therefore entirely at our charges, and furnish little more than the poor rags they need when they come. Besides the ordinary expenses for food, clothing, and medicaments, some more general expenses are necessary to keep up the hospital. Now, in a country like this, so often visited by heavy rains, strong winds, and even tempests, the houses which we can build, rapidly give way. All our buildings are of wood for we cannot afford otherwise. Unfortunately such constructions do not last long. From foundation to roof they rot quickly, and can hardly do without a workman continually engaged in repairing them. Must we add what every body knows, viz., that since some time all prices have risen considerably, that rice and all sorts of provisions necessary for life have nearly doubled?

Of course, our lepers work as much as they can, to cover a part of the expenses; but they are more or less disabled, and their work is necessarily very limited.

On the other hand, the alms from Christians in Europe have decreased of late, owing to the great number of charitable institutions which require aid in Europe also. The contributions of the closing year have been so reduced that without the generous gift of one foreign resident of Yokohama, who desires to remain unknown, we would not have covered half the expenses of the year.

We are therefore very poor and without means to better our situation. All we want is but to live, and it is only to preserve our existence that we ask for help and succour.

Therefore, this year even more than the preceding ones, I make bold to appeal to the charity of our former benefactors and of all persons desirous to be generous.

I thank in advance the charitable souls that will send us their alms. I pray God to repay them a hundredfold even in this world, for the good they will do us.

P. VIGROUX, Miss Apost.

Note.—Contributions may be addressed to Rev. P. Vigroux, Miss. Ap.—Tokio, 35 Tsukiji; or to Rev. R. Pettier, Procurator of the Cath. Miss.—Yokohama, 80; or to the Japan Mail Office.

THE REPRESENTATIVES OF ENGINEERING FIRMS.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I have read with interest your leading article of to-day, dealing with a statement I made with regard to the Yokohama foreigners and the Tokyo Club, in the course of one of my articles on "Modern Japan" in *The Engineer*.

Let me say at once that, at the time I wrote the article in question, I was a member of neither the Yokohama Club for the Tokyo Club, though I fully appreciated the hospitality I had received at the hands of both. I have no personal feeling in the matter whatever, and if your article will tend to lessen the friction that now exists between the two communities I shall be very glad.

I agree substantially with what you say with regard to the reasons for the disfavour with which Yokohama men are regarded by the Japanese, nor do I think that individual merit has anything to do with the question. But if you will refer to my article you will see that I do not go into the rights and wrongs of the case, but merely state the fact,—a fact with which I presume both you and Yokohama people will agree.

With regard to its being a stigma in the eyes of a Japanese to be a treaty-port man, I do not say that such a state of things is justifiable, but that it exists. Personally, I think it to be quite unjustifiable, but no one who is in intimate touch with the Japanese, can come to any other conclusion than that such a feeling exists.

My work for *The Engineer* in this country consists in advising British engineering manufacturers through the columns of that journal, as to the best way of securing work for Japan, and in dealing with that subject, I was bound to point out that great care must be taken in the selection of representatives here.

On broad lines the Yokohama man is not the right representative for important engineering firms, because of the very complete Japanese merchant ring which at present surrounds Government contracts, and because of the "stigma" from a Japanese point of view, deplorable and unjust as it may be, which attaches to the treaty-port foreigner. You admit, and very truly, that the Japanese are doing their best to boycott foreign firms, and that is precisely why I maintain that manufacturers should be very careful in the selection of their foreign representatives in Yokohama and elsewhere.

There are certain treaty-port firms, as I mention in my article, who, in spite of the terrible handicapping, are yet able to deal satisfactorily with engineering representation, and it is greatly to their credit that they can do so. No doubt in other trades, with regard to which Government work is not so overwhelmingly important, treaty-port agents are all round greatly preferable to others. On this subject, however, I can offer no opinion, as my remarks in *The Engineer* have only to do with engineering work.

I have no wish whatever to enter into a discussion on anything I have written, but I should be sorry if a remark of mine, with the truth of which, I gather from your article, you agree, should be taken as implying either that I underrate the business capacity of the treaty-port foreigner, or that I sympathise with the attempt of the Japanese to block his work.

Faithfully yours,

THE SPECIAL COMMISSIONER OF
"THE ENGINEER."

Tokyo, November 11th, 1897.

CIVIL GOVERNMENT AND ROMAN CATHOLICISM.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—Allow me a little space to refer in a farewell way to the principles defended by the three Papal champions who have appeared upon the stage of this discussion.

Mr. Pettier, in his letter of Sept. 13th, tries to make it appear that I make others say what they have not said, and give to their words a meaning not intended by them. To this charge he says:—

"Even in his answer to my letter, after quoting the resume I had given of the teaching of Leo XIII. with regard to civil power, he adds that Leo meant Papal power, which presently was out of the question." Let us see. He meant civil power not independent of Papal control. Mr. Pettier above makes my language say what was not intended. The following criticism will show how deceptive Papal logic is:—Mr. Pettier laboured hard in his letter of Sept. 13th to quote Roman authority to show that his church was not antagonistic to the civil power, that the two powers were regarded by the Hierarchy as distinct in authority, that one could not encroach upon the other. And he brought forth only one really authoritative Papal witness in the person of Pope S. Gelase to the Emperor Anastase. It reads as follows:—"With regard to the administration of public (Civil) affairs, the Bishops, knowing that the Imperial power has been given you by the disposition of God, obey they also, to your laws." Now, if I say "the Imperial power" here, which Mr. Pettier would have you all believe is distinct from Papal power, is ruled and reigned over by the Hierarchical power, in fact, is the Papal power, he would be again ready to say I am making the language mean what it does not. But does Mr. Pettier thus try to hide the facts? The "Imperial power" above is held by the Emperor at the will of Pope Gelase. "The disposition of God," through which that power was given to the Emperor, means the disposition of the Roman Hierarchy. Now let Mr. Pettier deny this. Does he think that the "dark ages" into which he dives for his "facts" are not accessible to others? Certainly the Bishops obey the Emperor's laws. The whole outfit is Roman, the civil rulers as well.

Emperor Anastase I. (there was another: which one does Mr. Pettier mean?) Emperor of the East, 500 A.D., was anathematized by Pope Symmachus for his support of the Etychians. Gelase I. (there was another: which one does Mr. Pettier mean?) was pope at the beginning of the 6th century and took part in the conflict between the Greek and Latin sects. From his letter to Emperor Anastasius, Mr. Pettier would make believe that the civil power referred to was non-Catholic civil power; but such is not the case. It is Roman Catholic civil power exercised by the Emperor at the will of the Pope, as Boniface VIII. clearly shows. Papists are not bound to keep faith with non-Catholic or heretical Princes. So it is plain that the civil power referred to by Pope Leo, quoted by Mr. Pettier, is civil power in the hands of Papists. And instead of my making anybody's language mean what the author did not intend, Mr. Pettier has simply tried to obscure the facts of history.

Another important difference between Papal and Protestant relationship to civil power which I had not time to bring out in my former letter I will now explain here. The very allegation made in my letter that the Hierarchy claims superiority over civil power and is not subject to civil power, the very thing Mr. Pettier has been trying to show not correct, he has been forced to acknowledge; and in his recent letter has attempted to justify it. He will certainly now acknowledge that I have not misrepresented the Papacy. The Papal claim to superiority in the special point when conflict arises between it and the civil power, is the one Mr. Pettier strikes upon to justify. And apparently quite plausibly he can raise the question, "What must be done when a conflict arises between the two powers? Which must yield?" He answers, "The State must yield. The Hierarchy must decide when the State (and he must mean Protestant State as well as Roman) has gone wrong." Now suppose the Hierarchy should go wrong, which thing it has done a thousand times, who must decide? Mr. Pettier still answers, "The Hierarchy must decide." So it remains in all circumstances just as I have shown, that the Hierarchy claims to be supreme above all powers. The Hierarchy defies the civil power, rules in the States that are Roman Catholic, and consents to hell all Protestant governments and subjects.

Let us contrast the Scriptural attitude in which the church is set towards the civil power. In the Bible no earthly religious organization is at all recognized larger than the local congregation or assembly of Christians, and the ruling power is vested in a number of the local members called elders, and this power does not extend beyond the local congregation. A religious ruling power over all the congregations or any plurality of congregations is utterly at variance with both the spirit and letter of Christianity. From just such a departure from the Truth has sectarianism arisen. It will be clearly seen then that the relationship existing between the church (local congregation) and State will be narrowed down to the smallest scope of mere insignificant matters of deed and

titles to lot or meeting house (if the congregation owns such). And when we come to study the New Testament instruction in regard to the Christian's relation to the State we find that the duty to be rendered is an individual duty each one for himself must render. It is so taught in the very text Mr. Pettier quoted; and which he erroneously applied to the Hierarchy. In obeying the scripture injunctions no conflict can arise with the civil government above an individual matter, and the Christian is taught to render obedience, except in matters of conscience as to individual duties to God. The State does not touch religious convictions. In these the individual conscience is supreme everywhere but within the pale of Papal despotism. The Christian law which tells one not to resist evil applies as well in the relation to the State as it does in relation to the individual.

But says Rome, "The individual has no conscience above the Papacy. The Papacy is his conscience. He cannot tell when he conscientiously differs from the State." This is the Papal figment from which infallibility has sprung. But nearly all the instructions in the epistles and the gospel history have an individual application. And to be logical, when Rome applies to the Hierarchy Christ's injunction not to resist evil, the Hierarchy should not resist the State even when the State imposes unjust laws. But her violation of this shows the marks of human parentage. The Hierarchy poses as a religio-civil government in the world; and as such opposes other civil governments in the same sense that one civil nation opposes another.

And does the Hierarchy keep her dragon claws off the affairs of State? Let us see. According to a telegram from Rome, the Pope has written a letter to the Queen Regent of Spain in behalf of Evangelina Cisneros. Some significant items appear on the surface. The news reads:—"As Queen, a full daughter of the church, it is practically certain she will use her influence with her Ministers to give effect to the appeal of his Holiness." Cardinal Rampolla states that, "the policy of his Holiness has always been to recommend mercy and generosity to monarchs." (When it suits the policy of "his Holiness," of course). The Cardinal is not certain, "that the intervention of his Holiness" "will prove efficacious, as the matter is very grave." This is a mild and gentle way by which the dragon puts his paw in State affairs.

And now for the farewell detection of Mr. Pettier and his terrible and formidable *Wisc* (by interpretation *Mr. A. Wolf-in-sheep's-clothing*). I suppose we shall never hear of him again. *Mr. Wisc* is probably trying to get his name changed. It is an ethnological fact that environment and habit have a deep effect upon the human species in developing physical and mental characteristics. Now will that loyal (?) American *Mr. Wisc*, the man who got ashamed of his name, and whom all true Americans also are ashamed to own as a fellow-citizen,—will this knight and redoubtable champion, who must be acquainted with the Papal priesthood in the United States, please tell us why this special class of celibate men who wear women's clothes have such large necks. The fact stands. What is the ethnological explanation?

The following is published in the papers in the U.S. The name is suppressed for the reason that the man would lose his position if known:—

DEAR FRIEND:—I will write you these few lines concerning a little incident which happened on board the United States ship *Oregon*, last Friday, to let you know how things are going in this grand United States navy.

Last Friday was, as you know, Good Friday, quite a day among the Catholics. Early Friday morning, just before breakfast, there was an order issued by the captain that there would be no meat eaten by the crew or officers that day, which caused quite a bit of dissatisfaction among some of the men. But that was only a "starter." About 10-30 a.m. a big, burly priest came on board ship, and the whole crew had to attend a meeting in the officers' quarters, where they had a great many large candles burning and a lot of other foolishness. All the officers, with the exception of two, were dressed in big robes of white. When the priest left the ship all the crew were lined up on the quarterdeck, and, as he went over the gangway, the captain gave the order to salute him, which they all did with the exception of thirty-four, myself among the thirty-four. And we were every one of us punished for not saluting the priest, under a charge of not obeying orders.

When I enlisted in the navy I did not think I was joining a Catholic institution, and I told the captain so, and he came near putting me in the brig (ship's prison) for saying it to him. Now that the officers know I am against the Catholics, I expect that they will make my life miserable the rest of my time on the *Oregon*, just because I let them know I am an American.

Now, I would like to have you advise me on this

subject. I have already been told by an officer that the best thing I could do was to get out of this, and, if I did not, I would be disgraced as a seamen.

April 22, 1897.

Suppose some Catholic sailors were ordered to do reverence to some Presbyterian minister, how the land would echo with the complaints. The matter is not a trifling affair. The wrongs here spoken of call for redress at the hands of the Government. Our navy is not a piece of Mexico or Spain, where Romanists may with impunity over-ride the Constitution of the United States, and trample on the rights of men for the sole crime of being Protestants.—*Christian Leader*.

Rise Mr. Pettier and tell us if this is not a menace to the peace of the State.

Friend Dooman in his entering the lists in defense of the Papal see did, indeed, a logical thing. For if Romanism is inimical to civil power (non-Catholic power especially), not much more can be said for the Episcopal Church of England which poses as a State Church. In theory at least, if the Episcopal Church is the State Church of England (it certainly was a child of the civil government of England), then it will logically follow that it is inimical to all other civil powers except England. This is the logical conclusion; and can only be refuted by admitting that practically no Churchmen to-day respect that theory any more, and act in reality upon the supposition that the Church has been disestablished.

When Jesus was once laying the scourge of condemnation upon certain ones another class arose saying, "in this speaking you also condemn us." This is the only reason I can give for Mr. Dooman's outbreak.

This subject embraces matter of the very gravest import. And these apprehensions are intensified when it is remembered that in the West Papists are assiduously instructed in strict military drill, and their anti-Protestant animosity is aroused at the least opposition. A system which violates nearly every commandment of the decalogue, which binds in degrading slavery the God given mind of man, and which sends to perdition every soul outside its hideous pale, may well be subjected to perpetual scrutiny and unflinching rational opposition. There are thousands of honest minds who ought to be liberated from this intellectual bondage which has been fastened upon them in their childhood.

Very truly,
E. SNODGRASS.
Kanazawa, October 28th, 1897.

LAUNCH OF THE "AKASHI"

The latest addition to the Japanese Navy was made on Monday afternoon by the launch at the Yokosuka shipbuilding yard of the cruiser *Akashi*, a sister vessel we believe, to the *Suma*, which was launched from the same yard about two years ago. The *Akashi* is a steel, twin-screw cruiser of 90 metres in length, 12.70 metres beam, 4.80 metres draft, 2,800 tons displacement and 8,000 horse-power. It is expected that she will attain a speed of 19½ knots an hour. Her coal bunkers have a capacity for 600 tons, and her armament, when completed, will consist of six 12-centimetre quick-firing guns, two 15-centimetre quick-firers, four machine guns and two torpedo tubes. The six 12-centimetre guns will be mounted in sponsons, three of which are constructed on either side of the ship, the two 15-centimetre guns being mounted, behind shields, fore and aft.

The picturesque little port of Yokosuka was, as usual on such occasions, *en fête* throughout the day, and the numerous men-of-war in the harbour, including the newly arrived battle-ship *Fuji*, were gay with bunting. The launch had been arranged for 3 p.m., and H.I.H. Prince Komatsu Yoshihito, who attended as representative of the Emperor, with a numerous staff, arrived at Yokosuka at about a quarter past 2 p.m. by the 11.50 train from Tokyo. Among the guests present were Count Matsukata, Marquis Saigo, Count Kabayama, Viscount Takashima, Viscount Nomura, Mr. Kiyoura, Marquis Ito and several military and naval officers, including the Commanders of H.M.S. *Redpole* and *Daphne*, etc. Several companies of blue-jackets, naval cadets, etc., with a naval band, were drawn up outside the station, and saluted the Prince on his arrival, the band at the same time striking up the National Anthem. After being conveyed in a carriage to the landing place for the outer harbour near the station, Prince Komatsu and suite embarked in a steam launch for the dockyard, the men-of-war in the harbour at the same time booming forth an Imperial salute. The arrangements for the accommodation of the numerous spectators inside the dockyard, as well as those for the more important function of the launch itself, were admirably carried out and reflect the greatest credit on all concerned. About ten min-

utes before 3, Prince Komatsu took up his post on the upper tier of the dais erected opposite the bow of the cruiser, with Admiral Togo, Commandant of the Yokosuka Admiralty Station *ad interim*, in the absence of Admiral Tsuboi, with a large staff of naval officers just below him. The *Akashi* was very prettily decorated with garlands of greenery relieved by bunches of crimson flowers, all round her bulwarks, while hanging over her bows and ram was a large and fancifully designed globe, or cage, containing the flight of pigeons which are released as the ship leaves the ways. At 5 minutes to 3 the various gangs of men along the sides of the ship were all in their places; at 3 sharp a flag was waved from the dais and the order given to drive in the wedges under the keel, and with rhythmic strokes this was effected in a few minutes; then another wave of the flag and another order shouted, and the knocking away of the shears was carried out; a couple of minutes more and a third wave of the flag and a third order given and the lever under the bows was set to work, and a minute more and the good ship, starting slowly, glided smoothly and gracefully down the ways into her natural element; the pigeons were released and all the steam whistles and syrens in the port vied with each other in a discordance of sound, to which was added the *bansais* and waving of hats of the assembled multitude. The launch was a complete success and a very pretty spectacle. The numerous guests invited were then most hospitably entertained to a cold collation and liquid refreshments *ad lib* in the big room above the engine-fitting shops, where probably a thousand visitors partook of the good things provided and joined in three cheers for the *Akashi* and to the health of the Emperor and H.I.H. Prince Komatsu, proposed by Admiral Togo. There was one new feature in the entertainment offered to visitors to Yokosuka on this occasion which we must not omit to mention. This consisted in the exhibition, in the gallery or cloak room adjoining the banqueting room, of a most interesting collection of curiosities, made by workmen and men-of-war's men at Yokosuka in their spare time from various odds and ends of materials used in the ship-building yard and shops. Many of these were *junk-works* of art and displayed wonderful ingenuity and together formed quite a museum of curios. Among the various items in the collection we may mention a very prettily executed miniature Maxim gun made out of boiler tubes; chrysanthemums in pots, made from zinc plates and metal shavings from the lathe; a huge spider, the body of which was constructed out of an old copper pot and the legs from bits of bar iron; one fine bit of rock work, with a little crawling around it, was made out of cinders and wood; storks and other birds were artistically constructed from cotton waste and bits of metal, and a host of other subjects have been as aptly treated. The collection is well worth a fuller inspection and description than we are able to give it on this occasion. From beginning to end the Naval Authorities did all that was possible for their guests on the occasion, but we regret to have to record that on this, as on former similar occasions, the Railway authorities were very negligent. Though they should have known the number of passengers booked for Yokosuka at Tokyo and Yokohama, there was the usual delay in despatching the return trains from the naval port, and extra carriages, already in waiting at the station, were not coupled on until considerably after the schedule time for starting, while there was the usual disgraceful struggle and fight at the Yokosuka booking office to get tickets—simply because no return tickets were issued at the Tokyo and Yokohama stations. The railway authorities appear to be utterly incapable of rising to the occasion when any well foreseen extra development of traffic occurs.

HAWAII.

The following is a translation of a Memorial adopted at a mass meeting of Hawaiian citizens held on the 8th October which has been presented to President McKinley:—

TO THE PRESIDENT, THE CONGRESS AND THE PEOPLE OF THE UNITED STATES OF AMERICA.

This Memorial respectfully represents as follows:—

1.—That your memorialists are residents of the Hawaiian Islands; that the majority of them are aboriginal Hawaiians; and that all of them possess the qualifications provided for electors of representatives in the Hawaiian Legislature by the Constitution and laws prevailing in the Hawaiian Is-

lands at the date of the overthrow of the Hawaiian Constitutional Government, January 17th, 1893.

2.—That the supporters of the Hawaiian Constitution of 1887 have been, thence to the present time, in the year 1897, held in subjection by the armed forces of the Provisional Government of the Hawaiian Islands, and of its successor, the Republic of Hawaii; and have never yielded, and do not acknowledge a spontaneous or willing allegiance or support to said Provisional Government, or to said Republic of Hawaii.

3.—That the Government of the Republic of Hawaii has no warrant for its existence in the support of the people of these Islands; that it was proclaimed and instituted and has hitherto existed and now exists, without considering the rights and wishes of a great majority of the residents, native and foreign born, of the Hawaiian Islands; and especially that said Government exists and maintains itself solely by force of arms, against the rights and wishes of almost the entire aboriginal population of these Islands.

4.—That said Republic is not and never has been founded or conducted upon a basis of popular government or republican principles; that its Constitution was adopted by a convention, a majority of whose members were self-appointed, and the balance of whose members were elected by a numerically insignificant minority of the white and aboriginal male citizens and residents of these Islands; that a majority of the persons so voting for delegates to such Constitutional Convention was composed of aliens, and that a majority of said aliens so voting were of then very recent residence, without financial interests or social ties in these Islands.

5.—That the Constitution so adopted by said Convention has never been submitted to a vote of the people of these Islands; but was promulgated and established over the said Islands, and has ever since been maintained, only by force of arms, and with indifference to the will of practically the entire aboriginal population, and a vast majority of the whole population of these Islands.

6.—That the said Government, so existing under the title of the Republic of Hawaii, assumes and asserts the right to extinguish the Hawaiian Nationality, heretofore existing, and to cede and convey all rights of sovereignty in and over the Hawaiian Islands and their dependencies to a foreign Power, namely, to the United States of America.

7.—That your memorialists have learned with grief and dismay that the President of the United States has entered into, and submitted for ratification by the United States Senate, a Treaty with the Government of the Republic of Hawaii, whereby it is proposed to extinguish our existence as a Nation, and to annex our territory to the United States.

8.—That the Hawaiian people, during more than half a century prior to the events hereinabove recited, had been accustomed to participate in the Constitutional forms of Government, in the election of Legislatures, in the administration of justice through regularly constituted magistrates, courts and juries, and in the representative administration of public affairs, in which the principle of government by majorities has been acknowledged and firmly established.

9.—That your memorialists humbly but fervently protest against the consummation of this invasion of their political rights; and they earnestly appeal to the President, the Congress and the people of the United States, to refrain from further participating in the wrong so proposed; and they invoke in support of this memorial the spirit of that immortal Instrument, the Declaration of American Independence; and especially the truth therein expressed, that Governments derive their just powers from the consent of the governed,—and here repeat that the consent of the people of the Hawaiian Islands to the forms of Government imposed by the so-called Republic of Hawaii, and to said proposed Treaty of Annexation, has never been asked by and is not accorded, either to said Government or to said project of Annexation.

10.—That the consummation of the project of Annexation dealt with in said Treaty would be subversive of the personal and political rights of these memorialists, and of the Hawaiian people and Nation, and would be a negation of the rights and principles proclaimed in the Declaration of American Independence, in the Constitution of the United States, and in the schemes of government of all other civilized and representative Governments.

11.—Wherefore your memorialists respectfully submit that they, no less than the citizens of any American Commonwealth, are entitled to select, ordain and establish for themselves, such forms of Government as to them shall seem most likely to effect their safety and happiness; and that ques-

tions of such moment to the Hawaiian people as are proposed to be settled by said Treaty, are questions upon which said people have the right, in the forum of Conscience, to be heard; and that said Hawaiian people have thus far been denied the privilege of being heard upon said questions.

12.—And your memorialists humbly pray the President, Congress and the people of the United States, that no further step be taken toward the ratification of said Treaty, or toward the extinguishment of the Hawaiian Nationality, or toward the absorption of the Hawaiian people and territory into the body politic and territory of the United States of America, at least until the Hawaiian people, as represented by those citizens and residents of the Hawaiian Islands who under the provisions of the Hawaiian Constitution, promulgated July 7, 1887, would be qualified to vote for representatives in the Legislature, shall have had the opportunity to express at the ballot box, their wishes as to whether such project of Annexation shall be accepted or rejected.

13.—And your memorialists, for themselves, and in behalf of the Hawaiian people, and of the residents of the Hawaiian Islands, pledge their faith that if they shall be accorded the privilege of voting upon said questions, at a free and fair election to be held for that purpose; and if a fair count of the votes that shall be cast at such election shall show a majority in favour of such Annexation, these memorialists, and the Hawaiian people will yield a ready and cheerful acquiescence in said project.

Honolulu, H. I., Oct. 8th, 1897.

J. KALUA KAHOOKANO,

President of the Hawaiian Political Association.

MODERN JAPAN.—INDUSTRIAL AND SCIENTIFIC.

In the first article of this series—says the correspondent of the *Engineer*—I dealt with the business relations between the Japanese and their foreign contractors. There is another and important business matter from the point of view of the manufacturer, and that is the manner in which he is represented out here. Japanese business is regulated in so strange a fashion that the conditions with regard to representatives in other countries do not necessarily apply here. I think I have already mentioned that the Government work, which is the work most worth having from the point of view of the manufacturing engineer, is nearly all in the hands of a small clique of wealthy Japanese merchants, who have had sufficient influence to cause the necessary laws to be passed to keep the work exclusively in their hands. Battleships and certain other war material are exempted from this ring, but otherwise it is extremely complete.

At the first glance it would not appear that this business would be so restricted, for the law nominally allows any Japanese firm to compete for the Government contracts, and on the face of it, it seemed that the object of this legislation was merely to exclude the foreign firms from competition. But the law is hemmed round with so many provisions that it is impossible for any but a few very strong Japanese firms to fulfil the conditions. These conditions provide that the firm shall have been carrying on a certain class of business for a certain length of time, and must have been paying a certain and very high amount of income tax during that time. So far there is nothing out of the way, as of course, the Government wish to protect themselves from dealing with bogus firms. But what knocks many of the smaller firms out of time, is the condition that whenever they tender they must deposit sums of money equal to 5 per cent. of the total amount, and in event of an order they must practically double this sum. Finally, as if this were not severe enough, they must be prepared to lose all that money in event of any small technical hitch occurring between them and the manufacturer, which may delay delivery or otherwise violate the wording of the contract; and this even in cases where it is utterly impossible for them to foresee such a catastrophe. Thus it is that practically all the Government work for Japan is handled by certain firms the number of which could easily be counted on the fingers of one hand. It would therefore seem that it is these few merchant firms who are the people whom the manufacturer should see, and come to an arrangement with, in order to secure Govern-

ment work. Such, no doubt, is the case up to a certain point, but it should be remembered that the merchant here is supposed theoretically to have no voice whatever in the matter as to who is to supply the machines or materials. The Government hand to the merchant a specification with one or a number of makers' names attached, and he gets an estimate through his London house from all the makers named. The same routine is followed by the other merchants, and assuming that the makers quote them all alike, the merchant who cuts his margin of profit down to the lowest, thereby putting in the lowest price, gets the order.

But it often happens that the makers, for one reason or another, do not treat them on the same basis, for being unacquainted with the conditions of the order they may imagine that one merchant can do more to help them than another. This is not so, at the late stage of affairs, at all events; for by the time the inquiry reaches London the conditions of the order are fixed hard and fast at this end. The way in which the merchant can help the manufacturer if he feels inclined to do so, is by using his influence to get the name of the manufacturer in question on the list of the makers who are to be asked to quote whenever anything in his particular line is asked for. But a merchant has no particular reason to do this for a firm unless he can get some better terms than the other merchants and so ensure the order passing through his hands. But when the other merchants find that they are continually underquoted by one of their competitors, it does not take them long to see that there is a compact between that firm and the manufacturer. Their policy of retaliation is simple. They do not bother to try and get that manufacturer's name removed, if there is any difficulty about it, but they take care to get the names of other and preferably cheaper makers on the lists in competition with him. If they can succeed in doing so, they effectually stop any orders going to the objectionable firm. As I inferred above, the few merchant firms who can quote for this work have all plenty of money, and as a consequence plenty of influence, and it is safe to say that in nine cases out of ten, as specifications are managed out here at present, they can rake up if they wish irrespective of the merits of the manufacturer, that which will effectually boycott an individual maker.

The merchants as a rule do not care about holding sole agencies for manufacturers, as in a general way it would tie their hands too much. Nor would it pay English firms to give their sole agency to one of these merchants, as all the others would at once begin to work against him in the effectual manner above described. There are, however, two exceptions to this rule. The first of these is the manufacturer who turns out specialties against which there is no competition. Such an individual could not possibly do better than come to terms with one or other of the big merchants and give them his sole agency if he can get an assurance that his specialties will be properly pushed.

The other case in which a merchant can be taken on as a sole agent to advantage is when a manufacturer turns out the worst class of rubbish, which, from its very cheapness, will defy competition. For as long as his merchant agent can force his name on to the Government lists this low-class manufacturer is sure to obtain the orders until one of the other merchants finds a cheaper man or the users have got tired of buying his goods.

To the credit of the Japanese merchants, it must be said that they do not all encourage the cheap maker, but it stands to reason that when they are put to such a close competition they should sometimes try to get the name of a squeezable manufacturer on the list. In a general way, then, the merchant is not a suitable representative here, and then comes the question as to who would be the right man to appoint.

Many of our English engineering firms having had it continually drummed into their heads that a Japanese is without business integrity—which, by the way, is a gross libel—think that their salvation lies in giving their agency to a foreign firm in a treaty port. It does not much matter who that firm may be, as long as it has the word "merchant" or "commission agent," on its letter paper. The "firm" may be an exporter of silk, or keep a hat shop, or let out bicycles. He may, in fact, be an excellent man—perhaps even an excellent business man—but the chances are he will not be of the faintest use to a first-class engineering firm as an agent. To such a man it does not matter how many engineering agencies he takes up, and his not knowing how to work them matters little to him. A few orders will perhaps now and then come his way, and he can make his commission on them. He will employ a low-class Japanese to tout for him on

commission, and though this man will hardly be received in many places, still he may or may not get an order sooner or later. But the treaty port merchant will not trouble himself about the negotiation, nor will he take any risk. For, in the first place, he knows nothing about the machinery he is to sell, nor is he sure that he is ordering what is wanted. So he very naturally wants all the money beforehand, or enough of it to cover him in the event of the goods being left on his hands. One cannot blame him for this caution; but I am merely pointing out that he is not the right man to represent an English manufacturing engineer. Of course there are certain treaty-port firms who have more or less of an experience in machinery and so on, and who lay themselves out conscientiously to work this business, but they are extremely few and far between.

Another great mistake made by our manufacturers is to give a sort of roving commission to irresponsible individuals to sell their machines on commission here. A man who is coming to Japan on other business, and writes to a manufacturer to know if while he is there he can represent that firm, in many cases receives a reply from the manufacturer to the effect that he cannot give him a sole agency but that he will pay him a commission on anything he may sell for him. This is not a good policy for securing Japanese trade. Such a man will call on the merchants, and state that he represents the firm in question, and after the merchants have taken a certain amount of trouble with him, they will find out that he has no more special knowledge of the subject than they have, and that he is powerless to estimate properly or give them detailed particulars. Then they find out he is merely an irresponsible "free lance." It is the repeated visits of these gentlemen which cause the merchants to doubt the credentials of the *bond-fide* and competent representative who is sent out to Japan by the manufacturer for the purpose of helping them to understand the specialties of their firm, and to facilitate a mutual business.

Speaking generally, Tokyo is the only place in which the representative of an engineering firm should have his headquarters, for it is there that the Japanese business people are to be found. To be a "treaty-port foreigner" is a stigma in the eyes of the Japanese, and they will not deal with him if they can possibly avoid it. It is almost a foregone conclusion that a Yokohama man, however good he may be, will be blackballed at the Tokyo Club, which is a mixed Japanese and foreign institution. Assuming that a firm has a representative in Japan, it is essential that he should be in a position to quote the merchants here the same terms that his firm in England would quote the London representatives of the Japanese merchants. There should also be a distinct understanding that he does not work against the merchants. Such a man will not have to handle the money, and so will have to take no risk. His commission, therefore, need not be large, especially if he is on salary, too. But his business is to get the books and particulars of his firm into the proper hands, and let the business find its way home automatically through any of the complicated channels which Japanese red-tapeism just now renders necessary.

As examples of the ludicrous manner in which engineering agencies are sometimes handled out here, I would mention that I know of a well-known firm of battleship builders in Great Britain whose interests are in the hands of an excellent treaty port firm, who know nothing whatever about ships, and who, until recently, subtlet the negotiation part of the business to a Tokyo tobacco merchant. This gentleman knows, perhaps, no less, but certainly no more than they do. Naturally that firm has never received an order, and is not likely to do so, for the worthy tobaccoist would certainly never be received by any of the people who have to do with the ordering of ships, and he would not know how to talk to them if they did see him. It is said that all the warship business is worked at the other end, and so it is with the final negotiation. But there is a very great deal of the preliminary work to be done here by a man who understands his business and can see the right people.

The high official Japanese are essentially gentlemen, and they appreciate having to do with a gentlemanly representative. They are essentially observant, and quickly see whether a man understands his business or not. Another shipbuilding firm have as agent one of those companies in England who seem to deal in everything which is made of metal, and issue enormous catalogues containing every type of machine under the sun. The Japanese sub-agent of this firm is a sort of ironmonger, and it is to him that they look for the technical negotiation with the Government. He runs no risk of showing his complete ignorance on the subject, from the fact that he will

never be applied to for advice. And, while his firm is well known here, it is openly stated that they will never get an order.

Referring, again, to the question of the irresponsible individuals who call themselves representatives, in the hope of getting a commission on something some day, I constantly meet men of this sort who tell me that they represent firms with whose accredited agents I am well acquainted. There were at least three different men here at one time, who told me they were the sole agents for the same firm of locomotive builders, and four who said they held a similar mandate from a single portable engine maker.

As I said before, the position of a real representative with regard to the merchants is a very difficult and delicate one. If he is merely passing through the country, the merchants, while receiving him courteously, doubt his credentials, and if he stops here any length of time they mistrust his motives, and think that he is sure in the long run to work against them and try to do direct trade. Therefore unusual tact and diplomacy are wanted in the man who is to represent English engineering firms in Japan, and the greatest care should consequently be taken in his selection.

VALUE OF STAPLE IMPORTS AND EXPORTS.

Investigations having been made by the Bank of Japan in regard to the relative values of forty five staples of import and export in accordance with the Trade Report for August, the following results were obtained (100 being taken as the standard of value for January of the 20th year of Meiji):—

Original value of articles exported in August of the 30th year of Meiji:—

Classification.	August, 1897.	Previous month.	August, 1896.
Camphur	366	298	448
Ginseng	119	167	133
Sulphur	264	243	172
Barley	145	0	133
Dried cuttle-fish ...	215	209	190
Isinglass	208	184	183
Rice	201	203	184

Beer	130	110	119
Wine	260	277	214
Candles	97	93	84
Average	150	153	135

Said an eminent German professor to a correspondent on arrival at Victoria, B.C.:—"I have travelled some 7,000 miles in a British ship and across British territory without interruption; that gives me a conception of the extent of the British Empire which I never had before." This, perhaps, expresses the predominant thought in the minds of those members of the British Association who were fortunate enough to cross the Dominion in the special cars provided by the directors of the Canadian Pacific Railway Company.

LATEST TELEGRAPHIC NEWS.

(FROM THE "JAPAN TIMES.")

London, Nov. 4.

THE MAYOR OF NEW YORK.

Mr. Van Wyck, the Tammany candidate, has been elected Mayor of New York by a large majority.

London, Nov. 5.

Mr. Van Wyck, the newly-elected Mayor of New York, was returned by a majority of 85,000, which is the greatest victory that Tammany has ever achieved. The State elections show throughout the count the general reaction that has taken place against McKinleyism, and the correspondent of *The Times* declares that New York under Mr. Van Wyck will become the head-quarters of populism, silverism, socialism, and the rest of the Bryanite programme.

FUNERAL OF THE DUCHESS OF TECK.

The funeral of the Duchess of Teck was conducted with Royal pomp, and all the foreign Courts were represented.

GLASGOW UNIVERSITY.

The Right Hon. Joseph Chamberlain, M.P., has been again installed as Rector of Glasgow University.

THE OCCUPATION OF KASSALA.

The correspondent of *The Times* at Cairo says that Major-General Sir Herbert H. Kitchener commands a force of 200 Egyptians with a battery of artillery to occupy Kassala, and will proceed to that place *via* Massawah.

CHINESE OFFICERS AND THE COMING MANŒUVRES.

Peking, Nov. 4.

The Chinese Government, it is said, will despatch a party of military officers, serving under Yuen Shi-kai, to Japan for the purpose of witnessing the coming army manœuvres in Kyushu. Captain Kajikawa, military attaché of the Japanese Legation here, has left for Tientsin on business connected with the affair. A Chinese man-of-war will probably be detailed to convey the officers to Japan.

A LIBERAL GAIN.

London, Nov. 6.

At the election at Middleton, in South-East Lancashire, to replace Mr. Thomas Fielden, deceased, Mr. Duckworth, the Liberal candidate, was returned with 5,964 votes, against Mr. Mitchell (Conservative), 5,664 votes. (The late member was a Conservative).

THE FRENCH IN WEST AFRICA.

When the Governor of Lagos (Sir Gilbert Thomas Carter, K.C.M.G.), found that the French had occupied Nakki, within the British sphere, he despatched a force thither, and the French thereupon retired.

SOUTH AFRICA.

The Right Hon. Joseph Chamberlain, M.P., speaking recently at Glasgow, said that relations with South Africa were more satisfactory now than they had been for many a day, and that he believed that a really united empire was becoming a question of practical politics.

RUSSIA AND SIAM.

London, Nov. 8.

Russia intends to establish a diplomatic agency shortly at Bangkok.

THE SEAL CONFERENCE.

Russia, Japan, and the United States have signed a treaty for the protection of the seal fisheries.

TURKEY AND GREECE.

The peace negotiations at Constantinople have not progressed since October 26th.

CRICKET IN AUSTRALIA.

Stoddart's team is now playing the Victoria eleven, and the latter going in first have made 273 for six wickets.

THE SOUDAN EXPEDITION.

London, Nov. 9.

Four gunboats have ascended the Nile above Matammeh and reconnoitered to within seventy miles of Khartoum. They shelled the new forts at Matammeh, both going up and coming down, and though the latter replied they did but trifling damage.

SPAIN AND CUBA.

The Spanish Cabinet has approved the draft of a decree granting to the inhabitants of Cuba and Porto Rico the same constitutional rights as Spaniards.

CRICKET IN AUSTRALIA.

The Victoria eleven concluded their innings with a total of 306, and Stoddart's team has made 213 with seven wickets down.

THE SEALING CONFERENCE.

Washington, Nov. 9.

After the sixth sitting the Sealing Conference was brought to a conclusion on the 6th inst. and the convention was signed by the Representatives of the three Powers.

The Commissioners will take passage on board the *Coptic*, which will start from San Francisco for Yokohama on the 18th instant.

Japanese Consulate, Vancouver, Nov. 5.

An official message has been received to-day from the Canadian Government, to the effect that after Nov. 5th the benefit of the Reciprocal Tariff will be conceded to Japan.

SENSATIONAL TRAGEDY.

London, Nov. 10.

A great sensation has been created in Paris by the suicide, together with his wife and three children, of M. Dreyfus, a cousin of Captain Dreyfus, the officer condemned to penal servitude for life. The motive is entirely a mystery.

CRICKET IN AUSTRALIA.

Stoddart's team concluded their innings for 250, and the Victoria eleven had compiled 243 in their second innings with nine wickets down.

- Correct solutions received from W.H.S., J.W.E. and D.D.

PROBLEM No. 346.

By OTTO WÜRZBURG, Grand Rapids.

White to play and mate in three moves.

Just as we go to press we have received a solution of Problem No. 340 (Mrs. Baird's) which at first sight looks correct, but we desire to have a little time for analyzing it before publishing.

THE YOKOHAMA CHESS CLUB.

Further challenges have been handed in *via*, Thomas v. Fox and Ackman v. Abenheim, which brings the list up to five challenges. Meanwhile only one match game has been played, namely Stormbrink v. Hodges, resulting in a win for Mr. Hodges. We hope that interested parties will roll up next week or else the competitors will be hard pressed for time, each match having to be decided within a month from date of challenge.

The Consultation game which was to have been played on Thursday last week between the President's and the Secretary's teams, did not come off owing to the small number of members present. However a pleasant game was arranged between Messrs. Mendelson, Ackman and Thomas in consultation against Mr. Friedlander, the score of which we publish below:—

GAME No. 345.

KVN'S GAMBIT.

NOTES.

- (a) Better here..... B to R6 followed by..... Q to B 6.
(b) A bad move, for Bishop takes Pawn and White cannot retake the Bishop. This escaped Black's notice.
(c) A hard blow for White, who has been caught napping.
(d) Here Black should have played..... R takes Kt ch! Then 33—K takes Kt (if Q takes Kt, Black mates in three)..... R to Kt 5 ch. 34—K to R sq..... R to R 5 ch. 35—K to Kt 2..... Q to R 6. 36—K to B 2..... Q to R 7 ch. winning the Queen next move.

"A LESSON FOR BEGINNERS."

The Pawns are by far the most pervasive and important single element in a game of Chess. Pawn play is the very best index to a player's strength. Every one who would improve as a player must study the management of Pawns with care and patience, for the right management of the Pawns is not easy to learn.

We lay down a few general maxims, as follows: First—"In the opening move only the K P and the Q P."—Lasker. Exception: In "close games" the P to Q B 4 may sometimes be moved with advantage before deploying the Q Kt. Caution: It is generally not good to play P to K R 3 or P to Q R 3 early in the game. Let your adversary pin your Knights, if he likes. This rule has exceptions, however. Second—"It is bad to allow 'holes' to be formed in your third rank—that is, squares unguarded by a pawn. E.g., after you have played P to K R 3 and P to K B 4 a hole is left at K Kt 3; or after you have played P to Q Kt 3, there is a hole at Q R 3; or, after P to Q B 4 and P to K 3 there is hole at Q 3. Such uncommanded squares will often allow your opponent's pieces, especially his knights, to enter your ranks with disaster to your cause. Guard against the beginnings of trouble by forming no such weaknesses, unless forced to do so. The Chess world is indebted to Mr. Steinitz for this law. Third—Avoid advancing your Ps too far early in the game. They are likely to be cut off and captured.—Staunton. Sometimes your opponent will make a far advanced P serve as a protection to his own position. The fact that a P can not retreat ought to make you doubly cautious in advancing it. On the other hand, advanced Pawns are often very dangerous, and exercise much restraint and pressure.—Farmer's Voice.

GAME No. 346.

BERLIN INTERNATIONAL TOURNAMENT.

- | White—Schiffers. | Black—Walbrodt. |
|------------------|-----------------|

| 10 Castles | 22 RxP(r) |
| 11 Kt B3(d) | 23 RxB |
| 12 Q Q3 | |
- And White won.

Notes by Gunsberg.

(a) It is generally considered that this move causes a loss of time.

(b) This is the direct outcome of 3—B to Q 3, which necessitates 6—B takes Kt, thus producing this position, in which the second player has gained time.

(c) Not good on general principles. He should develop his queen's wing, beginning with Kt to Q 2, followed by R to K sq, then either Kt to B sq or P to K 4.

(d) White executes a splendid conception of an old form of attack. It is strange how many experienced players disregard the wholesome caution to beware of taking the Q Kt P while their game is yet in an undeveloped state.

(e) No doubt by this time Black was very sorry that he did take the pawn. He has no other move than this, as K R to Kt sq was threatened.

(f) This excellent move puts an end to Black's hopes of getting two pieces.

(g) There is an admirable crispness in all White's moves, though Black may yet win the White knight on the rook's square, yet his game is hopeless.

LATEST SHIPPING.

ARRIVALS.

Gaelic, British steamer, 2,690, Wm. Finch, 7th Nov.—Hongkong via ports, 28th Oct., Mails and General.—O. & O. S.S. Co.

Sarpedon, British steamer, 2,283, Grier, 8th Nov.—Liverpool via ports, General.—Butterfield and Swire.

THE GREATEST WONDERS OF MODERN TIME HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER, in his work entitled "The Nile Tributaries in Abyssinia," says—"I ordered the druggist Mahomet to inform the Fakir that I was a Doctor, and I had the best medicines at the service of the sick, with advice gratis. In a short time I had many applicants, to whom I served out a quantity of Holloway's Pills. These are most useful to an explorer, as, possessing unmistakable purgative properties, they create an undeniable effect upon the patient, which satisfies them of their value."

SIMPLE, SAFE, AND CERTAIN.

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations. Mr. J. T. Coors, in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I gave some to the people, and nothing could exceed their gratitude; and, in consequence, milk, fowl, butter, and horse feed poured in upon us, until at last a teaspoonful of Ointment was worth a fowl and any quantity of peas, and the demand became so great that I was obliged to lock up the small remaining 'stock'."

Sold by all Chemists and Medicine Vendors throughout the World.

Printed and Published for the Proprietor, at 51, Main Street, Settlement, by ARTHUR BELLAMY BROWN, of "Nooklands," No. 156, Bluff, Yokohama.—SATURDAY, NOVEMBER 13, 1897.

YOKOHAMA: SATURDAY, NOV. 20TH, 1897.

BIRTHS.

On the 14th October, at 139 Bluff, Yokohama, the wife of FRED. OWEN EUSTACE of a Son.

On the 19th inst. at No. 105, Bluff, Yokohama, the wife of H. ABROG, of twin sons.

MARRIAGES.

On November 17th, at the Swiss Consulate, Yokohama, by R. Kallen, Esq., (H.I.G.M.'s Vice Consul General), Acting Swiss Consul, and afterwards at Christ Church, by the Rev. E. Champneys Iwine, M.A., PAUL LOUIS, son of Professor Benjamin Vautier, of Düsseldorf, to GLADYS MARGARET, daughter of Charles D. Moss, of Yokohama.

On November 18th, at the residence of the bridegroom's father (Oriani Kaihei, President of the Yokohama Chamber of Commerce), Iseiyama, Yokohama, ORIANI KŌNOSUKE, President of the Eastern Japan Trading Co., Ltd., to MASU, eldest daughter of Watanabe Enkusaburo, of Yokohama.

DEATH.

At Paris, on the 18th of November, MYRTILLE OPPENHEIMER, eldest partner of the firm Oppenheimer Frères of Paris, Yokohama, and Kobe.

At Tokyo, on the 13th inst., CHARLES J. HASS, a native of Switzerland, in his 60th year.

SUMMARY OF NEWS.

THE *Moyune* has been floated and arrived at Singapore.

THREE persons, husband, wife and son, were burnt to death during a fire in Tokyo on the 15th inst.

DYSENTERY having been stamped out though-

out the country all the inspection bureaux in the various Prefectures were closed on the 16th inst.

MR. ARAKAWA YOSHITARO, Secretary of Kanagawa Ken, has been appointed Governor of Tottori prefecture.

ABOUT one hundred Japanese traders, etc., have established themselves at Mokpo, one of the newly opened Korean ports.

SEVERAL futile attempts have been made to raise the sunken ironclad *Fuso Kan*, and it is now expected she will become a total loss.

THE *Shimpo-to* members of Kanagawa Ken will hold their grand general meeting on the 28th inst. at Yokosuka-machi and discuss the future policy of the Party.

THE army manoeuvres in the northern plains of Kynahu commenced on the 17th inst., the 5th Army Division having its head-quarters in Fukuoka while the 6th Army Division occupies Kurume.

A NUMBER of tenant farmers in Date-gun, Fukushima Prefecture, on the 11th inst. attacked the residences of their landlords, because the latter had refused to reduce their rents. The police dispersed the mob.

It is believed that the Government came to a decision on questions regarding the Budget for the 31st fiscal year of *Meiji* and the increased taxes on land and *saké* at the Cabinet Council held on the 16th inst.

HACHIJOI has again been the scene of a disastrous fire, which occurred on the 12th inst. at 5.45 p.m. and destroyed some 57 houses. It was only a few months ago since the town was wholly reduced to ashes.

THE Nippon Kangyo Ginko (Japan Industrial Bank) has granted a loan of yen 300,000 to four cotton spinning companies. It is expected that other spinning companies will also apply for loans to tide over the present bad season.

A SHANGHAI telegram reports that 600 marines have been landed at Kaichow Bay, near Wei-hai-wei, from German men-of-war, and that the local force of 2,000 China soldiers were driven away and the German flag hoisted and saluted.

TROUBLE has occurred between Austria and Turkey at Mersina, Armenia, owing to the expulsion of the agent of the Austrian Lloyds S.S. Co. and the Austrian authorities threaten to bombard the town unless satisfaction is given.

A FEW nights ago, a boy of about 13 or 14 years of age was run over by a train on the line at Ichome, Honshiba, Shiba ku. A note was found upon the person of the boy stating that he had committed suicide on account of having been disobedient to his parents.

Dr. Divers' cook, who broke into a locked up room on his master's premises some time ago and stole \$600 in cash and a much larger sum in Bonds, which he destroyed, has been convicted, and sentenced in the Tokyo Court to ten months' imprisonment and six months' police surveillance.

A most successful entertainment was given by the dramatic amateurs of Yokohama in the Public Hall on Wednesday evening, in aid of the funds of the Mosquito Yacht Club, which lost its flagship in the typhoon of Sept. 9th. The performance was so successful that in response to general request, it was repeated on Friday night.

THE amount of gold coins exchanged during October and during 15 days ended with the

15th of November, was as follows:—During last month yen 4,911,430 were exchanged for silver yen and notes for 3,472,527 yen; during 15 days of this month yen 1,638,595 were exchanged for silver yen and notes for 1,422,303 yen.

In connection with the revision of the Treaty between Austria-Hungary and Japan, the Foreign Office dispatched a final message some days ago to Mr. Takahira, Minister to Austria. The final negotiations between the Austrian Authorities and Mr. Takahira were to take place on the 18th inst. and a telegram announcing the conclusion of the Treaty may be expected at an early date.

THE Yokohama Chamber of Commerce (Japanese) has addressed a protest to the Railway-authorities against the lack of traffic facilities and the block of merchandise at Yokohama station. The Niigata Prefectural authorities have done the same, as there is an accumulation of 5,000 tons of goods at Naoyetsu and elsewhere on the Shinyetsu line and rice cannot be got through to Echigo, though urgently needed.

JUDGMENT was given in H.B.M. Court for Japan, in Admiralty, on the 16th inst. in the collision case between the Austrian Lloyd's steamer *Melpomene* and the British steamer *Patroclus*. In an exhaustive judgment, Mr. Justice Wilkinson found both vessels to blame and ruled that half the damages to the *Melpomene* be paid by the *Patroclus*; the damages to be assessed by the Registrar, and no order as to costs.

In the recent case of assault by a jinrikisha coolie and others upon a bicyclist at Kobe, the case in which Mr. Ackermann, an American citizen, was charged with assault and battery by a jinrikisha man, whom Mr. Ackermann hit over the head with the butt of a revolver, was dismissed in the U.S. Consular Court, but in the counter charge laid against the jinrikisha man in the Japanese Court, the accused was found guilty and sentenced to five days' imprisonment.

THE Import market has reached a stage of stagnancy not experienced for a long while past, and what is worse, there appears to be no hope of business improving this year. In spite of an inflation of currency by a large over-issue of convertible notes by the Bank of Japan, a tightness of money is complained of on all sides, and in the principal manufacturing centre of Japan, Osaka, several heavy failures are daily expected. The smaller banks in many parts of the country are also in difficulties, and the Bank of Japan is very chary of making loans to any considerable extent. Added to these financial troubles there is a perfect block on the railways, so that goods accumulate during weeks and months at the principal stations, booked for points in the interior. Under these circumstances it is scarcely surprising that all imports suffer, nothing but the merest hand to mouth business being done in any lines, whether we take cottons, metals, kerosene or sugar. Rice is the only import that shows any vitality, because, owing to the shortage in the home crop and the high price to which the latter has risen, the people must have foreign rice in order to live. In Exports there has not been a great deal done during the past week. Holders of raw silk having given way considerably, some business has been transacted at reductions in rates, but buyers are not eager and the market is weak. A few transactions have taken place in tea, but the season is nearly over and there is very little of good kinds left in the market. Exchange is slightly improved.

SPIRIT OF THE VERNACULAR PRESS.

The *Nichi Nichi Shimbun* writes at considerable length about the approaching completion of the Siberian Railway, and endeavours to rouse its countrymen to the necessity of at once taking steps to establish a really efficient service of steamships to Vladivostok. Unless the enterprise be vigorously and quickly undertaken, the Russians will step in, and secure for themselves the great carrying trade that must grow up after the railway is completed. It is now well known that they are preparing to employ a large part of their volunteer fleet for the purpose—fourteen steamers of ten thousand tons each and upwards, and eight of from five thousand to ten thousand tons. It is not merely a question of losing a profitable business: it is a question of Japan's deposition from the place which properly belongs to her. She ought to become the central depot of the trade between Europe and America, between Europe and Asia, and between Europe and Australasia, but she may find that stream of wealth deflected from her shores so that she is left altogether out in the cold. No immediate prospect of gain may be discernible in connection with a line of steamers between Japan and Vladivostok, but the final issue of such an enterprise admits of no doubt. Besides, the national interests are involved in the matter, and men would be conferring a benefit on their country if they devoted themselves boldly and perseveringly to the undertaking, instead of squabbling over political differences, or running after official posts, or discussing empty problems of law, or speculating in shares.

With reference to the fact that the recent Cabinet crisis was not brought about by any radical difference of political views between the Ministry and their some-time allies, the Progressionists, but was really due to the machinations of the Satsuma clique, the *Jiji Shimpō* considers that the public need not give itself much concern about such questions. An idea apparently prevails that the Satsuma men, having gained complete mastery of the situation, and being, for the most part, deficient in the instincts of true progress, will pursue a retrogressive policy, and may even endeavour to wield the governing power in such a way as to establish a kind of dictatorship for their own clan. Apprehensions of that kind are baseless. Japan's progress in the *Meiji* era has not been due to the efforts of a few statesmen nor can it be interrupted by any petty coterie. It is the outcome of the spirit of the time, and since no change in that respect has come over the spirit of the time, there can be no suspension of the progressive movement. Whether the Administration be controlled by Satsuma men, or by Choshu men, or by any other men, the nation is the same nation, and its instincts can not be altered. As to the possibility of a Satsuma dictatorship, the idea is equally untenable. If the Satsuma men had entertained any such project, the Restoration would have been the time. There would have been no difficulty then in establishing a Satsuma Shogunate to replace the Tokugawa. But Satsuma showed no disposition whatever to essay the coup. Again, in 1875, Okubo was suspected of a similar design, but his actions proved him to be influenced solely by consideration for the nation's interests. The present Cabinet has given proof of remarkable promptitude and resolution. It emphatically declined to accede to the proposals of the Progressionists; faced their disaffection boldly, and lost not a moment in filling up the consequent vacancies in the ranks of the Administration. That was a praiseworthy display of precisely the qualities for lack of which it has been the fate of Cabinet after Cabinet to forfeit popular esteem. The Matsukata Ministry has an opportunity of recovering the esteem of the nation. Let it only do its work stoutly and without wavering. The people are weary of instability. They want a Cabinet that knows its own mind, has the courage of its convictions and devotes itself to public business instead of being engrossed in internal dissen-

sions and political intrigues. Given such a Cabinet, they do not care whether it be composed of Satsuma men or not.

The responsibility of naval officers furnishes a theme for discussion by the *Nippon*. Japan has now a fleet of 45 ships with a total displacement of 109,000 tons, and 28 torpedo-boats with a displacement of 1,770 tons. Before many years have passed, she will have 64 ships with a displacement of 254,000 tons, and 106 torpedo-vessels with a displacement of 10,076 tons. Very few of these craft cost less than a hundred thousand yen each and several of them represent an expenditure of ten millions. A vast amount of the nation's money is sunk in them, and the responsibility devolving on their commanding and navigating officers is correspondingly great. Is it fully recognised, and are proper steps taken to secure recognition for it? England is the world's model in naval matters. When a British vessel runs on a rock or meets with an accident of any kind, a court of inquiry is held, and the conduct of all the officers responsible for the safety of the ship is fully investigated, the result of the trial being invariably published. But in Japan that is not the case. There is, indeed, a Naval Law Council which is supposed to look after matters of that nature, but nothing is heard about its proceedings. For example, when the *Tsukuba* ran ashore at Sado, the public learned, in a casual manner, that a violent gale of wind had been the cause. Subsequently, however, the same ship met with a similar accident in the Inland Sea under the same captain during the war with China, but nothing was heard about the facts, and the officer is now in charge of a ship just as though nothing had happened. Quite recently, again, a collision occurred between the *Matsushima* and the *Fuso*, and the latter had to be beached. It is stated that the accident was due to a swift current, but surely that is not a sufficient explanation. No court of inquiry appears to have been opened. If the naval authorities take proper measures for ascertaining the causes of such happenings and fixing the responsibility, they certainly do not let the fact be known.

The *Yomiuri Shimbun* sounds the first note of hostility to the new Minister of State for Foreign Affairs. It is, however, only a warning note thus far. Baron Nishi—significantly dubbed a "Satsuma man"—is not the person whom the *Yomiuri* would have liked to see appointed, but now that he is fairly in office, his success is to be hoped for. He is understood to have announced that he will make no change in the foreign policy of his predecessor. That is as it should be. Such changes are not desirable. Sometimes, indeed, they can not be avoided. It was necessary that Count Okuma should change the policy of his predecessor because it was a policy not calculated to promote the country's prestige and not adapted to her circumstances after the war. Just in the same way it was necessary that Lord Salisbury should change the policy of his predecessor, Lord Kimberley. But there is no reason whatever why Baron Nishi should change Count Okuma's policy, and it is reassuring to learn that he has no such intention. But the question is, in what sense may his declaration be construed. If it be framed merely on the broad lines of cementing good relations with foreign Powers, maintaining the country's prestige and promoting the development of trade, then the definition is not satisfactory, for the bases of every foreign Minister's policy might thus be set forth on his assumption of office. Will Baron Nishi follow Count Okuma's policy in detail also? It is easy to state the three chief aspects of that policy. First there is the Hawaiian problem. In connexion with the proposed annexation of Hawaii by the United States, Count Okuma had obtained from the Washington Government a solemn assurance that the rights of Japanese subjects in the islands should be respected. But in addition to obtaining that assurance, Count Okuma had protested strongly against the annexation of the islands for reasons with which all must agree, and had

made arrangements for securing that his protest should receive due consideration when Congress meets next month. Does Baron Nishi intend to follow that route? Again, with regard to the dispute between Hawaii and Japan and the violation of the latter's treaty rights by the former, Count Okuma had carried the negotiations within sight of successful termination, and it is important to know whether Baron Nishi will adhere to the same programme. Korea is the second problem. There are many points connected with it that do not bear public discussion, but it is well understood that the broad object of Count Okuma's policy was to effect a clear demarcation of the spheres of Japanese and Russian influence in the peninsula, with a view to the maintenance of its independence. The Lobanoff-Yamagata convention afforded a basis of agreement, but was silent with regard to important points recently presenting themselves for discussion, such as the employment of Russian military men to drill Korean troops and the direction of financial affairs by Russia. It is above all things essential that Russia and Japan should fully understand each other, and that if as the Convention suggests, a more detailed agreement be desirable to promote such an understanding, measures should be taken to effect it. Count Okuma fully grasped the situation, and was in a fair way to mould it into an intelligent and secure shape. Does Baron Nishi intend to follow the same route? Finally, there is the question of Japan's attitude towards the neighbouring empire. China's condition is such as to suggest grave uneasiness. All the domestic factors that should knit and consolidate her strength seem to be momentarily paralysed, and, on the other hand, she is subjected to ever increasing aggressive pressure from without. It is in the interests of the peace of the East that China's integrity should be preserved, and the duty of contributing to that end devolves upon her neighbour, Japan. Count Okuma's Chinese policy was modelled upon those lines. The steps taken by him did not appear upon the surface, but were, nevertheless, numerous and sagacious. Does Baron Nishi intend to follow the same route?

The Tokyo *Asahi Shimbun* discusses the present aspect of Japanese politics, and arrives at the conclusion that the fruitlessness of alliances between Cabinets and parties has been placed beyond the reach of farther question. Marquis Ito, indeed, seems to have long ago foreseen that such means of conciliating the Diet could not be relied on, and that the safest course was to make the Imperial mandate the sheet anchor of the Administration. He therefore adopted the so-called *chosen shugi* (over-head policy), asserting and acting upon the principle that Ministers appointed by the Crown can not be deposed by the Diet. Yet there is one thing quite certain, namely, that so soon as a Diet is called into existence and invested with legislative functions, its exercise of those can not be ignored by the Ministry. Consequently, in ignoring them and remaining in office despite the Diet's hostility Marquis Ito added unconstitutional irresponsibility to his policy of supremacy. Count Matsukata has now adopted the over-head policy. Having essayed unsuccessfully to work hand-in-hand with a political party which would have given him a majority in the Diet, he has severed the connection, has declared it inconsistent with his duty as a Minister of the Crown to bow to the party's demands, and has thus debarred himself from renewed recourse to alliances of that character. It remains to be seen, however, whether he will adopt irresponsibility as well as superiority. To reject the demands of a political party that does not represent a majority in the Diet, and to ignore the voice of the Diet legitimately raised in the form of a majority vote, are two very different things. It may be laid down as a fundamental and incontrovertible principle that when constitutional machinery has been established for admitting the people to a share in administrative affairs, the administration can not be carried on over the people's heads. That

the Emperor should select and appoint his Ministers is right and proper, but that men who can not command the confidence of the people are unable to discharge the functions for which his Majesty appoints them, is self-evident. It results that there is one way, and only one, of reconciling the operation of the Imperial prerogative and the recognition of the privileges granted to the people. Let the Matsukata Cabinet adopt that way. Let them lay before the next Diet a frank and full statement of their policy, accompanied by an explanation of their reasons for adopting it. If the Diet rejects their programme, let them appeal to the country, and if the new members sent up by the constituencies adopt the same attitude of opposition, then it will be plain that the Cabinet has not the people's confidence, and that its resignation is a public duty.

Under the heading "a strong government, a strong people," the *Kokumin Shimbun* has an able article the tone of which rises far above the clamour of political factions. However rich a country may be in all the elements of material strength, it is nevertheless poor if its government be weak. France's example is very significant. France is endowed with everything needful to place her in the very foremost rank of nations, but the instability of the Cabinets constitutes a weak spot that deprives her of the weight she would otherwise possess in international scales. Her present Cabinet has lasted a year and a half but that is something quite unprecedented in her *post-bellum* history. Japan is threatened with a similarly mercurial condition of politics. The Matsukata Cabinet had been little more than a year in office when it was shaken to its foundations. A government does not rest upon a basis of its own manufacture: it has its foundations in the people. If the people are strong, resolute and constant, the same qualities may be looked for in the Government. It is no doubt wholesome that a Government should be criticised and exposed to the attacks of political parties, if the object of the criticism and of the assaults be to correct abuses and ensure good administration. But if, as there is too much reason to fear in Japan's case, the object be merely destructive, merely the pulling down of cabinet after cabinet in order to make way for the accession of a particular set of men to office, then it must be frankly acknowledged that the national interests are prostituted to party purposes. The people have duties and responsibilities towards the government just as the government has towards the people. If the country is to be great and prosperous its affairs must not be directed by men who are here to-day and gone to-morrow, and if the people suffer such things to be, they have to thank themselves for the consequences.

DYNAMITE OUTRAGE ON THE HOKUETSU RAILWAY.

At 3.20 a.m. on the 10th instant, an explosion of dynamite took place in the engine shed at the Nuttari station on the Hokuetsu railway. It was followed in quick succession by two other explosions, one at an iron bridge, the other in a store-house. Examination showed that the engine shed had been entered by digging under the sill. One engine and a portion of the building were shattered. The injury done at the store-house and bridge—over the Kuri-no-ki river—was not extensive. Ten thousand *yen* will cover the whole loss, according to the report of the railway officials. No casualty to life or limb occurred. The *Hochi Shimbun* attributes the incident to resentment on the part of the Niigata shareholders of the Company, who, it says, were shamefully deceived. Recourse to violence had been feared for some time, and the *Hochi* had urged the Company to make some amicable settlement, but no notice was taken of the advice.

"THE GIST OF JAPAN."

This is a volume by the Rev. R. B. Peery of the Lutheran Mission, who resides in Saga. Its chief object is to give a full statement of missionary work in Japan, and out of the sixteen chapters it comprises, one-half may be said to be devoted to that subject exclusively, the other half containing a succinct account of the country, the people, their characteristics, manners and customs, civilization, and so forth. Dr. Peery's style is simple, lucid, and free from mannerisms. We can not say that he sets many novelties before his readers, but, then, he does not profess to do so. Indeed, one of the charms of his work is the spirit of modesty and sincerity that pervades it. It is just what it professes to be—a plain statement for plain people, based on the most trustworthy information obtainable. On the whole, we think that the first six chapters convey quite as accurate and comprehensive an idea of Japan and the Japanese as can be obtained from the very much more voluminous treatises of other authors. Dr. Peery has the faculty of wise discrimination; he selects his materials well, and preserves the balance very successfully between the important and the trivial. Sometimes he disappoints us—notably in his essay on Buddhism. Nothing is to us more interesting than the story of the modifications that Buddhism underwent in the process of its adoption by the Japanese, and when we find that Dr. Peery devotes almost as many pages to the novel and insignificant sect, *Tenrikyo*, as to the whole history of Buddhism in Japan, we can not but wish that he had allotted his space differently. But it would seem that the question of non-Christian religions does not concern him much. He speaks of the missionary's home as "a place where he can evade the subtle influences of heathendom, which creep in at every pore," and the general tone of his writing indicates antipathy to all Oriental creeds. He is not unfair, however. All his judgments are evidently formed with the utmost conscientiousness, and if he is ready to acknowledge the praiseworthy elements of Japanese character, he is equally ready to set forth its faults. He speaks with authority and with interesting frankness about the private life of the missionary, his methods of work, the obstacles that prevent his success, and the outlook before him. In the catalogue of trials and hindrances we ourselves should have been disposed to assign a prominent place to the extremely unfriendly attitude of the foreign treaty-port residents, but Dr. Peery apparently has had no unpleasant experience of that kind. At any rate, he makes no allusion to the matter. Perhaps his distance from an open port has saved him. Indeed, there are some passages in his book that make us wonder whether the parts of Japan in which his missionary life has been spent do not differ significantly from the parts that come within the field of an ordinary resident's vision. The missionary's home, he writes, should be "a safe retreat from the sin and wickedness and vice around it." It should be well supplied with everything that will keep its inmate from being "orientalized, else he will be in danger of becoming heathenized." Referring, elsewhere, to the necessity of revisiting the West, he says:—"A too long uninterrupted breathing of the poisonous atmosphere of heathenism has a wonderfully cooling effect upon the missionary's ardour and zeal, and is trying to his faith." Finally, he quotes, with avowed approval, Dr. Edward Lawrence's definition of the life of a missionary:—"It is an exile as when a man is lowered with a candle into foul places, where the noxious gases threaten to put out his light, yet he must explore it all and find some way to drain off the refuse and let in the sweet air and sun to do their own cleansing work." * * * The missionary * * * is forced into closest relations with heathenism, whose evils he abhors, whose power and fascinations, too, he dreads." Making every allowance for the rhetoric into which men are apt to be betrayed whose work lies so much in the region of words, we can not but wonder where all these disagreeable things—sin, and wickedness, and vice, and poisonous at-

mosphere of heathenism, and noxious gas and refuse—are so much *en evidence* in Japan. They have not thrust themselves upon our own notice. We have seen more drunkenness and degradation in one day in an Occidental garrison town, and more flaunting displays of vice in one night in a great European Capital, than we have seen for thirty years in the streets of Tokyo. We do not mean to assert that the Japanese are more moral than the highly civilized nations of the West: that is a question apart. What we mean is that in no country is sin paraded less than in Japan. Another doubt that suggests itself is with reference to the "power and fascinations of heathenism." The term "heathenism," in the sense of its use by Christian missionaries, does not appear at all applicable to Buddhism, in our opinion, but that, too, is a question apart. What we find novel is the "cooling effect" ascribed to the "poisonous atmosphere of heathenism" and the "dread" expressed of its "fascinations." Do those statements really represent the view of the average missionary? The layman, certainly, experiences nothing of the kind. His life is neither worse nor better here than it is at home, and, so far as we know, there have not been more than one or two converts to Buddhism in all these years. To us both Dr. Peery and Dr. Lawrence seem to use exaggerated terms, but we acknowledge that they may have a special standpoint. At all events their comments are very interesting. So, too, are many of the problems propounded by Dr. Peery. He asks, for example, what course a Christian householder should pursue when applied to for the contribution made by all his neighbours on account of some Buddhist or Shinto festival. That must be a hard nut for some consciences to crack. Of course it may be urged that Christian propagandists have no hesitation in seeking the pecuniary coöperation of disciples of Buddhism or *Shinto*. Many contributions of that kind have been obtained in Japan for the founding of Christian schools. But to the missionary it could not possibly seem wrong that the "heathen" should assist to spread Christianity, whereas the converse proposition might appear most repugnant. We must refrain, however, from following Dr. Peery any farther. His book fills a niche hitherto empty and will set a great many people thinking. Let us add that it is beautifully printed on luxuriously thick paper, that it has several very pretty illustrations, and that the publishers are Messrs. Fleming H. Revell Company, New York. Doubtless Messrs. Kelly and Walsh are agents in Japan, but here we speak from conjecture only.

THE JAPANESE CONCESSION AT TIENSIN.

A telegram dated at Tientsin 8 a.m., the 13th instant, appears in the *Yiji Shimo*. It says that the Japanese Chargé d'Affaires had just set out on his return journey to Peking, having brought to a satisfactory conclusion his negotiations with the Viceroy for an appropriation of land to form a Japanese settlement, as stipulated by the Shimonoseki Treaty. The Viceroy seems to have acceded to the Chargé's proposals. According to the telegram, the area of the allotted space is 400,000 *tsubo*, or some 330 acres, but it appears to us that there must be some mistake about this figure. We do not think that any such space is available at Tientsin.

PUBLIC ADVERTISEMENTS.

There is now in England a "National Society for Checking the Abuses of Public Advertising." The object of the association is to preserve naturally pretty prospects against the invasion of flaunting posters and vulgar pictures. The members propose that a regulation should be enacted prescribing a maximum size for letters used in an advertisement, and forbidding any display of "speaking emblems" at more than a given height from the ground. The number of people in England who are willing to interest themselves actively for the general good is quite a feature of our era.

THE FINANCIAL PROBLEM.

There are plain signs that agitation against the military increment contemplated in the *post-bellum* programme is growing in strength and importance. We have already stated that the President of the Tokyo Chamber of Commerce, Mr. Shibusawa Eiichi, spoke out most emphatically on the subject at the recent meeting of all the united Chambers of Commerce. A *resumé* of his speech is now published. "Up to 1895," he said, "the State budgets used not to exceed 80 or 90 million *yen*, but in consequence of the *post-bellum* undertakings, they grew to 200 millions in 1896, and to 240 millions in 1897. The Ito Cabinet compiled a table of expenditures covering a period of ten consecutive years, and the Matsukata Cabinet amended it, making some increases. According to that table, there ought to be a surplus of 5 million *yen* on the side of revenue in the fiscal year 1898-9, but, on the contrary, there is a deficit of 27 millions. Such figures naturally inspire grave uneasiness as to the future dimensions of the budget. What is to be the limit? What we understand by regulating the finances is not an increase of taxation. Anybody could make ends meet if there was nothing to be done but to collect additional revenue. The question is, what policy does the Government intend to pursue for getting the finances into order. I do not think that any confidence can be placed in the present system of finance. The principal cause of this expansion of the budget is undue military increment. There is, of course, no manner of doubt that military increment can not be dispensed with, but, on the other hand, military increment disproportionate to the national resources becomes a means of impairing the country's prosperity. We have an example before our eyes in the case of Italy. It is one thing to procure a number of ships of war and to raise a large army, but it is another thing to maintain them, and unless there is strength to maintain them, they are of no use. On the contrary, by reducing the number of ships and soldiers and putting the national finances into order, the prestige of the State may be advanced and the respect of foreign countries secured. We have to ask ourselves whether the sums we are now spending are in proportion to our resources, and if the answer be in the negative, there can not be the least doubt that we must reduce them. Otherwise, the very bases of national wealth, namely, agriculture, industry and commerce, will be arrested in their development. Nor is it on their account only that we bestir ourselves: the best interests of our country also are at stake, and it behoves business men to exert themselves vigorously."

It appears that Messrs. Shimada Saburo and Taguchi Ukichi also are busily organizing a party which will be called the "Association for the Regulation of the Finances" (*Zaisei-seiri Dōmei-kai*). Mr. Shimada has steadily advocated, in the columns of the *Mainichi Shimbun*, a reduction of the programme of army development, and it is upon those lines that the association is to be formed. Count Matsukata's promise that he would put the finances in order before the eleventh session of the Diet, is recalled by the promoters of the movement, and they contend that the first thing re-

quired is to bring down to reasonable dimensions the scheme of military expansion. What they regard as reasonable dimensions would apparently be attained if instead of raising the standing army from six Divisions to twelve, the project were cut down to nine. In other words, instead of doubling the Army, they would only add fifty per cent. to its strength. If the Cabinet accepts that proposal, they talk of giving the Ministry their support in other matters. If not, they will oppose it to the bitter end.

It appears to us that this movement ought to succeed. When the programme of military and naval expansion was originally published, we expressed an opinion that the army side of the account was quite out of proportion. A large army is a very fine thing, but the question is whether it can be utilized. Japan showed, during the war with China, that she could put a hundred thousand men into the field—a foreign field—and that she could maintain them at that strength. But the effort completely dislocated the machinery of her coast-wise carrying trade, and entailed costly inconvenience on her commerce. In short, she had the men but she had not facilities for utilizing them. Suppose that her army were doubled and that she wanted to put two hundred thousand men on the continent of Asia. Could she do it? Has she a transport service, or will she, in eight yearstime, have a transport service, adequate for such an undertaking? We see no signs of its growth. Our conviction is that an army with a war strength of half a million men would be considerably in excess of Japan's capacity to employ it, and that if, when war broke out, she found herself with a great number of troops which she could not put into the field, her position would be decidedly humiliating. We say nothing of the danger of organizing a force so large as to provoke foreign suspicion and inspire its units with a conviction that their *raison d'être* must be sought in wars beyond the seas. That aspect of the question is worthy of attention, but, for the moment, the main point is that Japan is organizing an army too large to be utilizable.

With reference to this subject, the *Kokumin Shimbun* takes an interesting line. It contends that while Japanese economists are advocating the introduction of foreign capital, and while Japanese financiers have placed the country's currency on a gold basis for the purpose of gaining access to foreign money markets, Japanese journalists, politicians and even economical experts are defeating that purpose by speaking in alarmist strains about the national finances, and by urging the postponement of the *post-bellum* programme of armaments expansion. They keep their eyes rivetted on domestic happenings and forget to look abroad. They do not perceive that the average foreigner has very little insight into Japanese affairs, and that if he finds the Japanese themselves talking as if they were in pecuniary straits, he will naturally conclude that their condition is at least as bad as they represent it to be. All that is very true, but we can assure the *Kokumin* that, so far as Englishmen are concerned, nothing could tend more effectually to inspire them with confidence in Japanese finance than to see the people discuss it intelligently and not too san-

guinely. We ourselves are disposed to deprecate, as misleading and unduly alarmist, statements like that recently made by Mr. Shibusawa Eiichi at the general meeting of chambers of commerce, when he pointed with evident concern to the fact that the annual national expenditure has grown from 90 millions in 1894 to 260 millions in 1897. A man with an income of nine hundred pounds a year might spend eighteen hundred pounds in one summer on building a house, but no one would think of alleging that his yearly outlay had suddenly been trebled, and that his financial condition was consequently alarming. That is pretty nearly Japan's case. Her exceptional and extraordinary outlays for exceptional and extraordinary purposes must not be regarded in the light of regular annual expenditure. But the most superficial foreign critic is not misled by indiscriminating assertions of that nature, and although Japanese journalists habitually speak of foreigners as "unversed in Japanese affairs," we can assure them that the ignorance is not so great as they imagine. Seven years ago, a great London banking firm offered to Japan any sum she chose to name from one million to thirty millions sterling at 5 per cent. at par. We had an opportunity of seeing the letter that covered the offer, and we were absolutely astonished at the minute acquaintance that the writer possessed with what was going on in Japan. There was not an enterprise of any importance, projected or initiated, with which he did not seem to be familiar. All were referred to in clear terms of evident understanding, and for all, or any one, capital was offered. Yet the agents by whom the letter was compiled were men whose attention might reasonably have been supposed to be wholly engrossed in the multitudinous and vast undertakings with which they were already connected in Europe and America. The effect produced upon us by a perusal of the document was a feeling of deep admiration for the wide range of the English business-man's vision, and a sentiment of commiseration for the amateurs who sometimes undertake to show him how his affairs ought to be conducted. We may add that we have never seen in Japanese journals or periodicals *exposés* of Japanese finance so perspicuous and comprehensive as those that appear from time to time in British journals. On the whole, therefore, we are inclined to think that the hackneyed expression *Nippon no jifo ni tsuwaesaru gaijin* is becoming antiquated. There is not much fear that foreigners will be misled by the frankness with which the Japanese discuss their own monetary affairs, or by the nervous interest that they show in them. Neither would foreign faith be at all shaken if Japan cut down her scheme of army expansion. Thoughtful foreigners wondered from the outset how she could hope to utilize such a force, and they would congratulate her on her prudence if she reconsidered the programme while there is yet time to modify it. Japan is not expected to escape errors. Every government errs from time to time. But the biggest error in the world is to recognise an error and not remedy it. That, indeed, is a sure way to shake public confidence.

NEXT SESSION OF THE DIET.

It would appear from the statements of vernacular newspapers that the extremists in the approaching session of the Diet are to be the Liberals. Hitherto, that rôle has always been played by the right wing of the Progressionists, that is to say, by the old *Kaishin-tô*, whose leader in the House of Representatives is Mr. Shimada Saburo. It is very conceivable, however, that the Liberals should desire to retrieve their somewhat impaired prestige by adopting a particularly stalwart attitude at this juncture. Their plan is to introduce an address to the Throne impeaching the Cabinet, but nothing is said as to the counts of the indictment. Foreign affairs can scarcely be touched upon. Even if there were faults to be found with Count Okuma's policy, that range of subjects would have to be excluded from the field of discussion since without the support of the Progressionists no such measure could be passed, and the Progressionists could not possibly vote for an address impeaching their own leader. If, on the other hand, foreign affairs are tabooed, the Liberals might be puzzled to frame an impeachment. It is against the foreign policy of the Okuma Cabinet that the voices of journals like the *Nichi Nichi* and the *Tokyo Shimbun* have been chiefly raised. They accused Count Okuma of precipitating the annexation of Hawaii by sending a man-of-war to Honolulu, and they accused him, also, of allowing Russia to have her own way in Korea with regard to the question of military instructors. Now the leading Liberals are very well aware by this time—though a great many journalists seem to be still ignorant of the fact—that the Russian drill instructors about whom there has been so much talk, were applied for by the Korean Government, and actually engaged before the signing of the Yamagata-Lobanoff Convention. There was, consequently, no possibility of formulating from Japan's side a reasonable objection to their employment. That count could not figure in an impeachment, and it would be almost farcical to base an address to the throne on the sending of the *Naniwa* to Honolulu. Apart from foreign policy, what materials are there? Not finance: that is out of the question, the Cabinet having followed, in the main, the lines mapped out by its predecessors with whom the Liberals were allied. There remain only the Takano affair and the Audit Bureau business—scanty materials, surely! It appears to us the only logical course for the Opposition to pursue is to wait until the new taxation measures come up for debate, and vote against them. Then there will be a dissolution and an appeal to the country. As to the result of the appeal, little room for doubt seems to exist. This rupture between the Cabinet and the Progressionists must have the effect of throwing the latter once more into the arms of their some-time allies, the Liberals. It was Mr. Hoshi Toru that dug the chasm between the *Kaishin-tô* and the Liberals, three years ago, and Mr. Hoshi is now standing outside the arena of politics. Besides, the Liberals are no longer inspired by the pride of power. They have fallen from their old position of easy leadership among political parties to the place of a bad second. We doubt whether they will go to the polls with an independent platform, and are rather dis-

posed to anticipate that, after losing a few more of their members by gravitation to the *Kodo-kai*, they will amalgamate with the Progressionists, and both together will appeal to the constituencies. In that event the main line of cleavage at the next elections would be pro-government and anti-government, and the victory—probably an over-whelming victory—would rest with the latter. It is hard to see why the National Unionists should survive the ordeal of a general election, unless personal considerations and local influence constitute special factors in their favour. But the time has scarcely come for any confident forecast.

NEW FOREIGN MINISTER'S POLICY.

H.E. Baron Nishi, the new Minister of State for Foreign Affairs, is reported by the *Yiji Shimpô* to have expressed himself in the following strain to a friend visiting him:—"I have not the gift of eloquence and do not love talking, above all where foreign affairs are concerned. In that realm privacy is essential. If a diplomatist desires to succeed, it is a bad plan to proclaim to the world his plans. He may gratify some people by doing so, but their satisfaction is very far from compensating the injury that his policy suffers. Very seldom indeed could he escape failure when he came to carry out his projects if he had announced them beforehand. Having accepted the responsibilities of this important office, I shall not fail to discharge its duties in accordance with the dictates of my conscience and the teachings of my experience. The public need not be uneasy about what I do. If my policy begets trouble, I don't object to having my head knocked off! That I will make peace and friendship a guiding principle of our relations with foreign Powers, is a matter of course; but on the other hand, I shall strenuously oppose anything calculated to sacrifice the country's interests to foreign purposes. That the national interests should be sacrificed or the national prestige impaired merely for the sake of preserving peace, is not the true purpose of foreign policy. As for myself, people say that I am a Satsuma man. Well, when I was twenty-three, I went to Russia, and I have spent nearly half of my life abroad. I am now fifty, and whether I retain any traces of my Satsuma origin is doubtful. When the Kago-shima folks formed the *Kyoyu-Kai* (association of village friends) and asked me to endorse the undertaking, I declined to do so. In the field of my vision the country only has a place. How could one hesitate between country and native village? It is also said that I have Russian proclivities and that they will show in my foreign policy. That is altogether erroneous. It is true that I was longer in Russia than in any other country, but I am not unacquainted with the affairs of other States. I have been abroad four times and have made the tour of all the countries in the West. I spent more than two years in Paris. On my way back from Russia, I passed through Central Asia. I do not think that I am behind other men in my knowledge of the world. People may say that I have Russian proclivities, but the Russians themselves do not think so. They give me the credit of being a strong patriot. I shall not say anything hereafter, but shall merely act. I shall not regard public criticism."

STUMPS AND TAILS.

There is a game played in Tahiti—the game of stumps and tails. A number of variously bred and variously aged dogs have their tails docked, and are then placed in a large basket, the tails being deposited in another receptacle. Each player takes a dog or a puppy out of one basket and a tail, at random, out of the other. Success consists in happening to bring together the right stump and the right tail, but the sport of the thing is the grotesqueness of the resulting misfits. The *Japan Gazette's* method of controversy is modelled on the stump-and-tail pastime. It jumbles together an opponent's premises in one hat and his conclusions in another, and then taking them out hap-hazard, pieces them together. For example, the *Gazette* having claimed that journals edited by foreigners in Japan must be secured against the caprices of the Diet, we pointed out that even in Great Britain no such security exists, as witness the special legislation resorted to some years ago for the control of seditious journals. Elsewhere we discussed a wholly different point, namely, whether newspaper enterprise can be considered an operation of "wholesale or retail trade." Well, in the *Gazette's* stump-and-tail game, the special legislation record and the trade question having chanced to come out simultaneously, our contemporary joined them together, and found the result so comical that it presented it to the world with a happy chuckle. The transportation of the editor of the *United Ireland*, it cries, is "quoted as a conclusive proof that a newspaper business is not a trade." Yet, 'tis a quaint juxtaposition of ideas. But there is a much more profitable and suitable employment which we recommend to the editor of our stump-and-tail contemporary, an employment in which he would figure with considerably greater grace and appropriateness than he does in a controversy: it is to borrow a square of carpet and tumble at a street corner.

THE INDIAN FAMINE.

We have received from Her Majesty's Consulate a copy of the "First Report of the Central Executive Committee of the Indian Famine Charitable Relief Fund." The Report covers the period from January to July 1897. It is sad reading, but, at the same time, the strong and successful efforts made officially and privately to mitigate the calamity form a bright side to the picture. The Indian Government's experience of famines has now been sufficiently extensive to educate a special faculty for dealing with them, and we think that it may be fairly claimed for the British that where a work has to be done demanding at once benevolence, organizing capacity, and promptitude, they seldom make a failure. Methods of gauging the approach of a famine have been reduced to something like a science. Estimates of the probable yield of crops in a particular district must, of course, be more or less fallacious, but it has been proved by the annals of many years that when the whole out-turn of the year falls to 25 per cent. of a full crop, intense famine is inevitable, and that, with such an out-turn, the prices of food-grains rise to three times the ordinary figures, wherever railway facilities do not exist on an ample scale. Hence, when the minute returns

regularly compiled in the various provinces, show that prices are approaching the double of normal figures, measures are immediately adopted in view of serious distress. Seventeen years ago, a famine commission was appointed to collect evidence and formulate suggestions, and its recommendations having been fully adopted, there now exists an elaborate and systematized organization for dealing with these calamities. Precise indications of the duties to be discharged by every one concerned in carrying out the system are laid down in famine codes; lists of works for giving employment to the able-bodied are carefully drawn up in every province and revised from time to time, and clear and accurate regulations are enacted for the relief of the weak, the infirm and the aged. Moreover, during the past twenty years, the Government, made wise by a terrible famine in the Deccan and Mysore, had systematically constructed a series of protective railways throughout the areas most liable to scarcity, and thus, when the premature cessation of the annual rains at the end of August in 1896 was followed by a failure of crops, and it became evident that wide-spread distress must be anticipated, no confusion or uncertainty was felt: the relief machinery was all ready, and the local governments had only to choose the moment for setting it in operation. The main facts of the calamity and of the measures employed to mitigate it, may be stated in a very few words. The famine extended over an area of 575,237 square miles, with a population of 128 millions, and on the 5th of June the number of persons actually employed on the relief works was 3,115,281, and the number receiving gratuitous relief, 1,108,918. Thus it may be roughly said that throughout this immense area relief was being furnished to one person in every thirty on the 5th of June. If such was the state of affairs on a particular day, we may infer that the total section of the population to which aid was extended from first to last must have been about ten per cent. of the whole population. That is a remarkable record, and when we consider the celerity with which the vast machine was set working and the smoothness of its operation, we can not but admire the efficacy of the Indian Administration. As to the sums expended by the Government for relief purposes, no information is given, but the amounts subscribed by private charity aggregated 16,245,963 rupees. There is one point worthy of notice in this context, namely, the sums contributed by foreign countries. We collect them in a table:—

	Rupees.
Russia	98,153
United States	21,275
Sweden, Denmark and Finland	5,736
Netherlands	1,938
Germany	395
Italy	190

It is interesting to find Russia at the head of the list. Of course, one can not tell what portion of these monies came from the purses of British subjects resident in the various countries named, but even admitting that the whole were subscribed by nationals of those countries, it must be admitted that, if we except Russia and the United States, the great sums constantly subscribed in London for the relief of distress in other States have not yet educated a spirit of reciprocity on the latter's part. The contributions from England and Scotland aggregated £758,850, Lancashire alone giving

£127,812. The Report contains many interesting details of the work done in the various provinces, but we have no space to pursue the subject. The thought that occurs to us as we close the book is, what awful sufferings the people of India must have endured in the old days when no railways existed to carry food-stuffs to the famine-districts, nor any organization for the discovery and relief of distress. There were doubtless years when starvation claimed not thousands but millions of victims.

By way of postscript to the remarks published in our last issue on the subject of the Indian Famine, we may mention that the priests and parishoners of the Nichiren Sect of Buddhists in Japan subscribed a sum of 562,545 yen—the 5 *rin* are suggestive—towards the Relief Fund, and that the amount was handed by the Japanese Government to her Majesty's *Chargé d'Affaires* in Tokyo for transmission to Calcutta. On the 13th instant Mr. Lowther conveyed to the Imperial Government the "warmest and most grateful thanks of the Central Executive Committee for the kind and generous assistance so opportunely rendered."

NEW KOREAN FINANCIAL ADVISER.

The *Kokumin Shimbum* publishes a document said to be a copy of the agreement under which Mr. Alnuxieff's services are secured for Korea in the capacity of financial adviser and commissioner of customs. The agreement is signed by the Korean Minister of Foreign Affairs, Cho Pyong-sik, and the Russian Representative in Seoul, Mr. de Speyer. We translate the document:—

In accordance with the commands of the Emperor of Korea, the Korean Minister Plenipotentiary in Russia, Min Yong hwan, having requested the Imperial Russian Government to send to Korea an official versed in finance, whose functions would be to transact all the financial business of Korea, and to take charge, at the same time, of her customs, the Russian Government acceded to the request, and directed Mr. Alnuxieff (described as a "member of the great council" *Trs.*) to proceed to Seoul, where he recently arrived. Now, therefore, the Korean Minister of Foreign Affairs and the Russian Minister, acting on behalf of their respective Governments, have consulted as to the duties to be henceforth undertaken by Mr. Alnuxieff, and have agreed as follows:—

1.—Mr. Alnuxieff is appointed as Adviser to the Korean Finance Department and as Superintendent of Customs.

2.—The Korean Government will pay to Mr. Alnuxieff, by way of salary in connection with his post of Financial Adviser a sum of three thousand dollars yearly.

3.—The duties of the Financial Adviser shall be:—

(a.) To make provision for the taxation revenue and the public expenditure of the ensuing year, and to submit (the budget) to the Korean Government. Provided that the Ministers concerned shall be consulted in all matters, and that the Financial Adviser shall not act on his own arbitrary authority.

(b.) To superintend all the receipts accruing to the Korean Government from taxation; to take them over from the chief collectors; to preserve them carefully and to employ them safely and profitably.

(c.) To pay in to the Korean Treasury and to the other official treasuries the sums necessary to defray the outlays of the various offices of the State, according to the amounts fixed in the budget.

(d.) To manage the Government's expenditures in the most cautious and strict manner.

(e.) To render an account to the Korean Government every month of the monies received under each item of the budget.

(f.) To render an account to the Korean Government of all new obligations incurred or old ones discharged.

(g.) To submit to the Korean Government a general statement of the country's finances.

4.—The various departments and offices of

Korea shall conduct the financial affairs appertaining to them in accordance with the recommendations and directions of the Financial Adviser; and shall supply him with whatever documentary assistance or aid of any other kind he may require.

5.—The Financial Adviser shall specially provide a suitable person to superintend the Korean Customs in *lieu* of the present occupant of that post. (This article is obscure. *Trs.*) The Superintendent of Customs shall submit all his accounts to the Financial Adviser, and shall report to him all expenditures and receipts, the Financial Adviser, in turn, reporting to the Korean Government.

6.—The Korean Government, when it concludes an agreement with the person appointed to be Superintendent of Customs, shall accurately determine his functions.

7.—Should the Financial Adviser have occasion to leave his post, he shall previously select a competent *locum tenens*, and shall make him discharge his duties during his absence. The person so selected must be approved by the Korean and Russian Governments. In the event of the Financial Adviser's return to Russia, he shall not leave Korea until a successor has arrived to discharge his duties.

8.—The period of this engagement is unlimited. In view of the friendly relations existing between the two countries, no occasion exists to fix a term of years. If at any time a Korean official be found competent to discharge the functions of financial adviser, and if, in consequence, the engagement of the present Financial Adviser should be dissolved after consultation between the two Governments, it is nevertheless agreed that no national other than a Korean or a Russian subject shall be appointed to the office. Should there be any reason for desiring to terminate this agreement, a period may be fixed by consultation.

(Signed.) KOREAN MINISTER OF FOREIGN AFFAIRS.
RUSSIAN REPRESENTATIVE.

(Dated) October 5th.

We refrain from commenting on this extraordinary document, for we find its provisions quite incredible. One thing, however, seems certain, namely, that Mr. Alnuxieff remains a Russian official while he holds the appointment of Financial Adviser to Korea. Russia pays his normal salary and Korea gives him a special emolument of three thousand dollars annually. The Russian officers and non-Commissioned officers acting as drill instructors in Korea are on a similar footing. Pecuniarily speaking, Korea gets the service of all these experts at a comparatively cheap rate. It is not an arrangement that we should be disposed to call dignified from the point of view of a European Government, but it may serve special purposes.

THE "HOCHI" ON THE CABINET.

The Government, the *Hochi* says, seems to have considered that it would be able to gain over to its side the entire clique of the Kodo-kai and the Liberals, and also to retain at least thirty of the Progressionists. But the Kodo-kai has already assumed a hostile attitude and the National Unionists are watching their opportunity to attack the Cabinet. What tactics can the Government pursue to successfully confront these inveterate enemies? It is reported to have already adopted a certain course towards the Liberals. On the one hand, it endeavoured to secure, through Mr. Matsuda Masahisa, the support of the anti-Tosa party, on the condition that Mr. Hoshi should receive the portfolio of Foreign Affairs, and on the other hand Mr. Hayashi was approached. He proposed that, in reforming the Cabinet so as to secure the assistance of the Liberals, Count Matsukata should retain only the post of Finance Minister, and Count Kabayama be appointed Premier, with Count Itagaki as Home Minister. The first of these two schemes was relinquished by the appointment of Baron Nishi to the post of Foreign Minister. The second is now in progress. The Government has already experienced the injurious effects of coöperation with a political party. While professing to pursue an independent

course, the Government formed its Cabinet with the Satsuma clique at its head and the Higo clique at its back. Where do we find, the *Hochi* asks, any legitimate reform of the Cabinet? Again, the Government is perfectly aware of the advantages of buying up the weak members of Parliament, and steps are now being taken to purchase them from all parties—Liberals, National Unionists, and Progressionists.

WELCOME SOCIETY'S MAP OF JAPAN.

Some time ago, we mentioned that the Welcome Society of Japan contemplated the publication of a tourist's map of the whole of Japan, showing not merely the usual cartographical features of the country, but also the railways open, under construction, or chartered, the principal roads, the railway stations, the notable places, the hot springs, the water-falls, the rapids, the volcanoes, the lines of steamers, the light-houses and the anchorages. The map has been published. It appears to us to be the best thing of the kind that has ever been offered to the public. Printed on thick paper, as strong almost as linen, it folds into a little pamphlet that can easily be carried in the pocket, and opens into a sheet sufficiently large for an admirably clear chart of the empire and all its out-lying islands—Formosa not excluded—as well as a skeleton map of the world, indicating all the lines of steamers that connect Japan with Europe, America, Africa and Australasia. Merely in the light of a handy and accurate map it should prove of the greatest use whether in private houses or in merchants' offices, and we do not hesitate to predict that every tourist will provide himself with a copy. Of the four reverse faces obtained by folding the map—each face containing eight pages—one is occupied with an account of the Welcome Society's *raison d'être* and the various devices for the assistance of tourists; the other three, with advertisements, many of which are very prettily illustrated. It is a matter of surprise that so little advantage has been taken of this excellent advertising medium by the foreign firms in Yokohama. Among 54 advertisers only three are foreign—the Pacific Mail S. S. Company, the Grand Hotel, and the *Japan Mail*. Quite recently, the Yokohama public were induced to put up a considerable sum for the preparation of a pictorial representation of the Settlement's business aspects, though no apparent reason existed for regarding the enterprise as a good advertisement. But this map will certainly find its way all over the world. It costs only 50 *sen*, and the first edition of eleven thousand will certainly be sold out very soon. Indeed, we expect that it will have a steady and steadily increasing sale. The compilers were most anxious to have a due proportion of foreign names, and with that object kept pages vacant until the eleventh hour, despite numerous and pressing applications from Japanese. But Yokohama declined to recognise the opportunity. We recommend our readers to have a wiser appreciation of a good thing by providing themselves at once with a copy. We believe that the map can be obtained at Messrs. Kelly and Walsh, though we can find no intimation of the fact, but it certainly can be obtained at the Society's Office in the Imperial Hotel.

JOURNALISM A TRADE.

To the champion who has set machinery in motion to secure the profession of foreign journalists in Japan against "the caprice of the Japanese Diet or of a Japanese Cabinet," we desire to recall a well-known page of British history. It belongs to the year 1848. In that year a certain John Mitchell edited and published a newspaper called the *United Irishman*, which, from week to week, made itself the propagandist of disaffection and insurrection. Ordinary processes of law would have been ineffectual to restrain the pestilential sheet. The Government accordingly introduced and passed

rapidly through parliament a measure under which all written incitement to insurrection or resistance to law was declared felony, punishable with transportation. Mitchell was arrested, tried and sentenced to fourteen years' transportation. The champion would call that "a caprice of the Cabinet and of the Diet," no doubt, if it happened in Japan, but does he seriously imagine that either Cabinet or Diet can be held to have forfeited the right to secure public order by exceptional measures against journalistic excesses merely because Japan has signed a treaty allowing foreigners "to trade by wholesale or retail in all kinds of produce, manufactures and merchandise of lawful commerce?" The fact is that the profession of journalism can not by any possibility be regarded as an ordinary commercial enterprise. It does not fall within the legitimate purview of a commercial treaty, nor would any government in the world agree to bind itself by any pledge as regards foreign journalistic enterprise within its borders. We have precisely the same interest in this matter as any of our contemporaries, but we think that the common cause can only be injured by displays of bombast and unreason.

CRITIC AND CRITICISED.

(Italicised by us.)

Extracts from a letter by the criticised (the Special Commissioner of *The Engineer*), published in *Japan Mail* of Nov. 12th.

I agree substantially with what you say with regard to the reasons for the disavowal with which Yokohama men are regarded by the Japanese, nor do I think that individual merit has anything to do with the question. But if you will refer to my article you will see that I do not go into the rights and wrongs of the case, but merely state the fact—a fact with which I presume both you and Yokohama people will agree.

With regard to its being a stigma in the eyes of a Japanese to be a treaty-port man, I do not say that such a state of things is justifiable, but that it exists. Personally, I think it to be quite unjustifiable, but no one who is in intimate touch with the Japanese can come to any other conclusion than that such a feeling exists.

There are certain treaty-port firms, as I mention in my article, who, in spite of the terrible handicapping, are yet able to deal satisfactorily with engineering representation, and it is greatly to their credit that they can do so. No doubt in other trades, with regard to which Government work is not so overwhelmingly important, treaty-port agents are all round greatly preferable to others. On this subject, however, I can offer no opinion, as my remarks in "The Engineer" have only to do with engineering work.

I have no wish whatever to enter into a discussion on anything I have written, but I should be sorry if a remark of mine, with the truth of which, I gather from your article, you agree, should be taken as implying either that I underrated the business capacity of the treaty-port foreigner, or that I sympathise with the attempt of the Japanese to block his work.

This is a very good average specimen of Yokohama journalism, and since the Special Commissioner is here to take notes it is just as well that he should have an object lesson in Yokohama newspaper morality. He can now understand what kind of treatment these accurate and conscientious critics accord to every one out of whom they think they can make capital by spurious displays of local patriotism. The

Remarks of the critic (Editor of *Japan Gazette*) in his journal of Nov. 13th.

Never a globe-trotter passes through but he is able to teach the men who have built up Japan's trade their business. The latest gratuitous instructor is a correspondent of a paper called *The Engineer*, presumably a trade journal. This correspondent has been in Japan a few months and has made the discovery that the foreign merchants, English, American, German, French and Italian are altogether wrong. In point of fact they have committed one stupendous error. There is a social Club in Yokohama and there is a social Club in Tokyo, but no member of the Yokohama Club may become a member of the Tokyo Club because a member of the latter was some time ago "pilled" by the members of the former.

And you can only do business in Japan by being a member of the Tokyo Club. Therefore, if English manufacturers wish to do business in Japan they must send agents to Tokyo, who will studiously avoid Yokohama, and then they will quickly make their fortunes. It is all very simple to the correspondent of *The Engineer*, and no doubt the Yokohama merchants will erect a statue in honour of the man who has thus exposed the weakness of their whole system.

Special Commissioner dealt with one minor branch of business only—Government engineering contracts. He exposed a state of affairs which renders it exceedingly difficult for any but a privileged few to obtain a share of such business. The story he had to tell is well known to the best British merchants in Yokohama, so well known that they do not care for Government contracts and make little effort to secure them. They prefer the straightforward sound lines of regular imports and exports, and find that better and far more permanent profits can be secured by handling the great staples of commerce than by waiting, hat in hand, at official doors or devising devious routes to circumvent wily rivals. The Special Commissioner very cleverly and industriously probed to the roots of the affair and laid them bare. It was, we repeat, the one subject of engineering contracts that he discussed. Yet his critic accuses him of having made "the discovery that the foreign merchants, English, American, German, French, and Italian are altogether wrong." The Special Commissioner, says that, "no doubt in other trades" (not engineering work) "treaty-port agents are all round greatly preferable to others," but that he "can offer no opinion on that subject," and adds that he should be sorry if any remark of his were "taken as implying that he under-rates the business capacity of the treaty-port foreigner." Yet his critic charges him with alleging that the treaty-port merchants of all foreign nationalities "are altogether wrong;" that "if English manufacturers wish to do business in Japan they must send agents to Tokyo who will studiously avoid Yokohama, and that "the whole system" of the Yokohama merchants is "weak." The Special Commissioner alludes incidentally to the fact that Yokohama men are black-balled at the Tokyo Club as one indication of the prejudice against treaty-port foreigners, and his critic represents him as saying that the "one stupendous error" committed by the foreign merchants in Yokohama is the act which closed the Tokyo Club to them, and that "business can only be done in Japan by being a member of the Tokyo Club." What an estimate this critic must have formed of Yokohama intelligence. What an idea he must have of truth and justice.

FRACAS BETWEEN WORKMEN AND SEAMEN.

About 9 o'clock on the night of the 14th instant over twenty workmen employed by the Yokohama Dock Company, armed with swords, clubs, etc., made an attack upon the Yokohama Seamen's boarding-house, in the native town. The seamen in the boarding-house defended the place against the intruders while one of their number was dispatched to the Police Station for assistance. For a while severe fighting ensued between the seamen and the workmen, until a number of police from the Isezaki Police Station arrived on the scene and succeeded in dispersing the assailants. Hashizume Eitaro, Hashizume Nizo, and 17 other workmen were arrested by the police. In the fight four seamen were wounded more or less as were also three workmen. It was past ten o'clock when order was restored. It appears that the trouble arose over some money transactions between the two parties, some of the workmen having lent money to the seamen.

NEW BISHOP OF SOUTH TOKYO.

The *Hyogo News* of the 14th inst. says:—A telegram was received here on Saturday afternoon announcing the appointment of Bishop Awdry in succession to the late Bishop Bickersteth, in charge of the important mission work centred in Tokyo. We venture to say that Kobe's loss by the removal of Bishop and Mrs. Awdry to the capital is Tokyo's gain. Those who have known them best will regret the change for their own part the most, but the appointment will undoubtedly be popular all the same.

COLONEL BACON & A MISSIONARY ON THE SOCIAL EVIL IN JAPAN.

Japan was recently visited by Colonel Bacon, an American philanthropist, who seems to have worked hard in the cause of good during his brief stay here. A correspondent, signing himself "Missionary," refers in eulogistic terms to Colonel Bacon's lectures, and we are glad to assist in extending thanks to him. But since the question is thus prominently brought forward, we can not pass without protest one stricture attributed to Colonel Bacon and evidently endorsed by "A Missionary." "Notably he rebuked most fearlessly the shameful prevalence of the social evil." That is what Colonel Bacon did, according to our correspondent. Now what inference must any intelligent person draw from such a statement? Must he not draw the inference that the social evil prevails in Japan more than it does in Western countries? But that is a libel. The social evil does not prevail in Japan more than it does in Western countries. Did Colonel Bacon consult statistics, or has "A Missionary" consulted statistics? They have not, or they could not have fallen into such an unfortunate and unjust blunder. Are we to assume that what they really intend to censure is the licensing of prostitution? But surely they must know that prostitution is licensed in nearly all the countries of continental Europe? And surely they must know that in denouncing the licensing system as a flagrant sin, they are, at the same time, vicariously denouncing as flagrant sinners some of the greatest philosophers and profoundest thinkers of all ages and all lands, as well as a very large section of the most highly educated and highly placed English men and English women? We scarcely think that Colonel Bacon and "A Missionary" have the licensing system in view when they speak of "the shameful prevalence of the social evil in Japan," and we are driven to conclude that what distresses and offends them is the fact that "the priestesses of humanity" are banished to special quarters of the cities and that they sit behind latticed windows, "like animals in a cage," to be viewed by libertine visitors. As to the banishment question, we extend to it our hearty applause. It is excellent for two reasons: first, because it effectually guarantees the ordinary thoroughfares of the cities against the disgraceful scenes thrust upon public notice in the great capitals of Europe and America; secondly, because it attaches an additional stigma to vice, and doubtless reduces its dimensions by adding to the inaccessibility of its ministers. As to the custom of the latticed windows, we think that it deserves the most unqualified denunciation. It is in the last degree demoralizing—demoralizing to the passers-by and demoralizing to the unfortunate women themselves. For a brief interval, twenty-four years ago, the Authorities seemed determined to correct the abuse. A strong effort was made, but, for reasons that we have never been able to understand, it failed. Why do not the missionaries raise their voices against that feature of the system, instead of inviting ridicule by talking of "the shameful prevalence of the social evil." Fancy telling a Japanese who has been to London, New York, Paris, or Rome that the social evil prevails shamefully in Japan! All chance of effecting any useful reform is destroyed by such regrettable misstatements.

A LIGHT SENTENCE.

The thief who stole a large sum of money from the house of Dr. Ed. Divers some time ago, has been tried and sentenced to ten months' imprisonment and six months' police surveillance. The punishment seems to us almost ludicrously inadequate. The man was a burglar. It is true that he lived in Dr. Divers' house as cook, but it is also true that to effect the theft, he had to enter one of the rooms in the second story by the aid of a ladder and by forcing a window. Possibly the good character he had borne during a service of eight years, and the fact that after being arrested, he ultimately confessed his crime, may have suggested some mitigation of the normal penalty. But whatever allowance be made on such scores, we still find the sentence flagrantly out of proportion to the gravity of the offence. In commenting on the incident we have not the slightest idea of suggesting that the judge took any account of the nationality of the person robbed. That would, indeed, be an extravagant hypothesis. We merely express our astonishment at such a method of administering criminal justice. As a general rule foreigners hear nothing of what takes place in Japanese Courts of law, and when a rare case thrusts itself upon public attention, not because of any anomaly in the procedure, but simply because a foreigner is concerned, they are naturally disposed to conclude that it is a typical case. Are crimes, then, punished with this singular leniency in Japan? We do not think so. Our own impression is that the opposite is the truth. It is plain, at all events, that a great many Japanese would be willing to put in an imprisonment of ten months at Tsukudajima in consideration of a sum of six hundred yen, which was the amount of the ready money stolen in this instance. Undoubtedly the punishment can not be called deterrent, and since to deter not to chastise is the main object of criminal enactments, the judge seems to us to have committed a serious error.

The original accounts published with regard to the crime and the details of the arrest were erroneous. When the cook had carried away the box containing the money, bonds and other documents, he concealed it in the dust-bin, and made no attempt to open it for nearly two months, knowing that he was watched. Finally, one night in August, he took the box into his room, opened and proceeded to examine the contents. While he was so engaged, his wife, who, with her two children, was sleeping in the same room, awoke, or seemed to awake. The cook at once secreted the box and thrust a portion of the contents which he held in his hands at the moment, under the fire-place, thus destroying some six thousand yen worth of War Bonds. His wife, however, detected nothing. In fact, she was not conscious of having been disturbed. Ultimately the man took the ready money—six hundred yen—and then hid the box in a tub of pickled radishes, where it remained until found by the police two months afterwards, with the result that several of the documents were practically destroyed. By and by, the cook gave the money to his wife, telling her that he had won it by gambling, and desired her to keep it for him. Meanwhile the police, though watching closely, failed to find any clue, and at last, having assured themselves that the man was gambling, they summoned a new detective whose face could not be known to the cook, and set him to act the part of a gambler. One night, at a gambling bout in which the detective took part, the cook, having lost twenty yen, sent a messenger to his wife for thirty more, and having lost the second instalment, sent for another of like amount, and then for yet another. At that stage the police thought themselves justified in arresting him and carrying him before the magistrate. At first he asserted his innocence in a persistent and plausible manner, and it was not until the magistrate ordered him to be committed to prison—"to be tied up," as the Japanese expression goes—that he made confession. There appears

to be no doubt that his wife was innocent. She did not even count the bundle of notes given to her, and if she at first conceived a suspicion on being made depository of the money, her husband's assurances seem to have quickly convinced her. It is difficult to see what extenuating features these details present. The man deliberately broke into a room in the house of his master, whom he had served for eight years, and not only stole a large sum of money, but destroyed, almost wantonly, a quantity of valuable securities. An English judge would have given him three years at least.

THE HAWAIIAN PROBLEM.

According to the *Yomiuri Shimbun*, which is now an opposition journal, Baron Nishi's policy with regard to the annexation of Hawaii differs slightly from the policy of Count Okuma. The Baron will not press any objection to the annexation, but will merely insist that the privileges already enjoyed by Japanese subjects in Hawaii shall not be impaired as a result of annexation, and that any losses caused by it shall be made good. We are disposed to doubt very strongly whether the *Yomiuri Shimbun* is in possession of any trustworthy information about Baron Nishi's policy. The new Minister of Foreign Affairs is most unlikely to take any outsiders into his confidence on such a question. For our own part, however, we fail to see that Japan can effect anything by remonstrating. According to present indications annexation is pretty certain to take place. The Senate will reject the Treaty, but a joint resolution of the two Houses will save it. Something may occur, indeed, to deter the American people. They are not particularly keen about the matter now, and an anti-annexation movement might be started without much difficulty. But Japan is not the one to start it. Her protests would probably produce an effect precisely the opposite of what she desires.

A "JACK THE RIPPER" CASE IN TOKYO.

Tokyo papers contain reports of a gruesome crime of the "Jack the Ripper" class, said to have been committed in the capital. At about 11 a.m. on the 15th instant, a man who happened to pass the Aoyama Parade Ground noticed the toes of a human foot appearing just above the ground in a shed formerly used by a railway corps. Horror-stricken by the sight, he immediately reported the fact to the nearest police on duty, and a little later Police Inspectors from the Asakusa and Yotsuya Stations, accompanied by the Criminal Judge of a district Court reached the spot, and having excavated the earth covering the body, in the presence of a physician whom they had taken with them, found the corpse of a girl of about eleven years old, with her hair cut extremely short. Her face was covered with a cloth, and she had apparently been buried alive with her head downwards in a hole just large enough to hold her. It was evidently through the precipitancy of the perpetrator of this cruel deed, that part of the toes were left uncovered. There were marks of blows on the face and limbs, while several cuts were noticeable in the upper part of her loins. In short, the appearances showed that the girl had been murdered with all possible cruelties. It is said that when exhumed, the body still had a little warmth in it. A post-mortem examination was held at the Imperial University, and steps are now being taken to find some clue to the perpetrator of the foul crime.

The *Münchener Allgemeine Zeitung* relates that foreign medical students will not in future be admitted to the clinical courses in German universities, unless they can prove that they have passed examinations as stringent as those of the German preparatory colleges. It is not thought that this will seriously affect American students, as American colleges will formulate rules which will enable their pupils to be admitted.

THE FORMOSA SCANDAL.

MR. TAKANO'S exit from the judicial scene in Formosa was attended by incidents which have furnished copy, more or less sensational, to several journals. MR. TAKANO intended, of course, to create a sensation, and when an official holding such a high position assigns to himself that object and pursues it in defiance of lawful authority, he is pretty sure to succeed. We do not by any means assume, or desire to suggest, that Mr. TAKANO'S motives were not high-minded. Very likely he regarded himself as the champion of an important constitutional principle, and having reached the state of mental exaltation frequently observed in men that believe themselves to be entrusted by Providence with a heroic mission, he snapped his fingers, metaphorically and literally, in the face of the Authorities, and compelled them to enforce their mandate by means that must necessarily invest it with a measure of odium. That sort of thing is so common in the British House of Commons that its true significance is fully understood. A member is directed by the Speaker to withdraw. He declines to obey until the Sergeant at Arms approaches, or, it may be, lays hands on him, whereupon he makes an exit designed to show that he bows to force though refusing to acknowledge the principle of its application. That is just what Mr. TAKANO did. He would not abandon his position on the bench of the Formosa High Court until the police removed him. There appears to have been some hysteria on the part of his fellow-thinkers. The clerks of the Court had a momentary impulse to embrace the fate of martyrs; a sword made its appearance on the scene and, being snatched from its brocade wrappings, shed a brief glitter over the drama; the assistant judges vaguely intimated their readiness to be sacrificed if a holocaust was *de rigueur*, and tears and sobs were not wanting as Mr. TAKANO marched out before the police. We may take it for granted that the immediate purpose of all this demonstration will be attained. The constitutionality of the Government's action will be brought up in the next session of the Diet, and one or two members will have an opportunity of delivering a trenchant attack on the Cabinet. But the Cabinet being technically in the right, parliamentary protests will not disturb it. The affair will take the form of a Question, supported by the prescribed quorum of thirty members and accompanied, at the time of its presentation, by a denunciatory speech. Then there will be a brief interval of silence, and finally the Government will reply curtly that the provisions of the Constitution do not apply to newly conquered territory and that the administration was perfectly competent to remove Mr.

TAKANO. The House may possibly pass some dissentient resolution. Its reputation for appreciating legal principles is not yet sufficiently established to form a basis for any forecast of its action in a given contingency. But we imagine that it will be better advised. The most rudimentary familiarity with constitutional law will be enough to convince the members that the Constitution of a State does not apply to conquered territory where the conditions are different from those for which the Constitution was originally framed. The whole system of administration in Formosa from the very outset has been unconstitutional—a species of military dictatorship, such as could not be exercised in Japan proper without the Diet's special consent. Laws have been framed and enforced without any reference to the constitutionally created legislature, and the Governor-General is invested with autocratic powers far in excess of those possessed by any official in districts where the Constitution holds. It is curious to observe how some critics strain at a gnat and swallow a camel in this matter: they overlook a wholesale departure from constitutional principles and become clamorous about a mere detail. Even English local journalists appear to ignore facts that stare them in the face. Forgetting that in Japan they do not themselves enjoy the full privileges of the British Constitution, since the power of making laws for their control is vested in an individual independent of Parliament, and even the celebrated "palladium of liberty" is reduced to a fraction of its proper dimensions, they declare that the Japanese Constitution in its entirety becomes applicable, *ipso facto*, to territory conquered by Japan from the moment of conquest. Of course the Japanese Government did not wait for this Takano affair to determine how far the Constitution should be held to apply to Formosa. The whole question must have been duly considered by competent experts before an administration and a judiciary were organized for the island.

But while the technical legality of the Government's action admits of no doubt, while the fact that the Constitution is not operative in Formosa can not be questioned, such a departure from Constitutional principles as the Takano affair, seems unwise and ought to be unnecessary. We take it that although the Government, when required to provide for the administration of newly conquered territory, is necessarily invested with discretionary power to determine what, if any provisions of the Constitution shall be applied there, it is, at the same time, under obligation to exercise its discretion within the narrowest possible limits. Thus, unless in the condition of Formosa there be something that constitutes an insuperable obstacle to independence of the judiciary, an independent judiciary ought by all means

to be organized there. Does such an obstacle exist? If it does, the public know nothing about it. Men understand that a military form of administration may be desirable, and that the delegation of exceptionally large power to the Governor-General may be essential, but they do not understand why the important principle of judicial independence should not be applicable. That is the instinct underlying the censure heaped upon the Government, and it is an instinct with which we heartily sympathise. Mr. TAKANO can not convict the authorities of technical unconstitutionality, but his resolute conduct has certainly contributed to establish the principle of the Judiciary's independence, and while opinions will differ greatly as to the strict propriety of his acts, there ought to be no second opinion about the uses they serve.

MONTHLY SUMMARY OF CURRENT JAPANESE LITERATURE.

We observe that a collection of the whole of Mr. Fukuzawa's writings down to 1892 is about to be published. For more than forty years the Mita sage has been using his pen. Some of his books have had an enormous circulation, considering the limited number of readers of such works in Japan compared with Western countries. The figures given in the *Fiji Shimpō* show that the most popular of Mr. Fukuzawa's books have reached a circulation of 200,000 copies, and it is estimated that if all the volumes that have been sold be added together, they will not fall short of 7½ million copies. The edition of his collected works now being prepared will cover some 4,000 or 5,000 pages. The books are to be arranged as to give a kind of connected history of passing events and topics of interest. The work is to be furnished with an introduction, which we observe is already appearing in the columns of successive issues of the *Fiji Shimpō*. This introduction contains so much that is of literary interest that we propose to summarise the contents of the portion of it that is now before us, reserving the remainder for next month. As a writer and translator Mr. Fukuzawa has always aimed at simplicity and lucidity of style, and, in the opinion of the best judges, he has succeeded to an extent unattained by any other writer. In popularising knowledge he is the Huxley and Tyndal of Japan. In reference to the acquirement of this style, Mr. Fukuzawa has furnished the following particulars:—About forty years ago, I became the pupil of Dr. Ogata Kōan, of Osaka. At this time Sugita Seikei of Edo and Dr. Ogata were at the height of their fame. They were well-versed in Dutch and they both engaged in translating to a considerable extent. But the methods followed were very different. Sugita was careful to reproduce the original, sentence for sentence, and word for word. But Ogata took the greatest liberties imaginable with the original, only consulting it in a general way. His view was that, since translations were read by persons who were ignorant of the original, it was quite unnecessary to keep to the author's method of expressing his thoughts. It often happened that other translators sent their manuscripts to Ogata for correction; when, in my presence, he habitually altered the language without even consulting the original. Ogata's aim was to make his translation thoroughly intelligible to readers, and in this he succeeded. When, on one occasion, I asked his opinion on the translation of a Dutch book on Fortification, which I had in hand, he made the following remark:—The translation of books on military subjects by *samurai* is to be encouraged, for the simple reason that

the language with which *samurai* are acquainted being limited and simple, what they write is easily understood. From Ogata I learnt that the art of being able to express thoughts in so simple and clear a manner that persons of ordinary intelligence can comprehend them is the highest of all literary accomplishments. This art I studied, and in two books which I published some time after, the *Seiyō-tabiannai* (Guide to Western Countries) and the *Kyūri-sukūi* (Physics, explained by Charts) my aim was to make the subjects treated intelligible to peasants and other illiterate people when read to them. In order to be sure that I had attained my object and to make corrections where necessary, I caused the manuscript to be read to a few illiterate women and children. Whatever was not understood I altered. I usually found that the introduction of classical terms had caused the want of intelligibility and I replaced them with words in common use. Thus by degrees I acquired a written colloquial style, which I have retained to this day. The difficulty I encountered was in rendering foreign technical terms into Japanese. But I observed the rule of selecting the best known characters for use in the Japanese equivalents. The subjects on which I wrote were not chosen haphazard. They were suggested by the spirit of the age when the books were published. In the Bunkyo era (1861-1863) the anti-foreign spirit was very strong. The illiterate masses were entirely ignorant of foreign ways and there was no attempt to enlighten them. This fact was impressed on me by Kanda Kōhei, who spent many months in trying, as an experiment, to enlighten an old woman who lived in his house. This old lady daily cursed the red-headed barbarians that were seeking to pollute the land of the gods with their presence. Mr. Kanda failed in the attempt to change the sentiments of the bigoted old lady. This is the state of opinion all over the country, said Mr. Kanda to me. My 唐人往来, *Tōjin-Orai* was intended to remedy this evil by teaching the unlearned something of foreign ways and doings. I published it under a *nom de plume* and distributed copies far and wide, under the impression that the country could never progress till the masses became more enlightened.

Here is the gist of what the *Kokumin-no-tomo* has to say on the spirit of the times. All things are drifting in the direction of materialism and outward prosperity. The age is becoming more and more practical. Abstract thought is at a discount. Even in the field of literature men turn away with aversion from subjects that have no immediate bearing on the affairs of every-day life. In order to gratify the tastes of readers the majority of writers are engaged in describing the actual condition of society and passing events. The consequence is that modern literature is for the most part characterised by an absence of religious belief, a lack of earnestness and feeling, and a dearth of truth. There is no soaring of the thoughts to the lofty regions occupied by really great writers. All our efforts to rise above the mundane commonplaces of every day life seem to be in vain. In order to write what is valuable men must have beliefs and ideas. Here beliefs and ideas are wanting. Hence the languishing on every hand. Little spurts of this and that, but no sustained effort. What we desire to see are authors who are determined to lead men's thoughts instead of following them, authors who have an ideal of their own that is unaffected by the whirlpool of topics and opinions in the midst of which the minds of so many writers revolve.

The well known School of Oriental Philosophy, established by Dr. Inoue Yenyō and others ten years ago, was burnt last year. On the occasion of the opening of a new building on the 2nd of last month, a detailed history of the founding of the school was given, from which we cull the following:—In order to find out what attention was paid to Oriental studies in other countries, in 1888 Dr. Inoue undertook a foreign tour, from which he returned convinced of the importance of founding a college in which instruction in Oriental subjects should be imparted by duly

qualified men. In order to collect money for this object, Dr. Inoue travelled throughout the length and breadth of Japan, visiting 220 places and giving no less than 818 lectures. He succeeded in raising the sum of 8,250 yen by this means. In 1895, a large piece of ground was purchased in Haramachi, Koishikawa, Tōkyō, where a school was erected. Prior to this, classes had been held in a building situated not far from the Imperial University. Hitherto the principal subjects of study have been Buddhism, Chinese and Japanese Literature and Philosophy, but it is now announced that certain Oriental languages will be taught, including Chinese, Korean and Sanscrit.

The magazine quoted above relates the experiences of Mr. Seki Shūzaburō while touring in Europe. What struck me most while visiting various families in Europe, says Mr. Seki, was the minute acquaintance shown with popular current literature by the ladies of the various houses where I stayed. The topics of conversation attable were frequently literary, and the striking sayings of the personages who figure in noted novels were constantly quoted with approval by quite young girls. In Japan we have nothing of the kind. An observation addressed to most of our ladies relating to modern novels would elicit no reply. But the question which it is pertinent to put is:—Are there any remarkable sayings uttered by the men and women who figure in our Japanese novels? We trow not. For maxims that embody wit and wisdom we have to turn to the writings of men of a bygone age. The modern puppets who are marched on to the stage in our fiction-theatre do not pour forth words worth repeating or laughing over at the family gathering. When they do not confine themselves to dull commonplaces, they make use of language that no proper-thinking father would wish his daughters to hear.

The *Waseda Bungaku* and the *Kokumin-no-tomo*, formerly fortnightly, have now become monthlies, each covering about 170 pages. No. 2 of the new series of the *Waseda Bungaku* contains a report of the views of Mr. Shiga Chōkō on art and literature, of which we give the following epitome:—What I desire to see in both art and literature is a manifestation of the unity of nature. This unity cannot be shown by representing things as they are found in any given place at any given time, but by applying to objects and events a process of harmonising. The photographer can furnish us with a perfect representation of visible objects as they present themselves to the eye of the observer, but from an artist we expect more than this. We expect him to show us combinations that do not actually exist in nature, but that may be conceived of as existing. We expect him to blend and harmonise objects in a way that nature rarely accomplishes. Literature and art should both become interpreters of nature. Even in reproducing natural objects the skilful artist can use his brush so that his picture shall reveal more of the processes of nature than any photograph can possibly accomplish. Many of our Japanese artists do not realise this, and hence are mere photographers minus the camera. The combinations which the artist and the writer alike should seek to effect ought not to be open to the charge of unnaturalness. While not transgressing any of the laws which govern nature, they should reveal to us more of nature's methods and ways than are exhibited in any one set of phenomena at any one time in the material universe.

A recent number of the *Taiyō* discusses a subject connected with high class education that seems to us to be of primary importance, namely the failure of the students that pass from the Higher Schools (Kōtō Gakkō) into the Imperial University to understand the lectures delivered by the foreigners employed in the Institution. The following is the *Taiyō's* account of the facts bearing on the subject:—In the Engineering Department there is no student who properly understands the lectures of the single foreigner employed. In

the Law College there are several foreign lecturers, but the lectures are poorly attended, and even in the case of those that attend there are none that comprehend the meaning of the remarks made, and as for stating difficulties for the teacher to deal with, it is out of the question. Even in the Literary College, where language is of still greater importance, comparatively speaking, with the exception of a few superior students, those that attend the lectures can do no more than dot down in their note books a few of the observations of the lecturer. If it be asked, how do such students as we have referred to manage to pass their examinations?—the reply is, they rely on copies of the lecturer's manuscript, which are distributed among the members of each class. The origin of this much-to-be-deplored deficiency is to be traced to the Higher Schools. While professing to specially prepare students for the University, these schools undertake to impart instruction in a number of extraneous subjects. The pupils have not sufficient time in which to master the difficulties of foreign languages. Though students are taught German 8 hours a week, it is found that at the end of three years there are none that can even understand books of reference, to say nothing of conversing or composing in German. It is necessary that the number of subjects taught in these schools should be reduced, that study should be limited to those branches of knowledge which are directly connected with the profession the pupil purposes adopting. The whole curriculum of these schools needs remodelling, so as to make them in reality as well as in name preparatory institutions to the University.

Specimens of ancient architecture are growing very rare, and hence it is gratifying to read in the *Shigaku Zasshi* that the Home Department has undertaken to restore the Chūsonji, a temple that has the credit of being the most perfect existing model of the Fujiwara style, which is situated in the district of Iwai, Rikuchū. The building was erected at the commencement of the twelfth century by Fujiwara Kiyohira. It was restored in the Tokugawa era, but not with sufficient attention to important characteristics of the architecture of the period to which it belongs. The heirlooms and relics treasured in the building are said to be of an exceptionally interesting kind.

A recent number of the *Waseda Bungaku* has an article entitled *Nihon-gwa no ichi Jimon* (A question concerning Japanese pictures). The point discussed was mooted by Baron Suyematsu and taken up by the *Yomiuri Shimbun*, in whose columns it is thus stated: How is it that in Japanese ancient paintings, while flowers, animals and birds are so artistically and carefully delineated, the faces of human beings are conventional? What is the reason of this great difference? A writer signing himself Mukian Shujin gives the following answer to the above question:—In the power of reproducing objects in their actual forms Japanese ancient artists were deficient. Though they represented the presence of rays of light or the shade caused by their absence, the effects of the presence or absence of these rays on human faces is not given. The shadow thrown by a tree makes this object to be more capable of representation than the flat face of a man. Hence the excellence of Japanese artists when delineating trees, and the like. Commenting on the above, the *Waseda Bungaku* says, Japanese artists are lacking in the power to reproduce natural objects in their actual form, and hence the human faces they portray are characterised by unreality. Then there is among our artists a marked tendency to represent the common and general characteristics (通性) of objects rather than their individual ones, and this prevents them from paying attention to the shadows cast by human figures. The conclusion that the *Waseda Bungaku* comes to is that the failure to reproduce shade is only a minor defect in Japanese painting, and is more than atoned for by many excellencies. The *Waseda Bungaku* next takes up the views expressed by Mr. Lafcadio Hearn on Japanese art (reproduced in the

September Literary Summary) some of which it endorses. It says that while Professor Hearn's opinions on this subject are an immense improvement on the blind Western bigotry so often displayed by Occidental critics of Oriental art, his views are a trifle too optimistic, and that in certain instances the professor draws unwarranted inferences from the facts that he is discussing. Mr. Hearn's view of art seems to be founded on what is called Platonian idealism and the type theory of Schopenhauer, says the *Waseda Bungaku*, and he thinks that he sees these theories exemplified in Japanese art. The assumption that the further the painting is removed from being a reproduction of existing form the higher it ranks as a work of art is to our minds unwarranted. Nor do we see that the choice of the general and typical characteristics of objects for portraiture rather than their individual and peculiar ones indicates superiority in the ideal followed by the artists who adopt this course. The moral ideas which Mr. Hearn reads into our Japanese art are certainly not deducible by any ordinary process of reasoning. To say that there is any moral superiority in the representation of general and typical characteristics rather than individual ones, is to assert what is incapable of proof and savours somewhat of the art criticism of Europe common among those who think that ethical and religious standards are applicable to art. Mr. Hearn's views on Japanese art impress one as biased in its favour, while those given to the public by Baron Suyematsu, which also originated with a foreigner, are founded on an actually existing defect. We are of opinion, concludes the *Waseda Bungaku*, that nothing that can be said on the other side will suffice to nullify the truth of the assertion that Japanese artists lack the power to represent objects in their natural shape and form; and that it is to the interest of progress in art that this fact should not be obscured in any way whatever.

In this context we may mention that the writer mentioned above, who has adopted the *nom de plume* of Mukian Shujin, has, in the columns of the *Yomiuri Shimbun*, published a long reply to Professor Hearn's *Taiyō* article, in which it is maintained that the portraiture of typical features of objects is in every way inferior as art to the representation of their individual peculiarities.

The *Taiyō* publishes an article by Mr. Teshima Seitchi on the necessity of increasing the number of high class Middle Schools. There is no denying the fact, says Mr. Teshima, that irrespective of cost there is an ever increasing demand throughout the country for high-class teaching on special subjects. Existing schools are insufficient to satisfy the demand; and if no efforts are made to provide suitable institutions for the hundreds of lads unable to gain admission into Government schools there is a danger that the talents of such boys will be lost to the country, and that *noles volens* they will be forced to commence earning a livelihood without the high class education they are anxious to receive. Statistics published in the latest Report of the Department of Education show that a large number of pupils drop their studies without entering a high class school. In some cases, no doubt, there are pecuniary reasons for this result, but in the majority of instances the paucity of schools is its real cause.

The *Kyōiku-jin* furnishes some interesting particulars bearing on the history of the Loochoo islands and the progress of education there, supplied by a Mr. Ando Kiichirō. From ancient times the Loochooans preferred Chinese to Japanese rule on account of the greater liberty given by the former. Prior to the China-Japan war, they always regarded the Japanese as inferior to the Celestials and while, from fear of consequences, they professed allegiance to Japan, their sympathies were with China. The party known as the Koku-iō (Black Party), the pro-Chinese party, was very strong and Japanese reforms were hindered by its obstruction again and again. Education made little progress. Ten years ago in Naha, a town of 35,000

inhabitants, nearly as large as Hakodate, there was only one elementary school, and there was great difficulty in procuring pupils for this one establishment. Three Elementary Schools are now in a flourishing condition, being attended by 2,000 pupils.

* * *
The *Teikoku Bungaku* is confident that there is truth in the assertion that the literature of islanders is not characterized by the breadth and thoroughness of the literature of continentals. Japan compares badly with both India and China. Great changes have been witnessed in this *Meiji* era, continues the organ we are quoting, but there is one radical defect of the Japanese mind which has survived, despite all the reforms that have taken place. This is the lack of a spirit of perseverance. We are an emotional people and lacking in the power of sustained action. If our desires are not rapidly gratified we lose heart and desist. To quote a signal instance. It has been perfectly well-known to all persons engaged in education that the Japanese language as now spoken and written is a most imperfect medium for the conveyance of knowledge, and that a reform in the methods of writing words in common use is most urgent. On two separate occasions a kind of reform fever has raged on the subject of orthography, and various proposals as to ideographic changes have been the result. But the movement has been as short-lived as some of the epidemics from which we have suffered. The promoters of these reforms succumbed to the initial difficulties of the enterprise on which they had embarked. The path of progress is blocked by an obstacle that is by no means insurmountable, but the men who have sufficient persistency of purpose to effect the desired change are as yet not forthcoming. Until Japanese get rid of the defect to which we have alluded they cannot carry to a successful issue any great undertaking, concludes the *Teikoku Bungaku*.

* * *
It is pointed out by the *Shakai Zasshi* that in many of the leading newspapers there is a dead set against class government, class distinctions, and cliques of all kinds. Attacks on the nobility as a class are very frequent. They are said for the most part to be leading idle, useless lives, and to be ignorant and superstitious. All kinds of irregularities are allowed in their families. As a class they are behind the age and a hindrance to the progress of civilization. The *Mainichi Shimbun* brings a number of charges against both the wealthy and the noble. Owing to their licentious lives, says this organ, the members of these classes do not increase in anything like the proportion they ought to do. The *Fiji Shimpō* ridicules the method of conferring rank now in vogue, showing that it is considered in Europe to be entirely out of date. The fact of services rendered to the government being selected for special notice and reward shows how unenlightened are many of the prevailing ideas on these subjects. This practice conduces to the continuance of the class government which it is desirable to be rid of. The *Kokumin Shimbun* goes as far as to advocate the total abolition of the nobility. As a class they have altogether lost the respect of the public, says this organ. They gamble, live profligately and are for the most part lacking in intelligence. Moreover, there are not a few of them who are too poor to be independent and hence become a burden to the Imperial House. The writers who have taken up this subject earnestly are divided in opinion, however, one party recommending total abolition, the other radical reform. Life peerages have also been advocated by several papers.

In an article entitled "Labour," the *Shakai Zasshi* quotes a variety of opinion on the relation of labour to capital and kindred topics. The following is the gist of what Dr. Toyama, writing in the *Ryūmon-Kai Zasshi*, has to say on the subject:—The most productive periods, as regards men, in our history were the Genki and Tenshō [A.D. 1570-1591], and the reason of this is that during

these eras there was keen competition. In modern times competition has resulted from the increase of population. Instead of the distinction between the high and the low in rank, we now have the distinction between the rich and the poor, and, as the struggle for a livelihood becomes keener, labour and capital will come into conflict here as they have in the West. But it is worthy of note that there are elements in our national character which will certainly modify the effects of whatever friction may arise between masters and workmen. There is in the Japanese as a people a sense of fairness and a regard for state interests that is not possessed to the same extent by any Western nation. Hence it may be confidently predicted that we shall witness no such industrial troubles in this country as are being experienced in Europe and America.

To the *Shakai Zasshi* the above observations seem somewhat naïve. Judging from the strikes that have been reported within about a month and the attitude manifested by workmen generally throughout Japan, there is little chance of agitators being influenced by any such considerations as are alluded to by Professor Toyama, says the *Shakai Zasshi*.

The *Awayama Hyōron* writes on the decline of interest in historical study throughout Japan during the past twelve months or so. A few years ago there were no less than six magazines devoted to the publication of articles on historical subjects, namely, the *Shigakukai Zasshi*, the *史海 Shikai*, the *Shigakufukū* (普及) *Zasshi*, the *史談 Shidan* and the *Kōtenkōkyūjo Kōron* (皇典講窮所講演). Of these only the first has survived. The defunct organs mostly owed their existence to a notion that no longer prevails, namely the idea that literature and history are inseparably connected and cannot well be treated apart from each other. The writers for these magazines were not real historians, but ordinary literary men. Their *raison d'être* was a fictitious one. Hence their early decease. It is worthy of note in this connection that the historical societies which were founded some years ago in O U, Hokuriku, and Kyūshū are doing good work, and that, during the past few years, a goodly number of historical works have been published, such as the *Gunsho ruijū*, the *Kokushi-taiki*, the *Asuma-kagami*, the *Kōji-ruijū*, the *Tokugawa Jikki*, and others. But there are two subjects for regret connected with this study; one is the failure among a large number of writers to appreciate the value of scientific accuracy in recording facts, and the other the restraint that is put on free criticism by the Government.

Dr. Nakamura Shingo, formerly a student of International Law at the Berlin University, now a teacher at the Semmon Gakkō, has just published a work entitled "*Shin-jōyaku* (The New Treaties), which is advertised for sale at the Hakubunkan for 1 yen 30 sen per copy. This book discusses in a thorough manner the various features of the new treaties made by Japan with Western Countries, comparing these treaties with those hitherto in use and dwelling on the changes which their operation is likely to bring about. In an appendix to the work the full text of each separate treaty is given in Japanese.

Another English Magazine has made its appearance called the *Eibun-no-tomo*. It is to be published monthly and sells at 12 sen per copy. Its design resembles that of the *Gwaikokugaku Zasshi* and other publications. It aims at assisting students of the English language by furnishing them with literary models and explaining difficult passages. Whether a sufficient number of reliable writers to keep such magazines going from month to month actually exists is questionable.

Mr. Yamazaki, a military instructor, is the compiler of a set of French Readers designed for first, second, and third year students. Book

* All these were noticed by us at the time of their publication.

I. sells at 35 *sen*, Book II. at 40 *sen*, and Book III. at 70 *sen*. In addition to ordinary reading lessons, specimens of French letter-writing are given, which ought to prove valuable to Japanese students of the language. These Readers have already been adopted as class books by the Tōkyō Military School. They are for sale at the Shoyeisha, 1 Motosukiyachi, Kyōbashi, Tōkyō

The publication of a new Fine Art Journal has been announced. The *Gwahōsha*, 2 Kabuto-chō, Nihonbashi, Tōkyō, are to issue the new organ. It is to be called the *Bijutsu Hyōron* (The Fine Arts Critic). Whether the *Nippon Bijutsu Gwahō*, hitherto published by this office, is to be discontinued is not clear. The new magazine is to appear fortnightly (on the 5th and 20th of each month) and will cost 20 *sen* per copy. The first number was to be published this month.

X The Japanese residing in San Francisco have started an English Magazine called, *The Japanese-American Voice*. Though diminutive in size, its get-up is very good and its contents above the average of English magazines edited by Japanese in this country. Among the subjects discussed in Nos. I.-VI. are:—"The Future of Commerce in the East"; "the History of Japanese Art"; "the rank occupied by Christianity in Japan," and "Mr. Noguchi's Poems."

The *Teikoku Shiryaku*, by Dr. Ariga Nagawo, is an historical work of considerable value. It is published by the Hakubun-kwan, occupies 1,000 pages and sells at 1 *yen* 50 *sen*. The *Teikoku Bungaku*'s review of the work is on the whole very favourable. According to this organ the best part of the new history is that which deals with Japan's earliest records, in which Dr. Ariga endeavours to separate truth from fiction.

LAND TAX IN JAPAN.

The Yokohama correspondent of the *Daily News*, referring to the proposed increase of the Land Tax, writes:—

Rice has now risen to the phenomenal price of 12 *yen* per *koku*, as against 4.80 *yen* a few years ago, and 8.20 *yen* in 1895. That means an increased value in the land, and the proposition would be fair if it were not that the land is already over-assessed. For instance, even at the present high price of rice, a *cho* of land cannot yield more than 160 *yen* worth, yet taxes are paid on 400 *yen*, the rent being one-half the yield. A small rise would not be unjust to the farmers, but as the land already pays nearly one-half of the total taxes, any further imposition would arouse resentment.

This is certainly one of the most perplexing and confused statements we have even read. What on earth has the rent to do with the tax? The tax is paid by the landlord who receives the rent. Then again, the correspondent seems to labour under the impression that the tax is paid on the yearly yield, or on some fanciful assessment of it. The truth is that the tax is paid on the supposed value of the land: it is 2½ per cent. of that value. A few simple figures will demonstrate the strange misconceptions under which the London journal's correspondent seems to labour. The area of rural lands under cultivation in Japan is 4,610,000 *cho*, and the tax levied on this land—we are excluding the urban lands—is 35 million *yen*. in round numbers. Hence the tax is 7½ *yen* per *cho*, and it is consequently seen that the land is assessed at a value of 300 *yen* per *cho* for taxation purposes. But if rice be selling for 12 *yen* per *koku*, as the correspondent alleges, the annual value of the various crops raised on the rural lands is 737 million *yen*, at the lowest calculation, or 159 *yen* per *cho*. In other words a *cho* of land which yields crops worth 159 *yen* a year is supposed to be worth only 300 *yen* for purposes of taxation. That is certainly a curiously moderate estimate. Further, while the yield is 159 *yen*, the tax is only 7½ *yen*, or less than one twentieth of the yield. It has also to be remembered that the tax is really a rent, the present holders of the land never having paid anything for the fee-simple.

THE NEWMANS.

Infinitely pathetic, says a London contemporary, is the story which the death of Francis Newman will recall to the minds of those who followed the divergent life-courses of the two eminent brothers, John Henry, and Francis Newman. Eloquent, too, of strength of character and deep vitality of religious conviction, the outcome probably of their Huguenot blood, is the record of the indomitable pertinacity with which each clung to his own belief, even at the cost of severing the tender tie of brotherhood. The stake and the torture are gone for ever, but in the self-sacrificing devotion which immolated the closest relations of life upon the altar of duty, there is discernible the spirit of martyrdom which would have defied both. It was a necessary condition of the trend of his opinions in the age in which he declared them that Francis never attained the eminence of his elder brother. Indeed, had not the strength of his convictions forced John Henry over the borderland which divides England and Rome, it is probable that he would have died a simple English cleric instead of a Prince of the Roman Church. Nothing could have afforded brighter promise than the outset of the younger brother's career. His University record, which included a double first and a Fellowship at Balliol, was far more brilliant than that of John Henry; but with the operation of the Test Act came the parting of the ways and an end to all hope of an orthodox career. It is well to remember that the younger brother's refusal to sign the Thirty-nine Articles was as prompt and decided as doubtless the elder's would have been had they been similarly placed. In fact, so far as character goes, there was the closest similarity between the two men, and when the divergence once became apparent, it was equally necessary to each of them to pursue his own course to the end be the cost and the consequences what they might; and this they did in a spirit of stern, unbending resolution which we more frequently associate with the unyielding temperament of the Middle Ages than with the love of compromise which characterises our own time.

INCREASE OF CUSTOMS REVENUE.

Investigations having been made by the Government with regard to the estimates of the Customs revenue realizable after the enforcement of the Statutory and Conventional Tariffs, as compared with the amount receivable at present, the following results were obtained:—

Classification of articles.	Present receipts. <i>yen</i> .	Receipts after Treaty Revision <i>yen</i> .
Arms.....	552,009	1,661,419
Food.....	52,955	167,336
Books.....	51,380	126,591
Clothing.....	10,958	119,412
Dyes.....	111,066	308,628
Glass.....	17,900	57,820
Cereals.....	28,824	176,213
Horns and tusks.....	57,072	287,086
Previous metals.....	398,480	1,093,636
Other metals.....	86,736	194,343
Oils.....	250,265	708,190
Sugar.....	451,939	1,279,599
Woven goods.....	1,078,757	1,393,084
Woollen manufactures.....	456,690	1,189,681
Silk textiles.....	47,366	175,833
Flaxen manufactures.....	80,620	345,556
Miscellaneous fabrics.....	33,468	136,613
Tobacco.....	21,995	222,256
Liquors and spirits.....	41,058	297,101
Miscellaneous goods.....	26,261	180,771
Miscellaneous manufactures.....	155,217	528,683
Total.....	4,238,842	11,318,412

The actual receipts given in the above table are based on calculations made at the end of December last year, while the amount realizable after treaty revision is computed in accordance with the Statutory and Conventional Tariffs. It represents the sum to be actually received when the new Tariffs becomes operative. The Customs receipts of Japan therefore will be augmented, through the adoption of the new Tariff, by a sum of 7,079,570 *yen*.

"THE PASSPORT" AT THE PUBLIC HALL.

The theatre-going public of Yokohama always expect a dramatic treat whenever the clever amateur Theatians of the community appear upon the boards of the Public Hall, for never once have their hopes been betrayed. But this feeling of confident assurance has begotten a most unpleasant trait in our characters: it has dulled our perceptive faculties so much that many altogether fail to realise the exceedingly high standard of art attained by local players. It is a pity that it should be so, but the fact remains. The house on Wednesday was crowded in every part by a very attentive and at times enthusiastic audience; though the coolness was more apparent than real. Many a good thing that trips from the mouth of a player would be taken up more readily, we feel sure, were the acoustic properties of the hall in a better state of perfection—this accounts for a good deal. The audience is so eager to catch all that is being said that the chances of applauding a smart remark gets swept away in the rush of the dialogue before it can be taken advantage of even by one familiar with the play. We offer this explanation to the players, for undoubtedly a sense of "chilliness" must often creep over them as the work proceeds—a "chilliness" that is by no means intentional on the part of the house.

Messrs. B. C. Stephenson and W. Yardley's farcical comedy is full of fun from beginning to end, except perhaps in the last act, which drags somewhat and develops a dangerous tendency towards attenuation. We gave the principal idea of the play the other day, but will crave leave to repeat it in this notice. *Ferdinand Sinclair* (Mr. W. G. Bayne) on his way to a diplomatic post in Russia, encounters on the frontier a fascinating young widow, *Mrs. Darcy* (Mrs. A. C. Read) who, owing to constitutional forgetfulness has left her passport in a bag at the railway terminus in Berlin. Having recently become a widower, *Sinclair* chivalrously offers the widow assistance and passes her across the frontier as—well, *Mrs. Sinclair*. But, as Burke said a century ago, "the age of chivalry is gone." For, the poets to the contrary, this censorious world of ours will not give mere man any credit for actions done from a chivalrous intent, and therefore *Sinclair's* Quixotic proceeding naturally led to trouble. To begin with, *Christopher Coleman*, a city merchant and (of course) Philistine M.P., has been detained at the frontier, along with his wife and her maid, by the Russian Police, but, after undergoing some very unpleasant experiences, they are able to proceed by the same train as that by which *Mr.* and the pseudo *Mrs. Sinclair* travel to the capital of the White Czar. Of course *Coleman* had appealed to *Sinclair*, as a British diplomatic official, to help him out of his fix, and although the intervention—owing to the arrival of the ubiquitous telegram—was unnecessary, an introduction all round had to take place. This really was the *fons et origo* of all the trouble that ensued eighteen months later, when the same parties meet again in London under wholly different circumstances. By this time *Sinclair* had come to the title of *Lord Bibary* and had married *Coleman's* daughter *Mildred* (Miss F. Eldridge); *Mrs. Darcy* had married *George Greenwood* (Mr. H. J. Sharp), *Coleman's* partner, and of course when the various people meet a delightful series of complications ensue. The unravelling of the mystery caused plenty of fun, and the audience grew more and more delighted up to the very close, when a perfect thunder of applause was raised.

Mrs. A. C. Read, more charming than ever, bore away the honours in her own gracious, queenly fashion, her interpretation of the impulsive, hopelessly forgetful, inconsequent, and delightfully imperious *Mrs. Darcy* was irresistible: whenever she was upon the stage all interest centred in her, and one anxiously awaited her reappearance. Mrs. Read has acquired a most charming stage presence: her voice is exquisitely modulated to meet the varying exigencies of the many moods of any character she for the moment may be

pourtraying; she makes her creations live and speak and move—in fact, she casts upon her audience the glamour that only a most finished actress has it within her power to bestow. As *Mrs. Coleman*, Mrs. McWilliams was very successful, acting the part of the stereotyped middle-class British Matron to the life; Miss Thomas, as *Markham*, the maid, was particularly successful; while Miss Wheeler played the subordinate part of *Violet Tracey* very prettily. A peculiarly pleasing *ingenue* was Miss F. Eldridge: one wished she had had more to do, so well was her impersonation realised. The central male figure of the *caste*, is *Ferdinand Sinclair*, and this part was capably carried out by Mr. W. G. Bayne. His sterling abilities upon the stage need no panegyric at our hands; suffice it to say that he surpassed himself all through. Mr. A. C. Read, as *Christopher Coleman*, has never been seen to better advantage—unless we bracket this performance with his *Colonel O'Flipp* in "Tom Cobb," in which he "made-up" upon the generous lines of the most genial of our local *medicos*, whose gentle mannerisms he "took off" so skillfully. A vision of the dear, good British merchant who flies to *The Times* to right his wrongs, who is ever overflowing with the mild milk of domestic platitudes, and whose heroics are always sustained by the fine-old-crusted axioms of suburban rectitude, rose before one as Mr. Read "strutted his brief hour" before us. Yes, it was a perfectly conceived interpretation. Mr. Sharp pleased best as *Schmirhoff*, a Russian official: he was too stilted as *George Greenwood*, though he then had to assume "a jealous disposition coupled with an Indian liver." A really clever piece of acting was that of Mr. E. C. Davis, as *Henry Harris*, the man-of-few-words: it was drollery of a very high order. Mr. Showler, as *Pattison*, afforded most agreeable comic relief as a valet, and Mr. Murray extracted all that was to be got out of *Algie Grey's* much cut-down and colourless part. One felt sorry for the "walking gents," *Ivanovitch* and *Predrovski*, they had to keep their risible faculties under such complete control.

The following was the *caste* :—

Ferdinand Sinclair, afterwards *Lord Bibly*,
Mr. W. G. Bayne.
Christopher Coleman, a city merchant,
Mr. A. C. Read.
George Greenwood, his partner... Mr. H. J. Sharp.
Algie Grey, Sinclair's best man... Mr. G. Murray.
Henry Harris, a man-of-few-words...
Mr. E. C. Davis.
Pattison, Sinclair's valet... Mr. W. Y. Showler.
Schmirhoff, a Russian official... Mr. H. J. Sharp.
Ivanovitch, Policeman... Mr. B. H. Pearson.
Predrovski, Policeman... Mr. G. Philip.
Mrs. Coleman, Coleman's wife... Mrs. McWilliams.
Mrs. Darcy, afterwards *Mrs. Greenwood*,
Mr. A. C. Read.
Mildred, Coleman's daughter... Miss F. Eldridge.
Violet Tracey, Mildred's friend... Miss Wheeler.
Markham, Miss Coleman's maid... Miss Thomas.

The gowns worn by the ladies were extremely handsome and Mrs. Read's hat was a dream of delight—to quote one feminine admirer. Miss F. Eldridge's wedding attire was a dainty perfection all through, as was also Miss Wheeler's, who appeared in a bridesmaid's costume. Mrs. McWilliams's dresses were very becoming.

A very pleasing little orchestra, comprising Commander Grafton, Lient. Cole, Messrs. H. Poole and F. Whitefield, played a most agreeable selection of music during the evening and won much applause. As the performance was in aid of the Mosquito Yacht Club, the hall was appropriately hung with flags, the Club's burgee bulking largely. A word of praise must be accorded the stage management, an onerous duty that fell upon Mr. W. G. Bayne.

The *Powerful* is to proceed to the East at an easy rate for her, of 12 or 13 knots, which ought to be very comfortable steaming. As at present intended, she will call at only four places on the voyage to Hongkong, namely, Las Palmas, the Cape of Good Hope, Mauritius, and Singapore.

JAPANESE FACTS AND COMMENTS.

An Imperial Ordinance was issued on the 10th instant fixing the maximum rate of tuition fees for the ordinary course in common schools of a city, town, or village, at thirty *sen* per *monsem*.

The income tax increases satisfactorily year by year, says the *Nichi Nichi*. Investigations completed by the Finance Department show the amount for this year to be 1,905,696 *yen* against 1,434,258 *yen* for last year, thus indicating an increase of 471,437 *yen*.

The Hantan Railway Company is reported to have opened negotiations with Messrs. Samuel Samuel & Co. for a loan of 500,000 *yen* at 6 per cent. interest per annum, the security offered being the existing railways owned by the Company. But since no such security could be lawfully given, it is plain that the rumour must be erroneous.

The introduction of foreign capital, remarks the *Chyo*, can not fail to benefit a nation in the adjustment of its finances, if the scheme is formulated on a suitable basis. But no advantages can be secured if foreign capitalists are to be paid such a high rate of interest as five per cent. and are allowed to enjoy extraordinary powers in connection with their investment.

The *Mainichi* states that the various banks of Niigata forming a union lately decided to apply to the Bank of Japan for a loan of two million *yen*, but can offer no security. The reason for this is ascribed to the failure of the rice crops, and the consequent necessity for the importation of foreign rice. The committee are to arrive in Tokyo in a few days, to open direct negotiations with the Nippon Ginko.

Intelligence from Major Fujimura, dated Ilan, Formosa, and instant, as published in the *Tokyo Asahi*, announces that, having detected a band of insurgents among certain mountains in the vicinity of Ilan, known as Taishow, he attacked them and occupied their post, the enemy offering but slight resistance. The insurgents are reported to have fled to the mountains south-east of Taishow. No casualty occurred to the Japanese troops. It is said that the insurgents numbered over 2,000 men.

The *Chuo* chronicles the resignation of a number of judicial officials in Formosa who are in sympathy with Mr. Takano. Chief Judges Kato and Kawada, of the Appeal Court and the Taipei local Court, were the first to resign their posts. They were soon followed by Chief Judge Toguchi, and Judge Inouye, of the Hsui-chu local Court, and also by Judge Tatenouchi, of the Ka-wi local Court. It is reported that all the judicial officers in Taipei and Hsui-chu, with the exception of the Public Procurators, have resolved to resign in a few days.

According to the *Yoroku*, the registered capital of agricultural banks throughout the empire amounts to 19,600,000 *yen*, which, together with the unregistered funds, makes a total of 25 millions. These banks are not of course to raise shares and commence business exactly at the same time, but it is almost certain that their efforts to raise subscriptions will create, in the near future, a temporary pressure in the money market. The shares are nominally to be raised in various provinces, but the principal part of the money will have to come from the capital and Osaka, without a shadow of doubt.

Mr. Ume, the new President of the Legislative Bureau is reported, in the course of an interview with a representative of the *Mainichi*, to have complained that the public termed him a sycophant and time-server because he had accepted the new post. As a matter of fact he had not changed his opinions on the subject of the removal of Formosan judges, which he still regarded as unconstitutional. It was rumoured that the Government, when it appointed him President of the Legislative Bureau, expected

him to support their action. But he had never pledged himself to do so, and although his opinion might be asked by the Cabinet on various legal points from time to time, he was under no obligation to agree with the views of the Government on such questions. His duties were solely the investigation or amendment of drafts of laws and ordinances.

According to the *Yiji*, about 3,000 retail kerosene dealers are holding secret meetings in the capital with the idea of boycotting an oil company known by the name of the *Hakkosha*. This company is underselling all the other oil-dealers, having concluded a special contract with Messrs. Samuel Samuel & Co., for a big supply of cheap oil. The small dealers finding their trade falling off in consequence of the cut in rates, are very wrathful, and threaten vengeance.

At 7 a.m. on the 13th instant, a 3rd class car attached to a train running from Naniwa on the Hankai Railway, was suddenly overturned at Shinya, and the 1st and 2nd class cars, numbering five in all, were consequently derailed. Some of the passengers were slightly bruised, but others had their teeth broken, though none sustained serious injury. The cause of the accident is ascribed to the rails having become loosened in consequence of repair works now being undertaken on the railway.

The *Mainichi* remarks that orders for railway materials have decreased considerably of late, owing to the stringency of the money market and the rise in the cost of commodities. Shareholders in various new railway companies have, it seems, failed to pay-up calls on shares, and while some have been able to postpone payment for a little while other corporations have been compelled to dissolve. On the other hand, the engineers' strike in England has occasioned the breaking of many contracts. Prices and freights from Europe have risen tremendously during the past three months, cargo space that fetched 24 shillings a ton in May, having now gone up to 45 shillings.

The *Official Gazette* publishes the following table of coins struck since the establishment of the Mint up till March this year :—

Classification.	Amount. monme.	Pieces.	Value yen.
Gold			
50 yen	419,795	47,285	941,590
20 "	8,307,733	1,869,178	18,617,780

It is beyond question, asserts the *Mainichi*, that newly undertaken enterprises have declined day by day since the spring of this year. Nor is it deniable that Government enterprises are likewise very backward in their progress. This grievous state of affairs may be proved by a reference to the present condition of the cement market. At the beginning of this year, there was some difficulty in procuring a hundred barrels of cement at any one place or from a single merchant. At present, dealers are announcing that their stocks have reached a thousand or two thousand barrels. As for bricks, even the lowest quality were quoted in January at 1.5 *sen* each, and many enterprising men, considering that they could scarcely find a more profitable undertaking, competed with each other in starting manufactories. No sooner were these manufactories completed, than a decline in trade became universal, and old manufacturers were obliged to suspend business.

The views expressed by Mr. Shibusawa at the Tokyo Chamber of Commerce on the subject of financial adjustment appear to have influenced considerably the opinions of the members

of other Chambers of Commerce throughout the empire, and to have given them some practical pointers as to how to attain their object. Representations with regard to financial reform are to be made at a general meeting of the United Chambers of Commerce to be held on the 4th proximo, and submitted to the Government. The decisions unanimously arrived at are—(1) Curtailment of administrative expenditures to an extent in accordance with national resources; (2) reform of the financial administration of Formosa; (3) abolition of intricate systems of taxation. The above three points are fundamental bases for the adjustment of revenue and expenditure proposed by the practical community. Is the Government prepared, asks the *Mainichi*, to decrease the expenditures for administration?

We have already predicted, says the *Shogyo*, that the appreciation of gold and depreciation of silver would tend to impair trade in yarns to a considerable extent. The forecast has proved correct. The export of yarns to China shows a serious falling off and manufacturers are now greatly embarrassed. No prospect of a revival of business exists at present, in spite of the value of silver being restored to 36 pence. Under these circumstances, it is necessary for dealers to discuss the best means of restoring the former prosperity. A suggestion was made that agents should be appointed to export certain definite quantities of yarn to China upon condition that the losses, if any be sustained, should be equally borne by the producers and themselves. Such a system could only be the outcome of serious distress. There are, the *Shogyo* alleges, only three schemes for ameliorating the present situation and securing the permanent stability of the spinning industry in Japan. The first is the establishment of a factory in China to carry on trade in the interior; the second, the development of the manufacture of fine yarns, to be substituted for imported goods, and the third the starting of a cotton weaving factory. Something permanent must be adopted, says the *Shogyo*, for the maintenance of the spinning industry in Japan.

The *Yiji* reports that the general meeting of the Salt Industry Council was held on the 11th instant at the Prefectural Assembly Hall in Hiogo, over 400 persons being present. Mr. Murata was in the chair, and all the resolutions introduced at the meeting were passed without revision. After the election of officers and other business had been disposed of, H.I.H. Prince Komatsu, President of the Council, delivered an address to the following effect:—"Salt is absolutely indispensable for subsistence, and forms one of the most important productions of Japan. Vicissitudes in this industry, therefore, have not a little influence upon the decline or prosperity of a country. Some time ago, a number of men holding these views formed a union, which is now designated the Japan Salt Industry Council, for the purpose of securing improvements in and development of enterprises connected with salt. I am delighted at being enabled to be present at the first meeting of the Council so instituted, the object of which is to foster technical knowledge among salt producers and to promote the prosperity of the State. The members of the Council will, I hope, engage in their work of development of the industry with vigour and zeal." Medals were then awarded by the Prince to Mr. Murata and fifteen others, and congratulatory addresses were delivered by the local governor and Prince Konoye.

The currency of Japan, alleges the *Tokyo Asahi*, has been transferred from capitalists and manufacturers into the hands of the labouring classes, or direct consumers, and this has contributed towards the enhancement of the prices of commodities. Unless a scheme is devised towards restoring the money so held, any amelioration of the condition of the economic world can hardly be expected. To attain such an end two schemes alone commend themselves, viz., the encouragement of thrift among the working classes and an increase of taxation.

The former plan, however, is much simpler than the other. Postal Savings Bank deposits have decreased considerably of late. At the end of the year before last, the figures aggregated 28,065,427 yen, but they had decreased to 28,479,684 yen by the end of last year, indicating a falling off by an amount of 485,743 yen. The number of depositors, however, increased by 56,125. Depositors of large sums appear to have transferred their investments to various savings banks recently organised under more convenient systems. But it seems certain that the appreciation of commodities has had the effect of relaxing the spirit of thrift among all classes. In view of these facts the Postal Bureau now contemplates establishing a simpler and more effective system of postal banking.

Marquis Ito, being lately questioned by a visitor as to the probable issue of political changes which now appear imminent, is reported by the *Yiji* to have replied as follows:—"Men look at things from different points of view, and it is unreasonable to criticise the proceedings of the present Cabinet. I have already entreated the Matsukata Cabinet to carry out its own convictions to the utmost. I have therefore nothing further to say on the subject." Thus saying, the Marquis laughed heartily. It is said that he takes a walk every day with his attendants beyond the town of Oiso, seemingly indifferent to all political matters.

The *Fomuri* notes that the Yokohama Dock Company, having at present only one dock completed, is overwhelmed with work, and the employees have been unable to take a holiday since July last. Applications for docking accommodation and the repair of ships follow one another in rapid succession, long before vessels already in hand have been disposed of. It is expected the Company will be able to pay a dividend of 8 per cent. for the first half of this year.

Commenting upon the general corruption of Japan, the *Porodsu* says:—"Wealth demoralizes man, and unfortunately the highest orders of society have fallen into this grievous condition. They are now characterized by luxury and dissipation. Vice brings no shame to them. In stately mansions adorned with red lanterns and filled with sweet music, the meekest lusts are indulged. A step behind, however, hungry wretches are crying for bread. Such is the state of affairs throughout the empire. The dissipation of the rich and the starvation of the poor were the direct cause of French revolution. Apparently Japan has developed the germs of such a calamity."

The general meeting of the Practical Industrial Association of Kumamoto was held in the capital on the 15th instant, with Mr. Mayeda in the chair. The principal subjects introduced for discussion were—(1) The forwarding of a representation to the Government with regard to the promulgation of regulations for the prohibition of the export of spurious teas; (2) to urge the Government to adopt suitable means for encouraging the invention of machinery for the manufacture of tea; (3) the engagement of a French expert at public expense for the purpose of improving the process of dyeing, and the quality of silk textiles for export; (4) affording special treatment to persons who have rendered meritorious services in connection with arts and manufactures and with the sale of articles of domestic production.

The number of armed robberies in Tokyo is reported by the *Shogyo* to have decreased considerably of late, being less than one-tenth of the figures recorded five or six years ago. The reason for this is chiefly ascribed to the means of detection provided by the various instruments available for speedy communication. The decrease in grave offences in the capital, however, seems to have considerably influenced the adjoining prefectures to Tokyo, inasmuch as most of the malefactors, being fully sensible of the danger of their presence in the Capital, have retired to the country districts, where they ply their abominable trade with greater safety. The

amount of stolen goods for the fifteen urban and six rural districts of Tokyo is estimated every year at 260,000 yen in value, but one-third of this amount can be recovered. Offences at present do not exceed fifty in number per day, showing a decrease of almost 40 per cent. as compared with the figures recorded three or four years ago. This diminution is in part ascribed to the fact that the labouring classes are enriched in consequence of the abnormal rise in wages.

It is a matter for congratulation, says the *Tokyo Asahi*, that the people of this country have become keenly alive to the necessity of education since the late war. Not only primary schools but also prefectural middle schools have considerably increased during the past few months. In former times there was seldom more than one middle school in each prefecture, but now the number has increased to three or four. Everything, however, has some drawback, or is attended with some unexpected abuse. Thus it is with the middle schools of various prefectures. The members of several prefectural assemblies show an inclination to have educational institutions established in the most inappropriate places simply for the purpose of securing local interest, in utter disregard of the convenience of the students at large.

Provisional charters have been granted to the following railway companies:—

Name of Company	Section	Miles	Chains	Capital Yen.
Kyohoku	Obazaki-Otsu	6.18	1,100,000
Asuma	Komigawa-Matsue-shi	13	550,000
Usugishima	Kurashiki-Takeyama	21	800,000

According to the *Hochi*, the anti-Japanese movement is growing in Thursday Island, Australia. In the 22nd year of Meiji (1889) the Japanese immigrants to the island numbered only 19, but have since increased to over 900. One of the reasons for the opposition to Japanese is ascribed to their sagacity and assiduity, with which the white labourers on the plantations can hardly compete. The latter found themselves gradually but steadily deprived of their occupation, being replaced by cheaper labourers from this country. The result has been a loud clamour against the Japanese, who are now represented as a race detrimental to the development of the colony on account of their readiness to return home with their savings. The Chinese, however, are universally welcomed. They appear to come to the country with the object of permanent settlement, in spite of serious differences in the mode of living and general customs of the society with which they are incorporated.

The *Boyski Shimben*, a few days ago, published a paragraph which would lead the reader to believe that some 180 deserters from foreign men-of-war and other vessels are now at large in or around Yokohama. Our vernacular contemporary says:—"The number of marines and seamen who have absented themselves without leave from men-of-war and steamers of various nations from January to the end of October last at Yokohama was as follows:—British, escaped 179, arrested 95, at large 87; American, escaped 162, arrested 75, at large 87; Russian, escaped 4, arrested 3 at large 1; German, escaped 5, arrested 1, at large 4; French, escaped 2, arrested 1, at large 1. The *Boyski* seems to take it for granted that all the leave-breakers not arrested by the police are deserters now at large, whereas the fact is that with very few exceptions all these men returned to their ships without the kind offices of the police. So far as the British and American seamen referred to are concerned, we learn from enquiry at the Consulates, from which the warrants for the arrest of leave-breakers and deserters are issued, that in the course of the current year there has been but one British seaman who has not been accounted for, all the others having either voluntarily returned to their ships or been put on board; while three deserters from an American man-of-war—the only men not returned to their vessels, have been shipped out of the port. Instead of there being 174 British and American deserters at large in Yokohama

there is not a single one, the only British sailor unaccounted for having made his way to Kobe. With regard to the other nationalities referred to we have no statistics, but we entertain not the least doubt that our contemporary is as much at sea in its statements regarding them as it is with the British and American seamen.

The high price of rice having now become a subject of universal comment and anxiety, it may be of interest to know the comparative amounts of the crop for the past two years. According to investigations made at the Shibusa Office and published in the *Shogyo*, the total crop for this year does not exceed 33,861,540 *koku*, against 35,854,809 *koku* last year, thus showing a decrease of 1,993,266 *koku*. Compared with ordinary years it bears the ratio of 8.456 to the average of 10, taken for seven years from the 23rd to the 29th year of *Meiji*. Below are the details:—

Names of cities and prefectures.	Estimated crop for this year.	Crop in ordinary years.
Tokyo, Saitama, Tochigi, Koku.		
Chiba, and Ibaraki.....	3,783,927	4,614,545
Kanagawa, Gumma, Nagano, and Yamanashi	1,926,285	2,320,826
Fukushima, Miyagi, Iwate, and Aomori	3,066,949	3,786,357
Akita, Yamagata, and Niigata	2,911,828	4,773,489
Toyama, Ishikawa, & Fukui	2,148,193	2,983,601
Shizuoka, Aichi, Mito, Gifu, and Shiga	4,893,397	5,097,289
Kioto, Osaka, Hiogo, Nara, and Wakayama	4,027,585	4,576,802
Okayama, Hiroshima, Yamaguchi, Shimane, and Tottori	3,702,807	4,408,104
Tokushima, Kagawa, Ehime, and Kochi	1,899,307	1,938,068
Saga, and other prefectures in Kiushiu	5,461,743	5,461,743
Hokkaido	39,519	39,519
Total	33,861,540	40,000,343

CHINESE NOTES.

The notorious Chou Han seems to have really disappeared from the scene in Changsha; the triennial examinations have taken place without the posting of any anti-foreign placards on the city walls; a society for the abolition of foot-binding has been formed, and the city is veritably lit by electricity. That is the latest record from Hunan. It comes from a Chinese missionary who is trying very hard to obtain permission for opening a London Mission chapel and school there, but whose success has thus far been small. Incidentally it is worth noting that the citizens of Changsha pay only 20 cash a night for an electric lamp. That means about 65 *sen* a month. People in Tokyo are charged 120 *sen*. Thus electric lighting costs only half as much in the capital of Hunan as it costs in the capital of Japan. There should be plenty of room for competition in Tokyo.

The Wuchang incident has been closed. Unlike the generality of "happenings" in China, it did not obtrude itself on public observation until the necessary official steps had been successfully taken to obtain redress. The affair was this:—The German Minister proceeded in the H.I.G.S. *Cormoran* to Wuchang, and went ashore in one of the ship's boats to visit the Viceroy, the celebrated Chang Chih-tung. During the Minister's absence, the German officers who were with the boat went ashore, and a mob collecting, stoned the men in the boat before the officers' return, and paid the same compliment to the officers as soon as they appeared on the scene. It now appears that the Viceroy has "fully apologized" for the outrage, and the German Minister is satisfied. Doubtless the Viceroy has taken steps to "get even" with the mob.

The insurrection in the north of China—the Têho country—continues to defy the efforts of General Nieh. The rebels appear to be pursuing guerilla tactics with considerable success.

The Chinese have a magnificently keen eye for opportunities. Several enterprising persons

calling themselves "deputies of the Railway Administration in Shanghai" having been selling bogus railway shares to capitalists in out-of-the-way towns up the Yangtze. They "eased" two Hangkow merchants of two thousand taels, and are now being looked after by the police.

Chungking has the honour of being the first city in China to start a newspaper under purely Chinese auspices—we except the *Peking Official Gazette*, of course. There are Chinese newspapers in Shanghai and Tientsin, but they owed their inception to foreign enterprise, and, at the outset of their career, were under foreign control. Indeed we are by no means sure they can yet call themselves independent. Chungking, however, has now a *Yü pao*, or "Chungking News"—Yü being the ancient name of Chungking. It is published once every five days, and wooden blocks are used instead of movable type. The latter strange fact is due to a stranger cause. Type and machinery have been ordered from Shanghai, but will take such a long time to get up the river that the projectors of the *Yü pao* determined to make a start with local resources. What a field China will be for newspaper enterprise one of these days.

The trouble that occurred at the recent race meeting in Shanghai between the representatives of the press and the Secretary of the Race Club was this:—The reporter of the *N.C. Daily News* obtained permission from Mr. MacGregor for himself and his brother-journalists to tiffin in the Owners' and Riders' Room on race days, and availed himself of the permission on two consecutive days. But, on the third day, he was informed by the Secretary that he had no right to come to the Room for such a purpose and the representative of the *Mercury* was refused admission by a policeman. Thereupon the reporters in a body, decided to take no further notice of the races. Correspondence subsequently passed, but no conclusion has been reached, for Mr. MacGregor is absent, and the Stewards apparently deem it necessary to seek confirmation or contradiction of the reporter's statement. It is a singular situation. We learn from the correspondence that when the Secretary addressed a veto to the reporter, the latter explained clearly that he had obtained Mr. MacGregor's permission. Surely the Secretary should then have conferred with Mr. MacGregor before enforcing the interdiction? His conduct seems to have been strangely arbitrary. For he says not a word about his own failure to refer to Mr. MacGregor, and he apparently treats the reporter's statement as quite unworthy of credence unless confirmed by Mr. MacGregor.

We take the following from the *N.C. Daily News*.

According to a memorial presented early this month to the Throne by H.E. Hu, Director-General of Northern Railways, his estimate for the building of the railway extension outside Shanhaikuan to North Kinchou will amount to four million taels, and the railway from Kinchou to Moukden and Kirin will cost another thirty million taels. In the present state of finances at Peking the memorialist regrets to say that unless assistance is obtained through a foreign loan there is no present possibility of commencing work on the proposed railways. He further gives it as his opinion that, owing to the sparse population outside the Great Wall, the net profits accruing from the proposed Shanhaikuan-Kirin Railway will only be sufficient to pay the expenses of running it together with the interest on the foreign loan. As for any chance of being able in the near future to repay the principal from profits derived from the line the memorialist fears that there are no hopes of doing so.

The Vienna correspondent of the *Daily Telegraph* says:—According to a sensational story from Belgrade, ex-King Milan of Serbia recently visited the Metropolitan of Belgrade and demanded an absolute divorce from ex-Queen Natalie. It is said that he declared that the interests of the dynasty require him to marry again, as King Alexander is ill and must go abroad. There are rumours also that Milan will be decreed regent of Serbia.

CHANGES OF LOCAL GOVERNORS.

In consequence of the transfer of the Governor of Kyoto to the Department of Agriculture and Commerce, the following changes of Local Governors are announced:—

To be Governor of Kyoto, Mr. Uchiyumi Tadakatsu, now Governor of Osaka.
To be Governor of Osaka, Mr. Tokito Tamemoto, now Governor of Aichi.
To be Governor of Aichi, Mr. Egi Chiyuki, now Governor of Tochigi.
To be Governor of Tochigi, Mr. Sento Kyoomi, now Secretary of the Home Department.
To be Governor of Fukui, Mr. Arakawa Gitaro, now Secretary of Kanagawa.
To be Governor of Ehime, Mr. Maki Bokushin, now Governor of Aomori.
To be Governor of Aomori, Mr. Kono Shuichiro.
To be Governor of Tottori, Mr. Seki Shingo, now Secretary of Hiroshima.

NEWS OF THE WEEK.

Richard Reynolds, the man charged with stabbing a shipmate on board the ship *Clarendon* at Kobe on the 6th inst., was committed for trial by Mr. Playfair, Acting Judge, on the 15th instant.

The Straits Legislative Council has sanctioned the expenditure of \$10,000 for the purpose of converting the vacated military quarters at Penang into a residence for the Governor. The *Straits Times* proposes an increase in the Governor's entertainment allowance.

We learn from home journals that the total cost of the famine to the Indian Government, in the form of direct relief and remissions of taxation, is estimated at ten millions sterling. The contributions from various sources aggregated a million and a half, up to the end of September. Thus the full figure is 11½ millions sterling.

The *Osprey*, a new torpedo boat catcher, just completed by the Fairfield Shipbuilding Company, attained a speed of 31½ knots, and must consequently be regarded as the fastest war vessel afloat. She will not hold that position long, however, for Messrs. Laird have nearly finished the *Express*, which they guarantee shall have a speed of at least 32 knots.

A fine illustration of modern football has been given at Kelvin'side Park, Kirkintilloch. The spectators became so interested that they took a hand—and a number of feet—in it. They also took sticks and stones. In the end the visiting team and their adherents were so badly kicked and mauled that they had to leave the game unfinished. Eh, mon, but it was graun!

The *China Mail* hears that the Benneriz case has been settled, and that the Chinese Government have released all the steamers seized. The expenses paid for the detention of the *Ningchow* in Hongkong are said to be \$25,000, and the Chinese Government are said to have agreed to pay something like three and a half lacs of dollars in settlement of the whole claim.

In the U.S. Consular Court at Kobe, on the 16th instant, the case instituted by Takajiro Kurata, a jinrikisha man, against E. G. Ackermann, for alleged assault and battery, in connection with the recent bicycling trouble, came on for hearing before S. J. Lyon, Esq., Consul and Judge. Mr. Brushfield appeared for the defendant. After evidence had been taken on both sides, and Counsel for the defence had addressed Court, the case was adjourned till the 18th inst.

Kobe's Smoking Concerts are now in full swing. Some new performers have come forward this autumn, we notice, to reinforce the ranks of the sister port's entertainers, among them being Mr. L. C. B. Jabers, Mr. A. D. Jective, Mr. Special Banquet, Miss Wheelks and Mr. Shrimpher—all of whom are said to be full of promise in their various "turns." Yokohama, with a much larger supply of young men, makes a very poor attempt at entertaining itself in this social fashion,

though a "smoker" is looming ahead, we understand; probably taking place this month. Dame Rumour says that "the mysterious Incogniti will burst upon Yokohama some time in January next." The tidings are welcome.

The football season opened in Yokohama on Saturday afternoon by a pick up game (Association Rules) which displayed some very fair play considering the lack of practice and training under which the players had to labour. The sides were very evenly chosen and neither secured any advantage, no goals being scored. We note that the Kobe footballers opened their season the same day with a game between teams captained by Lightfoot and Skinner respectively, the latter winning by two goals to their opponents' one.

In the U.S. Consular Court on Wednesday afternoon, a seaman named John Kerney was charged by the Japanese police, before J. F. Govey Esq., Consul-General and Judge, with being drunk and incapable in a public place. Accused pleaded guilty, and evidence having been produced to the effect that he had been found lying in the street in a drunken sleep and had to be carried to the police station on a stretcher, his Honour convicted accused and sentenced him to pay a fine of \$5. gold, and to be imprisoned for 30 days, or until such time within that period as he could be shipped out of the port.

A correspondent of *The Times*, who describes himself as an ardent admirer and sincere friend of the British Navy, says that he is now in possession of a join. shell which recently pitched among a flock of his sheep grazing near the sea shore, and that were not his house a very solid stone structure it would, he thinks, be soon reduced to a mere heap of bricks and mortar "by the absolutely terrific and really alarming impact and concussion sometimes produced" when her Majesty's ships are firing in the neighbourhood. He adds that "a huge structure of solid timber framing, some 60 ft. long, which had served for a target stage, drifted recently into Swanage Bay, having evidently broken from its mooring." Residence at Swanage must be decidedly piquant if 30 in. shells, 65 ft. target frames and deafening concussions are common visitors from the sea.

More news from Japan! This time it is the usually veracious *Globe* that suffers itself to be the disseminator of pseudo fiction:—Horse-racing in Japan apparently takes place under perfectly ideal conditions. That is, so far as the wealthy are concerned. The prices of admission to the courses are so high as to come only within the reach of the upper classes, and no betting is allowed on any of the courses. The Emperor, though an opponent of gambling, is a great patron of the sport. He has about 3,000 horses, and intends to do all in his power to improve the native breed. It is stated that his agents have recently been all over Europe buying horses on his behalf, and are now in the United States with the intention of buying 20 horses for their Imperial master's stables.

At a gymkhana recently held at Hongkong, the fifth event on the card had some novel conditions attached. A word was selected by the committee which had to be made into as many English dictionary words as possible by a lady, four minutes being allowed. Then the gentleman nominee had to mount and race home with the result. Four points were allowed per word. The event was productive of much amusement. The word "Gather" was printed on slips of paper, sealed in envelopes, and handed to the ladies. Mrs. Ritchie—who nominated Col. The O'Gorman—made 24 words, and secured 96 points; Mrs. Phillips (Mr. Spencer) secured second position with 92 points, and Mrs. Hawkins (Mr. Landale) third, with 84 points.

The race for the Hundred Yards Amateur English Swimming Championship was swum at Hornsey Baths, London, on October 3rd. In the preliminary heats J. H. Tyers, of Man-

chester, the English Champion, beat R. Derbyshire; and J. Helling of Sydney, beat Cohen by four yards; V. Lindberg, of Bondi, being only a touch behind. The final heat proved a magnificent struggle. Helling swam the first 44 yards in 25 seconds. He was then clear. At 76 yards he was a yard in front of Derbyshire, who in turn led Tyers by a yard and a half. Helling missed at the final turn. Tyers then put on a splendid spurt, and eventually won by six inches, Helling and Derbyshire finishing a dead heat for second place. The winner's time was 1 minute 3½ seconds.

A correspondent writing in *The Sydney Mail* over the signature "C. H. S.", has some intelligence to impart which will be just as novel to our readers as it was to the Australian journal. After describing Prince Arisugawa's career in the British Navy, "C. H. S." says:—

In due course of his naval career he studied at the gunnery school, &c., in England, and subsequently entered his own service, in which he is a post-captain, and in that capacity did good work in the late war. Now the wheel of fortune has revolved for him again. Prince Yoshihito Haru no Miya, after 18 years of a feeble hold on life, has gone to his ancestors, and once again, this time, as the children say, "for always," Arisugawa Satsujiro Takahito is Crown Prince of Japan. A year ago, with what results may be guessed, overtures were made to obtain a bride from the House of Orleans for the deceased Yoshihito, but there is no need for such a marrying in Arisugawa's case; he has a wife and bairns of his own race.

A nurse of the Humbledon Union Workhouse has got into trouble for putting on a suit of corduroy ditto and promenading the ground, "causing much amusement." To the porter at the lodge she said, "I say, guv'nor, can you put me up for the night." Whereat the porter was "convulsed with laughter, we are told by a London paper." She has been asked to resign therefore; and now Mr. Hall Caine's friends and foes will doubtless find another opportunity to advertise "The Christian" by discussing whether this nurse is the proto-type or the result of "Glory Quayle."

On November 6th, at Hongkong, a court martial was held on the *Victor Emanuel*, the accused being Montague A. Penfold, assistant paymaster in charge of H.M.S. *Humber*. He was charged with misappropriating public money to the amount of about £30. The Court was composed of Captain Clarke, H.M.S. *Undaunted* (President), Commander Sparks, H.M.S. *Linnet*, Commander Kingmill, H.M.S. *Archer*, Commander Henderson, H.M.S. *Tamar*, and Commander Taylor, H.M.S. *Tamar*. Mr. Lawford, the Commodore's Secretary, was Judge Advocate, and the prisoner's friend was Mr. Wallace, assistant paymaster. The charge was proved and the prisoner was sentenced to lose eighteen months' seniority and to be dismissed his ship.

Sir Andrew Noble, presiding over the annual meeting of the shareholders of Messrs. Armstrong, Whitworth, and Company, said it was fortunate for the firm that they had a well-organised and effective establishment in Italy, which was rendering useful aid on the present occasion, and was capable of being developed to almost every extent, though the need for such expedients was much to be deplored. He denied that it was the wish of employers to crush the men's unions. Since the Amalgamated Society of Engineers came under its present management the employers had been subjected to most vexatious and constant demands. Any attempt to interfere with men using their abilities to the best advantage, and to make able and competent men carry on their backs idle and incompetent men, could mean nothing but disaster to the men and ruin to the engineering trade of the country.

On Wednesday afternoon the marriage took place of Miss Gladys Margaret Moss, daughter of Mr. Charles D. Moss, of H. B. M's Court for Japan, and Mr. Paul Louis Vautier, manager in Tokyo for Messrs Illies and Co. The civil ceremony was performed at the Swiss Consulate,

by Mr. R. Kallen, H. I. G. M. Vice Consul-general, and acting Swiss Consul, and the religious ceremony was conducted in Christ Church by the Rev. E. Champneys Irwine, M.A. The Church had been prettily decorated by the lady friends of the bride. The bridesmaids were Misses May and Hilare Moss, the bride's sisters, Mr. Edward Bosshart being bestman. The bride was given away by her father. Mr. Griffin presided at the organ and played a march from Handel's Occasional Oratorio, at the opening, and the Bridal March from "Lohengrin," and Mendelssohn's Wedding March at the close of the service. A reception was afterwards held at the house of the bride's parents, No. 103 Bluff.

Professor Mason, of the Rensselaer Polytechnic Institute, Troy, U.S., recently discussed the question of scientific evidence, says a home paper. At the American Bar, as at our own, witnesses are classified as liars, —liars, and scientific experts. Mr. Mason endeavours to account for the low grade of science in the scale. He blames first the cross-examination of the court, which does not speak the language of science, and does not understand it. Hence, counsel ask puzzling and sometimes monstrous questions. Scientific witnesses also encounter deep-rooted prejudices in court, which they cannot remove. As President Jordan once said, "There is no nonsense so unscientific that men called educated will not accept it as science"; and they will shift the burden of proof on the man of science opposed to their view. Adverse authorities, and even his own earlier opinions, are quoted against him, so he ought to be well up in these. "If I had only not written my first book," laments the distinguished author, just as a great composer once said of his first opera, "It is one of my early crimes." "The expert, above all things, should provide things honest in the sight of all men. He should be interested in the case as if it were his own, but not allow his interest or feelings to bias his judgment. Experiments should be tried before hand to ensure success. Care must be taken in reports not to leave out matters well-known to the expert but not to the public. In short, the expert should be absolutely truthful, clear and terse in his statements, homely and apt in his illustrations, incapable of being led beyond his proper field, and as fearful of illegitimate knowledge as he is fearless of ignorance."

The following cutting from *Engineering* (not *The Engineer* recently referred to in these columns), has been forwarded to us by Mr. H. S. Bindley, of Tokyo, technical adviser in Japan to Messrs Vickers, who asks us to insert it as explaining exactly the state of affairs with regard to the amalgamation between Messrs Vickers Sons & Co., Limited, and The Maxim-Nordenfelt Gun & Ammunition Company, Limited, and as this forms perhaps the strongest combination between manufacturers ever effected for the construction of war material, we think the subject of considerable interest:—"The purchase of the Barrow-in-Furness Naval Construction Works by Messrs Vickers Sons & Company, Limited, and the amalgamation with the Maxim-Nordenfelt Gun & Ammunition Company, Limited, which has been recommended by the Directors to the shareholders of both companies, constitute, in view of the immense resources of their own establishment at Sheffield, a most important industrial combination, which has great economic advantages; for while the company may build ships and engines, construct armoured plates and guns of every type and size, and produce all sorts of railway material and castings, they can without outside help also complete any type of warship ready for action. Thus there is a national importance involved which should not be lost sight of, especially as it is recognised that the existence of Britain depends on our resources to maintain our maritime power. Messrs Vickers' Works are more than equal to several of the Government establishments. Indeed, few other companies can of themselves so fully meet the demands of a nation in the supply of the weapons of warfare afloat or on land."

CORRESPONDENCE.

WORD MAKING.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I read in to-day's *Mail* that at a recent word-making match between ladies in Hongkong, the largest number of words extracted from "Gather," in a space of four minutes, was twenty-four. Probably the excitement of competition prevented the contestants from searching thoroughly; for I have just taken,—confining myself to the same limit of time,—forty-six words from "Gather," to which number one or two others might perhaps be added, since they can doubtless be found in the Dictionary, although possibly obsolete or little used. I presume that a longer and closer search would disclose several additional words. E.H.H.

Yokohama, November 18th, 1897.

THE VISIT OF COL. BACON.

TO THE EDITOR OF THE "JAPAN MAIL."

SIR,—I am assured that I would express the sentiments of those who had the pleasure of an acquaintance with Col. Bacon, if I should put on record in the columns of the *Mail* a statement of hearty appreciation of his labour of love in Japan. It is not often that prominent "men of business" who come to this country have either the time or the inclination to turn aside from their regular duties to engage in philanthropic work. Too often even a professing Christian, if he happened to drop Sunday on the meridian, as in one case, left it entirely out of his calendar during his entire visit in this country. But Col. Bacon's course elicited admiration for his versatility, and love for his nobility of character, as well as wonder at his energy and powers of endurance; for he was at work somehow and somewhere almost all day and late in the evening.

Col. Bacon is a graduate of West Point Military Academy, where he was a class-mate and roommate of Rev. C. E. Garst, the well-known champion of the single-tax. The title of "Colonel" comes, however, from the fact that he is commander of a regiment of the New York National Guards. He is a prominent lawyer and successful business man, and has been a member of the New York State Legislature. He is an enthusiastic lecturer and reformer, interested in Y.M.C.A., temperance and Sunday observance work, and almost every week addressing large audiences.

The visit of Col. Bacon in Japan occupied about six weeks. He had the honour of dining with Count Itagaki; and he was invited to Count Okuma's garden party, where he had the pleasure of meeting the Countess and having a long and interesting interview with the Count. From Nikko to Kobe he saw Japan hastily; but he was impressed with the natural beauties of this Empire and also with the many admirable qualities of the people. He was unstinted in his praise where it was due, and equally ready to censure and urge reform where needed. Notably he rebuked most fearlessly the shameful prevalence of the social evil, the lack of business integrity (as in failure to keep contracts), and the cowardly habit of committing suicide.

During his stay he delivered perhaps twenty addresses, many of them before large audiences, speaking in Tokyo at the Y. M. C. A., the Central Tabernacle, the Semmon Gakko, the Higher Commercial School, etc., etc. He proved himself a true friend of the Japanese by telling them their faults, but in so kindly a manner that his rebukes were received in the best possible part and the hearty applause indicated a response in the hearts of his hearers. On occasion, he used the Japanese and U.S. flags most impressively, calling upon the Japanese to cleanse their flag of the dishonor that sin brings upon it, just as the United States cleansed hers of the disgrace of slavery. Individual purity he urged his hearers to believe is the highest patriotism.

One of the busiest of business men, he made a unique impression; for it is sadly unusual to see such a man urging faith in Christ and devotion to the Holy Scriptures as the two sure roads to success for the individual and the nation. Col. Bacon's many friends, Japanese and foreign, would gladly urge him, a true and inspiring "missionary to the missionaries," as well as to the unbelievers, to "come again" to Japan.

Yours respectfully, A MISSIONARY.
Tokyo, November 15.

The *London Gazette* announces that King Menelek, of Abyssinia, has been appointed a Knight of the Grand Cross of the Order of St. Michael and St. George, and that Mr. T. W. Taylor, Chief Justice of Manitoba, has been knighted.

YOKOHAMA YACHT CLUB.

An extraordinary general meeting of the above Club was held on Monday afternoon at Keil's Building, to discuss certain proposed alterations in the Rules of the Club. There were present Messrs. H. Rose, Salabelle, Carst, Carst Jr., G. Hodges, Tucker, Gibbs, H. Irwin, C. S. Averill, Schmiedeke, Black, T. Abbey, F. Owston, A. Owston, G. Scidmore, A. Kingdon, K. Kingdon, A. M. Gale, Manley Jr., M. Pors, Grautoff, Abbey Jr., etc.

On the proposal of Mr. ROSE, Mr. G. SCIDMORE took the chair, and at the request of the latter Mr. ROSE acted as secretary *pro tem*, in the unavoidable absence of Mr. BOYES.

The Chairman said they were convened as an extraordinary meeting to consider certain proposed amendments, which were before them, in the Rules of the Club. The first was Rule 4, which it was proposed to alter to read as follows:—

That the committee shall consist of 3 members, one of whom shall act as President and one as Honorary Secretary and Treasurer. The President shall have power to appoint a President *pro tempore*, whenever he is unable to act himself. In event of any disputed question arising, the President shall decide it, and from his decision there shall be no appeal.

After some discussion as to the reasons for reducing the number of the Committee to three, the alteration was proposed by Mr. AVERILL, seconded by Mr. SALABELLE, put to the meeting, and lost.

The next proposal was to alter Rule 13, the last words, "in December," to be altered to "at the time of the Annual General meeting." This was explained and proposed by Mr. ROSE, seconded by Mr. HODGES and carried.

The next change proposed was in sailing Rule No 20, to read: "Racing crews shall be limited to the following numbers:—for 39 raters, no limit, 32 raters, no limit, 26 raters, no limit, 21 raters, 5 men."

Mr. GRAUTOFF proposed and Mr. GIBBS seconded the proposal, which on being put to the meeting was lost.

Mr. R. KINGDON proposed and Mr. HODGES seconded the alteration of Rule 25, the words "either by accident or design" to be altered to "by any cause whatever."

Put to the meeting and carried.

Mr. AVERILL proposed and Mr. GRAUTOFF seconded the alteration of Rule 27: Allowance to Schooners and Yawls, the words "schooners at three-fifths and yawls at four-fifths of their actual rating" to be altered to "schooners at the cube root of 3/5ths of their L X SA, and yawls at the cube root of 4/5ths of their L X SA."

The words at end of section "middle of rating length" to be altered to "middle of L.W.L., and foresail shall be at least 50 per cent. of area of mainsail."

The alteration was put to the meeting and carried, as was also the following clause: Ketches and Luggers: "Allowance at three-fifths their rating" to be altered to "allowance at the cube root of 3/5ths of their L X SA."

In a ketch the distance between the masts to read "not exceed half the mean of over all + L.W.L. length, that the smaller sail is carried at." and that the mizzen mast is stepped forward of rudder post at deck, the sail to be at least 50 per cent. of area of mainsail."

The next clause, that classification be made to correspond to Y.R.A. rules, was proposed and lost.

Mr. AVERILL proposed and Mr. HODGES seconded that for all boats over 17 rating, etc. the words "A Class" and "B Class" be altered to "A Division" and "B Division." Add to Rule 29: "at least half the 'First Prizes' offered shall be sailed for under club-time allowance."

Carried as was also the following clause, Rule 2—alter §2 into "Ven 2" and add:—"That members shall pay the measurement fees, both when entering their boats on the Club Register and also when making alteration necessitating a remeasurement, due notice of which must be given to the Hon. Sec. in writing."

Mr. AVERILL proposed that the alterations in the Sailing Rules be laid on the table, as they required consideration by the Committee.

The CHAIRMAN was against this step, as they were liable in that case to be called up again. He proposed to put the alterations to the meeting *en bloc*. These were read and put to the meeting *seriatim*, some being carried and others lost, as follows:—

1.—Alter "the committee shall award the prizes" to "the prizes shall be awarded."—Lost.

3.—Alter the words, "the officer of the day," insert "and the committee."—Carried.

18.—After the word, "buoy, boat &/or vessel to

mark it out," insert "the Breakwater at the Harbour Entrance excepted."—Carried.

28.—Alter the words, "the Club Courses shall be as follows" to "the majority of the Races shall be sailed over the Club Courses, which shall be as follows:—"

Add to this Rule:

The amount of entrance fees for all classes to be at the discretion of the Committee and to be stated in the Race programmes.—Carried.

29.—Add: (a) The Programme for the Season shall provide for only 12 races in each class, for which record points on club time allowance shall be awarded, two to the first and one to the second boat.

(b) All additional races, whether provided for on the programme or not, to be termed extra races.

(c) Races with record points not to extend beyond Kannon-saki for the A division, and not beyond 7 miles from the Harbour Entrance for the B division, nor to extend over more than one day.

(d) Races without time limit are to be avoided except in the case of cruising races.

(e) Fastest time prize to be awarded on the L.W.L. basis.—Carried.

Mr. A. OWSTON proposed the rule *d* be altered as follows:—*d*. "All races except cruising races are to be subject to a definite time limit, not less than 30 minutes per mile for A division and 40 minutes for the B division." This was put to the meeting, and carried.

This concluded the business of the extraordinary meeting and the Chairman then called the Ordinary Annual Meeting to order.

The CHAIRMAN spoke in high terms of the valuable services of the Hon. Sec., Mr. BOYES, who they all regretted was leaving for Kobe, but they had grounds for hoping that he would return here again later on.

The adoption of the report and accounts was proposed by Mr. SALABELLE, seconded by Mr. HODGES, and carried. The report and accounts were as follow:—

ANNUAL REPORT OF THE COMMITTEE, SECRETARY, AND TREASURER OF THE YOKOHAMA YACHT CLUB.

SEASON OF 1897.—REPORT.

The Committee have much pleasure in reporting that during the eleventh season of the Club's existence the sport has been kept up with an enthusiasm that offers abundant promise of its future popularity and growth. An innovation was this year made by giving a "cruising race" to Uraga and round the island of Ukishima, which proved a very enjoyable feature of the sport. Of the 56 races sailed, the most prominent was the regatta held in celebration of the sixtieth anniversary of Her Britannic Majesty's accession to the throne, and the members will look back upon that regatta as one of the most important in the Club's history.

The entries were very numerous, not less than 29 boats taking part in the races, towards the prizes for which the members and the public contributed very liberally. The thanks of the Club are also due to the local press for their continued support and promotion of the interests of the sport.

The fleet has been increased by a new competitor in the 39 rating class, the centre-board cutter *Riever*. She did not at first prove a success under her old rig against the Yokohama craft, but with her fine new sails she will have a look in for the prizes in certain breezes. *Mary* did not dim her old fame and again proved that she was able to win under heavy handicaps when the weather suited her. *Golden Hind*, the most powerful vessel of our Club, broke the record this season with an actual speed of 7.54 knots over a 22 miles course and secured second place for record points with her yawl rig allowance, *Maid Marion* and *Spray* being very close to the same number of points.

In the 26 rating class *Molly Bawn* secured most of the prizes, being of a far superior racing type to her competitors; *Ideal*, the smallest boat of this class, taking second place, and having good racing with her larger sisters all through the season.

The 17 raters received an addition by *Snap*, now *Devonia*, of the type of *Bonito*, a valuable acquisition to this class.

Eclair, equipped with a new suit of sails, reducing her to 16½ rating, maintained her position at the head of the class, besides winning the fastest time prize on full Club-time allowance. *Isabelle* showed her power in rough weather, whilst *Petrel* did not race this season.

The 12 raters.—Mr. Alan Owston's school for young yachtsmen—were represented by six boats, of which *Susume* and *Chocho* secured most of the prizes and record points. This class, with its short courses in full view of the Bund, added greatly to the interest in racing taken by onlookers.

The full theoretical time allowance adopted at last year's meeting has given entire satisfaction, save to those boats of older age, for which somewhat large handicaps are at times needed.

The rig allowance as worked this season seems to have been in excess of the intention of its promoters, and it is proposed to rectify it. A few changes in minor details of rules have been suggested; but with,

these few exceptions no alteration seems required and our rules give general satisfaction.

Appended is the Treasurer's Report

T. ABBEY
T. M. LAFFIN } Committee.

Collector's Commission	5.00
Gratuities	20.00
	Yen 1,557.00

RICHARD BOYSS.

Examined with the Vouchers and found correct.

W. GAUTOFF.

Yokohama, 6th November, 1897.

The CHAIRMAN proposed and Mr. HODGES seconded a vote of thanks to the retiring Hon. Sec. and Treasurer, and the Committee, which was carried unanimously.

On the ballot for officers the following gentlemen were declared elected: Messrs. H. Rose, J. O. Averil, M. Pors, G. Hodges and T. Abbey.

Mr. BOYSS, the retiring Hon. Sec., who had come in after the opening of the ordinary meeting, read a letter from Mr. Jas. Troup, H.B.M. Consul, accompanying a very fine Cup presented by the British Residents of Yokohama on the occasion of the Jubilee of Queen Victoria. The question arose as to what should be done with the Cup.

Mr. ABBEY proposed that it should be sailed for by the whole fleet on Her Majesty's Birthday.

Mr. HODGES proposed that it should be won twice over by any one boat, in races on the Queen's Birthday, on Club time allowance.

With the amendment that the date of sailing be left to the Committee, Mr. Hodges motion was carried.

This concluded the business before the meeting.

THE SEASON'S RECORDS.

The Yokohama Yacht Club has just finished another season, making the eleventh since it was first instituted under the more modest title of the Yokohama Sailing Club. Although the past summer was unusually rainy and the wind somewhat fickle, the racing was carried on throughout with much spirit, fifty races being sailed to a finish, viz., fourteen by the 39-rating class, twelve by the 26-raters, twelve by the 17-raters, and twelve by the 12-raters. In addition to these there was a long cruising race sailed by the 39-raters, and there were also several races which failed for want of wind. Among the latter may be included the winding-up race of the season on the 2nd October, which was a failure as a contest, although some of the yachts finished the course. The record prizes in the several classes were won by the following yachts:—

39 rating Class ... <i>Mary</i>	with 12 points
26-rating Class ... <i>Molly Bawn</i>	19 points
17-rating Class ... <i>Eclair</i>	16 points
12 rating Class ... <i>Susume</i>	10 points

No races were provided for the 32-rating class, the two yachts *Daimyo* and *Swanild*, which belong to that class, being sailed with the 39-raters in the few races in which they competed. The 21-rating class, although giving a very handy-sized boat, has never been patronised, and it is now a matter of doubt whether many of the members of the Club are aware that such a class has been provided for in the Club rules. The other four classes were well represented, there being a good list of entries for every race. There are at the present time 30 yachts and sailing boats on the Club register, all but two of which competed in the races of the past season, and a large proportion of them sailed in nearly all the races arranged for their respective classes.

The following table gives a comparison of the average speeds of the record prize-winners for the past and the preceding six seasons:—

AVERAGE SPEED OF RECORD PRIZE WINNERS.

Raters.	Miles Sailed.	Speed in knots.

Taking wind and weather into account, the speed of the 39 and 26-raters remains about the same as during the three preceding years. This is as might be expected, there having been no new fast racing yacht added to the fleet during that time. In the 17-rating class there is an improvement, the fin-keel boats lately built being undoubtedly faster than the older types, as represented by boats like *Coogee* and *Undine*, although these latter are still good enough to pick up a prize now and then. Although heavily handicapped in most of the races, *Mary* still keeps up her reputation as the fastest all-round yacht in the Club, and she won a fair share of the prizes. In strong breezes she has, however, at last found her match in *Golden Hind*, which yacht has on more than one occasion succeeded in crossing the winning line a considerable distance ahead of her. *Tori* had her lead lowered at the beginning of the season and was also rigged up with a new and improved sail plan, by which she appeared to be much improved. However, she was very unfortunate and failed to win a single prize. This yacht would very likely be faster if her spars were slightly reduced; at present she carries much more sail than any other yacht in the class and apparently without being benefited by it. The latest addition to the 39 rating class is *Riever*, a keel and centreboard yacht about the same size as *Maid Marion*. This yacht came from Kobe rigged as a lugger, but has since been greatly improved by being altered into a cutter. So far she has hardly proved a match for the Yokohama yachts, but as she is fairly speedy under some conditions she may have better luck next year than she has had so far. *Maid Marion* was in good trim and was very well sailed throughout the season, with the result that she won three first prizes. *Spray* sailed in about the same form as last year, and although only winning one first, was well in the racing and gathered eight second and third prizes. *Golden Hind* came out this season as a yawl and her new rig seems to suit her very well. Having such a small sail-plan she is, of course, nowhere in a drifting match, but with a good topsail breeze she can walk away from the whole fleet. At the end of the season she had five first and one second prize to her credit, not at all a bad record for a cruiser, particularly as she came in first in three of the races. In the 26-rating class *Molly Bawn* had pretty well her own way. In a fresh breeze she was now and then closely pressed by *Albatross* and *Surprise*, but in a light breeze they could come nowhere near her and she consequently headed the list with a string of twelve prizes. Another good boat in this class is *Ideal*. If she were bigger she would do very well in the racing; as it was, she won seven prizes though mostly by the aid of handicaps. The best racing after all was with the 17-rating class, the boats being more evenly matched than in the larger classes, and the competition was very keen. *Eclair* appears to be still the fastest boat in this class, although the fin-keel boats *Snap* (now *Devonia*) and *Bonito* are pretty nearly a match for her. *Snap* is a new boat this season and has been fairly successful. She had the honour of winning the gold cup for 17-raters on the Diamond Jubilee day. *Coogee* came out under a new rig and proved herself to be a good boat, though of an old type, her best point was in strong breezes. *Undine* also sailed very well in several races and secured her share of the prizes. The 12-rating class, represented by six boats, provided some good sport for the junior members, and at times considerable amusement to the spectators. These 12-raters are capital little boats in which to learn the art of boat-sailing, and there was a noticeable improvement in the manner in

which they were handled compared with last season. *Susume* was the most successful among them and had the luck to win one-third of the prizes, including the record.

The weather during the past racing season was rather unsettled and the winds very unsteady. Eliminating all races that were not finished on account of insufficient wind, half were sailed in light breezes the other half being about equally divided between moderate and fresh breezes. As a number of races failed for want of wind it will be evident that on the whole the prevailing breezes during the summer afternoons were very light. The following notes are extracted from Reports of the Meteorological Bureau: being made from observation made at 2 p.m. each day they are necessarily incomplete, but will give a tolerable idea of the weather. During the five months of the yachting season, say from 1st May to 30th Sept., there were 22 rainy, 22 cloudy, and 49 fair and clear days. The wind force recorded during the same period gives:—Calm 1 day. Force 1, 18 days; 2, 52 days; 3, 60 days; 4, 22 days. The wind scale used by the Meteorological Bureau is Force 1 to 6 being half of the Beaufort Scale. Force 3 therefore must be understood as equal to force 5 to 6 of the Beaufort Scale.

At the end of last season it was resolved to double the scale of time allowance in the hope that resort to arbitrary handicapping would be reduced. Handicaps have, however, been applied as much, and as heavily, as before and have given rise to discussion amongst the yachtsmen as to their necessity. It may perhaps interest them to see how the present time allowance works out when applied to the average speed of the yachts. If all the yachts had sailed the same distance together, over the same courses, this would give the value of the allowance exactly, but as the circumstances under which they sailed were in many cases different, the table below can give no more than a general idea, though perhaps sufficient to show that, given equally good boats, the time allowance is quite enough to make up for difference in rating:—

Rating	Miles Sailed.	Elapsed Time.	Actual Speed.	Corrected Speed.
		h. m. s.	kt.	kt.
<i>Golden Hind</i> ...39	75½	16 02.53	4.7	4.7
<i>Mary</i> ...39	134½	31 36.33	4.3	4.3
<i>Tori</i> ...39	68	14 50.51	4.6	4.6
<i>Riever</i> ...37½	99½	28 11.49	3.5	3.6
<i>Maid Marion</i> ...37	137½	31 53.03	4.3	4.4
<i>Spray</i> ...34	134½	34 25.59	3.9	4.1
<i>Albatross</i> ...26	78	27 36.27	2.8	3.1
<i>Surprise</i> ...26	67	20 11.21	2.6	2.8
<i>Molly Bawn</i> ...25½	88	29 52.37	3.9	3.3
<i>Ronin</i> ...22½	34½	11 49.21	2.9	3.4
<i>Ideal</i> ...21½	63	23 46.18	2.7	3.1
<i>Coogee</i> ...17	56	18 07.14	3.1	4.1
<i>Isabelle</i> ...17	35	10 57.42	3.2	4.3
<i>Violet</i> ...17	34	11 12.52	2.9	3.9
<i>Snap</i> ...16½	56	17 10.50	3.2	4.5
<i>Bonito</i> ...16½	60	18 10.31	3.3	4.6
<i>Undine</i> ...16½	49	15 17.25	3.2	4.4
<i>Eclair</i> ...16½	66	19 41.49	3.4	4.7

The above speeds are corrected throughout by the time allowance from 39 rating.

A YOKOHAMA SCHOOL FOR THE BLIND.

It is stated that there are 150,000 blind persons in Japan—and it may be safely assumed that a large proportion of these are poor, and very poor. This unfortunate class is also credited with a low standard of morality, and it is said that there is much depravity among them. Of late years a little effort has been made in some cities by local government authorities towards the improvement of the condition of the blind; one school has been opened in Tokyo and another in Kyoto. There is also a school in Gifu; but all told the attendance numbers but a few score.

Some five years ago, a benevolent widow lady, residing in Yokohama, was moved to attempt something for the blind in this place, and under her auspices, in September, 1892, a small house at the foot of Ushizaka was hired, and a school for the blind commenced. One little girl was the first pupil, but gradually the numbers increased and the accommodation at Ushizaka was found to be too limited. In 1894, a larger place in Umegayacho was hired. The regular pupils now number twenty-seven, while many more attend for short periods. A graduate from the Tokyo Blind School teaches acupuncture, the system of dots for the reading of the Japanese alphabet, and massage. From a female teacher the pupils learn the *Koto*. Instruction is given also in the ordinary subjects of school education: this and the general charge of the school are in the hands of Mr. T. Kasahara, who also gives scriptural instructions and teaches

the pupils to sing hymns. Thus, while the school seeks to fit the scholars for their work and to help them to earn their livelihood, it seeks also their moral and spiritual welfare.

Some of the pupils are very young: the youngest at present is only nine years old. The older blind employ a number of blind children, both boys and girls, to work for them, and it would seem that these poor children are sometimes severely treated; if they fail to earn and bring home money they are beaten by their cruel masters. These masters are too often noted for their vicious lives, and the lot of the children becomes thus all the more pitiable. They are expected to work from noon to five o'clock, and again from 6 o'clock to one in the morning. Under these circumstances, education is carried on with difficulty, but the results have been such as to greatly encourage the teachers. Some brightness has been brought into many poor lives, and in one case a notably cruel master has been transformed into a true father to the children he employs. During the past years, twenty-five blind have been baptized into the Christian faith; and these converts are now seeking, out of their scanty earnings, to help the sick and the poor, and to lead others to hear for themselves the good news which has changed their own lives.

The expenses of this work have hitherto been met by donations from a few friends who have become acquainted with what is doing; but now Mrs. Draper is desirous of enlarging the sphere of operations, and especially, wishes to provide a larger house where the blind might be lodged and perhaps boarded;—not gratuitously but on payment of cost. Such a place would save the children from much of the hardship of their lot, and would be also a boon to others, especially to those who come to the school from a distance. Dr. Whitney, of Tokyo and Yokohama, Mr. A. J. Wilkin, of Yokohama, and the *Japan Mail* will be happy to receive donations from those disposed to help to maintain and expand the good work now doing.

IN H.B.M.'S COURT FOR JAPAN.

IN ADMIRALTY.

Before H. S. WILKINSON, Esq., Acting Judge.—
TUESDAY, NOV. 16TH.

THE "MELPOMENE" v. "PATROCLUS" CASE.

JUDGMENT.

Judgment was given by Mr. Justice Wilkinson on Tuesday morning in the suit instituted by the owners of the Austrian Lloyd steamer *Melpomene* against the master and owners of the British steamer *Patroclus* for damages alleged to have been sustained by collision of the two vessels on the 9th Sept. last. Mr. Lowder appeared for the Plaintiffs and Mr. Walford for Defendants.

His Honour said:—

This is a suit for damage by collision. The Plaintiffs are the Master and Owners of the Austro-Hungarian steamship *Melpomene* and Defendants are the Owners of the British steamship *Patroclus*.

On the morning of the 9th of September last, the *Melpomene* was lying in the harbour of Yokohama, moored to a buoy on the northern side of the harbour called the Shell Line buoy. To the eastward of the *Melpomene* the German warship *Irene* was lying at anchor. The *Patroclus* was lying to the southward of the *Melpomene*, moored to a buoy called the P. & O. buoy. This latter buoy was dragged that morning from its original position, and I was informed by Counsel at the hearing that they had been unable to ascertain exactly what that original position was, but the evidence would seem to place it south, or south by west from the Shell Line buoy and about 1,600 feet distant. Between the *Patroclus* and the *Melpomene*, and rather to the westward, lay the German flagship *Kaiser*, moored to a buoy called the Pacific Mail North Buoy.

On the 8th of September there had been variable winds from the second quadrant (S. to E.) with heavy rain. At two o'clock on the morning of the 9th the wind had freshened; by five o'clock it was blowing typhoon force, and at some time between five and six there was what is described on both sides as a terrific squall, during which the *Patroclus* dragged, and eventually came into collision with the *Melpomene*.

In the petition on behalf of the *Melpomene* it is alleged that those on board the *Patroclus* failed to take proper measures to ride out the storm. It is charged that she was moored to a buoy with only 5 fathoms of chain, and though the strain threatened to become, and eventually did become, greater than the holding power of her moorings, nevertheless the chain was not eased or slackened and no other effectual measures were taken to relieve the strain, by reason of which neglect the

Patroclus dragged her mooring and (having no steam up) came into collision with the *Melpomene*.

In the answer filed on behalf of the *Patroclus* it is alleged that at 5 a.m., when the wind had increased to typhoon force, the starboard anchor of the *Patroclus* was let go; that no chain was then or had been let out from the *Patroclus* because she was so high out of the water, and the position of the German ships was such that to have paid out chain would have greatly increased the danger of collision and must have resulted in far more serious consequences if a collision had occurred; that when about 5.45 a.m. the *Patroclus* was struck by the terrific squall which caused her to drag her moorings, ample chain was then paid out to the starboard anchor, but that both that and the buoy moorings were dragged until the *Patroclus* was brought up astern of the *Kaiser* heading nearly west, and afterwards in swinging round with her head coming to the wind she came into collision with the *Melpomene*; that the dragging of the moorings and anchor as aforesaid happened without any neglect or default or mismanagement of any person on board the *Patroclus*, and was the result of inevitable accident. And it is further alleged that those on board the *Melpomene* improperly neglected to keep a good look out; that before and during the time the *Patroclus* was dragging the port anchor of the *Melpomene* was hanging in the bridle and on the tackles, and although from the time when the *Patroclus* commenced to drag she was continuously approaching the *Melpomene* and threatening a collision, those on board the *Melpomene* improperly neglected to remove the anchor from that position, and that when the *Patroclus* was brought up as aforesaid, those on board the *Melpomene* improperly neglected to pay out chain to the buoy to which the *Melpomene* was attached: that the collision and the damages consequent thereon would have been avoided if those on board the *Melpomene* had exercised ordinary care, and would not have occurred but for their neglect and default in not paying out chain and in not removing their port anchor from its dangerous position, and that the collision and damages were not occasioned by any neglect or default or mismanagement of any person or persons on board the *Patroclus*.

It being admitted that the *Melpomene* was stationary at her moorings and that the *Patroclus* came into collision with her, it lay upon the *Patroclus* to show that the collision was not due to any negligence of those on board of her. The defence of inevitable accident has accordingly been set up, and in support of that defence it has been established, and indeed is not disputed, that the drifting which eventuated in the collision was caused by a terrific squall which caused the moorings of the buoy to drag. But it is contended on behalf of the *Melpomene* that the master of the *Patroclus* was to blame in not having taken precautions, before the squall struck her, which would have averted the collision or at least rendered it less probable. At the time the squall struck the *Patroclus* she was moored to the buoy by her port cable with about five fathoms of chain and with her starboard anchor underfoot, and it is urged on behalf of the plaintiffs that under the circumstances the master was to blame for trusting to the buoy at least to the extent he did trust to it. It appears that the buoys in the harbour of Yokohama are not laid down under the superintendence of the harbour authorities, and that no regulations have been made by the harbour authorities as to the anchoring or mooring of vessels, except to prescribe a space near the fairway for vessels entering or leaving the harbour and another space in the vicinity of the pier within which buoys are not allowed to be laid down or vessels allowed to be anchored. The buoy to which the *Patroclus* was moored was, as its name implies, a buoy belonging to the P. & O. Company. It had been laid down by them for their own steamers, but was no longer employed for that purpose, the P. & O. steamers being now berthed at the pier. It was, however, almost constantly in use by other vessels and frequently by vessels of a very large size. Except for the degree of responsibility assumed to be exercised by the harbour authorities the conditions as regards the buoys were similar to those in the case of the *William Lindsay* (L. R. 5 P.C. 338). What was considered a proper assumption from the facts in that case—that the harbour authorities treat the buoys as proper and sufficient mooring places for vessels frequenting the port—could scarcely be sustained on the facts in the present case, but the principle of that case seems nevertheless to apply to this. The Lords of the Privy Council in their decision in that case, after stating that they could not think that there was anything like negligence in the matter of the *William Lindsay* in mooring at one of the buoys there referred to without examining for himself whether there might be latent defects in it, said:—

"These questions of negligence must be decided by what a prudent and skilful seaman would do under the circumstances, and by what he is able to do. It is obvious that no man, however, prudent and however desirous to be on the safe side, would be able to examine these buoys, so as to discover whether there were latent defects in them or not. He must, to a certain extent, trust to the sanction which has been given to them by the authorities of the port. No doubt that would not absolve him from all further precaution. He ought not implicitly to trust to that which he cannot to a certainty know is a safe buoy, and he ought to take reasonable precautions, in the event of its not holding, to bring up and secure himself from danger."

If for the sanction of the authorities of the port is substituted the fact of the previous constant use of the buoy, coupled with the fact of there being no buoys in the harbour for which the authorities had assumed responsibility, the cases are alike—alike as regards the propriety of the Master mooring to the buoy, alike as regards the inability of the master to know with certainty whether it was sufficient to hold him, and alike as to the obligation upon him to take reasonable precautions in view of the possibility of its not holding him. The question as to whether there was any negligence on the part of the Master in mooring to the buoy is to be answered in the negative.

The next question is whether, having moored to this buoy, the Master ought to have taken any other precautions than he did. It was scarcely contended on the part of the Plaintiffs that the Master need have done more in ordinary weather, and so long as ordinary weather might be anticipated, than fasten the chain as he did to the buoy; but it is suggested that in view of the season of the year, when bad weather might be anticipated, and in view of the size and trim of the vessel—a vessel with a carrying capacity of 8,000 tons, with most of the cargo discharged and drawing only 14 feet 9 inches as her draft, when loaded being 25 feet—she ought not when the storm came on to have been trusting to the buoy alone, and that after the storm came on she ought not only to have dropped her starboard anchor, but to have veered chain so as to bring the starboard anchor into use, and not to hold on to the buoy with only five fathoms chain; and it was also suggested that if the fact was as urged on behalf of the Defendants, that there was not room for the *Patroclus* to veer chain, then the Master was to blame in view of the weather which at that season ought to be anticipated, in taking up a position in which he could not veer chain, or, if in that position, in not having both his own anchors down, which might have held him, instead of having one of his cables fast to the buoy. It was also suggested that he ought to have had steam up.

Upon the questions thus raised, I conferred with the Nautical Assessors, whose valuable assistance I had at the hearing, and I explained to them the law with respect to the amount of care, caution, and skill that is required in order to establish the defence of inevitable accident, and the following are the conclusions at which we arrived. First, as regards the fact of steam not having been ready, that no blame attaches to those on board the *Patroclus*, but, second, as regards the anchor, that the port chain of the *Patroclus* ought before the time she began to drag to have been veered sufficiently to bring the starboard anchor into use, and, third, that, if this had been done, the collision would have been rendered less probable. The evidence shows that four hours was the shortest time in which steam could have been got up so as to work the engines, and it appears to me, and in this I am confirmed by the Nautical Assessors, that the obligation upon the master to order steam to be got up did not arise so much as four hours before the collision. Upon the evidence it appears that, as a fact, steam was ordered about four, and was ready about eight o'clock. On the *Melpomene* it was ordered at half past two, but it was not ready at the time of the collision. If ordered on the *Patroclus* at that time or even two o'clock, which is the earliest hour suggested—it would not have been ready.

The fact, however, that steam was not up when the storm came on, and could not be got for four hours, was one of the circumstances which had to be taken into consideration by the Master in considering whether any and what other precautions ought to be taken by him to avoid danger to himself and to other vessels in his vicinity. In the opinion of the Assessors, in which I entirely concur, the circumstances in this case were so different from those in the case of the *William Lindsay* that the precaution of having an anchor ready, which was considered sufficient in that case, (or the precaution which was adopted in this case of

dropping it underfoot) was an insufficient precaution, and that the starboard anchor ought to have been brought into use to assist the moorings of the buoy, that a further precaution was necessary and that the further precaution of bringing the starboard anchor into use to assist the moorings of the buoy ought to have been adopted. It may be here right to take notice of an argument put forward by Counsel on behalf of the Defendants, although a decision upon the point is no longer essential, in view of the conclusion arrived at that the *Patroclus* had room to veer cable. It being urged on behalf of the Defendants that there was not room, Counsel for the Plaintiffs argued that if that was the case then additional precautions, which he indicated, ought to have been taken, but Counsel for the Defence contended that so to argue was to contradict the Plaintiffs' preliminary act which placed the *Patroclus* and *Melpomene* at such a distance apart that after deducting the distance which the *Kaiser* was shown to be from the *Melpomene* the distance left between the *Patroclus* and the *Kaiser* must have been ample to allow cable to be veered and he urged that the Plaintiffs having committed themselves to the statement of distance in the preliminary act, while it was open to the Defendants to show that the distance was much less they were not liable to the Plaintiff for failing to take precautions which the shortness of the distance might have rendered necessary or desirable. It appears to me that to allow this contention would in any case be carrying to its utmost limit the rule with regard to the necessity of adherence to the pleadings, but the case of the *Alice* and *Rosita*, (L. R. 2 P. C. 214) seems to show that the rule only applies where the averment is material to the issue raised, and that in the case of vessels at anchor such an averment as that of the bearing of the two vessels (and the same rule seems to apply to the distance between them) is not such a material fact to the issue, which is, which vessel caused the collision, as to bring the rule into effect. In that case, it was alleged on behalf of the *Rosita* that the *Alice* had been riding about half a mile to the south west of the *Rosita* and that she came down asthward the tide towards the *Rosita* and so the injury happened. It was proved that she was to the south east and not to the south west, and that if she had been to the south west the collision never could have taken place in the way it did. But the Lords of the Privy Council distinguishing the case of vessels in motion and vessels originally at anchor, decided that the bearing of two vessels was not an essential element in the statement of the cause of injury, and that the claim of the *Rosita* was not prejudiced by the statement that the *Alice* was lying to the south west of her before the collision. Their Lordships' remarks moreover, as to the possibility of the other side being misled, apply exactly to the present case. "With regard to the possibility of any misleading there could have been none in this case, because it is quite clear that the *Alice* stated the circumstances according to her own view; and placed the vessels in the exact position in which they were proved to be; therefore even if the possibility of being misled could have been an objection to these pleadings, the objection would have failed for want of a foundation."

The Defendants having failed to relieve themselves of the burden of showing that the dragging was due to inevitable accident, the next question to be considered is the conduct of those on board the *Melpomene* in relation to the collision and the damage caused by it.

It is clear upon the evidence that the material damage to the *Melpomene* was occasioned by reason of her port anchor being carried as it was carried, and would not have been occasioned if the anchor had been taken in board or had been lowered or let go. The damage, if any, occasioned otherwise than by the anchor was inconsiderable. Having arrived at this conclusion the question becomes, according to the judgment of the Court of Appeal in the case of the *Margaret* (6 P. D. 76) a question as to liability for the damage done, as distinct from the collision. The damage would not have been done if the *Patroclus* had not drifted down upon and come into collision with the *Melpomene*, but neither would it have been done if the anchor had not been where it was.

The Defendants say that it ought not to have been where it was at the moment of the collision. It is not contended on behalf of the Defendants that the position of the anchor was an improper position for it to be in up till the moment the *Patroclus* began to drag, but it is suggested that when those on board the *Melpomene* saw that the *Patroclus* was dragging, they ought to have prepared for the collision and if they were not able to get the anchor out of the way by taking it in board, they ought to have lowered it or dropped it.

Upon this question I conferred with the Nautical Assessors and explained to them the degree of care, skill and promptitude required under circumstances in which one vessel by its movements, places another under the necessity of taking measures to avoid a collision which without such measures cannot be averted, and I drew their attention to the doctrine laid down in the case of the *Bywell Castle* (4 P. D. 219) as to the care or skill required by the master of a vessel when placed in circumstances of difficulty by the wrongful act of another vessel.

The conclusion at which we have arrived is—that the port anchor of the *Melpomene* ought to have been lowered or dropped before the collision, and that if this had been done the damage caused to the *Melpomene* by the anchor would have been avoided.

The Defendants also contended that the chain of the *Melpomene* ought to have been veered, but it is not necessary to decide the point. If it were, I might possibly have to adopt the suggestion of counsel for the Defendants and take further evidence. Having arrived at the conclusion that the *Melpomene* is to blame, in respect of the anchor, the decision of the further question seems unnecessary.

It has been contended on behalf of the Defendants that even though the *Patroclus* may be found to blame for the dragging which eventuated in the collision, the Plaintiffs are not entitled to recover anything if the collision or the damage could have been avoided by those on board the *Melpomene* taking in or lowering or dropping their port anchor, upon the principles underlying a class of cases of which the case of *Davis v. Mann* (10 M. and W. 546), usually known as the "Donkey Case" is the best known example. The facts of this case are thus stated in Pollock's Law of Torts (3rd edition, p. 411): "There the Plaintiff had turned his ass loose in a highway with its forefeet fettered, and it was run over by the Defendant's wagon going at a snail's pace." It was held a proper direction to the jury that whatever they thought of the plaintiff's conduct, he was still entitled to his remedy if the accident might have been avoided by the exercise of ordinary care on the part of the driver. Otherwise a man might justify the driving over goods left on the public highway or even a man lying sleeping there, or the purposely running against a carriage going on the wrong side of the road. If the principle were confined to such cases as are here referred to the application would be easy enough. They are all cases of commission by persons who had an opportunity of judging what the result of their action would be, and differ from the present case where the act of negligence charged is one of omission. The principle, however, extends to acts of omission also, though its application to such cases will, I believe, be found to be comparatively rare. I find none exactly like the present in which it has been applied. But that might not prevent its application if on principle it is properly applicable. The rules derivable from the cases have been stated in various ways. I have been asked by Counsel for the Plaintiffs to apply the rules as laid down by a writer cited in Pollock's Law of Torts, which is that in cases where acts of negligence on the part of the Plaintiff and Defendant are not simultaneous but successive "he who last has an opportunity of avoiding the accident, notwithstanding the negligence of the other, is solely responsible." It is argued that the obligation of the disposing of the anchor having arisen subsequently to the dragging occasioned by the negligence on the part of the *Patroclus*, the *Melpomene* is to be held solely to blame. But it is quite clear that this rule cannot be applied without reservation, and faith in its correctness is not strengthened by the grounds assigned for it "that the law looks to the proximate cause, or, in other words, will not measure out responsibility in halves or other fractions, but holds that person liable who was in the main the cause of injury." The law in cases of collision does measure out responsibility in halves, and the problem in the present case is whether it is or is not to be measured in halves. In Marsden's Collisions at Sea, the following is given as the apparent result of the cases as applied to cases of collision:

(1) A ship A., may recover full damages against another, B., though she (A.), has been guilty of negligence contributing to the collision, provided B. could have with ordinary care, exerted up to the moment of the collision, have avoided it.

(2) A. can recover nothing though B. was guilty of negligence contributing to the collision, if A., by ordinary care, exerted up to the moment of the collision, could have avoided it.

(3) A. may recover half her loss, though she has been guilty of negligence contributing to the collision and rendering the collision unavoidable

except by extraordinary care on A's part, and (4) in the last case B. may also recover half her loss.

I think that the third rule applies in the present case, that here A. (the *Melpomene*) is entitled to recover half her loss. It appears to me that B. (the *Patroclus*) has been guilty of negligence contributing to the collision, and rendering it unavoidable except by extraordinary care on the part of the *Melpomene*.

The lowering of the anchor was a reasonable and proper precaution to take, and I agree with the Assessors in thinking that there was sufficient time allowed the Master of the *Melpomene* to take that precaution to prevent the "agony of the moment" excuse applying, but under all the circumstances I consider that the Master of the *Melpomene* if he had lowered the anchor would have been exercising extraordinary care rather than ordinary care within the meaning of the rule.

Put in another way I find that the dragging was not a remote cause, but one of the proximate causes of the damage.

On the whole then I pronounce both vessels to blame for the damage. The damages to the *Melpomene* occasioned by the collision are therefore to be borne equally by the owners of the *Melpomene* and the owners of the *Patroclus*; and the Defendants and their bail are condemned in a moiety of the Plaintiff's claim in respect of such damages. The damages will be referred to the Registrar to assess the amount. There will be no order as to costs.

IMPERIAL UNIVERSITY ATHLETIC SPORTS.

Glorious weather favoured the autumn athletic sports of the Teikoku Daigaku Undokwai (Imperial University Sports Association) on Saturday afternoon, and the picturesque banks and knolls bordering on the play ground of the University, which were gaily decorated with garlands of flags, were crowded with spectators, comprising undergraduates of the University, boys of the Nobles' School, the Tokyo High School, etc., and foreign and Japanese ladies. Among the more notable persons present were the young sons of the late Prince Kitashirikawa, Dr. Hamao, the new Minister of Education, the Vice-Minister and his daughters, the new President and Vice President of the University, Professors Toyama and Kikuchi, etc. Some capital sport was witnessed and while in several instances the events showed rather a falling off in times from previous years, on the other hand two records were made. It must be borne in mind when considering the time made in the 100 yards race, that the track is really only 95 yards long. All the arrangements were most satisfactorily carried out by Prof. Tanakadate as Judge, with an efficient staff of stewards to assist him. At the close of the sports the prizes, useful and ornamental, were presented to the successful competitors by the President of the University. The events were as follow:—

100 YARDS RACE.

Sekinichi	1	Murata	} 4
Ishikiwaki	2	Mizuno	
Noda	3		

Twelve started, and for the first twenty yards or so Noda led, but shortly lost the lead to Sekinichi and near the tape was also passed by Ishikiwaki. Sekinichi, running in splendid form, finished between two and three yards ahead of Ishikiwaki, who beat Noda for second place only by a foot or so, Murata and Mizuno running a dead heat for fourth place. Time, 10 $\frac{1}{2}$ sec., a tenth of a second better time than made last year at the same sports by Mr. Inouye.

THROWING THE HAMMER.

Kobayashi	1	Sato	3
Nagai	2	Sano	5
Murata			

Seven competed. The hammer, we understand, weighed 8 or 10 lbs. The winning throw was 66ft. 5in., a great falling off from last year, when Murata threw 91ft. 6in., and the record of the University, 96ft. It is possible the weight of the hammer has been increased, otherwise it is difficult to understand how it was that Murata, who was fifth in the competition on Saturday, should have been unable to beat a throw of 66ft. and a half.

LONG JUMP.

Mita	1	Matsumura	3
Sekiguchi	2	Murata	5
Tomita			

Seven competed, and though there was some fair jumping there was a sad falling off from the records of former years. Mita's winning jump was 16 ft. 5 in., while last year Tominaga cleared

16 ft. 10 in., beating the previous University record of 16 ft. 8½ in.

220 YARDS (FINAL HEAT.)

Sekinichi	1	Ichikusaki	3
Noda	2	Tomita	4
Otake	5		

Thirteen started and very soon were strung out with many yards between first and last. Sekinichi got the lead about half way round and won rather easily by five yards from Noda, who came up strong in the last forty yards and beat Ichikusaki for second place by a couple of yards. Time, 26½ secs., a full second better than last year's time.

THROWING THE CRICKET BALL.

Naga	1	Miyako	3
Murata	2	Tominaga	4
Shinamura	5		

Seven competed, among them being last year's winner of the event, Mr. Tominaga, who on that occasion threw the ball 84 yards 2 feet. Mr. Naga, on Saturday, beat this, throwing 85 yards 4 feet 4 inch. The University record is 90 yards 2 feet 9 inches; Murata's best throw was only about a foot less than Naga's.

HIGH JUMP.

Masuda	1	Tominaga	3
Fujino	2	Tatsuka	4
Mita	5		

Five competed in this event, and some excellent leaping was displayed. Masuda's winning jump was 5 ft. 3 in., but Tominaga, last year's winner, cleared 5 ft. 7 in., breaking all former University records, but was penalised 8 inches. Fujino cleared 5 ft. 2 in., the other two being finished at 5 ft. and 5 ft. 1 in. There were enthusiastic shouts of applause from the spectators at Tominaga's fine jump of 5 ft. 7 in., after which he tried another inch, but failed to clear it.

THREE-LEGGED RACE.

Otobe and Inoue	1	Mita and Tomita	3
Hido and Sato	2	Idsumi and One	4
Oguro and Saigo	5		

Seven couples competed and ran well together, only one pair coming to grief, about half way home. The winning couple finished about half a yard ahead of the second, with about the same distance between second and third, the others several yards behind. Time, 11½ secs.

440 YARDS (Final)

Tomita	1	Ichikisaki	4
Shekiguchi	2	Ishiwaka	5
Baba	3	Otake	6

Seventeen started and after a good race Tomita won by a couple of yards, Sekiguchi, Baba and Ichikisaki finishing very close together. The time made, 56½ secs., was nearly two seconds less than last year, when Inouye won in 58½ secs.

Pole Jump.

Shinomura	1	Totsuka	3
Tominaga	2	Nambu	4
Fujino	5		

Six competed. The jumping commenced at 7 ft., and gradually increased until the winner, Shinomura, cleared 8 ft. 9 in., just a foot less than the record made last year by M. Kamio.

TUG OF WAR.

A tug of war, between the University and the Tokyo High School, not on the programme, proved one of the most interesting events of the day. The rival teams consisted of something over 60 men or boys each. All the pullers sat down to their work and tried to get a hold in the turf for their heels. The other boys of the High School, who formed a solid phalanx of several hundred, on the bank allotted them among the spectators, roared out in unison with each wave of the coaches' flag and each heave on the rope. After about a minute's tug, in which the High School boys got a slight advantage, a rest of a couple of minutes was allowed, after which the tug was recommenced. The High School champions got a steady strain on, and after about a minute the University team had to give way and were pulled over the line amid frantic cheering from the boys of the High School and the spectators generally.

MONBUSHO SCHOOL RACE.—(440 YARDS).

Rurashita	1	Moriwaki	2
Kamemura	3		

Seven starters appeared for this event—three each from the Koto-gakko and Kogio-gakko, and one from the Rijnian gakko. Rurashita won easily by five or six yards. The winner and the other two placed men were all Koto-gakko boys. Time 54½ secs.

180 YARDS (Final).

Sugimoto	1	Sakamoto	3
Baba	2	Ishisaki	4
Kobayashi	5		

This event brought out the large field of 34 starters, but of these less than half finished, the rest dropping out of the race before the last lap. At the finish there was a fine race between Sugimoto, Baba and Sakamoto, the former winning by a bare yard, while only about half-a-yard separated second and third. The time, 2m. 19s. was exceptionally good, if not a record for the University, being more than 4 secs. better than last year.

GAKUSHI (GRADUATES) RACE.

Okaki	1	Kawada	2
Imamura	3		

Seven started, over the 220 yards track. At the finish there was a very close race between Okaki and Kawada, the latter falling just on the tape; the time, 26 secs. was an improvement on last year when Imamura, the third man, won the race in 29½ secs.

HEAD LOAD RACE.

Inouye	1	Tanamura	3
Ishiwata	2	Hido	4

This event, in which the runners had to carry a small flat sandbag on the head, and finish without letting it fall or holding it on with the hand, brought out a field of fourteen, the winner covering the distance—95 yards—in 12½ secs.

SPECIAL MEMBERS (PROFESSORS)

RACE.—(100 YARDS.)

Mr. Shimizu (Secretary)	1
Prof. Okino	2
Prof. Tanakadate	3
Prof. Wadagaki	4
Prof. Konouye	5

This race was run by the Professors in their full walking costume. Prof. Konouye fell after running half the distance, and though he was up and away again very smartly, of course it threw him out of the race. After a capital race the Secretary of the University, Mr. Shimizu, won on the tape, with Prof. Tanakadate a good third.

OBSTACLE RACE.

Simo	1	Matsumura	4
Ichikisaki	2	Kobayashi	5
Ishiwata	3	Narata	6

Fifteen started and displayed wonderful dexterity and celerity in negotiating the various obstacles, which comprised a flight of five hurdles, a ladder to get through, another ladder erected overhead to be negotiated hand over hand, rung by rung, hoops and windsails to crawl through, a net to be crawled under and finally to pick up and carry home a bag of charcoal. The time made by the winner was 57 secs.

FRANCE AND RUSSIA IN CHINA.

The Vienna correspondent of *The Times* writes:—

The following particulars are contained in a letter from China published in the *Novoe Vremya* complaining of the manner in which French diplomatic representatives there exploit the friendship of Russia for their own purposes. Russia had a small strip of land at Han-kau which had been ceded by the Chinese Government. In the centre of this territory was a French Consulate. When M. Gérard, the French Minister in Peking, ascertained that the Russian Government intended to apply for the cession of this territory he first begged that the road leading from the Consulate to the quay should be ceded to France. He afterwards requested that 100 metres on the quay at the harbour should also be made over to the Republic, and finally, he asked for the third and only remaining portion of the land. Count Cassini, the Russian Minister in Peking, who was not acquainted with affairs at Han-kau and who was besides a friend of M. Gérard, was guilty of the mistake of making over the whole of it to the French. The latter put themselves into communication with a Japanese steamship company respecting the transfer to the latter of a portion of the quay. Commenting upon this incident the correspondent of the *Novoe Vremya* observes:—"It is to be hoped that the St. Petersburg Foreign Office will recognize the danger and impropriety of this whole proceeding, and enter an energetic protest against it. The Han-kau incident is only one example of the manner in which the French constantly take advantage of Russian influence in China. This exploitation is prejudicial, and is, moreover, entirely unnecessary, as France has no interests in Northern and Central China and only sends there the dregs of her population, not one of whom is capable of serious and useful work."

The Russian naval estimates for 1898 amount to a total of 68,055,420 roubles, to which must be added a further sum of 6,000,000 roubles for increased shipbuilding, and a sum of 15,500,000 roubles for the extension of Vladivostok Harbour. A sum of 3,300,000 roubles is included in the expenditure for the extension and improvement of the Vladivostok dockyard. The *Alexander III.* dockyard at Liban is to be pushed on, and as soon as the new yard is ready the greater part of the fleet will be transferred from Cronstadt.

ENGLISH CYCLING NOTES.

(FROM A CORRESPONDENT).

Bicycle Polo now being played at the Crystal Palace by teams of American cyclists, is certainly obtaining public favour, and every night when these matches are held crowds of spectators assemble to see the marvellous "bicyclemanship." I witnessed a match recently and was surprised at the dexterous manner in which these men twisted their handles and so hit the ball with their front wheel which sent it spinning towards the opponent's goal. The ball used is about the size of a cricket ball and is of solid rubber, and though properly weighing about 1½ to 2 lbs., the riders are able to raise it off the ground and send it at a high rate of speed for some considerable distance, solely by means of twisting their front wheel. They are also very expert in avoiding colliding, and the ease and ability with which they mount and dismount should be copied by all cyclists.

Before witnessing the match I attended the Anerley B.C. race meeting, which was held at the Crystal Palace track. It was a 100 mile race for tandems and no less than 19 pairs sent in their entries, and out of this number only 3 pairs figured as absentees. With 16 tandems all bunched together I was constantly expecting to see a spill but it is to the credit and easy running of the track and the steadiness of the riders themselves that no mishap of this description occurred during the whole of the event. It was what might be called anybody's race till about up to the 44th mile when Lewin and Albone succeeded in riding away from the crowd, and from this point were never overtaken by the other competitors, finishing first in 3 (three) hours 53 (fifty-three) mins. 8 (eight) secs. H. H. and C. Rowe being second and C. T. Carter and J. G. Gibbs third. The Frank brothers, holders of the record for London to Brighton and back on a tandem, retired at the grand mile owing to some mishap with their machine.

It is difficult now to take up a paper which does not mention something of the tyre troubles. Some of the articles are so vehement against the leading tyre company of the world, that it must be apparent to everyone that personal feelings are involved and the various articles are written in spite or jealousy. The *Topical Times*, however, takes a rational view of the case and, in one of its recent issues, says that Mr. Harvey Du Gros comes out of the Dunlop and Amalgamated tyre storms without a scratch. He is a man who knows how to make money by remembering that he has two ears but only one tongue and gives the latter discreet rest in favour of the capacity of the former.

The National Cyclists Union on Saturday September 25th, held the last of their championships, namely that of the 50 mile amateur. There was an entry of 38 riders, 28 of whom figured as starters. The small attendance of 2 or 3 hundred expected to see a fairly interesting race, as such good men as P. W. Brown, J. Sigsworth, A. J. Robertson, E. J. Callaghan, A. J. Cherry, F. Burnand and others had entered. Such, however, was not to be the case for, soon after the 20th mile, P. W. Brown and 3 others came to grief and Sigsworth had previously fallen soon after the 5th mile. From the former distance A. J. Cherry never was passed, and he won a good race in 1 hour, 53 (fifty-three) mins., 45 (forty-five) secs. F. Burnand being second and C. A. Sedgwick 3rd.

The epidemic for arresting cyclists for furious riding has broken out amongst the police of the Lincolnshire district; in taking up the crusade against cyclists, they intimate their intention of stopping anyone they consider guilty of furious riding. As the great North Road runs through this district it is fortunate that the racing season is pretty high over, for it is along this well engineered and level stretch of highway that the principal road races are held.

Since my last letter sundry records have been improved upon by men anxious to take advantage of every favourable day before the cycling tracks are closed for the winter months. The first successful ride was that by R. P. Clark on the one mile professional tricycle record, which he brought down to 2 (two) mins. 12.15 (twelve and one fifth) secs. and on the way improved on the ¾ mile record, riding that distance in one minute 39.45 (thirty-nine and four-fifth) secs. Tricycle records do not however prove very interesting to the public, and J. W. Stocks' successful attempts on the one hour single safety record on September 27th caused much more interest in cycling circles. The hour record formerly stood to the credit of Stocks, but

on this occasion he put a further 638 yards on to the previous distance, covering no less than 32 miles 1,096 yards inside the 60 minutes. In riding he improved upon the world's records from 6 to 33 miles and also from 5 to 60 kilometres. On Tuesday night, September 28th, B. James of Cardiff, and G. A. Nelson of London mounted on a tandem, succeeded in reducing the world's record for all types of machines for 5, 6, and 7 miles, the 10 miles being covered in 17 mins. 50.3 5 (fifty three-fifth) secs. The former holders of this record were A. A. and F. W. Chase. Stocks' ride as well as the tandem pairs were accomplished on the Crystal Palace Track, Sydenham, and the riders had the assistance of the world renowned Dunlop Pacers.

Not many ladies now appear in English streets in the garb of the rational dress; their number is gradually decreasing now that the novelty of the costume has died out. There are still, however, a few trying to keep afloat the sinking ship, and these few some weeks ago held a conference at Oxford on the subject of this style of dress. They were to meet at Hyde Park Corner, London, and ride from there to Oxford, a distance of some 60 miles. Probably to a great extent owing to the bad weather, the meeting of the pioneers of emancipated clothes proved a regular farce, only a paltry half dozen or so putting in an appearance at Hyde Park Corner.

At the Oxford end of the journey things were brighter, for by means of the railway a fair muster assembled at the Clarendon Hotel, to partake of a substantial meal before launching out into such an intellectual discussion as rational dress might prove. A very strong rule was laid out that no lady should sit down to dinner unless she was in rational garb, and the appearance of ladies in rich silk blouses trimmed with frills of lace and chiffon, walking about the room in the singular lower garb of "rationals" was, to say the least, peculiar, and gave an unfinished appearance to the toilet. A lady who donned the costume simply to obtain permission to dine at the festive board, writes:—"I went down well supported and surrounded by more hardened wearers, and once at the table my feelings and experiences are best summed up in saying that a shawl would have been a desirable precaution against draughts and chills."

This is practically the season for road races but owing to the action taken by the police in cases of furious riding many clubs have discontinued their road fixtures or transferred them to the track. The Midland Cycling and Athletic Club has, however, remained true to the road, and on Saturday, Oct. 2nd, successfully carried out their 200 miles road championship, in which 7 riders started. As the race was unpaced the men kept together for the greater portion of the journey, but as the miles were ridden off the weaker riders fell behind and the virtual scratch men increased the pace. H. Chinn and A. Powell had a hard struggle for the premier position, but the former just managed to win by 2 secs, in 6 hours 15 mins., F. G. Bale being third.

At a bicycle gymkhana recently held at Rochester, the prizes were presented by Lady Harris, who spoke most highly of the sport. She remarked that she was as fond of cycling as her husband was of cricket, and considered that the sport had done more to promote health and pleasure among the people than anything else in the 19th century. Scorching she was very down on, and asked her hearers to use their influence in stopping this practice, which could only bring harm to the sport.

H. C. Horswell, the speedy Essex man, last Saturday made an attempt on the 50 miles Essex Road Record, which stood at 2 hours, 25 mins. Being admirably paced he succeeded in improving on the old time by 12½ mins, covering the full distance in 2 hours, 12 mins. 30 secs. The 50 miles record on the roads south of London stands at 2 hours 7 mins. 38 secs, which was made on August 30th by H. Green. The latter accomplishment is undoubtedly the best when the hilly nature of the southern roads are fully taken into account.

The result of the Redhill and Reigate bicycling carnival was the handing over of 31 guineas to the Provincial Police Ophanage. The Mayor of Reigate, in acknowledging this amount, remarked that it was undoubtedly returning good for evil in view of the wholesale prosecution of cyclists in that district. True, but then the cyclist would feel still more justified in running a policeman down if his orphans had been previously provided for. Still I am with the police in stopping searchers through the towns and villages.

Jimmy Michael, the ex Welshman, having washed his hands of all alliance with Great Britain by becoming a naturalized American, has at last met with defeat at the hands of Starbuck, an American rider, who gained the victory in a 25 miles race by 6 yards.

THE SEALING CONFERENCE.

Some surprise, not uncoloured by irritation, remarks *The Times*, has been expressed on the other side of the Atlantic at Lord Salisbury's refusal to enter into a proposed "sealing conference" at Washington, including representatives of Russia and Japan as well as of the United Kingdom, Canada, and the United States. This feeling may be not unnatural with persons who had succeeded in persuading themselves that the British Government had been brought to its knees by Mr. Sherman's peremptory despatch of May last, and that, as it is alleged the officials of the State Department recently declared, "the object sought by the Government of the United States for the past three years had been attained by the agreement of Great Britain to take part in a conference to be held in October." The correspondence published a few days ago and commented upon in our columns furnishes abundant proof that these speculations rest upon a misunderstanding of what has taken place in this matter since the beginning of 1895. The British Government has never assented to any international conference for a revision of the rules for the restriction of pelagic sealing in accordance with the award of the Paris Tribunal. What Lord Salisbury was willing to agree to, in his despatch of the 28th of July last, is not "a conference of the Powers interested in the fur-seal fishery of the North Pacific," as contended for by Mr. Sherman, but "a meeting of experts nominated by Great Britain and Canada and by the United States," to consider the results of recent further investigations in regard to the conditions of seal life in the Pribyloff Islands. Such an inquiry by experts is plainly indispensable before the revision of the regulations laid down under the Paris Award can be considered at the expiration of the first quinquennial term next August. In the subject thus limited, however, only the Governments interested in the award can be alleged to be concerned. Russia and Japan, for whose representatives the United States claim admission, are no parties to the treaty and are not bound by the regulations. They are, moreover, concerned only in the seal fisheries of the western, not the eastern, coasts of the North Pacific.

The position taken up by Her Majesty's Government upon this point has been absolutely consistent, as the correspondence shows. Neither Lord Salisbury nor his predecessor in office has given the slightest encouragement to the project of a new international conference to reopen questions settled, as between the nations directly concerned, by the Paris award. While there was every desire to ascertain the real facts of the situation and to consider how far they justified a revision of the regulations, it was evident that such a change in the conditions imposed by a solemn treaty of arbitration could not be made dependent, in any degree, on the interference of outsiders. The difference between Mr. Sherman's proposal of an international conference, including Russia and Japan, and Lord Salisbury's offer of a meeting of experts to prepare a case for the revision of the regulations on their expiry next year is, accordingly, one of principle. It is important to observe that on this point the Imperial Government and the Government of the Canadian Dominion are entirely in accord. We should be playing fast and loose with the interests and the feelings of our colonial fellow subjects if we were to allow the Paris Award to be tampered with in an irregular way. They have already had some reason to complain of the manner in which some incidental points decided in their favour have been dealt with in the United States, and they are not very much in love with systems of arbitration the practical outcome of which appears to be curiously one-sided. The basis of the demand of the United States for an immediate revision of the rules established by the Paris Tribunal is the report of an "expert" who contends that the practice of pelagic sealing declared by the arbitrators to be perfectly legal and not controllable except by the consent of the Governments representing those interested in the traffic, should be summarily and absolutely suppressed for the advantage of the lessees of the Pribyloff Islands. This preposterous claim the British Government has declined to accept as the basis of discussion. It throws considerable doubt on the allegations as to the imminent extinction of the seal herds in Behring Sea, which have been put forward by the State Department at Washington

both before and since the proceedings in Paris, though some 30,000 seals were captured on the islands in 1896.

We are, however, as anxious as the Americans can be to prevent the destruction of the seal herds in the North Pacific. British capital is largely engaged in the trade, both on land and sea, and if the further investigations carried on this summer by Dr. Jordan and Professor D'Arcy Thompson, who has just returned to this country, should go to confirm the somewhat astonishing statements contained in the former's earlier report, the conclusions arrived at by the meeting of experts suggested by Lord Salisbury will assuredly receive the fullest consideration when the time comes for deciding whether or not a revision of the regulations is necessary. But that time will not arrive before next summer, though, of course, any changes required should be carefully discussed in the interval. The insistence of the Government at Washington either on an international conference or on the admission of representatives of Russia and Japan to the meeting of experts can only tend to delay an agreement on the basis of ascertained facts and to render it improbable that new regulations will be ready to come into force in the summer of 1898. We do not know whether or not there is any foundation for the report telegraphed from Washington "that, whether Great Britain was represented or not, a conference would be held between the United States, Russia, and Japan," but it is obvious that such a conference, into which, of course, it is entirely within the competence of the Powers named to enter, could not, in the smallest degree, affect the binding character of the Paris award. On that award this country has taken its stand. We are perfectly willing, in accordance with the provisions of the award, to consider how far the conditions of seal life in the Behring Sea, as ascertained by the most recent inquiries, demand a revision of the regulations. This, however, should be determined, as the award prescribes, "by common agreement between the Governments of the United States and of Great Britain." No other Powers, however friendly, have any right to a controlling voice in the revision of a judgment that is binding on the "interested Governments" alone. It may be added that, as the American claim was founded originally on the contention, admitted by the Tribunal, that the United States was the successor in title of all the rights of Russia in the Behring Sea, it would seem a strange proceeding to contend that Russian interests in that quarter at present justify the demand for the separate representation of a Power not implicated in the award. When this country has settled with the United States whether the regulations are to be revised, and, if so, in what way, there will be nothing to prevent the two Governments concerned from negotiating for their extension to the western coasts of the Pacific, where the sealing grounds are under the authority of Russia and Japan.

KOREAN BIBLIOGRAPHY.

The amount of work done in the world to-day by specialists to facilitate the labours of scholars and students is assuming stupendous proportions. Perhaps in no field is more of such work done than in that of bibliography. Every new interest brought before the world in a short time finds its earnest, indefatigable biographer, who with infinite pains traces all that is already known on the subject, and makes clear to those who are to study it and spread information upon it, just what is yet to be covered. A subject brought prominently before the world by reason of recent wars and new political interests is Korea (a country practically unknown to all but geographers and travellers until the recent war), and now a bibliography of Korea is already before the world. Its author, says the *Publisher's Weekly*, is Mr. Maurice Courant, interpreter for the French embassy at Korea, who was specially fitted for undertaking a work which demands knowledge not only of the Korean language, but also of Chinese, Japanese, and Hindustani. This bibliography, published in the French language, gives titles of 3,240 works published in Korea before 1890, and a detailed dissertation on the more important works, offering information on the geography, history, manners and customs, literature and philosophy of Korea such as cannot be found in any other known publication. He has brought to his vast undertaking great enthusiasm and tireless industry. He has unearthed documents and information of all kinds from all sources, beginning in Söul, or Seyool, the chief town in Kiengkei, and the capital of Korea, then in the archives of Pekin and Tokyo, and in the Bibliothèque Nationale, which is specially rich in Asiatic lore.

In a fascinating introduction the author gives an account of Korean literature as merchandise. He relates that even after a long sojourn in Korea foreigners as a rule do not believe that the country has any literature. The reason of this is that Korean books are not sold in book stores, but in general stores. Even in the capital city of Seoul one finds in little dirty alleys little stands where among hair pins, hair ribbons, pocket mirrors, tobacco pouches, cheap pipes, etc.—ink, papers, and books are kept. The salesmen are generally little, poorly-clad boys with long braided hair.

The exterior of Korean books is not tempting. They vary in size from 8vo. to 16mo. and are not thick. The covers consist of coarse, tolerably durable orange-red paper, with ornamental stampings. They are without backs, the two sheets forming the cover being turned in like hems and held together by five or six stitches of red thread. Korean paper is made chiefly from the bark of the *broussonetia papyrifera*, as is also the Japanese. The best is made in the fall, and is tough, thick, smooth, and of ivory colour, tearing like cotton, almost like cloth. The best paper is used only for Government documents. The paper in common use is grayish, very thin and very soft, with porous places in which straw, dust, and dirt find a resting place. Such paper naturally takes ink very badly. The books are printed on one side of the paper only, like the Chinese books. Printing is done from wood-blocks engraved to resemble a *facsimile* of the handwriting, although as early as 1403 the king ordered the making of movable copper type. It is difficult to determine whether books are printed from types or plates. The margins of the books are narrow, and the text is often encircled with black lines. About one-quarter down the blank side of the page is a clover leaf, a monogram by which almost all Korean books may be identified. Almost all the general literature is printed in Korean characters, and it sells at a merely nominal price, averaging 10 saepheon. One hundred saepheon equal 1 ryang, 10 ryangs equal 1 koan, and 3 koans equal about 1 dollar.

In Sōul many books are found printed in Chinese characters; but eight or nine out of every ten are printed in Korean. Of course, there are some finer and better books, but they are all incomplete, unevenly bound, dirty, badly cut, and often worm eaten. A few very valuable books are specially sold, apart from tobacco and other articles. Booksellers dealing in foreign literature have their stores in the business centre of the city of Sōul, near the above-described bazaars, in the midst of quarrelling soldiers, grain-shippers, and idle pedestrians. The bookseller is dressed in silk and generally smokes a long pipe. He looks pleasant and receives customers amiably, but does not exert himself to obtain any. He would be ashamed to sell the cheap books in the Korean language. He deals in Chinese books, new editions of the classics, antiquarian books, and manuscripts on various subjects and of varying antiquity, fine editions of books carefully printed on large paper of ivory tint, resembling Japanese paper. Printed and manuscript Korean books are also found in little circulating libraries, generally kept by poor noblemen. There is no system of payment or deposit, and the books circulated are mutilated and lost continually. M. Courant visited all these little shops, examined all their catalogues and the books remaining on the shelves, and from them, with the aid of all the great European libraries, he compiled his valuable bibliography.

European or American bibliographers can form no conception of the difficulties presented even in verifying the names of authors. Every Korean has a family name and a given name, but the latter is often changed for slight reasons, or to satisfy some ritualistic ordinance. Then all literary workers assume a name as author and often eight different pseudonyms, many of which are names of localities and lead to endless confusion. Besides this, many receive honorary names from the king during life, and after death have a death name. And all these names are used indiscriminately for one and the same person. As there is no known work that sheds light upon this chaotic confusion there is no way to get at identities, but to read and take careful notes. Just as in China the names of places are changed with every change of dynasty, and besides its official name each place has all kinds of popular names, making it almost equally difficult to verify places of publications. Unless the books bear the name of some dynasty, or have some historical facts mentioned on their title pages, the date of publication is equally difficult to determine. The Korean employ the Chinese cycle characters for dates, which admit

of about sixty different combinations, depending almost wholly upon personal interpretation.

M. Courant's introduction gives an exhaustive history of the books as literature. Of every title he gives the original, the transcription in European sounds, and a French translation. The subjects covered range as follows:—Education, 46 titles; language, 118, of which 49 relate to the Chinese language, 25 to Manchurian, 21 to Mongolian, 21 to Japanese, and 38 to Sanscrit. Not one deals with a European language. Confucianism is represented with 142 titles; literature, 738; customs and manners, 777, of which 401 deal with ritualistic rites; law and government, 376; history and geography, 510, including some very valuable maps printed in *facsimile*; arts and sciences, 234; religions, 219, of which 105 relate to Catholicism. The indexes furnished are of surpassing excellence: one of transcribed titles; one of original Korean titles; one of names; and one chronological index of dates, given in Korean and Christian form.

TENNYSON'S LIFE.

Tennyson's biography has been compiled and published by his son. *The Times* devotes five columns to a review of it. Nothing shorter would have sufficed. Five columns, indeed, are all too short. Here are one or two brief extracts:—

In 1888 he had a severe illness, which seemed to threaten his strength and indeed his life, but he recovered, and on his 80th birthday was again in good health.

"Crossing the Bar" was written by my father in his 81st year on a day in October when we came from Aldworth to Farringford. Before reaching Farringford he had had the Moaning of the Bar in his mind, and after dinner he showed me the poem written out. I said "That is the crown of your life's work." He answered, "It came in a moment." He explained the Pilot as that Divine and Unseen who is always guiding us. A few days before my father's death he said me, "Mind you put 'Crossing the Bar' at the end of all editions of my poems."

It is noticeable that in the Queen's later letters her Majesty shows the warmth of her feeling for her aged Poet Laureate by signing herself "Always yours affectionately," and "Ever yours affectionately," while he is her Majesty's "grateful and affectionate servant," "loyal and affectionate subject." It may perhaps be doubted whether it was discreet to publish, but it is certainly highly interesting to read, the correspondence that passed at the time of the first Home Rule Bill. On April 16th, 1886, at the close of a letter about Lionel Tennyson's illness, the Queen writes:—"I cannot in this letter allude to politics, but I know what your feelings must be." Tennyson replies:—"Since your Majesty touches upon the disastrous policy of the day, I may say, that I wish I may be in my own grave, beyond sight and hearing, when an English army fires upon the Loyalists of Ulster."

The poet's life should be itself a poem, said Milton. "Poetry," says Tennyson, in a beautiful and touching letter to a working man, "should be the flower and fruit of a man's life in whatever stage of it, to be a worthy offering to the world." Long as this notice already is many topics have been perforce omitted or but scantily handled which might have been amply illustrated, the poet's friendships, in particular his delightful relations with Browning, his patriotism and public spirit, especially his care for Empire, his dealing with children, his mode of working, the frequent long gestation and rapid production, the wit and humour of his conversation, the charm of his reading, his scholarship and love of language. But enough has, perhaps, been quoted to show that Tennyson fulfilled both Milton's canon and his own, that the man was as good, nay better and greater, than his work, that his poetry was the natural outcome and expression of himself and his life. As he comes before us in these pages we see his "likeness in the dead below, his kindred with the great of old;" we see a man singularly gifted in body, mind, and soul, one who "looked as if he might have written the 'Iliad,'" myriad-minded, comprehensive, catholic, ranging with equal ease from the least to the greatest, yet withal reverent and humble, ever like a little child, even "as the greatest only are, in his simplicity sublime," before all things loving truth and "loving love." Men came to him expecting to find themselves in a "palace of art"; they found themselves in a

"palace of truth." He has been called too sensitive. He cared little for the technical criticism of others on his work, for he had judged it himself, but he was exquisitely sensitive to unkindness or jealousy or spite. He was accused of plagiarism, though, as Browning finely said, "you might as well accuse the Rothschilds of picking pockets." In these pages may be read the open secret of his wealth and his workmanship, his long study and great love of nature and letters. These volumes show what great and good poetry is, and how and by whom it comes to be written. The triumph of the poet, says Dante, is as rare as that of the Cæsar. "Joy should there be in Delphi when some one thirsts for the seldom-plucked laurel." Men may rejoice, too, especially his own countrymen, that an Englishman of our day should so well have lived the life and wrought the work of a true poet.

LATEST TELEGRAPHIC NEWS.

(FROM THE "JAPAN TIMES.")

INDIA COUNCIL BILLS.

London, Nov. 11.

Tenders for India Council Bills have been suspended for a further minimum period of four weeks.

CRICKET IN AUSTRALIA.

The Victorians were all out for 247, and Stoddart's team won by two wickets.

Stoddart's team has beaten the New South Wales eleven by eight wickets.

ENGLAND IN AFRICA.

The Marquis of Salisbury, speaking at the Guildhall, said that negotiations, continuous and animated but always friendly, were proceeding with France, Germany, Portugal, and Italy, about our remaining in Africa. We desire to be governed in these questions by strict justice, with regard for the prosperity and interests of the empire, and due consideration for the feelings and claims of our neighbours; yet he was obliged to say that there was a limit to the exercise of that consideration, and that we cannot allow our plain rights to be overridden.

The comments of the French press on the Marquis of Salisbury's speech at Guildhall are very moderate, and express a desire for a friendly agreement between France and England on the Niger.

THE AFGHAN FRONTIER.

Colonel Adams, Lieutenant Lord Fin-castle and Lieut. Costello have been recommended for the Victoria Cross for conspicuous gallantry during a reconnaissance by General Westmacott, whose force was attacked whilst retiring. In this affair the casualties were: Lieutenants Waddell and MacIntire and sixteen men killed, and Lieutenant Trent and thirty men wounded, of the Northamptonshire Regiment; and Lieutenants Ingham and Mereer and six men wounded of the Dorsetshire Regiment; and eight Sikhs killed and wounded.

Thirty-five Sikhs and one native officer were cut off from their comrades in the Kuram Valley and all killed.

London, Nov. 18.

While General Kempster's brigade was returning to Maidan it was heavily attacked when near the camp, and Captain Dorrets' detachment being cut off in the darkness, Lieutenants Hales and Brooke and nine men were killed. During this time the Sikhs covered the rear-guard, gallantly repulsing the enemy, but in doing so lost Lieutenant Lewarne and Colonel Abbott killed, and Lieutenant Mann and Captain Custance wounded, besides twelve men killed and 25 wounded. Lieutenant Wylie, of the Goorkhas, was also killed.

ELECTION AT LIVERPOOL.

London, Nov. 12.
At an election for the Exchange division of Liverpool, to replace Mr. John Charles Bigham, Q.C. (Unionist), appointed to a Judgeship, Mr. Macarthur (Unionist), was returned with 2,711 votes, against Mr. Rea (Radical), who polled 2,657.

THE NILE EXPEDITION.

The expenditure on the Nile Expedition is said to be seriously crippling all the Egyptian Departments.

THE WEST COAST OF AFRICA.

Colonel Northcott and staff have arrived at Cape Coast and gone inland with eleven hundred carriers.

TRAVEL IN NUBIA.

Reuter's correspondent has reached Suakim from Berber.

RUSSIA AND TURKEY.

London, Nov. 15.
Russia has informed the Porte that if any portion of the Greek war indemnity is employed in the acquisition of armaments, she will demand the arrears of the Russo-Turkish war indemnity. It is believed that Russia's object is to prevent the reconstruction of the Turkish fleet.

CANADA AND THE UNITED STATES.

The Hon. Wilfrid Laurier, Premier of Canada, is at present in Washington negotiating with the United States Government with a view to the conclusion of a reciprocity treaty.

COUNT CASSINI.

The Russian Minister to Peking, Count Cassini, has been transferred to Washington.

A WONDERFUL EXPEDITION.

London, Nov. 16.
The Paris correspondent of the *Daily News* states that Prince Henry of Orleans is busy preparing an expedition, which will include a corps of Houssa veterans from the West Coast of Africa, with the object of assisting Lieutenant Leontieff to forestall Sir Herbert Kitchener in the occupation of Khartoum and all territories thence to Lake Victoria Nyanza, on behalf of Abyssinia. The expedition leaves Marseilles in December. Lieutenant Leontieff pays King Menelik ten per cent. on receipts in the new provinces.

ANOTHER COMPLICATION.

London, Nov. 17.
Owing to the arbitrary expulsion of M. Brazzopolli, the Austrian Lloyds' Agent at Mersina, who is accused of connivance with the local Armenians, the Austrian Government has demanded satisfaction of the Porte, which, if not given before next Thursday, will result in Austrian ships bombarding Mersina.

GERMANY AND CHINA.

The German Press is urging the Government on to the permanent occupation of Kiaochow (?) as a naval base.

The *Times* applauds Germany's energy in dealing with China, and urges Great Britain to always act similarly.

THE MANCHURIAN RAILWAY.

A Russian Volunteer steamer, with a force of Cossacks for the protection of the Manchurian railway works, has left Odessa.

BRITISH NORTH BORNEO.

London, November 18.
Mr. Richard B. Martin, presiding as chairman at the annual dinner of the Bri-

tish North Borneo Company, said that the company was desirous of fairly meeting any grievance affecting Mat Salleh if any such grievance could be discovered.

THE TRIPLE ALLIANCE.

The Emperor of Austria, in receiving delegations, in a very pacific speech reaffirmed his adhesion to the Triple Alliance and dwelt upon the friendly relations existing between Austria and Russia. The Turkish difficulty was not alluded to.

(OFFICIAL TELEGRAM.)

AFFAIRS IN BRAZIL.

Petropolis, Nov. 13th, 1897.
The Brazilian Government yesterday declared a state of siege to be in force for thirty days, in the Federal District and Niteroy. This step was considered necessary for the maintenance of authority and public peace in those parts.

DESTRUCTIVE FIRE AT HAKODATE.

(FROM OUR OWN CORRESPONDENT.)

Hakodate, Nov. 13, 7.30 a.m.
Fire broke out here at 8 o'clock last evening in a block of houses standing between the Nippon Ginko and the Twentieth National Bank. The latter establishment suffered severely and about twenty houses were destroyed.

THE KOBE BICYCLE ASSAULT CASE.

Kobe, Nov. 18.
The case in the United States Consular Court, in which Takajiro Kurata, jinrikisha coolie, charged Mr. E. G. Ackermann with assault and battery, adjourned on the 16th, was concluded this morning, accused being acquitted. On a counter charge of assault brought by Mr. Ackermann against Takajiro Kurata, in the Japanese Local Court, accused was convicted and sentenced to five days' police detention.

(FROM THE "N.C. DAILY NEWS.")

THE MURDERS IN SHANTUNG.

Chinanfu, 10th Nov.
Robber raids occurred in Yen-chou on the 1st of November in which two German priests were killed, one escaping. The robbers stole everything. The Provincial Judge has gone to settle the affair.

THE "MOYUNE."

Singapore, 10th November.
The steamer *Moyune* has arrived.

THE CURRENCY QUESTION.

The Chamber of Commerce report on the currency to the Straits Government states that a fixity of exchange is favourable to the importer, but a falling dollar is not advantageous to the producers of tin and gambier.

The Chamber suggests that the currency should be established on the basis of a gold sovereign of ten dollars, and that Government should receive dollars for currency notes, with which they could coin smaller token dollars.

(FROM TONGKIN PAPERS.)

THE DREYFUS CASE.

Paris, October 29.
A member of the Senate, M. Scheurekester, says he is convinced of the innocence of Captain Dreyfus (convicted of selling French war plans to foreign governments) and intends to re-open the question in the Senate. The press says he is the dupe of Dreyfus' friends, who have cleverly got a refugee in Switzerland to proclaim himself the culprit.

(FROM "LE COURRIER DE SAIGON.")

THE FRENCH ARMY.

Paris, Oct. 28.
The Army Commission has unanimously approved the division into two sections of the sixth colonial corps.

THE FRENCH ON THE NIGER.

The Chamber has decided to instruct M. Hanotaux to maintain, energetically, the rights of France in the Niger region.

(FROM THE JAPANESE PAPERS.)

GERMANY IN CHINA.

Peking, Nov. 18.
It was in consequence of two German missionaries having been murdered in Shantung that three German war-vessels took possession of Kaichow Bay near Wei-hai-wei on the 14th inst. The Taung-li Yamén has been thrown into a state of great confusion.

THE "YASHIMA."

Hongkong, Nov. 19.
The battleship *Yashima* arrived here this morning from Singapore.

CHESS.

All Communications to be addressed to the Chess Editor.

The Yokohama Chess Club meets at 184, Creek-side.

The Tokyo Chess Club holds its meetings at 3, Uchi-Saiwai-cho Ichome (next to the Tokyo Club).

Correct solutions received from W.H.S., P.E.F.S., D.D., J.W.E. and T.S.T.

PROBLEM No. 340.

When we published Mrs. Baird's Problem, now nearly two months ago, we had no idea that it would cause so much work and trouble to our solvers, although we mentioned at the time that the problem had proved the most difficult three-mover that had even appeared in the *Morning Post* since its column commenced in 1887. Many Chess friends in Yokohama, Tokyo, Kobe, and other places tried their utmost to find the key-move, but in vain, until judging from the number of letters we received the opinion had become general that there was "something wrong with the diagram," and bets on the result of this surmise were laughingly suggested. We were therefore very pleased to receive, a few days ago, a solution from our veteran solver, W.H.S., which turns out to be perfectly correct, and we accordingly publish it in detail:—

25 K-B sq.	50 K-K sq. Resigns

Another game deserves special mention, namely, Marco and Englisch, played in the seventh round, in which, according to the *Berliner Tageblatt*, the two competitors after nine moves had been made and neither a piece nor a pawn captured, agreed to a "draw." No doubt these heroes were afraid of one another. But it seems a pity that the committee should have no power to prevent such an occurrence in a Tournament, in which the issue of each game not only affects the two players but every one in the Tourney.

SINGAPORE.

We heartily welcome the appearance of a chess column in the Singapore *Free Press*, and extend the felicitations of the oldest chess column in the Far East to the youngest entrant in the field. The

Editor's opening remarks are to be commended. He says:—"So far as possible, within the limits imposed, it will form a record of contemporary chess. Although no attempt is to be made to supersede recognised textbooks, examples of master play will be inserted from time to time in the belief that 'the opening and all other points of the game find their best illustrations in the published games of chess masters.' Space will also be found for local and other games of interest, and we invite contributions from players throughout the Colony, promising that all matter received will be conscientiously examined. Chess problems, especially such as will not impose too heavy demands upon the time of chess students, to the exclusion of other amusements and pursuits, will also form a feature of the Chess Column, preference, of course, being given to 'Two-movers.'"

NOTES.

Charousek, the first-prize winner of the Berlin Tournament, is only twenty-four years of age. *The Westminster Gazette* gave this opinion of him in 1896:—"We are of the opinion that since Morphy and Kolisch no more promising player has risen in the Chess-world than Charousek. We can testify that this opinion was shared by all the competitors at the Nuremberg Congress, with the exception of one, Lasker, but his evidence was somewhat biased by the fact that he lost his game with Charousek. We have so much pleasure in recording this fact since the appreciation of Charousek's genius by the large majority of the Nuremberg competitors was only a corroboration of our own opinion expressed the very first day of the tournament." Maroczy was not known among the masters three years ago. Caro, who is spoken of as "the mysterious and hitherto unknown" player, is also a young man.

Englich, it will be remembered, withdrew from the Berlin tourney soon after its commencement. A story is now going the rounds to the effect that he wrote to the committee that he had been advised by some one to take a poisonous drug for headache, with the object on the part of the adviser, he believed, of injuring his chances in the tournament. The management did not escape criticism at the hands of Lasker, and it is possible that the fact of the committee being obnoxious to him had something to do with Lasker's refusal to enter the tourney.

The chess season in London began in real earnest in the second week of October. There were simultaneous displays by Messrs. Gunsberg and Van Vliet at the Metropolitan Chess Club, and a successful blindfold exhibition by Mr. Blackburne at the City of London Chess Club against eight opponents. Last, but not least, the ladies played a match twenty-five a side in which the Metropolitan won by 16 to 9.

Active preparations are progressing at Vienna for an International tournament, to be held in the Austrian capital in the spring of next year. If rumours are to be relied upon, the tournament will be very richly endowed, and the amount of prize-money will be sufficient to induce all the best players to compete, probably without exception.

AN END GAME STUDY.

This ending occurred in a game played at the Nuremberg Chess Club, by Dr. Tarrasch (White) and H. Romberg:—

BLACK.

WHITE.
White to move and win.

The position is given thus by Dr. Tarrasch in the *Frankfurter Schachblatt* without solution. We append a solution:—

1-RxR KxR 3-P-Kt3 P-KR4
2-B-B3 (!) K-B3 4-P-R3 and wins.

For, if 5..... P to B 5, or P to R 5, then 6-P to Kt 4; if 5..... P to Kt 5, then 6-P to K R 4, and Black must lose the Knight ultimately. There are other variations for the reader to try.
